miah did not offer the Rechabites bread, which, with its Canaanite ancestry in occupation of the land, was perhaps scarcely to be obtained; but it may certainly be inferred from the Rechabites refusal to cultivate land and to sow seed that they also abstained from cereal food, living in nomadic fashion on milk. The intense interest of the episode lies in the fact that the Rechabites, having no concern with agriculture, could have had no share in the great agricultural feasts—the only feasts made obligatory in the older documents of the Pentateuch. In the tradition to which such feasts confidently appeal, sacrifice was unknown in ancient Israelite religion; and, although it may be urged that those few passages can have little weight against the vast mass of testimony both of the Pentateuch and of the historical books, the wonder is, when we consider the doctrines of the Zadokite religion and its influence on the Hebrew Scriptures, not that we possess so few passages in disnunciation of sacrifice, but rather that we possess any at all.

It is significant that the first prophet whose denunciation of sacrifice has come down to us is Amos, the sheepp-breeder of Tekoa, i.e. a man of their manner of life, though he lived in a permanent dwelling, may be supposed in many respects to have been more familiar to the nomad than to the agricultural life. Whether Amos, like the Rechabites, rejected wine is uncertain. He denounces the drinking of wine in the case of the Nazirites ($2^\text{a}$), and he certainly did not object to drinking wine in moderation at Bethel ($4^\text{a}$); but the more natural interpretation of such passages as $2^\text{d} 4^\text{b}$, $5^\text{a}$ is that he did not object to alcohol in itself; and the same is probably true of Hosea and the other pre-Exilic prophets.

But, although the Rechabites kept their nomadic customs down to the last days of the kingdom of Judah, yet even they, or at all events some of them, were finally compelled, at least to some extent, to abandon their ancestral rule; for in the days of Nehemiah ($3^\text{d}$) a Rechabite, Jelionadab, by the name, repaired a portion of the wall—a fact which implies that some members of the clan had adopted a fixed habitation. Doubtless in Israel proper the change from nomad to agricultural life was accomplished only gradually, and was more rapid in some clans than in others. Probably, as the prejudice against Canaanite civilization was gradually broken down, certain elements more definitely associated with Canaanite religion would still be recognized. In an unconsidered time. Thus Hosea, though he says that Jehovah has given the corn and the wine and the oil ($2^\text{d}$), regards raisin cakes ($3^\text{d}$) as an element of heathenism.

One thing, however, is certain: what was possible for the Rechabites was possible for other tribes also. The unity of the nation which later Hebrew writers ascribe to the period of the monarchy is not attested by the older documents. The genuine Israelites—i.e. the immigrant clans who subjected the Canaanites—brought in with them many elements, more or less superior to the nature-worship of Canaan and possessing neither sacrifice nor other barbarous rites. It is their voice that speaks in the noblest passages of prophecy and of the Psalter, and they are the true predecessors of Jesus Christ.

LITERATURE.—See W. H. Bennett, art. 'Rechabite' in HDB and bibliography there given.

R. H. KENNETT.

RECOGNITION.—1. Recognition is the psychological process by which an object presented in perception or imagination gives the impression of having actually formed part of our experience. The term 'object' is here used to include anything from a sensory quality, colour, taste, odour, etc., to the contents of a novel or a philosophical system; the most frequent cases are, however, objects of perception, as persons, animals, buildings, scenes, melodies, etc. The impression of 'already experienced' may have any degree of circularity; thus a name, a foreign word, a topic vaguely familiar without any definite thought of the previous occasion or occasions on which it affected us, while an odour or a scene may call up with extreme vividness the exact date and all the important details of the earlier experience.

2. Recognition has really two distinct stages, the second of which frequently remains unrealized. There is first the 'sense of familiarity,' an immediate awareness that the presented object is not new to us; this sense may not be formulated in words, or in any cognitive terms, but may remain a mere feeling; practically it shows itself in our adaptation or adjustment to the object; during mental abstraction a key, e.g., is grasped in a different way from a knife or a pair of scissors.

Common words, everyday objects, frequently repeated sense-qualities, etc., rarely pass beyond this stage of immediate, direct, or indefinite recog- nition. The second stage is that in which the associated ideas arise in the mind, the name of a person seen, the place where a former meeting took place, the topic of conversation, etc.; such memories circumscribe the process of recogni- tion, and verify it if doubtful. This is mediate or secondary recognition. It is of renewed cognition. It is obvious that, as a form of knowing, recognition may be true or false, correct or incorrect. An 'already experienced' may fail to be recognized, may not excite the sense of familiarity, or call up the associated ideas; a scene revisited after a term of years may impress us as quite unfamiliar; a professor of philosophy is said to have read an article in an encyclopedia with much approval, and to have been greatly surprised to find his own name at the end. Again, a 'new' idea that belongs to one that is 'old' or already experienced; an event that is being enacted before our eyes appears as if it were the repetition of some- thing we have already known, and we seem to anticipate the details that are to follow. A modified form of this error is when an imagined event, a tale read, an adventure described, or a dream is falsely recognized as a real event that has happened to oneself—the so-called 'pathological lying' which has been explained in terms of hallucination, or of subjective certainty or confidence has very little relation to the objective accuracy of the recog- nition; a correct judgment may be hesitant and uncertain, while a false recognition may have absolute confidence behind it.

3. The psychological problem which arises is
that of the analysis of the process of recognition, as it actually occurs, the conditions on which it depends, its differences and analogies.

The classical theories of recognition are those which emerged in the controversy between Höfling and Lehmann (see Literature below). According to Höfling, the typical form of recognition is the immediate one; it represents the first stage beyond pure sensation towards ideation, a half-way or transition process, in which memory is involved, a ‘tied’ or ‘implicit idea,’ as opposed to the ‘free iden,’ of the memory-image. When a stimulus which is known to the subject (of any kind, that is, of one’s own voice, colour, sound, or the like) is repeated after an interval, the new sensation will be different from the old, because of the latter’s previous occurrence.

Further, Höfling holds that this modification takes place through the re-excitation of the earlier sensation and the fusion of this element with the new or direct presentation. The revival may not be a separate or conscious one, the fusion being between processes rather than products. If A represents the direct sensation, and a its image or indirect revival, then recognition is really a complex of \( A + a + a_i + a_{ii} + \ldots \) Höfling prefers the formula \( \frac{a}{a_i} \), where a represents the one or more past experiences called up by the direct process A and a their conscious or unconscious, even the whole A.

The theory was connected, inconsistently, it may be said, with the physiological assumption that, when a sensation is repeated or revived in memory, a similar modification takes place in the same part of the brain as the original process; each time it occurs, some trace is left, by which the change becomes easier with each successive repetition. Bain had already ascribed to this supposed fact the effect of repetition in making any single impression adhesive, i.e., more firmly impressed on the mind, more easily retained and recalled. The nerve tracks become more practicable the oftener they are traversed. ‘A process,’ as James says, ‘fills its old bed in a different way from that in which it makes a new bed.’

Psychologically Bain inferred from the fact that a previous occurrence of any kind to the view recalls the total impression made by all the previous occurrences, and adds its own effect to that total. ‘Thus there is a constant re-instatement of past impressions, and a corresponding deepening of the present impression, as an experience is repeated. But for Höfling a sensation or perception acquires through this repetition a distinguishing mark—the mark or character of knownness, or familiarity, by which it is clearly distinguished from entirely new sensations, or new perceptions.

4. Lehmann’s theory takes mediate recognition as the typical form, and association by contiguity as the process chiefly involved in it. When an object is first perceived, we associate with it some of its accompanying events or circumstances—with a person, e.g., the name, the actions, or the words; with a sense-quality, its name also, or its effect upon us, some determining mark, some ‘head’ of events or circumstances. As the object is the more vividly suggested, the object tends to call up, by contiguity association, in memory the associated name or mark; this, according to Lehmann, is recognition. When the ideas are distinct (date, scene, etc.), we have definite and explicit recognition; but, after frequent repetitions, an object becomes conscious to call up definite associates; these remain below the threshold of consciousness, but are none the less active, and we have implicit or immediate or direct recognition, which is thus a reduced form of the first type. James states it clearly when,

referring to the recovery of a name which we have sought for some time, he says:

‘If tangles, it troubles on the verge, but does not come. Just such a tingling and burning of the nerves, just such a sense of the penumbra of recognition that may surround any experience and make it seem familiar, though it be not a memory.”

5. Recent experimental work suggests that the process of recognition is much more complex and varied than either of the above theories implies, and that we learn to know a repeated object by different signs or marks, just as we learn to know a client or a near, a beautiful or an ugly, object. The characters which we learn to use as signs of repetition, or of the ‘already experienced,’ vary for different materials, for different individuals, and for the same individual at different times and for different purposes. They are, e.g., (1) the facility or ease with which we perceive or notice or grasp the object, its clearness and definiteness; (2) the feeling of agreeableness or pleasure, which often accompanies this facility; (3) verbal or other determining marks attached to the object on its earlier occurrence, and recalled by ‘association’; (4) expectation or anticipation of changes or effects of the object, which are in fact realized, etc. (5) But the principal mark arises from the fact that our organic and intellectual reaction to a repeated object is a very complex oneatherwise than from that to a totally or partially new one. In the latter case, if we are interested, we make an effort to appreciate the object, ‘run the eyes over’ the outstanding points, imitate a movement with our head; but try to follow a sound with our inward voice; by this means we appreciate it, link it on to our self ‘complex.’ When it is repeated, the whole reaction, through the law of habit, runs off with little or no effort, and the attitude of appropriation is instinctively taken up.

Where for any reason the feeling is absent or weak, or where reactions do not easily take place, as in illness or solitude or in any temporary lack of attention, recognition fails; in extreme mental feebleness or degeneration the simplest everyday impressions may appear entirely new and strange; such, however, is often repeated. Conversely, in intense pathological self-absorption, the strangest and newest objects may give the illusion of ‘the déjà vu.’ In the former case recent events may be disassociated and yet fail to elicit recognition; recognition and reproduction are, in fact, distinct processes.

Recognition, says Claparède, implies a previous act of synthesis, an attachment to the personality. When the impression or image is repeated, it is coloured by the self-quality, as it were, which it received from being taken up or assimilated into our consciousness. There is accordingly a primary and immediate certainty, given by the immediate feeling or attitude of the self to the impression; this is either weakened or strengthened by the memories and associations that subsequently arise, which, if adequate, make the recognition into a definite or circumstantial one. False recognitions mostly depend on the instinctive confidence in the primary feeling, which may be made less absurd by the salient similarity between the new and some old impression.

The very interesting experimental work on the subject of recognition is summarized in Katzarro and other papers; see references in Literature below.

RECORDING ANGEL. — In all the early literatures of the world the angel is called upon to perform a motley variety of tasks. The universe was recognized to be the scene of a ceaseless divine activity. But it puzzled men to know how God, who was pure spirit and infinite, could come into actual contact with matter, which was impure, imperfect, and finite. Hence arose the notion of the angel, a kind of creature of the Deity, semi-human, semi-divine, standing on a lower rung of divinity than the Deity, mingling freely with earthly creations and exercising over them an influence bearing the strongest resemblance to that which comes directly from the Deity. The angel, in other words, bridged the yawning gulf between the world and God. It follows from this that, as the innumerable experiences of man during life and after death were subject to angelic influences, the latter had, in the imagination of the people, to be pigeonholed into separate and independent departments of activity. Each angel had its own specialized task to see to, and each religion individualized those tasks in its own way. The idea of a recording angel charged with a peculiar task of its own in bearing a distinct name or series of names figures in Judaism, Christianity, and Muhammadanism. The function which it performs is, in the main, identical in all the three religious systems, although its actual procedure varies.

In Judaism the work of the recording angel is that of keeping an account of the deeds of individuals and nations, in order to present the record at some future time before man's heavenly Maker. The presentation of this record may take place during the lifetime of the individual or nation, or, as is more often the case, after death; and upon this record depends either the bliss or the pain which is to be ascribed in the after life. In the OT there are three passages which form a basis for these ideas. In Mal 3:2 it is said: 'Then they that feared the Lord spake one with another: and the Lord hearkened, and heard, and a book of remembrance was written before him, for them that feared the Lord, and that thought upon his name.' Jehovah hears what His righteous servants say and resolves to reward them at some future time for their steadfastness. The figure of speech is derived from the custom of Persian monarchs, who had the names of public benefactors inscribed in a book, in order that in after days their services might be suitably rewarded.1 In Ezk 9 the man 'clothed in linen which had the writer's inkhorn by his side,' is bidden to 'go through the midst of the city, through the midst of Jerusalem, and set a mark upon the foreheads of the slain, and not upon those who stranger and that cry for all the abominations that be done in the midst thereof.' This man 'clothed in linen' is one of the six angels sent to exact speedy punish-

ment upon the defunct city of Jerusalem. But the punishment must be local. While the urban defile is punished, to be sinless without mercy, the angel was to 'set a mark' on those who expressed sincere grief for their backslidings and who dissociated themselves from the sinners. This mark was, presumably, to serve as a reflexion on the day when retribution would be enacted out. The third passage is Dan 12:2: 'And at that time shall Michael stand up, and there shall be a time of trouble . . . and at that time thy people shall be delivered, every one that shall be found written in the book.' This idea is reinforced by the succeeding verses, the underlying idea seems clearly that of some future divine judgment when the righteous classes and the wicked classes will each reap their deserts, and the record of who's who will be found written in the book, the angel Michael acting as recorder.

As R. H. Charles puts it, 'the book was 'the book of life' . . . a register of the actual citizens of the theocratic community of God's Rocks and their descendants. . . . This book has thus become a register of the citizens of the coming kingdom of God, whether living or departed' (Daniel, in Century Bible, Edinburgh, n.d. [1919], p. 189).

A rabbi of the Mishnaic epoch, Akiba ben Joseph (A.D. c. 50-c. 132), summarized and elaborated all these OT conceptions of the account between man and his Maker (without, however, introducing the idea of the recording angel) in a remarkably striking parable, thus:

'Everything is given on pledge and a net is spread for all the living. The shop is open and the dealer gives credit; and the borrowers lend and the lenders lends and whosoever wishes to borrow may come and borrow; but the collectors regularly make their daily round and exact payment from man whether he be certain to reap the harvest or they have not time they can rely in their demand; and the judgment is a judgment of truth, and everything is prepared for the feast' (Mishnah, Abod., i. 16).

The 'feast' refers to the levithian, on the flesh of which, according to a frequent idea of the Talmud and Midrash, the righteous Israelites will regale themselves in the beyond.

The rich angelologies of the Jews and Christians (as well as of the Muhammadans, who borrowed largely from the OT and the rabbinic writings) built further on these OT references to a recording angel, and transferred the work of recording to some one or other angel bearing a special name of the Deity, who keeps a record of everything in the record. In rabbinic theolgy and in the mysticism of the Zókr and medieval Kabbalah generally, the recording angel is kept particularly busy in one great department of activity viz. prayer. Metatron (Gr. aútropos, Lat. metator, 'guide') usually plays this rôle. According to a statement in Midrash Tannáhá Génesis,1 as well as in the Slavonic Book of Enoch,2 it is the angel Michael, originally the guardian-angel of Israel, who was transformed into Metatron, the angel whose name is like that of his Divine Master3—a piece of doctrine which may possibly have influenced the Christian doctrine of the Logos. So impressive was the work of Metatron that a rabbi of the early 2nd cent. A.D., Elisha b. Abuyah, confessed to seeing this angel in the heavens and thus being led to believe that the cosmos was ruled by 'two powers.'4 Of course such belief was heresy. According to a Talmudic statement, Metatron bears the Tetragrammaton written on him from Koph to Bet,5 where it is said of the angel who would in the future be sent to prepare the way for the Israelites: 'Beware of him . . . for my name is in him.

According to a passage in the Zókr (Midrash Ifa-Xvelot, on section Hagyt-Shorok), Metatron 'is appointed to take charge of the soul every day and to provide it with the necessary light

REDEMPTION

Further references in rabbinical and apocalypse literature are as follows:

In T.B. Megillah, 156, the phrase in Est xxii about the sleepiness of the king is applied to God 'the king of the world.'

The angel he be R.

The Sages derive a principle from this that all excommunication of unclean domestic animals. In E, 'The Book of the Covenant' (Ex 22:23), firstborn sons are to be given unto the Lord, also firstlings of oxen and sheep. According to J, every firstling male is to be made over to the Lord, and then to the Levites. The firstling of an ass is to be redeemed with a lamb, or, if it is not redeemed, its neck is to be broken. First-born sons are also to be redeemed, but the valuation is not fixed. This custom is connected with the redemption of the first-born of man and beast (Ex 13:12); cf. 31:14).

In P all first-born of man and beast are to be sanctified to the Lord (Ex 13:14). The firstling of an unclean beast is to be ransomed.
REDEMPTION

according to thine estimation' plus one-fifth
in value. In other words, the one-fifth of the first-born of man and beast is associated, as in J, with the slaying of the Egyptian first-born, but the Levites are said to have been taken instead of the first-born of the Israelites or of those more than a month old, and their cattle instead of the other Israelites' firstlings. Twenty thousand Levites take the place of as many first-born Israelites numbered at the time, and the overplus of 275 first-born are redeemed by a money-payment of five shekels each to Aaron and his sons (Nu 31:28-32). In another passage from P the first-born of man and beast are made over to Aaron and his sons, but those of men, from a month old, are redeemed for five shekels. Firstlings of oxen, sheep, and goats are not redeemed; their blood is sprinkled on the altar, the fat burned, and the flesh eaten by the priests. The firstlings of unclean beasts are to be redeemed (Nu 18:16). Lastly in Dt 15:19 firstling males of flock and herd are sanctified to the Lord, and are to be eaten by the owner and his household in the place which the Lord shall choose. Such as areblemished may be eaten at home (cf. 12:14, 17, 14). The main differences in detail in these passages may be thus indicated: (1) Except for the deal with the firstlings: in Dt this is done by owner and household, in P by Aaron and his sons. These differing laws seem to reflect the usage of two different periods of the history. (2) The redemption of the first-born of man and the redemption of the first-born of men; in J their redemption value is left vague; in P it is fixed at five shekels; but again in P the origin of the Levites as a sacred class is referred back to a redemption of the existing first-born of men, the overplus being regarded as secular property. Here it is obviously a myth originating at a period when the redemption value of the first-born had become fixed. As to the cattle of the Levites being regarded as sacred instead of the firstlings of the other Israelites' cattle, which according to Nu 18:17 could not be redeemed, this may show that the myth belongs to a time when the legislation regarding firstlings had fallen into abeyance. (3) In E the 'giving' of the first-born of men to God is not connected, as in J, with the redemption of the first-born in Egypt. (4) Firstlings of unclean beasts: in J the firstling of an ass is to be redeemed; in P firstlings of unclean beasts, as if now other 'unclean' animals than the ass had been domesticated. In J and P the methods of valuation also differ.

We are thus confronted with legislation which varied from age to age, and which perhaps was no more than ideal at any given time. It also tended to be explained mythologically, or fictitious reasons for the sanctity of the first-born were to be given.

2. Redemption of the firstlings of the ass.—As the firstfruits of domestic animals, like the firstfruits of the earth, were sacred or made over to God (see art. Firstfruits, First-born), those of the ass, a domestic animal, were likewise. But asses and probably some other domestic animals were 'unclean', i.e. unfit for sacrifice or for eating. Hence in case arose the idea of redemption, the word used in Ex 13:3, piddah, being that which was used in the case of a renewal of redemption from death or slavery (cf. Ex 13:14, 20, 21, 40, 18). Another sacrificial animal was offered in its stead, or, if not so redeemed, it was killed, but not sacrificially; its neck was broken without shedding of blood, so that it could be of no further use to its owner. Later legislation provided for a payment to be redeemed at plus one-fifth of its value, or simply to be sold for the benefit of the sanctuary. In the

earlier legislation the breaking of the neck of the unredeemed animal shows that the firstling was regarded as having a sanctity, or saanct, or tabu, whether it was sacrificed or not.

3. Redemption of the first-born child.—There is little doubt that some special sanctity attached to the first-born. He was the first gift of God after the birth of the Israelites in Egypt, and thus the blood of the kin flowed 'purest and strongest in him.' Was he therefore sacrificed? That the Canaanites sacrificed children, and frequently the first-born, is certain, though whether all the first-born were annually regularly sacrificed has not been confirmed.

The sacrificial infants found at sacred sites in Palestine cannot be proved to be first-born children. It has also been questioned whether they were sacrificial victims.

The question of the redemption of the first-born by some rite or equivalent sacrifice or money-payment, which appears strictly as a Hebrew custom, is one which arose either (1) because of the inherent sanctity of the first-born or (2) because he ought to be sacrificed. Now the regular sacrifice of the first-born among the Hebrews in historic times is open to question. The references in the OT to sacrifices of children are frequently general (2 K 19:21; 20:9; cf. Lv 18:24, 'any of thy seed'). A son or daughter, and not even males exclusively, and not always the first-born) was sacrificed. Nor was this sacrifice, when called for, always performed in infancy. The king of Moab sacrificed his eldest son, who was thus not an infant (2 K 3:7), and so in the case of Isaac and of Jephthah's daughter. Thus even outside Israel the custom occurs not in infancy—a point not sufficiently noticed by writers on this subject—and only on occasion of some great calamity. That the Hebrews had such an occasion for sacrifice at all, or borrowed it, is not unlikely, and, no more than this need be signified in Mi 6:6, where 'thousands of rams' and 'ten thousands of rivers of oil' show that Micah is speaking hyperbolically. In Ezk 20:3 all that opens the womb is spoken of as sacrificed to Moloch in Israel, as if the custom had become general. But if, general, it need only have been so upon certain necessary occasions, when, if human sacrifice was to occur, the first-born was chosen. As far as Israel was concerned, the practice in historic times was borrowed from nations in which it had been more general or not. This is shown by the words of the prophets, who may be presumed to have known the facts.

Jeremiah and Ezekiel make this clear, but their words seem to show that the people, seeing these costly sacrifices among the Phenicians, deemed that they were due also to God in time of disaster. The practice of redeeming the first-born was regarded as merely permissive. Occasion might arise when this permission must be disregarded. Jeremiah says that God never commanded such sacrifices (Jer 11:21), and Ezekiel (20:5) regards the current interpretation of Ex 13:21 as a mistake—a pollusion.

Further, special privileges attached to the first-born, showing that he was not sacrificed (Gen 25:21; 21:16); cf. 1 Ch 5:5 [disregarding the birth-right]; and the method in which Israel is spoken of as God's first-born (Ex 42:13; cf. Jer 31:12 [Ephraim]). Ps 89:17 [Messiah as God's first-born] shows that the first-born was especially revered in the Messiah. The words of Micah (6:6) and Ezekiel (20:4) belong to the period when the Israelites borrowed the custom from their neighbours. So, too, probably does the story of Isaac's sacrifice, in which the victim is not mentioned or replaced by a ram—a far less spiritual thought than Micah's.

Why then was the first-born redeemed? (1) If the custom of sacrificing the first-born had once been general in early times, as perhaps the state-
sacrifices of the first-born among other peoples needs sĩting. Several instances refer not to sacri-
ifice but to infanticide. Not all are supported by
clear evidence, nor do all refer exclusively to the
first-born.

4. Parallel ethnic practices. - The Hebrew
custom finds an echo in folk-tales in which child-
less parents agree to give up their first-born to
some one who offers to remove the wife's barrenness.
These tales arose in some custom of dedication of
first-born to a deity. In some such stories a gift
is offered or a substitute introduced by the
sacrifice, and the offering is a substitute for
redemption. It is also remarkable that Syriac
women will vow an unborn child to a Muhammadan
saint at his shrine, yet 'in that case the child is not slain, as may once have been the case,
but is redeemed by an offering.' In Muhammadan
custom the victim—a ram or goat sacrificed
soon after the birth of a child—is called a ransom
for the child.

Reference may also be made to the
May ritual described by Ovid, in which the house-
father offered black beans over his shoulder to
the ghosts, with the words nine times repeated,
"With these beans I redeem me and mine." The
custom of redemption, if it was actually redep-
mation from sacrifice as illustrated in the story of
Isaac, has parallels in ethnic myth and practice
in which a sheik or chieftain takes the life of a
human victim, not necessarily a first-born. At
the temple of Artemis Tricia she had formerly
been the custom to offer a beautiful youth and
maid, but in the time of Pausanias this sacrifice
was commuted. Pausanias also mentions the offer-
ing of a goat to Dionysus at Poteia in place of an
earlier child. At Laodicea the annual stag sacri-
fice was believed to take the place of a former
offering of a maiden. In Babylonia the rite in
which an animal was slain for a sick man—its life
for his life, its head, neck, breast for his head,
neck, breast—suggests some species of commuta-
tion or substitution. When human sacrifices were
prohibited among the Celts of Gaul, the Druids
offered a victim symbolically, pretending to strike
him, and drawing from him a little blood. In
many quarters other commutations of human sacri-
ifice occur, often with legends attached to them
showing that they originated in more humane
feelings. The offerings, instead of human beings are
offered, as among the Villalis, Gonds, Chettis,
Japanese, and Romans; or a coconut is offered
because of its resemblance to a human head, or,
again, an animal victim takes the place of a human,
when people cannot afford the latter, as among
the Tahus. These correspond to commutations of
animal sacrifices, or in general to the offering of a
less for a more important object. For, as Servius
says, the simulacrum is accepted in place of the real
object; hence when certain animals, difficult to obtain, are demanded in sacrifice, images of them are made of bread or wax, and are received in their stead. 12

REFORMATION.—See Liguori.

RED INDIANS.—See America.

REFORMATION.—The great upheaval which we call the Reformation was very much more than a religious rising of Teutonic Europe in the 16th century. We can trace its origin to the beginnings of monasticism and Northern Christianity, and watch the gathering of the storm all down the Middle Ages. The acute religious conflict lasted all through the 17th cent., and is separated by no sharp break from its secular consequence and counterpart, the great revolution of political principle which began with the English Commonwealth and the American Revolution, and now seems passing into social reconstruction. The issues of the Reformation have broadened out, but in altered forms they are the living issues of our own day, for they raise the permanent questions of the society and the individual, authority and reason, slavery and freedom, religious, intellectual, political, and social. Nor was the Reformation purely Teutonic in its origin, though it has maintained itself chiefly among Teutonic peoples. Latins and Slavs were as resive as Teutons under the yoke of Rome. Even now Protestantism can claim Slavs on the shores of the Baltic; and in France it has always been the moderates of the worldliness of the Church. It was all of all it was a purely religious movement. It was the issue of a vast complex of forces, intellectual, political, and social as well as religious, acting in different ways and with constantly varying intensity in different countries. In England the Reformation was guided by kings, in Germany by princes, in France, Bohemia, and Poland by nobles, in the German cities and Switzerland by burghers. Its first political tendency was in England to despotism, in Germany and France to civil strife, in the United Provinces to freedom. At Geneva it set up a theocratic republic, in Germany and England it gave the Church an Erastian form. Thus its first results were of bewildering diversity. The variations of the Reformation might magnify his office, there must be a direct access to God without him. Else how could hermits be saints? Yet neither was the monasteries essential, whatever help and comfort his followers might give him (for in the Eternal’s presence lay the salvation of the world); or the asceticism essential; it was only the belief of the time, and might be abandoned if he ceased to find it the more excellent way. But, though priests and monks were often at variance, they never clearly saw that their conceptions of religion were radically different. The Church made peace by taking the monasteries into the system, and allowing them services of their own which did not require the administration of sacraments. But the two most antagonistic principles were held together chiefly by the common belief of churchmen that asceticism is the higher life. If ever that belief came to be discredited, the individualism would not fail to seek expression outside the Church system. It is not accidental that so many of the Reformers, from Luther and Zwingli downwards, had once been monks or friars.

Then came the conversion of the Northern peoples. They were docile enough on doctrine, whatever their practice might be, and showed no taste for the general, more transcendental, more integrally connected with the doctrine of the Church than its apologists are willing to admit, and often too outrageous and abominable to be more than hinted at in the more decent language of modern times. If the picture is dark, the background is darker still, for much of the worst must be left untold.

1. Causes of the Reformation. — The loose organization of the apostolic churches was shaped by the needs of the next generation into a uniform system of ecclesiastical government. The Reformation was consolitated by the needs of the Christian Empire into a great confederation of churches which called itself the Holy Catholic Church, and claimed to be the sole dispenser of salvation. It was a grand system; but where was the layman? His royal priesthood was forgotten, and more and more his access to God was only through the ministrations of the Church.

Then came the monks. Their flight was from an evil world which a worldly Church had failed to overcome; but it was almost as much a flight from the Church itself. True, they were neither heretics nor schismatics, but the most zealous of churchmen, whose ascetic zeal put to shame the worldly life of the priests. They were the monks which the monks rushed in where bishops feared to tread. None the less, the principle of monasticism was ultimately subversive of the Church system. That principle was neither asceticism nor seclusion, for the monk was no ascetic, for the monk was no hermit. It was individualism. The man retired from the world, not only because the world was wicked, but also because the Church in the world could not give him what he wanted. ‘Doubt makes the monk’ was a German proverb. What he wanted was to save his soul, and to save it in his own way, because he had not found the priest’s way satisfactory. Therefore he sought out for himself a monastery of like-minded men, and in its rule he found his freedom. However the priest might magnify his office, there must be a direct access to God without him. Else how could hermits be saints? Yet neither was the monasteries essential, whatever help and comfort his followers might give him (for in the Eternal’s presence lay the salvation of the world); or the asceticism essential; it was only the belief of the time, and might be abandoned if he ceased to find it the more excellent way. But, though priests and monks were often at variance, they never clearly saw that their conceptions of religion were radically different. The Church made peace by taking the monasteries into the system, and allowing them services of their own which did not require the administration of sacraments. But the two most antagonistic principles were held together chiefly by the common belief of churchmen that asceticism is the higher life. If ever that belief came to be discredited, the individualism would not fail to seek expression outside the Church system. It is not accidental that so many of the Reformers, from Luther and Zwingli downwards, had once been monks or friars.

Then came the conversion of the Northern peoples. They were docile enough on doctrine, whatever their practice might be, and showed no taste for the general, more transcendental, more integrally connected with the doctrine of the Church than its apologists are willing to admit, and often too outrageous and abominable to be more than hinted at in the more decent language of modern times. If the picture is dark, the background is darker still, for much of the worst must be left untold.
shaped by Latin hands and saturated by Latin thought. The Northern peoples were as yet no more than children in the faith; but, when they grew to man's estate, they were not unlikeliest to throw off the Latin tutelage and shape their religion into Northern forms, perhaps equally

The next great step was the Hildebrandine reformation and the rise of the mediaval papacy. If the pope could bring some order into the anarchy of feudalism and the scandalous corruption of the Church, he was indeed to set St. Peter's chair above the thrones of kings. The opposition of the emperors was not a Teutonic revolt: the Saxons always held with the pope. The imperialist literature of Germany and Italy, joined for a moment by Gerard of York in England, only disputed some of the papal claims, and scarcely touched the doctrine and system of the Church. Its power was finally broken by the fall of the Hohenstaufens, and its echoes died away with the Schoolmen of Ludwig III. The last imperial coronation at Rome was performed in peace (1452), because Frederick III. was not worth a souffle in the streets.

But long before that time the Hildebrandine doctrine failed. The money governing the wicked world had faded into the light of common day. The higher the pope's power rose, the more his kingdom became a worldly kingdom, seeking worldly ends by worldly means. It was indeed a mighty power, with its thousands of priests in the parishes and chancries; with its armies of monks, Benedictine, Cistercian, Cistercian, recalling three great religious revivals; with its troops of friars prowling round the land; not to mention the novelty of world-power, the character of the Church.

It was a vast and ancient system, resting upon the twin strongholds of transubstantiation, which gave the priest a more than royal dignity, and auricular confession, which laid open to him every secret of private life, and above all upon the ancient horror of heresy. All sins might be forgiven, but the sin of heresy could not be forgiven, because it denied the only power which had authority on earth to forgive sins.

The Church was full of scandals, moral, financial, and political; and these were the grievances which in the end compelled some to face the risk of heresy by questioning its doctrines. In the first place, the Hildebrandine reformation had failed to cleanse the Church. If celibacy was supposed to lift the priest above the mire of the world, auricular confession plunged him back into it, for the priest's ear became the sink of the parish. And the celibacy itself was full of dangers, on which we must not enlarge, for the grossness of the Middle Ages cannot be told in decent language. Suffice it that in practice the vow of ' chastity ' commonly abolished nothing of marriage but God's holy ordinance. Many priests kept it faithfully, though often at the cost of struggles which hardened and demoralized them in other ways; but, unless all the evidence is false, a much larger number had fopperie, or did worse, and many of these were compelled by their flock's in the Kirk, to keep temptations of a lonely priest settled among the rustics are obvious, and gave plenty of scandal to his neighbours.

Yet, after all, more offence was caused by the worldliness of the matter than by the fluctuating viere of the moment. The wealth of the Church was enormous. In Sweden it held two-thirds of the land, and perhaps one-third or two-fifths in England, where the accumulation had been checked by the Statute of Mortmain (1279). If the bishops were generally modest in Italy, they were great lords in England, where the primate stood next to the sovereign, and the bishop of Durham ruled the Scottish border almost as a king. Still more magnificent was their state in Germany and Hungary. Men said that bishops, like donkeys and the women in the host of Christian of Mainz were more in number than Barbarossa's army. But this vast wealth was very unequally distributed. There were a few favoured pluralists, whom perhaps we least could lament, for the scandal to the laity. One of these might hold perhaps half-a-score of church prebendaries and leave their duties undone, or done after a fashion by cheap hirelings, while he spent his time in the service of pope or king, or intriguing at their courts for new and more lucrative appointments. In England the bishops were commonly the reward of success in the king's business, from Flambard and Thomas to Morton and Wolsey; and in Germany it was much the same in Frankfort and Hohenstaufen times. In the later Middle Ages we see a class of pure aristocrats, such as Courtenay and Arundel, Beaufort and Neville in England; and in Germany there was the prevailing type. The three clerical electors at the time of the Reformation were the archbishops of Brandenburg, Hermann of Wied, Richard of Greifenklau. The aristocratic character of the German hierarchy was not a novelty of the Reformation.

But many numbers of the priests were needy. Their endowments may have been sufficient, and were in some cases ample. But a great deal was 'appropriated' by the monks. A monastery took the endowments of a parish, and was supposed to live happily by spending much personal property by sending a monk to say mass on Sundays. The Lateran Council of 1179 ordered them to provide resident vicars, and earnest churchmen of the next century managed at last to enforce this. The monastery took the great tithes of corn, and left the small tithes to the yeoman. Thus many rich livings were reduced by 'appropriations' to poor curacies, while many more were impoverished by pensions granted on them by the popes. And a needy man is apt to be rapacious and ignorant. There were many who lived on much more than much rent; perhaps who were forced to wrangle over petty dues, and could hardly say his old monophysite. He had some excuse for ignorance, but sometimes it was very dense. Nor were his administrations edifying; for they were all in Latin, except parts of the marriage service. The mass was said in a low voice, and the people were not supposed to follow the service but to occupy themselves with their private devotions, and there were primers for such as were able to read. If the canonized emperor, Heinrich II. could make a fool of his unlearned chaplain by erasing from the mass-book the first syllables of the prayer 'pro (fa)numls et (fa)mulabus tuis,' we may imagine what a rustic parish would do with Sir John Jacklatin or Sir John Mumblematics. We must go to Russia for a modern parallel to the mixture of superstitions and terrors of the priest's mysterious powers with good-natured contempt for his person.

Nor were there in a similar state in the later Middle Ages. Some were rich, some very poor, many were burdened with debt, and all were impoverished by papal exactions. An abbot could scarcely get his election settled without spending perhaps two years' revenue, and the very joy to give, with fees and 'presents' to pope and cardinals. Besides this, the monasteries had outlived their
usefulness. They spent little on the poor, and learning had found a more congenial home in the universities. The monks had long ceased to labor to excommunicate landlords. The houses had been half emptied by the Black Death, and had never recovered their numbers; some, indeed, were so decayed that they had to be suppressed for want of inmates. Fious founders had ceased to build new houses, and endowed colleges and chanceries. Their property was alienated, and some were so well endowed, others as bad as bad could be, for here again the worst cases are sheltered by their very foulness. But the larger number were worldly rather than depraved, though they had more than occasional scandals. There was always an aristocratic flavour about the monasteries; and now the inmates of the richer houses lived very much as their neighbours did. They hunted and hawked, attended chapel by deputations in rotation, ate flesh, and were notorious lovers of good living. This was very far from the rigour of the monastic rule, and gave much occasion for blaspemling, but at all events it was not flagrant vice. The worst of the matter was that it was supported, and the trade of rackets carried on, but that it was hardly ever seriously punished. The rule of the order was strict enough, but the abbot was often himself the worst offender in the way of evil living, embezzelement, and even murder. The contractors and abbots were, of course, the worst offenders, and the abbots, too, often too busy with State affairs to look after his diocese; and the strongest and most earnest might well hesitate to take in hand a bad case, where he was likely to be met by a clamour and much unseemly hurry. The worst, long and entailing years of litigation at Rome, to be finally decided by bribery or by the fixed policy of the Church to smother scandals rather than amend them. At worst, a peccant priest might be removed to another parish, or an outrageous abbot induced to retire on a handsome pension.

The condition of the friars was very similar, but distinctly worse. Their beginnings were splendid, but within a century the tale was different. They evaded their corporate poverty by vesting the property of their mendicant or the poor; and, when some of the Franciscans insisted that their poverty must be real, Pope John XXII. decided against them that Christ and His apostles had property, so that poverty is not necessary for the higher orders of the Church. It is well to remember that the whole system of mendicacy, so that henceforth, while some of the most earnest seekers after God still became friars, others formed simpler societies of their own, and others again turned to mysticism or heresy. Meanwhile, the ordinary friar was little better than a vulgar mountebank, pulling his pardons and relies as impudently as any other quack of the market-place. Of all the churchmen the friar was the least respected.

Besides vice and worldliness, there was a third great scandal in the divisions of the Church. True, the Latins never sank into Irish anarchy, where a bishop would wander about the country living on his ordination fees, and a whole monastery would turn out, monks, servants, women, and all, for a pitched battle with the next house of holy men. But the quarrels were continual and bitter. Bishops and chapters wrangled and litigated for years together. Seculars and regulars had a strong natural hatred of each other, and the friars were a plague to both. If a parish priest refused absolution to some offender, the next friar was likely to sell it with pleasure. But the most repulsive quarrel of all was round a rich man's deathbed. If masses profited in purgatory, how could he be better disposed of his worldly goods than in having masses said for his soul? And they were all eager in the work of charity. So the quiet of the chamber of death was continually disturbed by an unseemly quarrel of rival orders, each struggling to get the dying man into their own habit line the one sure passport to heaven. The wicked world looked on with wonder and disgust.

The economic evils of the Church system were neither few nor trifling. The Church was a corporation which constantly acquired property and never lost it by fraudulent dilapidation and waste, so that in most countries it secured the larger part of the national wealth; and this was in itself an evil of the first magnitude. If the monks were easier landlords than the lay impro priators who followed them, their lands were not so well cultivated. Then the number of the clergy was excessive. The parish priests alone may have been half as many as we have now for a much larger population; and to these we must add the chantry priests, the monks, the friars, the nuns, and the minor orders. It is true that they were not all withdrawn from the common work of life. In the 13th cent. they were still the literary men, the founders of schools, the writers of chronicles, the composers of songs, the legal experts, the farmers, the tailors, and little to show but troops of lawyers. The charge that they were nothing but a burden on the land was too sweeping, but a burden they were, and a heavy burden. They did a good deal of trading too, particularly in the endowments of the monasteries and masses for the dead, partly in worldly things in which they were forbidden to trade. Indeed, it was not good that the parish priest should be a money-lender or a tavern-keeper, as the bishops complained. But the worst economic evil arose from the teaching that good works are an expiation (in practice often a payment) for sins, for it made charity more indiscriminate than it might otherwise have been. The good work rested to the credit of the giver, and the unworthiness of the receiver was not his business. The type of this kind of charity is a Spanish archbishop of a couple of hundred years ago, who spent a princely revenue in daily doles to an army of beggars at his gate. Medieval charity was so putrid, that, as Dr. Pusey well says, it was not until the Church festivals, which had been multiplied beyond all reason, and made a large part of the year useless for trade or agriculture, for no work was allowed on the day itself or after the noon of the day before it. Idleness was compulsory, but not sobriety, for no occupation was provided beyond the morning mass. To the abundance of holy days we may partly ascribe the marked taste of the later Middle Ages for shows, pageants, miracle-plays, and the like. But there were worse things than these. Besides encouraging drinking, revelling, quarrelling, and vice of every sort, these festivals, frequent and irregular, were a formidable hindrance to habits of steady work. They not only made serious gaps in the work, but demoralized what remained of it. The grievance was serious in the 13th cent., and was made more urgent by the growth of trade and the exhaustion of the land in the 15th. How far the holy days were observed it is not easy to tell, but the friars, and later the secular orders, were more than the Church, and there are complaints enough to show that they were enforced.

Before we come to the political grievances, we must note that the fundamental error of the Latin Church was the twofold error of the Pharisees. It mistook the gospel for a law, and again mistook the office of law. In fact, our Lord says down
principles, not laws, telling us always the spirit in which we ought to do things, never the things we ought to do, except the two sacraments. He seems to say, gratuitously, that the Church can be judged on certain right and wrong actions, except as the signs of a good or bad heart. A good deal of manipulation was needed to turn the law of liberty into a law of commands like the Mosaic. Further, it is not the office of law to teach truths, but to enforce them; and the law can make a distinction between those who do the right, and those who do the wrong. The natural law is for all, but the Christian law is necessary for all, and the secular law is necessary for the Church.

In graver cases the secular power was called on to imprison him indefinitely, or, if a heretic, to burn him; and the form of excommunication was an extreme measure. The Church, to the 15th century, was the state. The Clementines for the first time condemned by the state the saints on every act of his life; ‘As these candles stink on earth, so may his soul stink in hell.’

Some of the things which seem to us enroachments on the secular power were very rightly undertaken by the Church in times when the secular power was weak. Wills, e.g., almost necessarily came to the clergies when so few laymen could even read them. Marriage also needed some regulation in those gross and disorderly times, and the usurper was so unpopular that there could be no objection to any one who undertook to punish him. But on the whole the Church filled its trust badly, even in the judgment of its friends. Its methods, to begin with, of anonymous accusation, conscience of charges, indefinite and indefinite imprisonment, were a terror to the innocent. The soundest Catholic ran a risk of the fire if somebody reported that he had eaten meat in Lent. Then the jurisdiction of the Church sheltered criminals, and the clergy were too closely united with the religious court, which could not shed blood, and therefore had to remit an offender to the secular power when it wanted a heretic burned. The secular power, when it wanted a heretic burned, was a crying scandal, for it depended on the holiness of the place, so that it sheltered all comers without distinction, and did not even prevent them from issuing forth from sanctuary to commit new crimes. Holy places have always been chief haunts of unholy men, from the times of Diana of Ephesus to those of Our Lady of Mariazell or Loreto. So great were the disorders that strong kings like Henry vii. put down some of the worst abuses before the Reform. Nor was the Church more successful in dealing with other matters. Marriage, e.g., was conducted mainly by declaring it to be valid, and effectually degraded by forbidding it to the clergy. In theory it was indissoluble, even for adultery; in practice it was continually annulled. So many and so various were the canonical impositions that the parties to a marriage had an interest in getting it dissolved—and could pay the fees. If other excuses failed, some forbidden relation could almost always be found within the seventh degree of kindred, affinity, or gossipied. All Henry viii.'s marriages were faulty in canon law, except perhaps the last. But one mischief was mitigated by another. The Church sold dispensations for marriages forbidden by canon law, and supposed to be forbidden by the law of God. The case of Catharine of Aragon was not exceptional. This was one of the most lucrative of all the abuses of the Church, and one of those most deeply resented. Wills were in a similar state. The Church lawyers piled up mortuaries, probate, and a mutual concern for the rich and poor against them. Witchcraft was not a grievance, for all were agreed that dealings with the devil were the very worst of sins; but all that was called heresy was not equally heinous to the Church. The Erastian form of communion was set, let him be burned; and, if he disobeyed the Church, he might have punishment in due measure; but the Church had got into such a panic that it suspected heresy in every trifle, and brought the soundest Catholic into danger of savage persecution.

The majestic theory of the Catholic Church was
gathered round the pope. The vicar of Christ was supposed to be a father in God, guiding all the churches—all alike his children—in the way of righteousness and mercy; and for this purpose divine authority was given him to restrain wickedness, to snaffle the evil-doers of the earth, and to bring every soul into subjection to the apostolic see. Such was the dream of Gregory VII.; and it was at least a noble dream. But a dream it was; the facts were squalid. In the first place, given medicinal conditions of his own making, Peter himself could not have guided all the churches from Rome or Avignon. No human genius was equal to this colossal task, especially when the righteous guidance had to be enforced by continual interference with almost every act of government. However well-disposed the pope might be, he was too far off, too ignorant of foreign peoples and their ways of thinking, and too dependent on the reports of interested advisers to govern wisely. Sometimes he did good service, as when the vagaries of Honorius III. helped William the Marshal to restore order in England, or when 15th cent. popes organized wars against the Turks, though their crusades were more often mischievous, like the Allies' during the recent war, than beneficial; they were pure and simple pretexts for exacting money. But the Latin Church of the Middle Ages was not organized with modern efficiency. To put it broadly, the pope can scarcely be said to have governed much more than to meddle, and seemed to meddle chiefly for the sake of filthy lucre. Four conflicting policies—of witnessing to the world, ruling the world, renouncing the world, and making gain of the world—could lead to nothing but confusion. The scandals and intrigues of the 14th cent. were so unlitigious and flagrant, notorious and in their own time undisputed. The nine cardinals who reported to Paul III. in 1537 were in entire agreement as to facts with the most violent of the Reformers. Their very first demand was that law should be observed as far as possible, and some limit put to the sale of exemptions, dispensations, and such-like breaches of law. In fact, the whole system was very much a system of extortion. Peter was his own best subject; and the tax rates of the 16th cent. were the highest the world had ever known. Papal taxation was enormously extended. There were heavy fees for almost every business in which the pope could interfere. Among the most offensive abuses were provisions, or papal nomination to prelatures, often not yet vacant; reservations, by which the pope reserved to himself the right to fill such prelatures or to grant pensions out of them; and annates, or firstfruits, invented by John XXII., or payment to the pope of the first year's revenue by every one receiving preferment. Provisions were politically important. It was an old custom in the 7th cent. that, if a bishop died at Rome, a successor was sent from Rome for the comfort of his flock. So, when Wighard died at Rome, Bishop Viitanen sent the Bishop of Tarsus to Canterbury. In later times this custom right was enormously extended. Not only bishoprics but other prebends were reserved by the popes for nominees of their own, without regard to the rights of other kings or other bishops or pope and papal nominees were commonly Italian or French, or from foreign nations. This system of reservations at last covered almost every preferment, and the strongest kings could scarcely resist it. Thus Nicolas III. refused Edward I.'s request for Bury, and nominated Peckham, who was English; and Henry III. was limited in England by the statutes of Prouinc and Prenuninie, and in France later by the Concordat of Boursie (1438). But the popes did not consider themselves bound by statutes, or even by their own concordats, and the kings often had reasons of their own for conniving at papal encroachments.

In truth, the popes had put themselves in a false position, above the laws of God and man. The Renaissance popes broke like a hammer upon the world, and plotted assassinations at their convenience, and knew that they could do so with impunity. When they found resistance in the growing strength of nations, their foreign policy shrank back on Italy, and centred on the acquisition, by fair means or by foul, of the territories for their nephews, so each new pope had to begin the work afresh for a new set of nephews. Similarly their domestic policy was to turn everything into a source of revenue. Everything was on sale at Rome, from bishoprics and divorces downward. Juliales were proclaimed; privileges, pardons, and the virtues of relics were sold wholesale all over Europe; and even the indulgences—the theory invented for them was purely academic—were no more than the latest development of a practical system of licences for every sin but heresy. 'God will not the death of a sinner, but rather that he should pay, and live.' Vanity Fair is the Rome of the Renaissance, drawn by an enemy, but drawn to the life, and in no small degree. Nor did the popes generally command personal respect. Some, indeed, were worthy men, and liberal patrons of learning and the arts. But not all were so. Paul II., who reigned during the Renaissance period the What else was to be ex harlots walked at noon and clergy! We need not refer against John XXIII.; perhaps the Council of Con to the efforts of the popes to secure tranquillity and justice when they suppressed the worst of them for decency's sake, and condemned them on the rest. Other condottieri may have been as bad, but they had not strayed into St. Peter's chair. So, too, some of the worst of the crimes ascribed to Alexander VI. seem to be society gossip; but the fact remains that he was a very bad man, and that the cardinals who chose him cannot have been much better. Such was the school from which the popes of the Renaissance came, and much of them worthily represented it.

At the end of the Middle Ages there was no dispute about the condition of the Church. From the bulls of the popes and the registers of the bishops to the inscriptions of the chroniclers and the lampoons of the profane, all the evidence of the time tells the same story of deep corruption without a hope of mending it. Two methods were imaginable. 'Heretics' might overthrow the Church system and replace it by something better; or reformers from within might clear away scandals and abuses. Both plans had been tried, and tried in vain. We need not ask whether the 'heretics' had anything better to offer, for they utterly failed to overthrow the Church system, or even to influence it—except in the reverse way, for terror of heresy hardened the Church to a savage cruelty which in the end turned every feeling of humanity against the persecutors. In fact, the 'heresiarchs' bear the mark of reaction, and, like other reactions, the Reformation itself included, took over a good deal from the Church. The Poor Men of Lyons broke up the Church to a savage cruelty which in the end turned every feeling of humanity against the persecutors. In fact, the 'heresiarchs' bear the mark of reaction, and, like other reactions, the Reformation itself included, took over a good deal from the Church. The Poor Men of Lyons, who broke up the Church to a savage cruelty which in the end turned every feeling of humanity against the persecutors, were the forerunners of the reformers within and among whom might be seen early signs of the same movement. The Cathari and Albigenenses took over the asceticism of the time, but developed it in an anti-catholic form. The Poor Men of Lyons belonged to the same movement as the friars, and were preachers like the Dominicans, but soon showed a taste for Scripture which the Church could not tolerate. Most of the sects held that the unworthiness of the minister
invalidated his services, and the later 'hereties' had a new grievance in the refusal of the Cup to the laity. By far the deepest thinker among these was Wyclif, who not only denied the Eucharist in England, but gave the tone to 'heresy' in Bohemia, for Hus did little more than copy him. Wyclif began as a political controversialist, and gradually became a religious reformer of the boldest sort. He and his followers, even of the pope, were only what many were thinking; and even his crowning enormity of denying transubstantiation as a philosophical absurdity — substance without accidents, and accidents without substance — had formidable blow that he aimed at the Church. His translation of the Bible and the mission of Poor Priests to preach it made the complete suppression of the Lollards impossible. They appealed to the same religious instinct as the early Friars, but turned it against the Church. But Wyclif's doctrines of 'dominion founded on grace' and 'no messe lords in the kingdom of God' were a deadly offence, not only to the Church, but to the ruling classes, nobles and landowners. Wyclif himself was not implicated in the Peasants' Rising of 1381, but some of his followers were in sympathy with the social unrest of the time. So the governing classes who urged Henry IV. to spoil the Church, 'Theology was heartily agreed upon by all.' The House of Lancaster, and, if Henry V. of Henry VI. was a simple-minded, yea, forsooth, Puritanical folk, treasuring stmy leaves of the forbidden Bible, and meeting secretly in the woods or the shuns, till they were merged in the Reformation. There was more trouble in Bohemia. Crusade after crusade was preached against the Hussites, and each failed more disastrously than the last, till Frederick of Hohenzollern persuaded the Council of Basel to divide the heretics by conceding the Cup. They turned against each other and at the victory of the moderates at Lejan (1438) Bohemia ceased to be the terror of Europe, though it did not cease to be troubled with heresy till it was brought fully under the yoke of the Hapsburgs by the 'discovery of the White Mountain' in 1620. The German Peasants' War came in 1522, and was more barbarously suppressed than the English; but, instead of serfdom quietly dying out afterwards, it lasted till Napoleonic times, and in Mecklenburg till 1831. Its religious bearing was partly the same, for the Romanists of course laid the blame of social unrest on the disturbers of religion. But social movements had few supporters but extreme men and Anabaptists. Luther attacked them with unmeasured violence, and the Church in Lutheran States was even more closely allied to the governing classes than in England.

Reform from within was an equal failure. The efforts of individuals, and even of popes, were always set aside by the classes in abuses. The successive monastic revivals had only partial and transitory effects, and even these had ceased to be possible since the decay of the friars. But could not the 'reform in head and members' spread by the influence of the uncrowned bishops? The idea was in the air. Philip the Fair had appealed (perhaps not very seriously) from Boniface VIII. to a General Council, and in 1414, when two popes, and latterly three, had been dividing the church, and each other even since 1378, a General Council met at Constance. When it had deposed John XXIII.,

it was faced by the question, 'Reform first, or unity?' It decided for unity, and allowed Martin V. to be elected. The mistake was fatal. The Council could not deal with a scandalous pope, and a decent pope could deal with the Council. Reform was now impossible. Martin had only to make a few vague promises in separate concordats, contemptuously rejected by France and England. The Council of Basel fell as completely as that of Constance. Men, whenever they thought it was bad, the rule of the bishops was likely to be worse. After all, the Councils were too orthodox to touch the worst difficulty—that the abuses were not simply sins of individuals or miscarriages of administration, but logical, natural, and necessary results of the teaching of the Church. Only a reform of doctrine could reach the root of the matter; and that was the last thing that the bishops desired. They burned Hus in defiance of the ejection of the reforming clergy and wars internecine by declaring that no faith was to be kept with heretics. The Council of Basel was forced by the exterminating Hussite wars to negotiate with the heretics; but it was as resolute as ever to allow no reform of doctrine. There it failed, and it vanished the last hope of real reform by a General Council. So by the end of the 15th cent. all were agreed that a drastic reform was urgently needed, but none could see how it might be made.

Something, however, had been done. In most countries particular abuses had been put down or limited by the civil power; and in Spain a real reform—of a sort—had been carried out under Queen Isabella's guidance by Cardinal Ximenes, armed with the special powers conferred on the Spanish sovereigns by the bull of 1482. Ximenes aimed at the restoration of discipline, the removal of abuses, the encouragement of learning in the service of the Church, and the merciless extirpation of heresy. He succeeded in all—witness the Spain of the 17th century.

The dilemma was only too plain. The heretics wanted drastic changes, but could do nothing; the bishops would have no reform of doctrine, and could not get it, while they would fight against the pope's opposition. Had this been all, reform might never have got beyond epigrams in Italy and growlings in Transalpine lands. The forces which made the Reformation possible were growths of the later Middle Ages. First came the rise of nations. The tribal kingdoms of the early Middle Ages and the local feudalism which followed them might well be crowned with a Holy Roman Empire and a Holy Catholic Church. But first the Crusades, then the decay of feudalism, then the growth of commerce and general intercourse, had called forth a new sense of national unity, represented in France, in England, and latterly in Spain, by national kings who could rely on the support of national assemblies for the asserton of national rights, while international intercourse was weaker or absent, as in Italy, Germany, and Scotland. The growth of nations in the 13th cent. may be measured by the failure of Boniface VIII. against Edward I. and Philip the Fair. The popes themn struck from the scene, and the whole scene idealised by the contests with the emperors, the Catholic ideal by their astute negotiations with separate nations; and now that the right divine of fallen emperors had come down to kings of nations, it was becoming possible to believe that the rights of the Catholic Church might be exercised by particular or national churches acting on their own discretion.
The intellectual position of the Church was not improved by the efforts of the Schoolmen to defend by reason a system based on an agnostic denial of the competence of reason in matters of religion. Thomas Aquinas got over the difficulty by sharply separating the kingdom of grace from the kingdom of nature, so that the two could have no contact. But this could not stand the subtle scepticism of Descartes. In his Outline of Rationalism was marked by the Ass of Buridan and other barren logomachy. It gave, however, an impetus to study; and the first discovery was that the papal claims which appealed to the False Decretals and the Donation of Constantine were based on shameless forgeries. This is when quiet learning begins. We see first an age of enthusiastic collectors—none more zealous than Pope Nicolas v. Then came an age of Christian Platonism, in Italy, often passing into frank paganism. If Greece was risen from the dead, it was not yet won by the NT in her hand. Some, indeed, of the scholars would as soon have worshipped Zeus as read the 'bad Greek' of the Gospels. In truth, the Renaissance was terribly wanting in moral earnestness till it reached more serious states of life. Alps was a sign of discontent with Latin thought; and the New Learning found an eager welcome in new universities like Erfurt and Heidelberg. England was a little behind; but in 1498 Colet was lecturing in Oxford. In 1508 and 1516 the works of Erasmus from the exclusive study of the classics to the NT and the Fathers. Erasmus' edition of the Greek Testament in 1516 marks an epoch; and the invention of printing gave the message of culture an early triumph which nothing could ever have attained. Popes like Nicolas v. and Pius ii. encouraged the New Learning; Julius ii. was a liberal patron of its art; and Leo x. was its worthy representative. Yet it was fraught with danger to the Church system. It revealed a world which was not Latin; and the romance of the Crusades pale before that of the old world of Greece. For a thousand years Europe had been moving in the Latin orbit; now it broke loose like a comet deflected by some great planet. When the Latin and Greek and ideals were compared with the older thoughts and ideals of Greece, and found wanting, and the Greek thoughts were not simply other than the Latin, but directly contrary to them. The spirit of the Middle Ages dissolved; the love of truth for its own sake—utterly foreign to a Church which had no conception of truth but as a tradition of the Church or a form of justice to our neighbours, and therefore set no value on truth of thought. The moral contrast was as great as the intellectual. The text of the Latin Church was 'De contemptu mundi,' and the sermon was more often 'Dies irae' than 'Jerusalem the golden.' To the natural man the goodness of God is always too good to be true: 'I knew that thou wast a hard man,' so the same spirit of unbelief which turned the gods of free forgiveness into a slavery of good works also refused the goodness of God in the common joys of life. When the saint denounced the gifts of God as he denounced the works of the devil, he fixed on them a brand of sin which no form of teaching could remove. They were tainted even for common men, as inconsistent with serious holiness. To men who had grown up in the Latin gloom the old Greek life and sense of order and beauty in the world came as a new light. They felt the message of goodness from the realm of truth. It might be that God 'giveth to all men freely, and upbraideth not,' but did the message of the Renaissance come alone. Feudalism was society organized for war; when a whole, through a political decay, there was more room for domestic life, for commerce, for learning, and for worldly interests in general. Then came the question whether the world was really as bad as the Church made out. The human vision shown that the higher life could be lived among the people; the Church itself had declared that poverty is not essential; and it only remained for the Reformers to renounce the asceticism and strive to live as children of God in a world which was God's world, and not the devil's. And this brings us once again to the individualism of the Reformations.

2. Principles of the Reformations. It would be a mistake to find the principles of the Reformations in the rejection of the pope or of transubstantiation, or to appeal to the moral authority of Scripture. All these are only inferences; the principle behind them is that the knowledge of God is direct and personal. Any man may help us with example and spiritual counsel, and the priest may minister to us the services of the Church; but in the end we must know God for ourselves. But this principle may be embodied in many forms. Mysticism is almost independent of history, and not even specifically Christian. But movement ever had a connexion with circumstances, as monasticism by the asceticism of the Middle Ages, the Reformations by the reaction from it.

Individualism implies the truth of the individual to judge for himself; and the Reformers invited men to see for themselves the untruth of the Roman Church. But they did not see that the principle was equally valid against their own churches. They merely limited to nations the monopoly of a mediæval Church; that is, the dissent allowed. Hence in theory they were as intolerant as the Romanists, though their practice was commonly less ferocious. There was no real advance when Germany came to a deadlock in 1555, upon the principle, 'Cujus regio, ejus religio;' and a similar deadlock is marked in France by the Edict of Nantes in 1598. These were only political compromises which ended civil wars. The real struggle for toleration was decided for Germany in 1648 by the Peace of Westphalia, for England in the Toleration Act of 1689, for France only by the Edict of 1787.

But, if the individual is to judge, by what standard is he to judge? Scripture or tradition? If Scripture must be interpreted by tradition, it is read into the script thus. The Reformers believed the Church may choose to say they mean, and the whole system rests on nothing more spiritual than an unreasoning assent to an unverified historical process. So the Reformers appealed to Scripture as a rational whole, to be interpreted by sound learning. In this appeal they are unanimous. Thus the Westminster Confession:

'The whole counsel of God, concerning all things necessary for his own glory, man's salvation, faith, and life, is either express set down in scripture, or by good and necessary consequence may be deduced from scripture: unto which nothing may be added or taken away by any new revelation of the spirit, or traditions of men' (ch. 1.).

Yet here, too, the Reformers hardly saw the depth of their own teaching. Calvin indeed, their one great systematic genius, expressly says that 'the word, however, the freezing had is a mirror which faith may behold God;' but that age could not see clearly that God speaks, not in Scripture only, but in nature, history, and life. Rome was right in looking to history for a revelation, but the merely literal. The Reformers were right in instead of seeing all history illuminated by the living Word of whom Scripture speaks. Moreover, the Reformers carried over from the Middle Ages the conception of revelation as a code of law. This blinded them to the progress of revelation, as if everything contained in Scripture were not only
The baptism in which righteousness was declared to be "a right straith Epistle" compared with that to the Galatians; and Calvin was too good a scholar to ignore the doubts about certain books of the NT. But to their successors inspiration became more evident, as in "William Dunbar's Other Peter," and the rabbis the inerrancy of the text. The worst offenders were some of the English Puritans, who held that Scripture is a complete rule of conduct, so that no command is lawful without its express warrant. Hence the increase of infractions, and the bishops, having forgotten the archbishops; or, in more sober form, God is not the legislator of His Church, unless He has prescribed its government. This caused much straining of texts, and often led to great absurdities, as when the Puritans objected to square caps on round heads, and Laud replied by proving from Scripture that heads are square (Ls 1520, 'Ye shall not round the corners of your heads'). One of the worst mistakes was about Sunday. The Reformers saw that it was more than a feast of the Church like All Souls or Corpus Christi; yet neither Luther nor the English Reformers nor even Calvin identified it with the Sabbath. But the tendency to find in Scripture a code of law made some of them have not altogether given up a Sabbath. The best excuse for it is the formal services and noisy games—themselves an inheritance from the Middle Ages—of an English Sunday under Elizabeth and the early Stuarts. It must be noted that, when the objections were met, the ger- scent of Antichrist, their scruples were commonly definite objections to definite things which in their times ministered to vice. In the stage, e.g., there is a steep descent from Shakespeare to Massinger, and again from Massinger to Dryden and other foul creatures of the Restoration. So against bear-baiting they entered the same plea of humanity as we should. They had very little of the ascetic's vague dread of the pleasure generally, as thought every creature of God were bad, and as they were very often married to each other.

The appeal to Scripture had far-reaching con- sequences. Whatever was contrary to Scripture must be reformed; and in some cases omission is prohibition. Thus transubstantiation is suffi- ciently improper, because the doctrine became impracticable. It cannot be proved by Scripture, and the silence of Scripture about prayers for the dead is significant.

Sooner or later the Reformers always came to the conclusion that the first great practical evil was the authority of the pope. On this they were all agreed, though Melanchthon added to the Schmalkald Articles a note of his own, that, if the pope would allow the gospel to be preached, his authority might be accepted for the sake of peace and unity, but humanum purum only. This, however, was an extreme concession which gave great offence, for the rest were much more disposed to call him Antichrist and the Man of Sin. We must note Melanchthon's condition—'if he will allow the gospel to be preached'—because it shows that the objection was at bottom practical. The papacy was contrary to Scripture, not simply because there were sundry texts against it, but chiefly because it was the centre of a system which had been shown to be wrong. It was an attempt to void the righteousness of God revealed in Scripture. Justification was by faith (which Luther defined as trust in God), and by faith only, whereas the whole system ruled by the pope was an elaborate scheme for setting up a righteousness of our own which was not of faith. The sacraments were not simply signs or means of grace, but channels which conveyed it. The Church gave spiritual life to the infant in baptism, nourished it with the Eucharist, consecrated it with matrimony or orders, renewed it in penance, and finally sealed it with extreme unction. And sacraments had their efficacy ex opere operato—from the due (rite) performance of the ceremonial with intention on the priest's part. They conveyed grace 'always and everywhere and to every Christian individual (sane, potest, imponemus). The Council of Trent nowhere expressly tells us what constituted a bar, though we may safely say that unconfessed mortal sin was a bar; but, if baptism conveys grace always and everywhere, the bar is the loss of faith—it is clear that want of faith is not a bar. The faith of the parents or of the Church is not the faith of the person concerned, and is therefore in this connexion irrelevant. Thus the whole sacramental system was involved in the primitive confusion of matter and spirit, magic and religion. Moreover, to put it in another way, the message of the gospel is one of free forgiveness—not that forgiveness will be given some day on conditions, but that in Christ it is already given to all that will by faith receive it. 'By grace you have been saved through faith.' Faith—trust in God—is necessary for salvation, and sufficient for salvation. Works are the outward signs, but only the outward signs, of a good or a bad heart, and in and for themselves are never works of grace. In the English Puritans, of course, assurance in the act of justification by works. Baptism indeed carried free forgiveness of past sins; but, if a man sinned after baptism, as he always did, he would have to earn forgiveness by good works and penances, and, if those penances were adequate, he paid the balance in purgatory, where accurate accounts were kept of sins and compensations for sins. But certain sins called mortal needed confession to a priest and absolution, if the sacraments necessary to salvation were not to be refused by the Church. Thus attention was concentrated on sins instead of sin, and on sins not as the signs of an evil heart—the particular answers that it gives to particular temptations—but as so many separate debts to God, which had to be paid or compound for. Indeed, it has been said that the English Church required good works and penances. Penitentials—such and such penances for such and such sins, irrespective of motives and circumstances—date back early in the Middle Ages, and commutations or remissions were known for years. The whole pilgrimage was meritorious, and a crusade atoned for all sins. The next step was that others might be paid to do the pilgrimage or to go on the crusade; and at last money was frankly accepted instead of good works. Further, a debt was cancelled in Roman law by payment, whoever paid it; so a vast system arose of vicarious satisfaction through the merits of the saints—a new application of the communio sanctorum. The climax of this was the traffic in indulgences (q.e.), which was the occasion for Luther's protest. The theory of these may be left to the canonists; in practice they were certainly understood by sellers and sinners alike as a public sale of licences for sins.

This is what made the Church system intolerable to so many persons of serious religion. Some, indeed, were content to pass lightly over its bad sides, many thought reform hopeless, a few took refuge in the detachment of mysticism; but many again were stirred to action, not simply not only that the papal claims were unfounded, or that the Church was full of scandals, or that this or that doctrine was untrue, but that the system as a whole was a practical hindrance and not a help to devotion. Luther himself was a model of ascetic piety till he found in practice that, in St. Paul's words, it was of no value,
tending only to the full satisfaction of the carnal nature. And to this conclusion the more earnest Reformer always came. The Church stood not simply in error, but in deadly antagonism to the living heart of Christ. It had returned to the principles of Pharisaism, and made the Saviour's work of none effect. 'If righteousness come by law, then Christ died in vain' (Gal 2).

3. Outward forms of the Reformation.—Form being something which clings to the external, it might be superficial too. Apparently similar principles may issue historically in different forms, while apparently similar forms may conceal different principles. But form is the outward and visible sign which the world understands, and it always expresses a principle, though not always the deepest, so that we shall find it convenient to use the familiar classification of the Reformed Churches as Lutheran, English, and Reformed, meaning by the last the Zwinglian and Calvinistic Churches of the Continent and Scotland. Only we must not take for granted that their deeper affinities are precisely what their outward forms may seem to indicate. Each of them in different ways came nearer than the others to the Latin, though the Continental Calvinists had at times brunt battle with Rome, it does not follow that their deeper principles were more unlike the Latin. The importance of the English Church and the difference of its government require for it an independent and original scheme of the Lutheran and Reformed Churches. The doctrine, however, laid down especially in the Articles, is entirely that of the Reformed Churches, and was fully recognized as such on both sides, though predestinarian and antinomian as do not exclude Arminianism. It is simply said that man 'is very far gone (quam longitudinal) from original righteousness,' and there is nothing about reprobation and irresistible grace. Thus it takes off the edges of the stricter Calvinistic doctrine. In addition to these three branches and their offshoots, we have the Arminian reaction from Calvinism, while Moravians and Quakers form an appendix of mysticism, and we cannot entirely ignore Socinians and Deists, though they pushed some of the Reformation into a denial of its fundamental doctrines.

On some great doctrines all the Reformed Churches were agreed; and these we shall review before we come to their differences. They were agreed that the revelation of salvation through Christ is contained in the Bible to the exclusion of tradition, and that the meaning of Scripture is determined by reason and scholarship, and not by any Church authority. Every Church must of necessity declare the terms of its own communion, but there is no infallible authority declaring truth. The chief exceptions are the Socinians, who limited the authoritative revelation to the NT, and the English Carolines, who spoke much of antiquity and general councils. In this, however, they had no intention of setting up tradition in the Romish way as a continuous inspiration which practically superseded Scripture; they were only giving to times of 'primitive purity' a weight which it never had. The English Reformation Churches were also agreed, except the outliers, in the full orthodox doctrine of the Trinity and the Incarnation. The only peculiarity is the Lutheran Communia communicatio. Theories of a Real Presence consistent with a reception which is not a communicatio communes, but a 'communicatio minuta' had before them the difficulty that the divine element of Christ is not carnally pressed with the teeth, while the human is not present everywhere, and 'the flesh proflieth nothing.' Rome calls transubstantiation a mystery, and leaves it a contradic-

tion of reason; but the Lutherans had to reconcile their consubstantiation with reason, and did it with their peculiar doctrine of the Incarnation, that the properties of the divine nature (ubiquity in particular) were communicated to the flesh. This is practically Monophysite, and carries the important consequence that the Body and Blood of Christ are verily and indeed taken, not only by the faithful, but by all who eat and drink in the Church. In the Reformed Churches, while they acknowledge the consubstantiation, they are generally agreed on the sacraments, accepting Baptism and the Lord's Supper, and denying the sacramental character of Confirmation, Orders, Matrimony, Penance, and Extreme Unction, and the confirmation of the Lutherans and the English has little more than the name in common with the Romish sacrament. The Calvinists have generally replaced it with some form of admission to communion.

The Reformed Churches are further agreed that the work of Christ upon the Cross is complete and final, in the sense that there can be no more sacrifice for sin or priests to offer it, and also that no good work of man can have any way contribute to salvation. Of the whole Church system there is nothing that they denounce more fiercely than the doctrine that the Mass is a true propitiatory sacrifice for the sins of the living and the dead. Thus, when the Council of Trent anathematized those who called the sacrifice of the Mass blasphemies, the English Church replied in deliberate and direct defiance that such sacrifices 'were blasphemous fables and dangerous deceits.' With the sacrifice went the sacrificing priest. The minister of Christ was restored to his true dignity and office, to preach the Word and offer with his people the higher sacrifice of praise and thanksgiving—'with them,' not 'for them,' for all the Reformed Churches use the vulgar tongue, and invite the people to take their part in the services. And, if the work of Christ upon the Cross is complete, then, as the Augsburg Confession points out, nothing can be added to it by any good works of our own. All that we can do is to receive it, and be thankful for the justification which is God's act for Christ's sake, and the faith by which alone we can receive it is its result and not its cause. And, if faith itself is not a merit which claims reward from God, still less are good works, which are no more than the natural expression of faith before men. Least of all is it possible to acquire merit by doing more than God commands. Any such teaching directly contradicts the plain words of Christ.

The most conspicuous cause of the differences among the Reformed Churches has been the action of the secular power. That action was entirely favourable only in Scandinavia. The favour of the princes in N. Germany and of the cities in the south-west was partly balanced by the hostility of France. The English Reformation reactions before the Reformation was settled by Elizabeth. The secular power was hostile in Scotland, France, the Netherlands, Bohemia, and Poland; and in Spain and Italy it suppressed the Reformation. In many of the other countries there were long struggles, but in the end the Reformation was finally defeated in France, Bohemia, and Poland; in the United Provinces and Scotland it prevailed. Where the princes favoured it, they commonly had tried it—and shaped it—for political ends; where they were
hostile, it took its own course. Thus England would certainly have declared for Puritanism if Elizabeth had not, with political advantage in a show of Lutheranism. Few, indeed, of the sovereigns had much personal zeal for the Reformation—Edward VI. of England and Christian III. of Denmark excepted. In England and Scandinavia the Reformation was a revolt of the laity, headed by the king, against the overgrown wealth of the Church and the vexatious claims of the priests; and this could not be carried through without a great reform of doctrine, for the pope's bishopric had become a German court in the very end of the Middle Ages. George III., was bishop of Osnabrück from his infancy till 1602, the commentator Bengel was abbot of Alpirsbach, and a sister of Frederick II. closed the long line of abbesses of Quedlinburg. In some countries the old Church was swept away.

In Sweden Gustavus Vasa could plead dire necessity; and the Recess of Westerås (1527) placed in his hands the whole property of the Church. He took the castles of the bishops and some of their estates. The monasteries were partly taken by the king, partly granted to the nobles, and those founded since 1454 were resumed by the heirs of the founders. But there was no violence. Monks and nuns were free to stay or leave; and one or two houses were left on till 1565. In Denmark the estates of the bishops were given to Christian III. in 1536, but the royal power was not strengthened as in Sweden and England. The gain fell to the nobles, as in Scotland.

In England the monasteries fell first. They were granted to the Crown, the mayor houses in 1536, the larger in 1539. Some of the property was used for six new bishoprics and other foundations, or for the defence of the realm; but the larger part was granted or sold on easy terms to men in favour at court. Thus a new nobility was formed, pledged to the new order of things. But the monasteries had appropriated the tithes of many parishes on condition of providing for the services; and this right and this obligation came to the new owners. So far then the parishes lost nothing; and, if the new proprietors were laymen who frankly treated the tithes and advowsons as private property, they did no more than the monks had done before them. It was the same with the chantries, which were dissolved by the Ten Articles of 1536 that masses cannot deliver souls from purgatory, and were suppressed in 1547. The parishes, however, lost much by the suppression of pilgrimages, relics, and other lucrative superstitions; and the churchwardens, who defended the chancels against the younger Wittelsbachs from 1583 to 1761. But in the reformed states the sovereign rights of sees were abolished, and the titular bishops were laymen and lived as laymen. The case was similar in the Empire. Wherever the emperor, under the old system, had granted a bishopric to a prince, the emperor took it back when the prince became a Protestant. Thus the sees of Osnabrück and Minden were commonly held by younger sons of Brunswick and Brunswick-Lüneburg, and other princes were not allowed to lay claim to them. Certain half-ecclesiastic, half-secular cadets of the Wittelsbachs from 1583 to 1761. But in the reformed states the sovereign rights of sees were abolished, and the titular bishops were laymen and lived as laymen. The case was similar in the Empire. belief round predestination and election. The English Church made no such distinctive doctrine avowedly central, but the central place was practically held by the supremacy of Scripture. Now this means that Lutheranism was in fact intensely conservative. It removed practical hindrances to true religion—and they were many—but had no special interest in further changes. Luther's was the genius of vivid insight, not of systematic thought, and the other Reformation leaders were of the same mind. So, once was enough. Or, as he was obliged to change. The English Church was conservative too, but more logical and systematic; and by its emphatic disavowal of any reception in the Lord's Supper which is not 'only after an heavenly and spiritual manner,' it was enabled to deal more boldly with the Mass and the ceremonies generally. Calvinism stands apart from the others, for the individualism which to them was fundamental was to the Calvinists only an inference from their really fundamental doctrine of the absolute sovereignty of God. On that doctrine their whole system was moulded, and everything that seemed to conflict with it was ruthlessly swept away. The older the error, the more dangerous it was; and the more innocent the 'vulgar' the stronger was the reception of its thesis and the more resisted. Hence the Calvinists were much less conservative than the Lutherans or the English. If the old system went about to establish the righteousness of man against the sovereign grace of God, as it attempted to do, they would not Count it not only false in principle, but bad in all its details. The farther from Rome, the nearer to Christ.

These different ways of thinking were reflected in the different forms of Church government which always seem the chief things to the natural man. In the Church of the Middle Ages there were priests to offer sacrifice for the living and the dead, and these priests were ordained by bishops, who were themselves consecrated by other bishops who were supposed to trace their spiritual descent in an unbroken succession to the apostles. Thus ordination, consecration, and apostolic succession (three legal questions) were vital. The Reformers cut through all this; but even the Quakers had a regular call by the lawful authority of the Church, usually with admission by prayer and laying on of hands—for elucidation and solemnity, not as impressing any sacramental or indelible character. But here again Calvinism stands apart. To the Lutherans and the English Church government was a matter which every Church must determine for itself. No form of government and no ceremony of worship is officially held to be ordained of God. However ancient or edifying it may be, it is still only an ordinance of men, which may by men be altered or abolished. So they used their discretion in various manners. But, as it is usually the case, that what is done without the sanction of the State implied the sanctity of the State, so that the civil ruler was the natural representative and ruler of the Church also. Thus Lutheran churches have commonly been Erastian, seldom giving serious trouble. Catholics who did not go into Romanism or Calvinism. The old services and ceremonies (e.g., altar, vestments, etc.) they generally retained, only translating them into the vulgar tongue, and removing or explaining superstitious allusions. As regards Episcopacy they had no objection of principle to it. But, when the bishops refused, the results were various. In Germany the spiritual office was abolished, and the princes took over the general government of their churches. The bishops had consisted of courts where lawyers and divines vied together; and these, with extensions and modifications, became the chief subordinate authorities. In Denmark the bishops were equally intractable, and played a great part in the civil war after the Reformation. When Henry VIII., III. had captured Copenhagen in 1536, he arrested the bishops, and set them free only after their jurisdiction had been abolished by the National Assembly and the goods of the Church given up to the king. Thus Christian appointed seven superintendents to work under himself as summi episcopi, and these were consecrated, not by bishops, but by Luther's friend Bugenhagen, and soon took the title of bishops. There was no consistency. Sweden was more conservative. There the bishops were intractable, but Gustavus Vasa mastered the Church once for all at the Riksdag of Westerås in 1527; and Brusk of Linköping, the champion of the old order, left the country in despair. The vast estates of the Church were as a matter of course placed at the king's disposal. But the change was gentle and gradual: there were no martyrs on either side. The Mass was translated into Swedish and the ceremonies were explained. 

Function, e.g., was only a matter of a change in the interpretation of the Spirit. The forms of Church government were very little changed. The old bishops were gradually replaced by Lutherans, chosen by the clergy and consecrated by other bishops. Even if the episcopal succession were not observed (though this is disputed) by the unwilling hands of Petrus Magni of Westerås, though the Swedish Church leaves its spiritual value an open question. There was no central consistency—Gustavus Adolphus tried in vain to establish one—but parish priests are appointed by the bishops, and all dignitaries must have ring the king's approval.

The English Reformation took generally the same course as the Swedish, though the changes and the reactions were much the Ving's. The Tudors were stronger than the Vasa, and the antagonisms between Papalists and Nationalists, and between Catholics and Reformers, were much sharper than in Sweden. The English Church was Erastian because it was national, and therefore fifty represented by the civil power, and because the further the dangerous political situation after the separation from Rome induced the English people to give Henry VIII. a practical dictatorship. Thus the strong monarchy of the Tudors was raised to its height by the Reformation. Henry VIII. mastered the Church once for all at the 'Submission of the Clergy' in 1532. The king was acknowledged as Head of the Church—Supreme Head; convocation was not to make or even to suggest the laws. The Church was a state, and, if the election of bishops remained with the chapters, they could elect none but the king's nominees. The king's supremacy was not exercised through a consistory, but in a harsher form by direct orders from the crown. There was nothing less offensive to title of 'Supreme Governor,' though she claimed the same powers as her father, and exercised them through the Court of High Commission (not fully organized till 1583), which was as it were an established National church. As regards Episcopacy it was preserved not only the rite of consecration but the apostolic succession. She may have cared for it as little as Gustavus Vasa, but its political value was evident, especially when it suited her to pose like a Lutheran prince prescribing the religion of his subjects according to the Peace of Augsburg.
Thus the English Church has it as a matter of fact, but has nowhere officially declared it to have any other than the civil privileges of the other Church, to have any before the rise of the Carolines, which is commonly dated from Bancroft’s sermon in 1559. There is no mention even of Episcopacy in the English definition (Art. 19) of the Church; and, though no one has been allowed since 1662 to minister without episcopal ordination, this is given simply as a domestic rule ‘in the Church of England,’ and passes no censure on churches which otherwise ordain. In Church government then the English Gardiner passed a great deal of local independence in public worship they took a bolder line. The various books and the local uses were consolidated into the single national Book of Common Prayer in English for congregational use. The services were generally simplified, and the excessive number of the ceremonies was much reduced. Morning and Evening Prayer in 1549 contained little that was not in the Hours, and the Marriage Service is even now nearly what it was in the Middle Ages, nor was the Mass itself entirely changed. It was translated and much simplified; but it was still said by a priest in a vestment at an altar, and still provided for private confession and absolution. Its doctrine was upon the whole a spiritual Presence, but it was quite consistent with consubstantiality, though English Gardiner made a good deal of pleading to get transubstantiation into it. But in 1553 the Prayer-Book was ‘godly perused’ and revised. Invocation of saints and prayers for the dead were entirely removed. The ‘Service of the Lord’s Supper or Holy Communion’ was now to be said by a priest or minister in a surplice at the Holy Table. It provided for spiritual help and ghostly counsel, but individual confession was limited to the visitation of the sick, and even then it was neither private nor compulsory. Moreover, the whole structure of the service was changed for the deliberate purpose of disavowing every sort of Presence that is not purely spiritual. Every passage quoted by Gardiner was altered. The Canon of the Mass was broken up into three parts. The prayer for the whole state of Christ’s Church was limited to the living, the prayer of consecration was brought close to the administration in order to prevent ‘eucharistic adoration,’ and the obligation of the elements was turned into an optional text. The Church of England is still a Church, and the elements had been consumed. Thus in public worship the English made greater changes than the Swedes.

It will be noted that in N. Germany in Sweden, and in England the new churches were or soon became national, not simply as independent of Rome, but as true expressions of national character. Luther was so intensely German that his influence continued to dominate the North, even after the end of Calvinism in the latter half of the 16th century. In Sweden the new religion owed its consolidation to the services of Gustavus Vasa, the reaction against John III. and Sigismund, and the work of the great kings of the 17th century. Dissenters were few and anathematized, and the per cent. of dissenters are less than one per cent. In England the transition was during the peace of Elizabeth. A nation which in 1538 was hardly more than disquieted with the fires of Smithfield had become firmly Calvinistic in the latter half of the 16th century. By 1558, and never wavered afterwards. Even the Carolines (except a few creatures of Charles I.) were heartily opposed to Rome. But from the beginnings of Christianity in England there was a party which, while it was never the majority, yet was usually a majority, and which was always dominant, except in the time of the Civil War, preferred the regular and stately services of a national Church. The other, represented in successive ages by friars, Lollards, Puritans, and Dissenters, leaned to the freer ministrations, but in order to win the good graces of the Reformers and, for a moment successfully, to bring the whole nation into a single Church. That hope was wrecked by the tyranny of Bancroft and Laud; and, if the tyranny of the Caroline princes was as alien and as unpopular, the tyranny of the Restoration shut out men who stood for one whole side of the religious life of England. It condemned the Church to be a sect, yet a sect in which the other side is not for the necessary limitation of grace, so that the Caroline doctrine is shown at once by its powerful influence on English Dissenters and by its conspicuous failure to win the Celts of Wales and Cornwall.

Unlike the Lutheran and the English Churches were the Reformed. This marked historic difference is that they had the secular power against them everywhere but in the cities of the southwest—roughly, from Frankfurt and Lindau to Geneva. Where that power was friendly, they were guided and controlled by burgheers instead of princes; where it was hostile, they had to form their churches as the early Christians did, according to their own conceptions of doctrine and expediency. As the Romish sacerdotalism created an aristocracy of priests who alone could dispense the necessary ministrations of grace, so the Calvinist doctrine of predestination created an aristocracy of the elect, for whom alone Christ died, who alone received saving grace and alone properly constituted the Church. This aristocracy was created not by some visible rite of ordination, but by God’s eternal counsel secret to us, so that it could not form a visible class in the Church. The chief of sinners might be of the elect, and an apparent saint might prove a reprobate. So, while the distinction of priest and layman was denied, the acknowledged difference of elect and reprobate had to be ignored in the organization of the churches. Calvinism is indeed an inspiring creed—that God has foreknown me from all eternity, and sent me forth to do in His strength and not my own work predestinated for me before the foundation of the world. It is the creed of the strong, as asceticism is the creed of the weak, when neither the one nor the other can rise to the higher faith, that Christ died for all men, and not in vain. It is only half truths, and if it were not for the necessity, it must be treated in practice as if the limitation were false. As every Calvinist in his right mind believes himself to be elect like the boy in the English Catechism, he must presume that his neighbours also are elect, though he believes that some of them are not. It was like our own very necessary convention that our neighbours are honourable men, though we know that there are knaves among them. Only, a knave can sometimes be found out, a reprobate never. Hence a Reformed Church was in theory a democracy, with all spiritual authority deriving from the people. This principle was extended to civil authority by the English Independents in 1647, though the Commonwealth could not long outlast the Puritans vailed in America, where it was favoured by colonial conditions, and from America it was brought back to France, and became the basic principle of the Liberal movement of the last century. It created a series of new Churches and a free Church independent of the State; and to this ideal the Reformed doctrine pointed almost as clearly as the Romish. But the condition of freedom is persecution. The State cannot refuse to be a republic of opinion. This is clearly what is tolerated, and cannot decide them without judicial interpretations of its confessions and deeds of settlement. Hence the Reformed Churches
became subject to the State the moment they had mastered it. The burghers of Zürich or Amster-
dam might be the stoutest of Protestants; but they were determined to keep the ministers in their place, and allow no such clerical rule as that from which the Reformation had delivered them. They had none now, and the English had none then—to what we should consider a most vexatious interference with private life. They were used to it. Every town was full of sumptuary laws and minute regulations, and the wardens and authorities enforced them with the severity of law or less made little difference. But there was more than this. Calvin's high estimate of the Lord's Supper and of the primitive Church led him to demand the restoration of the primitive discipline and its enforcement by the secular power; and in this the Reformed Churches generally, including the English, were more or less inclined to agree with him. They had some reason. Public morals were in a dreadful state, and this was keenly felt, now that the new preaching had roused the public conscience, which the medieval Church had so debauched with formal righteousness and easy payments for sin that the foulest crimes passed with no more censure than in the old pagan times.

The new discipline was hideously severe and did inflict much moral pain, but in the end it proved more salutary than the old would have been, if the Church had not preferred to make a traffic in sin. It was at least impartial. Magnates and even ministers had to do their public penance like other sinners. Neither the ministers of Geneva, nor the Scottish Kirk, nor the High Commission in England showed any respect of persons. None the less the system hardened the saints with formalism and spiritual pride, and drove the sinners to hypocrisy or despair. It was long before the Reformed Churches could shake off the belief taken over from the Middle Ages that it was their duty to punish sin as with spiritual censures enforced by temporal penalties. But laymen were jealous of this dangerous power of excommunication, and modern churchmen like Bullinger disowned it. In Germany, Switzerland, and Scotland it was not allowed at all; in French Switzerland (even in Geneva) and in Scotland it was not permitted to purely clerical authorities. In England the frequency of excommunication and its effect were both much greater, particularly the censure against the early Stuarts; and the endeavor of the Presbyterians to introduce the Scottish discipline was foiled by the lawyers, the Independents, and the nation generally.

On the other hand, there was a doctrine which partly counteracted the natural dependence of the dominant sect upon the State. The holiness of the Church was nowhere more of a living truth than in the Reformed Churches, for they believed as any Romanist that it was ordained of God and guided by His Holy Spirit. Eternal preservation was a still mightier inspiration than the August tradition claimed by Rome, and there was no double standard of priests or monks and laymen, as in the Church of England. If the ministers could stand up as boldly as any bishops against wickedness in high places, they did so with a courage which, though not wanting, was less often seen in the more courtly life of the Roman Church. The Reformed Churches brought much more trial of persecution than the Catholics, for the Peace of Augsburg left them free to fight the hardest of the battle against the encroachment of the savage Catholic revival. Small regiments of freemen and narrow, quarrelsome and overscrupulous, but they were not fully represented by such extremists as Puritans, Covenants, and Camisards, who were more or less demoralized by Stuart or Bourbon tyranny. If we look to more peaceful churches like those of Zürich or Strasburg, or to the early stages of the Reformation in Scotland, we shall find greater moderation. Calvin himself charged the English Liturgy of 1552 with nothing worse than tolerabilia ineptias, and the one light—preached from the pulpit, and none omitted and some freedom to the minister—till they were disgusted with all forms of prayer by the attempt of Laud and Charles to force an English form upon them. Bucer and even Laski 

REFORMATION 861
be followed by something lower still. If there was much honest ignorance in the Middle Ages, there is much organized falsehood now.

Of all these evils the Reformation was the occasion, and of some the cause; and to these we may add the Reformation in its influence on the monasteries and in the corruption of the upper classes by the plunder of the Church, the mischiefs caused by the too great subservience of the Lutheran and English Churches to the State. We now look at the other side. The abolition of a mischievous and sometimes unfriendly foreign authority gave the nations freedom to develop themselves, and made better order possible in both Church and State. What were scandals in the 18th cent. were matters of course in the 16th. National character became stronger and more earnest, and gained a new sense of duty from the new responsibility laid on every man when the new teaching abolished auricular confession, swept away a vast amount of superstition, and turned the superintendence of the monks to the removal of the poison from family life by its emphatic rejection of the ascetic ideal; and all this was summed up in a rational worship constantly challenging comparison with an open Bible.

Yet all these were the side of the mighty evolution. The depth of meaning in the principles of the Reformation was reached slowly and through many conflicts, and is not exhausted yet. The Reformers were men of their own time, and took over from the Middle Ages many beliefs inconsistent with their own principles. They took over the old imperial conception of God as a despot in heaven, the old view of the gospel as a law of commands, the old belief in a rigid visible Church which could allow no dissent, and the old reliance on penitential disciplines of the State. All these are finally inconsistent with the indefinite character of the Reformation. A God who calls for freedom and democracy proclamation by the Reformation meant freedom first for heterodoxy. Persecution on the large scale was made impossible in Germany by the Peace of Westphalia, in England by the Revolution, in France by Voltaire and the Constituent Assembly. It meant also political freedom, and the growth of freedom is bringing the whole conception of government into better accord with the divine ideal of goodness and unselfishness. All Protestant states except retrograde Germany were saving nations, and the Catholic states nearly in proportion to their independence of Rome. The freedom won for criticism and science has been the occasion for many excesses; but the broad result emerging is confusion to the truth of the dissent done in the spirit of the Christian Church. Above all, the free appeal to history has shown that the gospel is larger and more varied, freer and more loving, than our fathers knew. The Reformation opened the way to a vision of God and the vision of God is the inspiration of men.

LITERATURE.—Dr. Gwatkin had finished this article, but had not added the literature, before his death. The following list has been prepared by the Editors.

The writings of the Reformers and the works of leading Church historians may be consulted for the history proper of the Reformation. Exhaustive lists of authorities will be found in the bibliographies attached to The Cambridge Modern History, I., II., Cambridge, 1902-04. In vol. I., The Renaissance, the section by W. Barry, describing 'Catholic Europe,' may be referred to, and that by H. C. Lea, on 'The Eye of the Reformation,' is also valuable. Vol. II., The Reformation, gives the history of the movement in the different countries of Europe. Vol. III., entitled The Wars of Religion, deals with those international and other conflicts which gave their origin to the Reformation.

In 1579 the title, 'the Reformed Dutch Church in North America,' was given. The min Synod at the adoption of the Constitution term, 'the Dutch Reformed Church in America.' But the name on the title-page of the first edition of the Constitution, printed in 1819 is 'the Reformed Dutch Church in the States of America.' The same title appears in the second edition of 1815. In subsequent years it is 'the Reformed Dutch Church of America.' The act of incorporation of the church in 1819 gives the name as 'the Reformed Protestant Dutch Church.' In these terms the name Aked and geographical position of the Church is defined. It was 'Protestant' in contrast to Roman Catholicism. It was 'Reformed' because it belonged to the school of Calvin rather than that of Luther. It was 'Dutch' because Holland was the country of its origin. The expression 'American,' 'North America,' and United States in its title, as its designation of time the title was considered cumbersome the word 'Dutch' inappropriate, since the church had become thoroughly American, the name was therefore changed to 'the Reformed Church in America.'
The Dutch colony in America was established in 1624. The colony was chartered by the Dutch West India Company, which was founded in 1621. The company was the first European company to establish a colony in America. The colony was located in the Caribbean and was intended to be a source of wealth for the company. The company was governed by a council of governors, who were appointed by the Dutch government. The council was responsible for the administration of the colony.

The colony was founded on the principle of religious freedom. The Dutch were known for their tolerance of religious differences, and this was reflected in the colony. The colony was divided into two parts, the Dutch Reformed Church and the Dutch Presbyterian Church. The Dutch Reformed Church was the established church of the colony, and it was supported by the government. The Dutch Presbyterian Church was a separate church, and it was not supported by the government. The two churches were allowed to operate independently, and they were free to conduct their own affairs.

The colony was also characterized by a strong tradition of free speech. The Dutch were known for their love of freedom of speech, and this was reflected in the colony. The colony was a place where people could express their ideas without fear of persecution. The colony was also a place where people could practice their religion without interference from the government.

The colony was also characterized by a strong tradition of education. The Dutch were known for their love of education, and this was reflected in the colony. The colony was home to a number of schools, and it was a place where people could receive a good education. The colony was also home to a number of colleges, and it was a place where people could receive a good education in higher learning.

The colony was also characterized by a strong tradition of commerce. The Dutch were known for their love of commerce, and this was reflected in the colony. The colony was home to a number of businesses, and it was a place where people could engage in commerce. The colony was also home to a number of banks, and it was a place where people could conduct business.

The colony was also characterized by a strong tradition of politics. The Dutch were known for their love of politics, and this was reflected in the colony. The colony was home to a number of political institutions, and it was a place where people could engage in politics. The colony was also home to a number of political leaders, and it was a place where people could interact with them.
Yet they realized the necessity of theological education, and Domine Ritzema evolved the plan of a Dutch Divinity professorship in the newly-organized King's College, in New York City. The plan was adopted, but the chair was never occupied.

In 1732 the Conference addressed its apologies in an 'Assembly subordinate to the Classis of Amsterdam.' The next year by special permission they ordained one young man.

The Classis of Amsterdam did not understand conditions in America. At first they favoured the Congregate, but in time they perceived that the freedom usurped by the Coetus was necessary to the life of the American Church. John Henry Livingston, sometimes called 'the father of the Reformed Church,' was influential in enlightening them. A well-informed American, he studied theology at the University of Utrecht in 1765-70. He took every opportunity to explain conditions in the American Church to members of the Classis of Amsterdam. In Livingston's return to America he became pastor in New York City, and the next year (1771) under his influence a peace conference was held. At this a plan of union, proposed by the Classis of Amsterdam, was presented. Both parties were then disposed to strike, and peace was obtained with surprising ease. The freedom desired by the Coetus was secured, and the feelings of the Congre- gate were soothed by the adoption of names not connected with the old disagreements. An organ- ized body, with wide power to ordain, and five 'special bodies' were grouped under it. The Church, now acknowledged independent, was about to enter upon a full ecclesiastic and religious life.

But in the Revolutionary War the church of New York City received constant appeals for aid from weak churches. To these she seldom turned a deaf ear. Several Domestic Mission Societies were organized at different times, and the Board of Missions, with such aid as was born in 1831. Its chief work is to aid feeble churches and to organize new ones in proper places.

Many of the strong churches of the denomination have received aid from it in their infancy. The first year of its existence its income was $6,400. In the year 1915 it received $197,555.55.

Foreign missionary work has received unusual attention. The first society for this purpose was organized in 1786. From 1826 to 1832 the Reformed Church in America Board of Commissioners for Foreign Missions, with the American Board of Commissioners for Foreign Missions, from 1832 to 1857 their relation with that board was that of co-operation. Since 1857 the Reformed Church has conducted its foreign mission work independently but with hearty co-operation with other Churches in the foreign field. The receipts of this board in 1915 were $300,752.51. The board at present maintains five missions, viz. Amoy, China, 1842; Aracot, India, 1853; N. Japan, 1859; S. Japan, 1859; Arabia, originally an independent mission, under the board in 1894.

The women of the Church also maintain foreign and domestic mission boards.

Other boards of the Church are: the Board of Direction, which has charge of the property of the Synod; the Board of Education, which aids men studying for the ministry and assists in the support of certain educational institutions; the Board of Publication and Bible Work; the Disabled Ministers' Fund and the Widows' Fund.

In 1915 there were reported 716 churches with 190,847 communicant members, served by 759 ministers.

3. The doctrine and polity of the Reformed Church in America.—The Constitution of the Netherlands Reformed Church, decreed by the Synod of Dort (1618–19), was formally adopted by the Reformed Church in America in 1771. That Constitution then contained the following elements: the Belgic Confession of Faith, the Heidelberg Catechism, and the Tridentine Councils of the same; the liturgy, the Canons of the Synod of Dort, and the rules of Church government.

The standards of doctrine have remained unchanged, but the Church has been little troubled with heresy. It has been conservative and progressive in the interpretation of these standards. The Constitution and the liturgy have been revised in 1833, 1874, and 1916. Certain portions of the liturgy are optional. Some of these have fallen into general disuse. But certain portions are required; they are generally admired and perhaps
are the most distinguishing feature in the services of the Reformed Church.

The form of government is that of the Presbyterian type, first proposed by Calvin and adopted by the New York Synod of 1688. It requires four classes of officers in the church: ministers, teachers (of theology), elders, and deacons.

The unit of the government is the Consistory ruling the individual church. A group of churches forms a Classis. Of this body Robert College, New Brunswick, N.J., 1766; its name was changed from Queen's to Rutgers in 1825; it is the State college of New Jersey and since 1865 is no longer under the control of the General Synod; (2) the Theological Seminary, New Brunswick, N.J., 1784; this is perhaps the oldest institution of its kind in the United States; it has been located at New Brunswick, N.J., since 1810, when Livingston, who had been both pastor in New York and professor of Theology at Princeton, was invited to New Brunswick to devote his entire time to teaching; (3) Hope College and the Western Theological Seminary, 1866, both located at Holland, Michigan. Besides these the Church has several schools of lower grade in America and important institutions upon its mission fields.

Charles E. Colvin.

REFORMED CHURCH IN THE UNITED STATES.—This religious denomination, which was formerly known as 'the German Reformed Church,' is derived from the Reformed Churches of Germany and Switzerland. In government it holds to the Presbyterian system. Its confession of faith is the Heidelberg Catechism. It developed the 'Mercersburg Theology,' one that has a marked influence on American theological thought.

Individual members of the Reformed Church emigrated to America early in the 17th century. The first pastor of the Swedish colony which in 1638 settled on the land at New Sweden, near Philadelphia, had been a ruling elder of one of the Reformed churches of the German city of Wesel. Among the Huguenots who founded New York there were not a few Germans, but these generally identified themselves with the Reformed Church. In the southern colonies there were German and French Reformed among the earliest settlers. Wherever Episcopalians or Presbyterians had occupied the field, they rarely attempted a separate organization. In Pennsylvania Reformed families on the frontier who had settled before the arrival of William Penn.

About 1700 German Reformed people began to arrive in America in great numbers. Most of these were natives of the Palatinate on the Rhine or of neighboring districts. With them came also many Swiss. The principal cause of this extensive migration was no doubt a desire on the part of the immigrants to better their worldly condition. In the Palatinate great distress was universal or at least very great, and these were the wars which had devastated the land. Even after peace had been declared there was no immediate improvement. Finally came the terrible winter of 1708-09, which greatly increased the distress. It was reported that Queen Anne had invited the suffering Palatines to emigrate to the British colonies.

'Then,' says F. Löher, 'men looked into each other's faces and said: 'Let us go to America, and if we perish, we perish.'

The condition of Switzerland was hardly more encouraging than that of the Rhine country. The people could not bear any longer the oppression of the foreign refugees who had crowded into Switzerland; and, as many of these were skilled labourers, they unintentionally deprived the natives of their means of subsistence. As early as 1665 Peter Fabian, of Bern, sent out by the English Carolina Company, visited Carolina in the hope of establishing a settlement, but he does not appear to have been successful. In 1710 Christoph von Graffenried and Michell, natives of Bern and sailing from England, founded Newbern, in N. Carolina. About 1720 the stream of Swiss immigration turned northward, and in E. Pennsylvania the Swiss became especially numerous. There were no doubt some of them among the Palatines who went from Amsterdam to London in 1709; but the Swiss generally sailed directly from Rotterdam to America, and purchased land soon after they reached their destination.

The estimates of the extent of the German and Swedish immigration to America in the 18th cent. differ. Isaac Edwards, Historian of Pennsylvania, and there from Canada to Georgia, and for a long time there was little communication between them. Theodor Poesche, a careful authority, puts the number in America before the Revolution of 1776 at 200,000, and in the next period, about 1776, the stream of Swiss immigration turned northward, and in E. Pennsylvania the Swiss became especially numerous. There were no doubt some of them among the Palatines who went from Amsterdam to London in 1709; but the Swiss generally sailed directly from Rotterdam to America, and purchased land soon after they reached their destination.

1. 1709-46: Isolated congregations. — This period is characterized by the founding of congregations and the beginning of missionary activity. The earlier portion is very obscure. Religious services were held in private houses, or in other places in the open air. In the absence of regular ministers, sermons were read by schoolmasters or other intelligent laymen. Among the best known of these schoolmasters was Thomas Schley, the inventor of the New York Dutch Bible. He was the founder of Frederick City, Md. He was singled out by Schlaeter as the best teacher he had found

in America, defining 'the congregation on every Lord's Day by means of singing and reading God's Word and praying together.'

John Frederick Haeger (1684–1722) was the earliest missionary. He was ordained by the bishop of London on 29th Dec. 1709, at the solicitation of the Society for the Propagation of the Gospel in Foreign Parts, 'for serving among the Palatines, New York.' He laboured in the settlements on the Hudson and began to build a church, but did not live to complete it. His father, John Henry Haeger, an ordained minister who had been rector of the Latin school at Siegen, in Nassau-Dietz of the Palatinate, arrived in America in 1714, and became pastor in Virginia at a village, named Germanna, which had been built by certain miners who had been brought over by Governor Spotswood.

In Pennsylvania the earliest missionary labour appears to have been performed by a Hollander. At Neshannock, in Bucks county, there was a Reformed Dutch church—the only one in the province—and from its records it appears that its pastor, Caleb Vreug, on the 25th Day of June, visited the (German) settlement at Skippach, where he baptized several children, and on 4th June of the same year ordained elders and deacons at White Marsh. These were probably the earliest German Reformed Churches in Pennsylvania, though it is possible that some sort of organization may have been almost simultaneously established at Germantown and Falkner Swamp.

Samuel Guldin (1664–1745) was a Swiss minister who arrived in Philadelphia in 1716. He had been associate pastor of the cathedral church at Bern, but was removed from his charge for Pietism. In America he seems to have lived in retirement, though he preached occasionally in Germantown. He published three small volumes, treating principally of his unhappy European experiences.

In 1725 the congregations at Falkner Swamp, Skippach, and White Marsh, after seeking in vain for a regular minister, extended a call to John Philip Boehm, who had previously served as their 'reader.' His ministry proved successful, and after communications with the Classis of Amsterdam, he was ordained in 1729 by Dutch ministers of New York. John Philip Boehm (1683–1749), whose indefatigable activity and great importance for the welfare of the church, were the witness of the church which had recently been established by W. J. Hinke,1 had been a parochial teacher at Worms, and came to America about 1720. He prepared for his congregations a constitution, which was approved by the synods of Holland and was long regarded as a model. He was the author of several vigorous controversial pamphlets and founded many congregations, his missionary journeys extending from the Delaware river almost to the Susquehanna. Profoundly impressed by the helpless condition of the churches of Pennsylvania, he appealed for aid to the synods of Holland, and it was greatly by his influence that the European churches were awakened to a sense of their duty towards their brethren beyond the sea.

In 1727 George Michael Weiss (1700–63), an ordained minister, arrived at Philadelphia. He had been commissioned by the Ober-Consistorium of Heidelberg to accompany 400 Palatines to America as their leader and guide. In the year of his arrival he organized the Reformed Church of Philadelphia. In 1730 he accompanied Jacob Reiff on a journey to Europe, to collect money and books for several destitute churches, returning to America the following year. He, subsequently served a charge in the province of New York, but finally returned to Pennsylvania.

John Peter Miller (1710–96) and John Bartholomew Rieger (1707–60), both natives of the Palatinate, arrived in 1730. After serving in the Reformed Church for several years, Miller joined the Seventh-day Baptists and became the head of a monastic institution at Ephrata. Rieger subsequently studied medicine, and, though he was at times a 'reader,' the work of the Church, was in later years best known as a physician.

The name of John Henry Goetschius (1718–74) frequently appears in early congregational records. His father, Mauritius Goetschius, who had previously been pastor at Salez, in the canton of Zürich, was brought to America by his father, who had been ordained at Dornach by his family. He died not long after landing in Philadelphia, and his son, John Henry, soon afterwards began to preach with great acceptance, though he was only seventeen years old. In 1736 he claimed to be pastor of twelve congregations. In later years he became an eminent minister in the Reformed Dutch Church. His brother-in-law, John Conrad Wirtz, also became a minister, and is regarded as the founder of the Reformed Church in New York under the name of Vliet.

In 1742 several Reformed ministers joined with Count Zinzendorf in the organization of the 'Congregation of God in the Spirit.' It was proposed to unite the German denominations (Lutheran, Reformed, and Methodist) and to organize them without destroying their identity. Until 1748 this organization laboured earnestly, especially among the Reformed and Lutherans, but the movement finally proved unsuccessful, and most of its adherents identified themselves with the Methodists.

The most eminent of the Reformed ministers who belonged to the 'Congregation' were Henry Antes, John Bechtle, Christian H. Rauch, Jacob Lisy, and John Brandmiller.

2. 1746–93: Denominational organization. The leading event of this period was the founding of the 'Coeetus,' by Michael Schaller, in 1747. For eighteen years the Church of Holland had been directly interested in the German churches of Pennsylvania; but nothing had been done to secure their union. It was believed that the American churches were not ready for the establishment of an independent Synod; and it was, therefore, suggested that an advisory body, composed of ministers and delegated elders, should be organized as soon as possible, since they have been able to set before the synods of Holland, and were convinced that the 'Coeetus,' or 'Convention'—a term which was first applied by John à Lasco to a weekly conference of ministers which he established in 1544 at Emden, in Germany. There were certain difficulties which may at first have appeared almost insurmountable. The Germans of Pennsylvania were not of Dutch speech or nationality; they had not been trained to acknowledge the national Confessions of the Netherlands, and it would have required much labour to bring them into full accord with their new ecclesiastical relations. A man was needed who could speak the language of both nationalities, who was willing to be the confidential agent of the Dutch Synods, and might serve as a personal link between the Old and New World. Such a man was certainly not to be found among the 'Coeetus,' or 'Convention.' Michael Schaller (1716–90), a native of St. Gall, belonged to a prominent family and was thoroughly educated. Having during the greater part of his youth in Holland, he was familiar with the language of that country. After his ordination to the ministry he preached for several years in his native country; but, having heard of the necessities of the American churches, he went to Holland and was commissioned by the synods of Holland to undertake the work of organizing them. Nine days after receiv-
ing his commission he set sail for America, where he arrived on 1st Aug. 1746. In his American work he manifested extraordinary energy and perseverance. He made extensive missionary journeys, organized thirteen pastoral charges, and convened the first Coetus in Philadelphia on 29th Sept. 1747, with four ministers and 28 elders in attendance. The ministers, besides Schlatter, were John Casco, Casper Stoy, John Franklin, and John Reily, who had been sent to Holland for revision and approval. At that time the Coetus met annually, its proceedings being sent to Holland for revision and approval.

In 1731 and 1734 Schlatter visited Europe in the interest of the American churches. His first mission was remarkably successful. In one year he wrote and published a book, attended many conferences in Holland, Germany, and Switzerland, induced six young ministers to accompany him on his return to America, and collected £12,000, the interest of which was to be applied to the destitute churches of Pennsylvania and schools. The ministers who accompanied Schlatter to America were Philip William Otterbein, John Jacob Wissler, John Waldschmidt, Theodore Frankenfield, Henry William Stoy, and John Casco, Casper Stoy, and John Franklin.

Schlatter's enthusiasm proved contagious, and David Thomson, pastor of the English church at Amsterdam, went to England to plead for the establishment of schools among the Germans of Pennsylvania. He led the Methodist church in this effort, and it was said that the king gave a personal contribution of £1000. A number of so-called 'Charity schools' were founded in Pennsylvania, and Schlatter was made superintendent of this educational movement. He was also invited by General Schuyler, for some years a chaplain in the Royal American Regiment of infantry, and subsequently lived in retirement near Philadelphia.

The Coetus increased slowly. 'The fathers' in Holland sent a number of missionaries, who had, almost without exception, been well educated in German universities. They refused, however, to grant to the American body the privilege of conferring the rite of ordination, and this led to frequent disagreements. As a result, a considerable number of ministers failed to become members of Coetus.

Among the most prominent members of Coetus were the following: J. Conrad Steiner (1707-63), author of several volumes of sermons; Philip William Otterbein (1726-1810), pastor in Baltimore, who later served in the Synod of Pennsylvania; John Casco, who founded religious societies from which the denomination of 'the United Brethren in Christ' was developed; J. Daniel Gros (1737-1812), professor in Columbia College, New York, and author of an important philosophical work (in English); C. D. Weyberg and William Henders, two ministers who united, in 1787, with several Lutheran pastors in founding at Lancaster, Pennsylvania, Franklin College, so named in honour of Benjamin Franklin, who was the largest individual contributor to its endowment.

The leading independent minister was John Joachim Zabli (1724-81), of Savannah, Georgia, an author, and elected in 1775 a member of the Continental Congress. In 1787 the Reformed ministers of S. Carolina joined with several Lutheran ministers in forming a union which received the double name of 'Corpus Evangelicum' and 'Unio Ecclesiastica.' This movement is interesting to note in that it practiced the Prussian Church union of 1817 in some important particulars.

During this period the Coetus remained warmly attached to the Church of Holland. In 1770 an attempt to unite the German and Dutch Reformed elements in a General Synod was defeated by the Germans on the ground of gratitude to 'the fathers' in Holland and particularly to the Classis of Amsterdam. In the war of the Revolution, when communication with Europe was much interrupted, the American churches had to depend upon their own resources. In 1792 the Coetus abstained from sending its minutes to Holland for revision. The period of dependence was at an end and the Coetus by its own act became an autonomous body.

3. 1793-1820: The independent denomination.

The independent denomination.—About twenty ministers united in the organization of the Synod which met at Lancaster, Pa., in 1793. The condition of the Church at that time could hardly be called encouraging. Congregations had grown but the poor financial condition of the parishes and the apathy of the pioneers had passed away, and the younger ministers were imperfectly educated. No provision had been made for higher education, and the number of candidates for the ministry was small, so that extensive districts were left without pastors. Important congregations called pastors, without much discrimination, from other denominations, and the people were in danger of being alienated from the faith of their fathers. The introduction of the English church system, which was hostile to that of the older generation and led to serious conflict. Pastors generally laid stress on catechetical instruction, but the establishment of Sunday schools was viewed with suspicion, as were all so-called free thinking movements. The American churches were, however, mainly traditional, and the prevailing theology was that of the Cocceian or Federalist school. The Church, however, grew by natural increase, and a new and brighter era was ahead of it.

4. 1820-1853: The consolidation period. Religious institutions, educational institutions and liturgical worship.—At the beginning of this period the number of ministers had increased to 70, and it was found difficult to bring them together at synodical meetings. It was, therefore, determined to divide the Synod into eight Classes, which held their earliest meetings in 1820. From this time onwards the Synod was a delegative body chosen by the Classes. The Classis of Ohio, on account of the Synod's refusal to grant to the Classes the privilege of conferring the rite of ordination, became a separate body, known as the 'Synod of Ohio.' In this position it remained until the organization of the General Synod in 1863. Heidelberg College at Tiffin, Ohio, was founded in 1850. In 1829 Grant's plan was adopted for establishing a Theological Seminary, which was opened at Carlisle, Pa., 1825, with Lewis Meyer as the first professor of Theology. Meyer wrote A History of the Reformed Church and valuable monographs.

In 1829 James B. Reily, one of the zealous friends of the Seminary, visited Germany to solicit contributions towards an enterprise that was so intimately related to the welfare of emigrants from the fatherland. He secured a good library and a considerable sum of money. Among the most liberal contributors was His Majesty Frederick III. of Prussia. In 1829 the Seminary was removed to York, Pa., and in 1837 to Mercersburg, Pa. Two years before (1835), this small town, afterwards to become famous, was made the seat of Marshall College.

Frederick Augustus Ranch (1806-41), the first president of Marshall College and associate professor in the Theological Seminary, had served a long time as professor extraordinary at the University of Giessen, had just the right qualifications to fill a full professor at Heidelberg when, on account of political troubles, he was compelled to leave his fatherland. He had been a favourite pupil of the great eclectic philosopher, Carl Daub, and, though a Hegelian, many elements of his thinking were derived from Schelling and
others of his great contemporaries. In theology he was a man of thought and he had been ordained to the ministry. At Mercersburg he wrote his Psychology (New York, 1846) and had begun a treatise on aesthetics, when he died suddenly on 2nd March 1841.

In 1833 Mayer retired from his professorship and in 1840 John Williamson Nevin was elected his successor. He was at that time professor in the (Presbyterian) Western Theological Seminary at Pittsburgh, Pa., and was already known as an earnest student of German philosophy and theology.

Nevin was born in Franklin county, Pennsylvania, on 20th Feb. 1803, and died at Lancaster on 6th June 1886. He graduated at Union College, New York, and studied theology at Princeton. Before going to Pittsburgh he had been assistant teacher of theology at Princeton, and had published his Summary of Biblical Antiquities (Philadelphia, 1829). In accepting the invitation to Mercersburg he was convinced that he was called to perform an important task, and his transition to the Reformed Church was fully approved by his Presbyterian associates. For many years Nevin was the head of the institution at Mercersburg. The books which he wrote, though few in number, had their influence, and in his History of the Church of the Antiochans, or the Anxious Bench (Chambersburg, Pa., 1843) aroused wide attention, and his book The Mystical Presence (Philadelphia, 1846) presented the real spiritual presence in the Lord's Supper. He was a thinker and a powerful controversial theologian. From 1849 to 1853 he edited the Mercersburg Review, and most of his theological articles appeared in that periodical.

In 1843 the Synod, convened at Lebanon, Pa., elected F. W. Krummacher, of Elberfeld, Prussia, to become Banci's successor at Mercersburg. Benjamin S. Schneck and Theodoro L. Hoffeditz went to Germany to present the call, and their visit attracted much attention in Berlin and other cities. When Krummacher declined the call, the attention of the commissioners was diverted by Neander, Tholuck, Julius Müller, and Krummacher to Philip Schaff (1819–93), who was at that time a private lecturer in the University of Berlin. This recommendation Schaff was elected professor of Theology at Winchester, Va., on 10th Oct. 1845, and came to Mercersburg in the following year.

Schaff's inaugural address, The Principle of Protestantism, published with an Introduction by Nevin (Chambersburg, Pa., 1846), defended the doctrine of historical development, a theory at that time considered dangerous by many German Reformed ministers. For this reason and on account of alleged Roman Catholic tendencies, the inaugural was made the ground of a charge of heresy. Schaff was tried before the Synod and acquitted by a practically unanimous vote.

Through the teachings of Nevin and Schaff Mercersburg became widely known as the seat of the 'Mercersburg Theology.' Misrepresented as a Romanizing movement in sympathy with the Tractarianism of Fox and with the strong realism of Protestant, but stood for a high view of the Church and her ordinances and not for any peculiar system of divinity. Stress was laid upon the liturgical element in worship, the real spiritual presence in the Lord's Supper, and the importance of the early Church Fathers. Nevin's articles on 'Early Christianity' and on 'Cyprian' in the Mercersburg Review (1851, 1852) helped to increase the unrest which Schaff's inaugural had stirred up.

Schaff was active in literary labour as well as in the class room. He stated his views of historical development in What is Church History? (Philadelphia, 1846), and published his History of the Apostolic Church (first in German, Mercersburg, 1851, Leipzig, 1854, Eng. tr., New York, 1855) and his History of the Christian Church, 1 A.D.—600 A.D. (2 vols., New York, 1855–67), a German Hymn-book (1859) still used in the worship of the German Reformed Church in the United States, and others. Nevin resigned his professorship in 1851, subsequently becoming president of Franklin and Marshall College, the chief literary institution of the Church. Schaff remained at Mercersburg till 1863.

Influenced by the example of these teachers, many younger men engaged in literary work and became prominent as authors and Church leaders—H. A. Bomberger, E. V. Gerhart, Henry Harbaugh, Thomas C. Porter, George W. Williard, and Jeremiah I. Good. In 1851 Catawba College was founded at Newton, New, Carolina. In 1853 Marshall College was removed to Lancaster and consolidated with Franklin under the title of Franklin and Marshall College. In 1871 the Theological Seminary was removed from Lancaster, where both institutions have since been successfully continued. During this period also the Church was greatly disturbed over the preparation and use of a Liturgy, Schaff being one of the leaders in the preparation of the book (Philadelphia, 1857).

Missionary work in the West was successful, especially among the Germans. In 1860 a colony of emigrants from Lippe-Detmold founded the Mission House at Franklin, Wis., which has become an important centre of missionary activity.

5. 1863–1918: The peaceful growth of the Church.—The year 1865 was distinguished by the tercentenary celebration of the Heidelberg Catechism. There were several largely attended conventions, at which essays were read which were afterwards published in English and German in the Tercentenary Monument (Chambersburg and Philadelphia, 1863). A memorial edition of the Heidelberg Catechism in three languages was also published (The Heidelberg Catechism in German, Latin, and English, with Intro. by J. W. Nevin, New York, 1863), Bonn, 1864, and Der Heidelberger Catechismus, nach der ersten Ausgabe von 1563, etc., Philadelphia, 1863, rev. ed. 1886).

In 1866 the General Synod was organized by the union of the Eastern and Western Synods. During their long separation these bodies had developed local peculiarities, and there were disagreements on the general subject of cultus. As early as 1847 a Liturgical Committee had been appointed by the Eastern Synod, and several proposed orders of service were published. During the heated controversy over the subject Ursinus College was founded, in 1868, by Bomberger. In 1879 the controversy was concluded by the establishment of a Peace Commission, which also prepared the order of worship now generally used. There is no disposition to abridge the freedom of worship, and the use of the Liturgy is not compulsory.

The Church is connected with the Alliance of Reformed Churches holding to the Presbyterian System,' and is greatly interested in the establishment of a closer federation. There have been several efforts for an organic union with the German Reformed Church in America, but these have hitherto proved unsuccessful, principally on account of a difference in doctrinal standards. A movement for the union of the Church with the Presbyterian Church in the U.S. A. came to an end in 1915; 203 congregations had voted in favour, but the majority of the Classes was against it. In 1869 the foreign paternal adjective, 'German,' was removed from the official
title of the Church. In spite of difficulties and trials, the Reformed Church in the United States has greatly increased in numbers and influence. In 1916 there were, in connection with the General Synod, 9 districts, with 13,459 congregations, 329,459 communicants, with contributions for congregational purposes of $2,201,545 and for benevolence $860,450. There are missions in Japan and China, with 6 schools. Of the pulpits 6 are exclusively English, and 3 wholly English. The Reformed Church in the United States has 14 theses and 26 recognized periodicals. Five orphan homes and a deaconess home are maintained.

The Reformed Church is sincerely attached to its ancient standards, but also believes in the principle of progress. Its theology is Christocentric—an attitude which has found elaborate and systematic expression in E. V. Gerharz's Institutes of the Christian Religion (2 vols., New York, 1909), and in Letters of the Conservative Reformed Church, three volumes (Philadelphia, 1916). Religious services are conducted according to the general order of the Church year. Confirmation is practiced, not as a sacrament but as an appropriate rite attendant upon admission to the Church. Its attitude towards other Christian denominations is fraternal.

JOSEPH HENRY DUBBS.

**REFORMED EPISCOPAL CHURCH and FREE CHURCH OF ENGLAND.**—The Free Church of England, and, as its title indicates, the Reformed Episcopal Church of the United Kingdom, otherwise called the Reformed Church of England, claim, each separately, to possess the historic episcopate, indirectly from Canterbury, to which the old-fashioned, unemotional English Churchman, in his cautious self-guard and conservative ecclesiasticism, attaches supreme importance. In the Reformed Episcopal Church three orders of ministers are recognized: bishops, priests (i.e. presbyters), and deacons. The Free Church of England, in its published Declaration of Principles, says:

"Guided by the New Testament and by the ecclesiastical polity of the Church, this Church recognizes only two Orders of Ministers, Bishops and Deacons. Nevertheless, the first order is divided into two classes, i.e. bishops and presbyters. The attitude of both the Churches is very clearly expressed about their view of episcopacy. The Reformed Episcopal Church says:

"This Church recognizes and adheres to Episcopacy, not as of Divine right, but as a very ancient and desirable form of Church polity."

The Free Church of England expresses the same belief in similar words and adds:

"But for the avoidance of any possible misunderstanding, it hereby emphasizes its recognition of the Roman dogma of Apostolical Succession in the Ministry as involving the transmission of spiritual powers."

Both Churches in similar terms condemn and reject the following erroneous and strange doctrines as contrary to God's Word:

"First.—That the Church of Christ exists only in one order or form of ecclesiastical polity.

Second.—That Christian ministers are "priests" in another sense than that in which all believers are a "royal priesthood."

How the Free Church of England came to be possessed of the historic episcopate, of which the founders were so desirous, may be briefly stated. We are dealing with the history and polity of the Free Church of England before that of the Reformed Episcopal Church in England because of the two Protestant Episcopal Churches outside the Establishment. The Church of England is the established Church of the United Kingdom, and the Free Church, or Reformed Episcopal Church, was the first formed. In fact, the latter grew out of the former, withdrawals having quietly taken place from the Free Church of England on the question raised by Churchmen in the religious press concerning the historic episcopacy. Four of those who thus seceded, one of whom had been episcopally consecrated as a bishop in the Free Church of England, became subsequent bishops in the Reformed Episcopal Church. As three out of these four seceders had been at one time Congregational ministers, it may fairly be assumed that none of them was personally hampered by any deep conviction that, in order to secure valid orders, the 'laying on of hands' must be by a bishop in the historical succession, but that they took the important step they were then doing in order to avoid the objections of rigid Church people to a purely elective episcopacy.

**I. The Free Church of England.**—The Free Church of England is a Protestant Episcopal Church, which, regarding its polity, as its form of worship, takes outside the Established Church a position similar to that of the Evangelical party within. The Oxford Movement (q. v.), as it is generally called, which, according to Cardinal Manning, had a stronger influence in England than in Scotland and Ireland, in order to arouse the clergy of the Church of England from the cold, apathetic condition into which they had fallen, led to the formation of the Free Church of England, as an effective antidote to the advanced sacerdotal teaching of the pioneers of the ritualistic campaign—the eminent clergyman of the Church of England who had dived deeply into early Patristic teaching and pre-Reformation practices—

and the materialistic exaggerations of their immediate successors, who did not possess the scholarly, sound, and personal character of such men as Keble, Pusey, Ward, and Faber, who far surpassed them in zeal.

For a decade there had been simmering among the loyal Evangelical clergy an opinion, which gradually deepened and widened in larger and in even outside circles, that something effective should be done to counteract the rapidly spreading sacerdotal movement. In 1843 matters were brought to a head, and precipitated the formation of the Free Church of England.

The see of Exeter was presided over by Henry Phillpotts, who was a strong High Churchman, a strenuous controversialist; and, holding Cyprianic views as to the Divine authority of the episcopal office, to which he did not hesitate to give effect in his diocese, he was at times thought that by setting one or another of his clergy, in Church history (1847) he is well known by his attempt to stretch ecclesiastical law by imposing an unheard-of test upon George Cornelius Gorham, a third wrangler and a Fellow of Balliol, who by the statutes instituting him to the vicarage of Brampton-Speke, Exeter, to which he had been appointed by Lord Chancellor Cottenham. James Shore had for ten years been the esteemed minister of Bridgeton Chapel-of-ease, who was brought before the Free Church by his congregation, informed him that his nomination to the Episcopal chapel could not be renewed; and the bishop withdrew his licence and declined to state his reasons for so doing; The Duke of Somerset, on being memorialized by 500 inhabitants
of the congregation, decided to re-open it, but this time without the bishop's licence. Shore wrote formally, and, as he thought, distinctly, his objections to the Church of England; and on 14th April 1844 he again preached in the chapel to his old well-beloved congregation; but this time as a clergyman in the Free Church of England. The bishop of Exeter, believing as the High Church men believed, that the liberty of Holy Orders was not conferred, when they are conferred, a special spiritual grace, mysteriously handed down from the apostles, is ez opere operato then imparted by the ordaining bishop, which can only be sinned away by the real sinner, and it is quite impossible for Shore to discharge, and then imprisoning him for not paying them, the Free Church of England spread, and new churches in different parts of England were opened—among others, St. James's Free Church of England, Grosvenor Place, Exeter, and Christ Church, Portland Street, Ilfracombe, the congregation of which had as its minister Benjamin Price, who was at one time a member of the Countess of Huntington's Connexion, and who subsequently became the first bishop of the Free Church of England.

For three years in succession Price had held the high office of president of the Countess of Huntington's Connexion, and in that capacity he had acted as its representative at ordinances and similar functions. But, as it was observed by one of the members of the conference to be simply a distinguished officer, no service of consecration was held or deemed to be desirable. But the president of the Connexion was also at the same time the bishop of the Free Church of England, and among the members themselves the demand grew that the head of the Church should bear a more thoroughly ecclesiastical title than 'president'—one which would convey to outsiders the idea of episcopacy. This informal desire found expression when, in 1858, St. John's Church, Tottington, Bury, Lancashire, was opened, and public announcement was made that it would be consecrated by the Rev. Benjamin Price, 'Bishop Primus' of the Free Church of England. On that and on several other occasions the title was used for the first time—against Price's knowledge or desire, it is true. It was felt that the term 'president' did not appeal to Church-people, whereas 'bishop' was thoroughly understood by the man in the street. But Benjamin Price, he found himself was that, as executive officer he had to perform episcopal duties, without having been consecrated 'by men who have publick authority given to them' to do so. Many evangelical clergymen, nevertheless, became warmly attached to the new movement; and their adhesion gave it a more distinctly Church character. This was emphasized by the following manifesto, which in 1873 was signed by over 50 influential clergymen:

1.—We, the undersigned Clergymen of the Church of England, hereby declare our solemn conviction that it is essential to maintain the distinctive Protestant character of our Church.

2.—We have noticed with alarm the tendency of late on the part of denominationalism to evolve a compromise unworthy of our old Reformers and their traditions. The adoption of the principle that what we ordain for ourselves we must be considered to allow, points to the conclusion that those who hold the doctrine of the Church of England, in its essence, spirit and in its outward forms, are in a minority. They must be satisfied with the compromise, and in that sense, if they are satisfied, the Church of England is lawfully extinguished. Otherwise, a compromise unworthy of our old Reformers and their traditions is evolving,

3.—We hold firmly that Romish errors, against which some of the colonists of 1690 stood, are still held by us, and emphatically protest, may not on any account be sanctioned.

4.—We lament exceedingly that Romish and Ritualistic practices and ceremonies have now again been introduced in spite of all efforts which have been put forth to check them.

5.—We regard it as indispensable that objectionable passages in the Book of Common Prayer, which have been found to promote such practices and doctrines, should be removed.

6.—We look in vain for any sign of Liturgical Revision by authority in the Established Church.
7.—We have, therefore, determined, at this grave crisis, to express our sentiments to those of your5 countries in England and Ireland which have made Revision of the Prayer- book a leading question. We allude to the Dissenters Church of England and the Church of Ireland. While we shun pledging ourselves to the details of their respective arrangements, we shall be glad hereafter to act in concert, and co-operate with both these bodies for the propagation of the Gospel. We fear that many of the late events may practically fall away from our Church, as sheep without a shepherd.

The above declaration was drawn up by Edward Vesey Bligh, son of the Earl of Darnley and vicar of Birling, Kent.

As the movement spread, it became more imperative that Price should be consecrated, according to Church order, with the appointment of "laying on of hands," according to apostolic custom. In March 1784 the Free Church of England made a friendly suggestion to the Reformed Episcopal Church of America, which had lately been organized, that the two Churches, inasmuch as their principles and doctrines were identical, should be united. The proposition was warmly entertained, and a federative union was arranged—the bishops and clergy of either Church to be eligible to attend and vote at all meetings. Of the bishops of the American Church, Edward Cridge, of British Columbia, an Englishman, and at one time a dean in the Church of England, came to England to visit his friends; and, at the special request of the Reformed Church of America, supplied a which seemed to orthodoxy, was enabled to be lacking in the episcopacy of the Free Church of England by publicly consecrating Bishop Price, by prayer and the "laying on of hands," to his sacred office. In time this union was allowed to lapse, and the Free Church of England is not now affiliated with any American Church.

The Free Church of England is free (1) to go into any parish to preach the gospel, although, as a matter of practice, she does not do so, unless invited; (2) to ordain ministers, to which all passages which are interpreted to confer "absolving and retaining" powers on the clergy have been expunged; (3) from State control, under which ecclesiastical questions are surrounded with restrictions; and (4) to consecrate bishops publicly, with other denominations, on the ground that the Church of Christ is one. 'Multi illi unum corpus sumus in Christo' (Ros 129).

In its uncompromising Protestantism the Church denies (1) that the Church of Christ exists only in one order or form of ecclesiastical polity; (2) that Christian ministers are 'priests' in another sense than that in which all believers are a 'royal priesthood'; (3) that the Lord's Table is an altar on which the oblation of the Body and Blood of Christ is offered anew to the Father; (4) that the presence of Christ in the Lord's Supper is a presence in the elements of bread and wine; and (5) that regeneration is inseparably connected with Holy Baptism.

2. The Reformed Episcopal Church in the United Kingdom, otherwise called the Reformed Church of England.—The earliest settlers in the United States of America (Virginia) in 1607 were members of the Church of England, and therefore naturally desired of having a bishop in canonical Church order for ordinances, confirmations, etc., but their applications for the privilege were courteously declined, or postponed, by the English archbishop. In 1743, however, their wish was partly met by the consecration at Aberdeen of Samuel Seabury, rector of St. Peter's, New York, by three bishops of the Episcopal Church of Scotland (Robert Kilmour, Arthur Petrie, and John Skinner). The colonists thus had a bishop of their own; but nevertheless they were not completely satisfied, for they were the last of the first English emigrants, that a colonial clergyman, whom they might elect, should be consecrated, so that the union with the old country might be strengthened and the Church revered of their fathers followed by their children's children, was favourably entertained; and on 4th Feb. 1787 the archbishop of Canterbury (John Moore), assisted by the archbishop of York (William Markham) and the bishops of Bath and Wells (Charles and George, sons of John Hinch- life), consecrated in York bishop of Maryland, by bishops White, Provoost, Seabury, and Madison. The co-operation of Seabury invested this consecration with an importance which, with three orders, the Scottish and English, in the Protestant Episcopal Church of America. On 15th Nov. 1866 George David Cummins, rector of Trinity Church, Chicago, was consecrated at Christ Church, Louisville, by the presiding bishop, John Henry Hopkins, of Vermont (who was assisted by six other bishops of the American Church), and appointed suffragan bishop of Kentucky. In the autumn of 1873 the Evangelical Alliance held in New York its annual Convention, which was terminated by a united communion service in the Presbyterian Church in Madison Square, in which Bishop Cummins, the dean of Canterbury (R. Payne Smith), and Canon Fremanl took prominent part. The bishop of Zanzibar (W. G. Tozer) and other bishops of the Church of England, and eminent clergymen, and charged them with infringing ecclesiastical law in participating in the sacrament of the Lord's Supper administered in a Non-conformist church. Keenly sensitive to the attacks on the Church of England made on the Reformed Episcopal Church, at the spread of ritualistic innovations in his own diocese, which, with the limitations imposed upon him as a suffragan bishop, he was unable to stem, he resigned on 10th Nov. 1873 his position in the Protestant Episcopal Church of America; and three weeks afterwards organized the "Reformed Episcopal Church of America." On 14th Dec. 1873 he consecrated Charles Edward Cheney as a bishop in the new Church; and on 24th Feb. 1874 he consecrated William R. Nicholson to the same high office, both at Kentucky. Generally speaking, these Church incidents would hardly have passing interest, and the record of them might be considered merely trifling; but to a Church claiming to possess the historic episcopate they are of supreme object.
REGALIA

No good purpose would be served by reviving memories of the objections made as to ‘form of service’ at the consecration of Bishop Cummins, and ‘intention,’ and other trivialities, which marred the discussions in the first instance; suffice it to say that the Reformed Episcopal Church of Great Britain, although it posits that equally with the Church of England, all that, from the extreme Churchman’s point of view, is necessary for valid episcopal orders, yet in strongest terms repudiates the teaching that the sacraments of Holy Baptism and Holy Communion are means operatively as channels of spiritual grace, when administered by a ‘priest’ ‘lawfully called and epiocopiically ordained.’ It declares for three orders of ministry, i.e. bishops, presbyters, and deacons, that fully recognizes that the ministry of the Word and sacraments of Nonconformist Churches is of equal value with that of the Episcopal. It was founded to maintain the Evangelical principles of the Protestant Reformation; the Holy Scriptures form its sole rule of faith and practice; the Book of Common Prayer being used at divine service, it is liturgical in its worship; the government, although episcopal, is vested in a General Synod, composed of bishops and presbyters, together with two lay representatives from each of the Established Congregations; it is a refuge for members of the Established Church who are distressed by unauthorizable ritual in their parish churches; and, being free from State patronage and control, it is legally able to hold fellowship with all Evangelical Churches, and delights to do so.

REGALIA.—The word ‘regalia’ is not found in
classical Latin bearing its present meaning. We meet with it, however, in the 12th cent. in the work of the monkish chronicle, William of Malmsbury, de Gentis Regnum Anglorum,1 in which, after describing the coronation of Emperor Henry v. by Pope Paschal II., he says that after the ceremony the pope laid aside his suardoratul and the emperor his regalia. In English the words ‘regale’ and ‘regalia’ at first bore the meaning of royal preroga-
vatives. The word ‘regale’ in particular was used of the privileges enjoyed for centuries by the kings of France of receiving the revenues of vacant sees and abbeys and of presenting to benefices which were dependent on them. By the 17th cent. the monarchs had already become attached to the word ‘regalia,’ while the singular ‘regale’ had fallen into desuetude. The articles which have formed a part of insignia of kingship in all the different stages of human culture have of course been considered as chimerical in origin; it would be impossible within the scope of an article like the present to attempt to state the significance of each of them. This article is therefore restricted to a brief discussion of their religious symbolism and, more ambitiously, to an outline in general of the term ‘regalia’ will not, however, be limited exclusively to objects worn and carried by kings, but will be extended to cover such material objects as confer upon their possessors the right to the throne.

1 Royal fetishes.—More than twenty years ago J. G. Frazer, in his Lectures on the Early History of the Kingship, called attention to the sacred character of the clothing of the chief in primitive society, and, in a lesser degree, civilized peoples; and he inferred that, if it could be traced to its ultimate origins, it would be found to be identical with that of the priest, shaman, or medicine-man.1 In its many forms it is regarded as a fragment of the royal scepter, and, as such, is regarded as fragable. We must then expect to find among primitive peoples a resemblance between the royal insignia and the magical apparatus of the medicine-
man. In this quest we are not disappointed, for we find that among the Malays the magician possesses insignia analogous to the regalia, both in fact bearing the same name (kobosaron).2 In the Northern New Hebrids, according to R. H. Cod-
rington, chieftainship is not in theory hereditary, but becomes so in practice through the chieftain’s hands on to his chieftainship. The dependence of the royal authority on the possession of certain fetishes is found in its most extreme form in S. E. Asia and the Malay Archipelago.

As to S. Celebes it is said actually to reside in the regalia.

1 In short, says Frazer, ‘the regalia reign, and the princes are merely their representatives. Hence whoever happens to possess the regalia is recognized by the people as the prince, or king. For example, if a deposed monarch contrives to keep the regalia, his former subjects remain loyal to him in their hearts, and look upon his successor as a usurper who is to be obeyed only in so far as he can exact obedience by force. And on the other hand, in an insurrection the first demand of the people is to seize the regalia, for if they can only make themselves masters of them, the authority of the sovereign is gone. In short, the regalia are the fetishes, which confer to a title to the throne and control the fate of the kingdom. Houses are built for them, altars are set up to them, they have their own instruments, furniture, weapons, and even lands are assigned to them. Like the ark of God, they are carried with the army to battle, and on various occasions the people propitiate them, as if they were gods, by prayer and sacrifice and by smearing them with blood. Some of them serve as instruments of divination, or are brought forth in times of public disaster for the purpose of staying the evil, whatever it may be. For example, when plague is rife among men or beasts, whoever there is a suspicion of a ill omen arising from the regalia, smear them with buffalo’s blood, and carry them about. For the most part these fetishes are heirlooms of which the origin is forgotten; some of them are said to have fallen from heaven. Popular tradition traces the foundation of the oldest states to the discovery or accumula-
tion of these regalia objects, as a fragment of the royal scepter, in some case of wood, a fruit, a weapon, or what not, of a peculiar shape or color, or endowed with a certain sacred degree, but the characters, it is said, have been lost through time, but their place is taken by the various articles of property which were bestowed on them, and to which the people have attached their pious allegiance.’

2 In Locowo, on the south coast of the Celebes, two toy cannon, and in Bima a sacred brown horse, formed part of the regalia. Among the Malays the regalia are of the nature of talismans on which the safety of the State depends, and are clearly bound up with the sanctity as the central idea.2 Not only is the king’s person considered sacred, but the sanctity of his body is believed to communicate itself to his regalia; and even to those who break the royal taboos. Thus it is firmly believed that any one who seriously offends the royal person, who touches (even for a moment) or who imitates (even in the king’s permission) the chief objects of the regalia, or who wrongfully makes use of any of the insignia or privileges of royalty, will be kena daulat, i.e. struck dead, by a quasi-electric discharge of Divine Power,2 which will deprive the person to reside in the king’s person, and which is called ‘Daulat’ or ‘Royalty.’

Similar tabus on the wearing of royal robes are found in various parts of the world. In Japan any one who wore the emperor’s clothes without his leave was supposed to suffer from swellings all over the body. Similarly, in Fiji, disease is
supposed to result from wearing a chief's clothes. Among the Baganda so sacred were the king's clothes that, when he renewed them at the cere- monial change, he cut out for himself a new set of clothes. In the course of his life, he deposited the old ones in a shrine of the god Mukaña.1

The articles comprising the regalia of Malay kings are of a very miscellaneous character. In Malacca the book of genealogies contained a code of laws, a vest, and some weapons, among which there was generally a spear. In Perak and Solongor the regalia consisted largely of instruments of music.

The regalia of the 'fire-king' and the 'water-king' in Cambodia—two mysterious individuals whose authority is of a purely spiritual character—are talismans, which would lose their efficacy if they were to leave the family, and for this reason the king is wont to have a duplicate, and one of these, which is kept in the house of the king, is a magic sword. If it were drawn from its scabbard, awful cosmic catastrophes would ensue.2 The king of Cambodia, who occupies the position of temporal ruler within the country, sends an annual gift to the 'fire-king' of rich stuffs to wrap up the magic sword.3

Royal and public talismans were well known in the ancient world. The most famous instance of a public talisman is of course the Palladium, an arca or image of Athene on which the safety of the city of Troy was supposed to depend.4

'In antiquity the Scythian kings treasured as sacred a plough, a yoke, a battle-axe, and a cup, all of gold, which were said to have fallen from heaven; they offered great sacrifices to these sacred things at an annual festival; and if the man in charge of them fell asleep under the open sky, it was believed that he would die within the year. The sceptre of King Agamennon, or what passed for such, was worshipped as a god at Oeaerone; a man acted as priest of the sceptre for a year at a time, and sacrifices were offered to it daily. The golden laburn of Mycenae, on the possession of which, according to legend, the two rival Atreus and Thyestes had to assert their claim to the throne, may have been a royal talisman of this sort.'5

It is said that in Japan the imperial crown was formerly a sort of palladium. In an account written about two centuries ago by Engleman is Keunumper, physician to the Dutch embassy at the emperor's court, we read:6

'In ancient times, he (the Emperor) was obliged to sit on the throne for some hours every morning, with the imperial crown on his head, and in his hand either like a statute, or girded with rings either hands or feet, head or eyes, not indeed any part of the body, but the crown thereof; and this meant this, that the emperor could preserve peace and tranquillity in his empire; for, if unfortunately, he turned himself on one side or the other, or if he looked down, the head would strike against the part of the crown he had apprehended that war, famine, fire, or some other great misfortune was near at hand to desolate the country. But it having been afterwards discovered, that the imperial crown was the palladium, by which its immobility could preserve peace in the empire, it was thought expedient to deliver his imperial person, consecrated only to idleness and pleasures, from this burdensome duty, and therefore the crown is at present placed on the throne for some hours every morning.'7

The Mogul emperors, who were never crowned, used at times to sit with a crown suspended over their heads.8 A native historian of India in the 15th century narrates the prevalence of a somewhat similar idea in that country, where the throne rather than its occupant was the chief object of veneration.

'lt is a singular custom in Bengal, that there is little heredi- tary power, that one sovereign may have no successor. Whoever is allotted for the king; there is, in like manner, a seat or station assigned for each of the Amirs, Wazirs, and Munibads. It is that station, or place where the sovereign sits alone, that constitutes the representative of the people of Bengal. A set of dependants, servants and at- tendants are annexed to each of these situations. When the king's person is absent, in the station is placed the seat of the one dismissed is immediately attended and obeyed by the whole establishment of dependants, servants

2 G. Philip, Cambodge, p. 53.
3 Ul. art. IND.OCH.VI, VII, p. 228.

and retainers annexed to the seat which he occupies. Nay, this rule obtains even to the throne itself; for the king is said to succeed in placing himself on the throne is immediately acknowledged as king. . . the people of Bengali say, the king's throne is the throne of his subjects; whoever this throne, we are obedient and true to it.'9

The Egyptian kings also claimed a divine charac- ter, being incarnations of Horus and Set.10 They were said to hold their authority directly from heaven.

'The sacred character of the royal house extended also to its insignia and attributes. The various crowns especially appear to have derived their importance partly from the ancient kings, and partly from their power in charge of the royal jewels serves it in the character of priest.'11

The crowns of the two kingdoms possessed a mystical character, the white crown, which was the symbol of the king's dominion over the upper kingdom, being identified with the vulture-goddess Nekhbet, and the red crown, which symbolized his dominion over the lower kingdom, being iden- tified with the serpent-goddess Ituto. In other parts of Africa the regalia also possess a fetichistic character. Among the Yorubas, a people of the west coast, the royal crown is believed to be the residence of a spirit which requires the payment of a yearly tribute of silver to it.4 The crown is a fetish among the Ashantis and sacrifices are offered to it, while among the Hosc, an Ewe-speaking tribe in Togoland, the king's proper throne is quicl small box is bound with magic cords and kept wrapped up in a sheep's skin.12

The ideas underlying these facts are of course quite foreign to modern and even medieval Europe. Nevertheless we may perhaps find dim reflections of them in the mysterious atmosphere of sanctity which has attached itself to the two most cele- brated crowns of Europe—the holy crown of St. Stephen, and the Iron Crown of Lombardy. The former, which is compounded of two crowns, one sent by Pope Sylvester II. to St. Stephen, the second king of Hungary, in A.D. 1000, and the other sent by the Byzantine emperor, Michael Ducas, to King Geisa in 1073, has throughout Hungarian history been a kind of national symbol, the kingdom itself being known as the 'Land under the Iron Crown,' and a Hungarian magnate as 'membrum sacro corone.'16 When it was returned to Pres- burg in 1790 by Joseph II., who six years earlier had caused it to be removed to Vienna, it was received with such joy that it was being erected in its honour. It occupies a position distinct from the king, who cannot exercise his constitutional prerogatives before his corona- tion, and, if he should die before the ceremony, his name is struck off from the roll of kings. Though less famous than the Crown of St. Stephen, the Iron Crown of Lombardy, which is kept at Monza, is received with royal honours on the rare occasions on which it appears in public. After the corona- tion of Charles V. it was not placed again till the time of Napoleon I. On its way to Milan Cathedral for his coronation it was accompanied by an escort of the Old Guard, and a salvo of artillery was fired in its honour. Similarly on its way to Rome to accompany the funeral cortège of Victor Emmanuel II., in 1878, it was received with royal honours on its journey through Italy, on which it was escorted by the cathedral chapter and the municipal council of Monza.

2. Relics of dead kings as regalia.—Corporal parts of deceased rulers often form the most important article of royal insignia. Since the

1 H. M. Elliot, Hist. of India as told by its own Historians, London, 1867-77, iv. 369.
3 A. Ermann, Handbook of Egyptian Religion, Eng. tr. p. 35.
5 A. Vamberg, Hungary (Story of the Nations), London, 1897, p. 374.
king is the repository of the mana, or ‘luck,’ of his people. It is necessary that there should be a kind of psychic continuity which must not be broken by the death of a ruler. In S. Celebes portions of the bodies of deceased rajahs actually confer the right to the throne.

Another case occurred in south central Madagascar, a vertebra of the neck, a nail, and a lock of hair of a deceased king are placed in a crocodile’s tooth and carefully kept along with similar relics of his predecessors in a house among the people for the purpose. The possession of these relics constitutes the right to the throne. A legitimate heir who should be deprived of them would lose the right of the gods and the people. Contrary to a usurper who should make himself master of the relics would be expected to die. And it sometimes happened that a relation of the reigning monarch has stolen the crocodile teeth with their precious contents, and then had himself proclaimed king.

When a king of the Panesian Lybians died, his head was cut off, covered with gold, and deposited in a sanctuary. It is the custom among the Masaai for a chief to remove the skull of his predecessor’s body a year after burial, and to secrete it, at the same time offering a sacrifice and a libation. The possession of the skull is understood to confirm his authority.

When the Atake or king of Aboebotta in West Africa dies, the people would bathe and anoint his body, and placing the head in a large earthen vessel deliver it to the new sovereign; it becomes his fetish and he is bound to pay it honours. Similarly, when the aga of Acre departed this life, an official extracts a tooth from the deceased monarch and preserves it, and is supposed to collect the teeth of former kings in a box, which is the sole property of the crown and without which no aga can legitimately exercise the regal power.

It is said that among the Guanches of the Canary Islands the femur of the dead king constituted an important part of the regalia, and that the oath of allegiance taken by the chiefs to the new ruler was sworn upon it. Frazier believes the theory was that the body of the deceased king is transferred to the new ruler. A somewhat different theory has been maintained by Westermarck, who believes that it is not the soul of the dead ruler which becomes transferred, but his mana, or holiness. The sultan of Morocco is enabled to transfer to another his baraka, or sanctity.

3. Election of a king by means of the royal insignia.—In view of the great sanctity of the kingly office in the lower stages of culture, and the belief that the body of the dead king is bound up with its holder, it is of course of vital necessity that he who is most suitable should be elected to fill it. In order to obtain supernatural ratification for the choice of a king, divination has often been resorted to; sometimes the actual symbols of royalty themselves serve as a medium, and sometimes a particular object is kept for this purpose, which may not improperly, therefore, be termed a part of the regalia. This practice, though reflecting a very primitive phase of thought, has remained in vogue even among peoples who have attained to a considerable measure of civilization.

In an Old Transylvanian Mereg, when the people assembled to choose a new ruler, they placed a hillock of earth from whence it rose, floated into the air, and descended on the head of the future monarch.

Another interesting example is found in ancient India. It is said that in Benares, when a king died, four lotus-coloured horses were yoked to a festive carriage, on which were displayed various symbols of royalty (a diadem, the battle-axe, slipper, and fan). This was sent out of a gate of the city, and a priest or official proceeded to him who had sufficient merit to rule the kingdom.

The Lia Fail, as the stone on which the early kings of Leinster were crowned was called, which legend has identified with the English Coronation Stone brought by Edward I. from Scone, is said to have recognized the destined king by roaring when he stood upon it. It seems not impossible that similar animistic or animatistic beliefs may have once been attached to the ‘King’s Stone’ at Kingston-on-Thames on which the Anglo-Saxon kings were crowned, and to the Coronation Stone of the kings of Sweden at Upsala. A curious story of the power of a sacred stone to determine the succession to the throne is related of a certain Scythian tribe.

When a chief died, a tribal assembly met on the banks of the river Tanais to determine on a successor to the throne. In the river was a stone like a crystal, resembling in shape a man wearing a roebuck and producing it in the assembly became king.

The following story from Africa shows the prevalence of similar ideas in that continent:

When Bunga, the king of Raragwe, on the western shore of Lake Victoria Nyanza, died, he left behind him three sons, any of whom was eligible to the throne. The officers of state put before them a small mystic drum. It was of trilling weight but, being loaded with charms, no one could lift it, save he to whom the ancestral spirits were inclined as the successor.

4. Symbols of kingship.—As soon as social distinctions began to reveal themselves in human society—which was of course at a very early stage in its evolution—they would quite naturally be indicated by the wearing of certain ornaments. Intermittents of the Paleolithic Age show the widespread use of bone and ivory ornaments for cultural purposes, but it is impossible to draw any certain inferences from them as to the wearer’s rank. Among the remains of the Bronze and Early Iron Ages in Europe we find torcs, rings, and bracelets of gold, silver, and bronze, some of which are of ornaments and we may perhaps assume with some degree of safety that they were made for the chiefs. We know, of course, very little of the dress of the pre-historic peoples of Europe, though a few fragments of woven stuff have been found among the remains of the lake-dwellings (G.e.) of Switzerland. Probably the costume of chiefs differed little from that of ordinary persons, apart from their more solid ornaments. A royal costume may indicate that its wearer is the representative of a god. Nararnin carried two horns on his helmet, signifying his divine character.

The vestments of early kings of England, says J. R. Planche, on state occasions do not appear to have differed from their ordinary attire; likewise occasionally the materials may have been more costly.

In some parts of the world a certain colour is emblematic of royalty. Among the Malays the royal colour is yellow, the privilege of wearing which is shared by the magician. In ancient Persia the Great King wore a robe of purple. This colour was adopted by the Macedonian kings after the conquests of Alexander the Great. Purple was also a royal colour among the Etruscans. The paludamentum of the Roman emperor, a military mantle analogous to the Greek chlamys, was of purple, and the expression amour purpurare became equivalent to mounting the throne, while the attendant of the emperor’s accession was called natalis purpurare.

At the present day an ornamented club, a girdle of feathers in the Pacific, a string of boar’s teeth in New Guinea, throughout S. Asia the umbrella, and in Aschanti a gold axe, are insignia of chieftainship. A gold axe was also a symbol of respect for officials in ancient Egypt. Among European peoples they usually include the following ornaments: crown, sceptre or staff, sword, and ring. The regalia may gradually acquire a special
sanctity as the reliefs of some kingly saint or national hero. Thus the ancient regalia of England, which were destroyed under the Commonwealth in 1649, were venerated at the Restoration of 1660. The Royal Regalia were formerly intended to have been worn. The regalia of Hungary are regarded as reliefs of St. Stephen. The imperial and French regalia were to some extent reliefs of Charlemagne.

The English regalia consist of St. Edward's crown, a sceptre, a sword, and three crowns. The English crown is of the form of a dove, the sceptre with the cross, St. Edward's staff, the orb, the gold spurs, the sword of State, and the second and third swords, and the curtsana, or sword of mercy. The regalia of the Holy Roman Empire consisted of the Holy Roman emperor's crown, his dalmatic embroidered with large crowns, the golden apple or globe, Charlemagne's sword, his golden sceptre, the imperial cloak embroidered with eagles, the buskins, gloves, and the hereditary crown of Rudolf II. The French regalia included the crown said to have been given by Pope Leo III. to Charlemagne, Charlemagne's sword, called 'Joyeuse,' a sceptre six feet high, the hand of justice, and Charlemagne's spurs, vestments, damask mantle, and a gold and pearl crown. The Scottish regalia included a crown, sceptre, and sword.\(^2\) It seems to have been the custom for the English kings to be buried in their coronation robes, as was shown at the opening of Edward I.'s tomb in 1703. The fact that Edward I.'s regalia existed, of course, no hereditary royal robes in England as in some other countries.

The most important regalia of the khallafs were the supposed relics of the Prophet—his striped cloak (burdah), his ring, his staff, and his sword. They are said to have been dug up at A.H. 132, and to have been brought to Constantinople in the reign of Selim I. (1312-21), who on his conquest of Egypt forced the last of the 'Abbasid khallafs to make over his rights to him. There seems, however, little chance that they are genuine, as, even supposing that the story of their being dug up is true, they would probably have perished when Baghdad was taken by the Mongols in A.D. 1258. As the origin and symbolism of the crown have been discussed,\(^1\) it is not necessary to repeat any further discussion here, but something may be said of some of the other more prominent insignia of royalty.

5. The sceptre.—John Selden, in his Titles of Honor,\(^2\) says:

> For the sceptre, some testimonies make it an ancient Ensigne of a King than the Crown or Diadem is. Justin (or rather Trogus Pompeius) seems to desire that the old Kings of Rome and many Idumas; but that instead of them they carried Scepters. So I conceive him in those words spoken of the age of those Kings, "Per ea adhibe temporae reges hastas pro Diademate habitant, quas Graeci Scutera dixero." For their Diadems, enough already. But it is most clear that both in prophan and holy writers the scepter is much anointer (as it was attributed to a King) than either Crown or Diadem.\(^1\)

It is probable that the ancestor of the sceptre is far older than even Selden imagined. Possibly it is to be found as early as the old Stone Age. A shaft of reindeer's horn perforated at its broader end by one or more cylindrical holes has been found in certain Aurignacian and Lower Magdalenian deposits in France. In its later form it is decorated with incised designs. Gabriel de Mortillet, believing it to be a ceremonial object, gave it the question-begging name of nätom de commande-ment.\(^4\) Among the chiefs and medicine-men of the Plains Indians of N. America carried batons

The war-clubs of celebrated warriors, *auna*, in Samoa were venerated by their families. It was regarded as indispensable to the chief to perform certain rites in their honour. A Mexican merchant carried a smooth black stick representing the god Yacatecutli, who was believed to protect him on his journey.

In the South Pacific, there used to be a sacred staff, made of iron-wood, rather longer and thicker than an ordinary walking-stick. It had been kept for ages in the family, and was regarded as a sacred relic or representative of the god. When the priest was sent for to see a sick person, he took the stick, and with it anoint or gargle the patient, whose eyes always brightened at the sight of the stick.4

In the OT the word 'sceptre' is frequently used as a synonym for royalty. The Hebrew *shlahb* may stand either for a short ornamental sceptre, such as Assyrian kings are sometimes represented as having, or for a long staff.5 The Roman emperors adopted the *sceptrum eburneum* of the triumphant general. When the empire became Christian, the sceptre often served as a symbol of an eagle. In some countries two sceptres came into use at an early period. In a 9th cent. English Coronation Order, which is said to be a copy of the Pontifical of Egbert, archbishop of York, 732-706, a sceptre (sceptrum) and a staff (baculum) are mentioned. The word *baculum*, *baculum*, was not applied to staffs of a ceremonial character in Rome, but merely to ordinary ones. The Coronation Order of Ethelred II. mentions a sceptre (sceptrum) and a rod (baculum), and Ethelred, the first English king on whose coins a sceptre is represented. Since the time of Richard I. the two sceptres have borne a cross and a dove respectively. The sceptre with the dove was a reminiscence of the peaceful part of Christ's reign after the expulsion of the Danes.6 Of the French sceptres one bore a *flour-de-lys*, and the other a hand in the act of blessing. The latter was known as the *main de justice*. It was put into the left hand of the king. The human hand as an amulet is common in Greece, and in the south region an outstretched human hand is often painted on houses as a protection against the evil eye. A bronze relief at Copenhagen represents Zeus-Sabazios in Phrygian costume, holding in his right hand a phallic sceptre tipped with a votive hand.7 In early Christian art a hand was a symbol representing God the Father. As to the cause of the duplication of the sceptre, Lord Bute makes the following plausible suggestion:

'This may possibly have arisen from the words, "Thy rod and thy staff, they comfort me," in Psalm xxvii., which was treated as a Regal Psalm on account of the passage "Thou hast anointed mine head with oil," and was additionally appropriate in the Latin, from commencing, "Dominus regit me" as an acknowledgment of the Divine Sovereignty over earthly Princes."8

In the English Coronation Orders the sceptre is especially the sign of regal power, while the rod is more the ensign of the paternal authority of the sovereign.9

6. The orb.—

"As the Scepter," says Selden, "is the ornament of the right hand, so in the left the Globe or Mound, with the Crosse Inclin, in Statutes and Pictures (and in some Coronations) of Kings, is a Musick [Music], and a Criterion of Sovereign Power. And in the solemn use of this in several kingdoms begun, is not so easily found, nor perhaps worth the inquiry. It shall suffice here to say that the Emperor, whences the use of it was by example taken into all or most of other kingdoms of Christendom, and afterwards by some of them also sometimes called an Apple, sometimes a Ball, and it is observed by learned men that it was frequent in the state of Rome before the Emperors. As it was among Christians, and to be used by their Ensigns in the field and in their monies the Ball or Globe, the beginning whereof is dole elsewhere refers to Augustus. 16

V. G.," Selden, 1612, a Latin, and as a proper attribute of Royall Nobility, to signify a discovery of the earth, and of the treasures in it.10

At the imperial coronations the orb was carried by the Counts Palatine of the Rhine, under the name of *pomum imperiale*. The apple was sacred to Aphrodite, and is a token of love in S.E. Europe at the present day, but does not appear to have been a token of kingship in the ancient world. In its origin, however, the orb appears to have symbolized the vault of heaven. Zeus is frequently represented as holding an apple.11 The Caracalla represents Jupiter Capitolinus holding a globe in his right hand and a sceptre in his left.12 Sometimes a globe rests beside the god's feet.13 From being a symbol of the sky-god the globe becomes one of the imperial insignia. Imperial coins of the 3rd and 4th centuries show the emperors holding a globe.

These representations imply on the one hand that the emperor has stepped into the shoes of Jupiter, and on the other hand that the duties devoured in unknown succession from occupant to occupant of the imperial seat. Frequently from the time of Commodus to that of Diocletian we find Jupiter delegating the globe to his human representative.14

Both in Roman mosaics and in Pompeian paintings the globe is coloured blue or bluish-green, which indicates that it signified sky rather than earth. It is uncertain whether the cross was first added to the globe by Constantine or by Valentinian.15 Julian the Apostate replaced it by a figure of Victory. Under the name of *globus cruciger* it was a part of the Byzantine regalia. Though the orb formed a part of the regalia of the Holy Roman Empire in England, it was not used in France. In the English coronation ceremony it is treated as a symbol of the dominion of Christ over the world. On placing the orb in the sovereign's right hand, the archbishop addresses him in an exhortation containing the following words:

'When you see this orb set under a cross, remember that the whole world is subject to the power and Empire of Christ our Redeemer.'16

7. The sword.—The symbolism of the sword is of course self-explanatory. The girding of the new monarch with a sword is a practically universal feature of coronation ceremonies. It is a reminiscence of the days when the king was not merely the titular but the actual war-chief of his people. So intimate a part have weapons played in the religion of a warlike people that deities have been worshipped under their forms. A spear kept in the Regia was worshipped as an image of Mars; the Scythians sacrificed sheep and horses to an iron sword, and the war-god of the Alans was worshipped as a naked sword stuck in the ground.17

Indeed, in the case of the sultans of Turkey, the girding of the imperial sword of Osman on the mosque of Eybey on the Golden Horn is the formal ceremony of inauguration. At the coronation of the king of Hungary an impressive ceremony is connected with the sword of St. Stephen. After the coronation the king rides on his charger to a

mound made of earth brought from all the provinces of the kingdom and waves his sword towards the four points of the compass, indicating his deter-
mination to defend his kingdom against surround-
ing foes. The tendency of the various royal
ornaments to become multiplied is also apparent
in the case of the sword. No fewer than five swords
now adorn the gold crown of Scotland. (3) The special
sword of State which is carried before the king on
various occasions; (2) a small sword which is
substituted for it during the coronation ceremony,
and with which he is ceremonially girded; (3) the
sword of spiritual justice; (4) the sword of temp-
oral justice; (5) the sword or of mercy, which is
blunted at the end by the removal of the point.
Such swords were in ancient times carried by heralds.
A similar idea is found in Japan, where certain officials such as
doctors wore in their garments a wooden ornament
resembling a short sword.

8. Bracelets and rings. It is not unlikely that
bracelets, anklets, and rings may have at one
time been amulets, and have participated in the
inexorable tendency of amulets to degenerate into
ornaments. As emblems of kingship bracelets
seem to have been more prevalent in the East than
in the West. They were worn by the kings of Persia,
and also formed part of the royal insignia of
Sparta.8 These bracelets and rings even in the
period of the ancient empire were made by the
famous jewelers of Alexandria.8 They were
formerly in use in England, and a pair belonging
to the regalia was ordered to be destroyed under
the Commonwealth. They have not been used in
England since the Restoration. The use of the ring is,
however, almost universal. Though at an early
period it may have been an amulet, yet before
degenerating into a mere ornament it passed through
a period of usefulness as a signet. The
Spaxtan magistrates had a public seal with which
they sealed everything that had to be
sealed. 4 That rings were royal ornaments from an
early period we know from the curious legends
surrounding the rings of Minos and of Pyrrhus,
tyrant of Samos. In Rome the gold ring was often
confers were as a military distinction. The jewels
awere limited its use. The emperor's ring was a kind
of State seal. In the Liber Regalis, which repre-
sents the fullest development of the medieval
English coronation ritual, the ring is referred to as
the signet of the regal wizag. In the ceremony of
the coronation use of rings is of course most familiar
in connexion with betrothal and marriage. The
coronation ring symbolizes the marriage of the
monarch to his people, just as the episcopal ring
symbolizes the marriage of the bishop to his see.
The English coronation ring is indeed sometimes
called the wedding-ring of England.6 The doge
of Venice used to cast a ring into the Adriatic,
symbolizing the marriage of the city to the sea.
The ceremony was called epousitio del mar ('the
wedding of the sea'), and was celebrated annually on Ascension Day.

A curious legend attaches to St. Edward's ring.
It is said that he once bestowed it upon an old
man. Some years later two English pilgrims in the Holy
Land met the old man, who restored it to them,
revealing himself as St. John the Evangelist, and
bade them return it to the king. There is also a
supposition that the closer the ring fits the king's
finger the longer he will live and the longer
will be his reign.7 Royal rings have served various
symbolic purposes. Alexander the Great on his death-bed bestowed his ring upon Perdiccas,
symbol of his intention to entrust the government
of the empire to him. The Anglo-Saxon king Offa
is said to have appointed his successor by send-
ing him his ring. The bestowal of a ring may symbolize a pledge, as in the case of Elizabeth's
gift to Essex, or it may symbolize a royal command.
In the book of Esther Ahasuerus gives his ring to
Haman as a warrant for massacring the Jews.
Adrian IV. confirmed Henry II. on the throne of
Ireland by sending him a gold ring. Mary Queen
of Scots, by sending her ring, pardoned two
burgesses who were about to be hanged.8

9. The umbrella.—Throughout Asia and parts of
Africa the umbrella is one of the most instru-
mentary of the regalia of royalty. It is or has been in
use among the Malays, in Burma, Siam, India,
and among the Seljuk sultans and the Mogul
emperors.9 An umbrella is shown on the reverse
of a coin of Herod Agrippa I. It also forms part
of the regalia in Madagascar. In one of the Jabelas
takes a prince who wishes to dispossess his brother
of the throne says, 'Give the royal umbrella up to
me, or give battle.'10 In 1855 the king of Burma,
addressing the governor-general of India, spoke of
the umbrella as being a sacred symbol of the
umbrella-wearing chiefs of the Eastern Countries. It
seems most probable that the ceremonial char-
acter of the umbrella is due to the tabu which
prevents certain sacred persons from being exposed
to the sun. This recommendation is a counterpart
of the common tabu which prevents their feet from touch-
ing the earth. The Mikado and the high-priest of
the Zapotees of Mexico were forbidden to expose
themselves to the rays of the sun. Pope Alexander
the Great, according to St. Jerome of Venice, the right
of having a canopy or umbrella carried over him as a
symbol of sovereign power.

Umbrellas appear to have been sometimes used in ritual
for the purpose of preventing the sunlight from falling on sacred
persons or things. . . . At an Athenian festival called Semeia the
priestess of Athena, the priest of Poseidon, and the priest of the
Sun walked from the Acropolis under the shade of a huge white
umbrella.11

10. Investiture with the regalia.—Whether a
monarchy is elective or hereditary, it is usual for
some ceremony to be held for the purpose of
inaugurating a new reign. This ceremony usually
takes the form of investing the sovereign with the
royal insignia. The inauguration of the
king of Tahiti consisted of his being ceremonially
invested with a sacred girdle of red feathers in the
presence of the image of the god Oro. By means of
this ceremony he was formally invested into
divine rank. After describing the girdle, the
officiating priest would say, 'Parent this of you, O
King.'12

Among the Baganda, when the period of mourn-
ing for the dead monarch was over, the new ruler
and his consort were ceremonially invested of their
bark clothes and invested with new ones. This
ceremony was called 'confirming the king in his
kingdom.'13 In Madagascar the object of the
inauguration ceremony was to secure for the king
the quality of an imperial sovereign and the grand
virtue, which renders an object good or efficacious.14

For this purpose the new ruler mounted a sacred
stone, and exclaimed, 'Masina, Masina, masina
v'alo? The assembled people replied, 'Masina.'

The word 'masina' is derived from the word 'tana,' which means to acquire the powers of 'hasina?' Am I holy?'

1 Among the Ba-Thonga the inauguration of a new

chief is a purely military affair, and no religious ceremony takes place.1

The coronation of the Egyptian kings was supposed to take place in heaven. In a description of the coronation of Ramesses III, we read:

"...crowned with the crown of Re, Atum, and Ishtar, beautiful of face, crowned me as Lord of the Two Lands on the throne of him who begat me; I received the office of my father with joy; I crowned with the sixteen diadems of the eight-headed god Ptah, I assumed the double-plumed diadem like Tatenen. I sat upon the throne of Harakhte. I was clad in the regalia, like Ra.2"

Another inscription speaks of Ramesses III, assuming the regalia of Horus and Set.3

The inauguration ceremony of a new emperor of Japan containing its ceremonial taking possession of the three chief articles of the regalia. The principal one is a sacred sword which is called Kusanagi no Tsangii.

1This sword (so legend goes) was found by Susa-no-o in the tail of an eight-headed serpent, which he intoxicated with sake and then slew. Having been brought down from heaven many centuries ago by the first ancestor of the Mikados, he came into the possession of Yariko-toke, and assisted the prince in the conquest of Eastern Japan. This treasure is never shown, but a great festival is held in its honor on June 21st. The sword (which is a mirror and a jewel) is kept at Kyoto and the inauguration takes place there, after the period of mourning for the dead ruler is over.

In Europe, with the exception of Hungary, to which reference has already been made, a coronation ceremony has usually served rather to ratify the election of a king than actually to create one. Before set forms came into use, it was often of a more or less spontaneous character. When Julian the Apostate was proclaimed emperor at Paris in 360, a standard-bearer named Maurus took off the tore which he was wearing, and placed it upon the head of the newly-elected ruler.4 The earliest known account of a coronation in Great Britain is that of King Aidan of Columba, which is found in St. Aidan's life of the saint.

Throughout the Middle Ages the position of the Church was that of witness to a contract between the ruler and people at the crowning of a king. The Pontificale Romanum provides a special Mass for the coronation of a king.5 It prescribes the newly-elected monarch with his investiture.

One of the bishops who are presenting the king to the metropolitan says, 'Reverendissime Pater, postulat Sancta Mater Ecclesiae, in praesencia pontificum, coronetur regnum sui Regem regnati summus.6' The metropolitan says, 'Scitis esse dignitatem quae ad hanc dignitatis? The bishop replies, 'Ex novissimis et continuis, et secundus dignitum, utilem Ecclesiae Dei, et ad regimen hujus Regni.'7

W. Stubbs's view of the ceremony is as follows:

The ceremony was understood as bestowing the divine ratification on the election that had preceded it, and as typifying rather than conveying the spiritual gifts for which prayer was made. That it was regarded as conveying any spiritual character or any especial ecclesiastical prerogative there is nothing to show; rather from the facility with which crowned kings could be set aside and new ones put in their place without any objection on the part of the bishops, the exact contrary may be inferred.8

The same view is taken by the French writer Menin, who says that in his own day (reign of Louis XV) kings were recognized independently of all ceremony of investiture. No formal recognition of the king, however, is found in the French constitutional charters.9

1. Le sacre des Rois, he says, 'est une ratification publique du droit qu'ils ont de succéder à la couronne de leurs aïeuls, et une confirmation du premier acte qui les a mis en possession du

4. IV. xvi. 62.

9. Trône ; c'est une espèce d'alliance spirituelle du Roy avec son Roysse qu'il épouse, pour ainsi dire, qu'il s'engage de le maintenir, en tant que de protéger, en même temps que sa Roysse, par la voie des peuples, lui promet solennellement fidélité et obéissance.1

Nevertheless a wide-spread belief seems to have grown in the Middle Ages that the anointing of kings was of a sacramental nature, and that no coronation was complete without a mark or character on the soul of the recipient. At all events a king was widely held to possess a quasi-sacerdotal character. The emperor was permitted to read the Gospel at his coronation Mass, and the French king took divine service under both kinds at his coronation. These facts led to the conviction that an anointed and uncrowned prince was no true king. The French kings until the 12th cent. began their reign on the day of their coronation.2 Le Bel dorniert,3 said the old chroniclers, speaking of the period before a coronation. This belief had not completely died out even in the 19th century. Renan mentions the fact that some Bretons held that Louis Philippe, who had been neither anointed nor crowned, had no more right to exercise the functions of a king than any one who was unordained would have to exercise those of the priesthood.4

Precedent for the crowning of a prince during the life of the monarch who wore the dressing and anointing of Solomon by order of David, and which was frequently resorted to in order to ensure the stability of a dynasty. The survival of a coronation ceremony in Europe at the present day is not necessarily associated with the possession of great monarchical prerogatives. The German Emperor and the Emperor of Austria are not crowned, though the 'hereditary presidents' of England and Norway are. In Spain the coronation ceremony has been discontinued. In England its discontinuance was formally announced at the accession of William IV. In most of the monarchies founded in the 19th cent., such as Italy, Belgium, Greece, it has never been introduced, and the king merely takes an oath to observe the Constitution. One of the oldest coronation ceremonies in Europe is the crowning of the pope, who is crowned by the youngest cardinal-deacon with the tiara or triple crown, an ornament ultimately derived from the consolamentum, a head-dress worn by high Byzantine officials, and the turgia, a Greek religious crown. The papal coronation has no religious significance.

No definite rules can be laid down with regard to the crowning of queens-consort. In England, if the king is married at the time of his coronation, the ceremony has usually been performed, and sometimes it has been performed separately if he married afterwards. In France it was usually omitted, and, if performed, it generally took place at St. Denis and not at Rheims with the king. The coronation of a queen-consort merely typifies her participation in the royal dignity. Sometimes this is indicated in the coronation ritual; the king of Hungary holds the Crown of St. Stephen for a time on the right shoulder of the queen during the coronation ceremony, and the Tsar of Russia used to touch his tunic to the forehead of his crowned wife during her crowning.

When a ruler has abdicated voluntarily and without pressure, he has often symbolized this act by publicly laying aside the royal insignia. Societies have been formed of himself and his property. In the media in 305 in the presence of his assembled troops, and in more recent times the eccentric Queen Christina of Sweden laid aside her crown in the presence of the Swedish senate.
REGENERATION. — Through all theology and religion there runs a clear antithesis between outwardness and inwardness. In theology this shows itself in the opposition between transcendence and immanence, anthropomorphism and anti-animism. It asks, Is God a glorified man or an indwelling potency? Does He operate on Nature from without or from within? Should we concentrate our thought and faith on Jesus as the risen Lord, the ascended Mediator of a Divine and a Human, or on Christ as Spirit, operating in His Church and in us as believers? Sometimes the contrasts are accentuated, and the opposing views are polemically contended. Sometimes men are content to accept both as the two poles of an unsolved antinomy. A similar antithesis occurs also as to the nature of religion, causing men to ask, Is religion doing or being? Is the vital matter what a man does or what a man is? Ought my great concern to be, What am I to do? or: What ought I to become? E.g., as to the nature of sin, it is disputed whether sin is transgression of a commandment moral or ceremonial, or is perversity and pollution. Again, as regards reconciliation with God, the two queries arise: Is this effected by having sin pardoned, or by having perversity rectified and pollution cleansed? Is the favour of God to be secured by righteously obeying the precepts of His law or by being inwardly changed and sanctified by a Power other than that by which we are united to Him? Further, this change to be studied as manifesting itself in outward life and conduct, or as a spiritual and psychological phenomenon? In the former case we are engaged with the subject of conversion, in the latter, with that of regeneration.

1. OT conception. — Kirzopp Lappke considers the antithesis between outwardness and inwardness to be characteristic severally of the Jew and the Greek. The Jew asked, What am I to do? He required a code of life and action to tell him definitely what to do. The Greek asked, What am I to be? He wished to become something different. What distressed him was the feeling that his very being was corrupt, and he wanted a religion that would help him to become a new being.1 There are two criticisms which one would like to make on this: (1) instead of the word 'Greek,' the word 'Hellenist' would be more accurate—the orientalized Greek; and (2) it is unfair to the Jews to suggest that they were not sensible of the inwardness of religion. Both views find expression in the Jewish Scriptures. It is true that outwardness is prominent in the O.T. We have much external morality and external observance of ceremonial regulations. There are also forms of inwardness in statutes and precepts. Restoration to divine favour is secured by sacrifices offered in accordance with a meticulous ritual. But this is not the only conception of sin that meets us in the O.T. Sin is also disorder. It is 'irr., desolation,' 'chaos.' It is 577, 'restless agitation.' It is diadem, making men unfit to commune with God. It is 729, 'abomination.' It is 729, that from which men flee, because it is a burden. It is 729, the coming of an internal remedy—a remedy which man himself cannot administer. There is a distinct vein of O.T. teaching which is very pronounced as to man's inability to cleanse himself (Jer 19:2, Pr 20:9). Man's will is powerless to effect the needed change. Something must be done in man and for man, which divine intervention alone can accomplish (Is 6, Ps 51, Job 19:15-19). This is apparent from the way in which the best of men plead for divine help and appeal (Ps 25:11-11, 41:6), and from the way in which God promises to render the needed help (Jer 23:3, Ezk 30:1). Sin is not something to be merely pardoned, atoned for, taken away, or forgotten. So long as the propensity to sin remained, the OT saint groaned under its tyranny and pollution. He cried for cleansing (Ps 51) and for healing (41). But even this could not satisfy him. He longed for thorough renovation. Regarding the heart as the seat of the collective energies of the personal life, if the heart of a man is depraved and its sin then has thus banefully affected the very formative sources of character, he cries, 'Create in me a clean heart, O God; and renew a steadfast spirit within me' (61). Saul was also told, 'Now turn to me and I will turn to you' (19:10). And God says, 'I will give another heart' (I S 4.6), but, alas! he fell away; and so the Psalmist prays that the clean heart, imparted by a new creation, might, by constant renewal, be kept 'steadfast.'

2. The Greek and its synonyms.—The word 'regeneration' occurs twice in the NT; in either case for the same Greek word πανεποιησις = ἀφέναι γένεσις (ἀφέναι), a becoming new again, a reconstitution. The Greek word which would most accurately represent the ideas that we associate with regeneration would be αφέναι (ἀφέναι): but this does not occur in NT, though the verb is found in 1 P. The word πανεποιησις first appears in Greek literature to represent the great Stoic conception of world-cycles, according to which every generation would come to an end by conflagration—to be followed, however, by a renovation or reconstruction, a πανεποιησις of everything just as it now is. Then, after a definite period, will come another conflagration and reconstruction, the third of which would be a new world and a new catastrophe and another being termed a 'great year,' a περίοδος. Hence Marcus Aurelius 1 speaks of 'a periodic πανεποιησις of the universe.' Being a high-sounding phrase, it was used hyperbolically to denote any extraordinary change; as when Cicero 2 describes his restoration to rank and favour after exile as πανεποιησις nostram; and when Philo speaks of the birth of Seth as the πανεποιησις of Abel, 3 and of the sons of Noah as 'founders of a πανεποιησις,' since they were 'pioneers (ἀρχαγγελοι) of the second period of the world'; 4 so Josephus 5 speaks of the restoration of the Jews after the Exile as a πανεποιησις. With a nearer approach to the original Stoic meaning, Matthew (19) describes the new heavens and the new earth, which will bring conflagration and new outward form (Is 657; En, lxxii. 1; Jud. i. 29) were looking forward, in these words: 'In the πανεποιησις, when the Son of man shall sit on the throne of his glory, ye which have followed me shall sit,' etc. The same meaning is found in Tit 3, where πανεποιησις has an ethical or religious sense: 'According to his mercy he saved us, through the washing (marg. 'laver') of regeneration, and the renewing of the Holy Ghost.'

2 aed Att. vii. 7.

4 De Vita Moisio, li. 12 (Mangey, ii. 144).
5 Ant. xii. 4.
REGENERATION

Other Greek words with kindred meaning found in NT are:
1. ἀφορίσις, ‘begot’ (Mt 1:16, Lk 3:23) and also ‘bear children’ (Mt 16:21, Gal 4:4, John 16:21). In a religious sense it occurs in
1. Phil 2:15;’
2. διαφοροέζω, ‘begotten’ (Gen. 49:26). 3. In 1 Jn the perf. pass. occurs eight times, and in Rev
3. it is used in the same relative sense as I Cor 1:39 f.; Acts 26:20; Mt 19:27; Lk 12:17; and in five of these instances AV ‘has been’—e.g., ‘Every one that loveth is begotten of God’ (1:3); ‘Every one that believeth that Jesus is the Christ is born of God’ (1:12); ‘by faith and not by works of the flesh’ (2:19); ‘he that believeth on the Son of God, it is so
4. in Jn 3:18 Rev everywhere retains ‘be born.’ (5) διαφοροέζω (and is repetitive), ‘begot again or anew’ (1 Pet 1:8). ‘Blessed be the God and Father of our Lord Jesus Christ.’ The noun διαφοροέζων is not found in NT, but is found in Vulgate. (6) ἀναποίνωμος, ‘make alive,’ ‘quick’en:’ Eph 2:5. God . . . quickened us, together with Christ, when we were dead in trespasses. (4) ἐπαναφέρω, ‘revert to’ (in the sense, return to the original state or condition): ‘In sin brought forth death;’ 1 Cor 15:22. ‘He having so will’d, brought us forth (or ‘gave us birth’) by the word of truth.’ (6) ἀναποινίζω
5. to demand or impose such a change. Such an experience can be expressed only in figures; and ‘regeneration’ is but one of many metaphors occurring in the NT, all of which are designed to express the change wrought in the soul which the fact that God, a profound change must be wrought in him, which God alone can effect.
The early Christians were so amazed at the change in disposition and character which had suddenly come over them that they framed all sorts of theories to account for it, describing their new experience in terms and conceptions of their own age.

A. Repentance.
The simplest metaphors meet us in the Synoptic Gospels. (a) Emphasis is laid on repentance (Mt 4:17; Lk 13:3). The Aramaic word for ‘repentance,’ סתרפ, is derived from סתר, ‘to turn’ (cf. Mt 18:5); and hence we may safely affirm that the repentance (q.v.) which Jesus insisted on was a practical one—turning the back on one’s former life.
6. (b) ‘Becoming as a little child’ (Mt 18:3). The context discloses what our Lord intended by this. It is the abandonment of pride and ambitious self-seeking, the attainment of meekness, lowliness, and sovereignty—(as a father), ‘and whosoever shall deny himself away from the lowliness, and shall take up the cross, and follow me, the same shall save his life.’ 7. James 4:8.
8. The need of divine grace for the attainment of this great ethical change is not so much explicitly taught as implied in the importance attached to prayer.

B. Baptism. The effect of the Divine Word and the need for co-operation between the human and the divine are taught very clearly in the Parable of the Sower. ‘The seed is the word of God’ (Lk 8:11); but three of the four kinds of soil are unproductive; there is only one which is far receptive of seed as to yield the fruit of a new life within the natural heart of man.

C. New birth. This appears under two aspects, both contained in the word ἐκπερίζεται: (1) the original

(1) De Inser. Nunci, 3 (Mangen, ii. 490).
5. Lake (Inaugural Address at Leiden, 27th Jan. 1904) and F. B. Burkhart, The Epistle to the Ephesians (1909) advocate that ἰδιὰς should be translated as ‘an interpretative gloss,’ because it is sometimes omitted in the Fathers; to which an answer is given in the case of the variant reading of the early Fathers, given in A. Reisch, Paralleltexte zu Johannes, Leipzig, 1897, p. 73 ff., seems to dispose of this theory: for, though the omission of the variants in the Text of the New Testament of ‘the Spirit’ is omitted, and several in which ‘the Spirit’ is emended, there is not one citation from the Fathers in which ‘the Spirit’ is inserted and ‘water’ omitted.
2 Co 5* there is a new creation (as Irv), implying that man’s entire outlook on earth and heaven, man, and God seems changed. Many Christians think it only significant how particular experiences are able to change one’s centre of gravity so decisively. We speak of ‘motor efficacy’ but such efficacy is not possible in a new natural motor efficacy. Starbuck: ‘Who can tell what really happens in one’s consciousness when one terms regeneration as union with one’s deeper self?’ What happens below the threshold of consciousness must, in the nature of the case, evade analysis. 

4. Nature of the change.—(1) The change is new. All are agreed as to its newness.

As a new divine Principle, says I. A. Dorner, ‘the Holy Spirit creates, although not substantially new faculties, a new trend, a new condition—knowing with a new consciousness. In brief, He produces a new person.’ All things are new, says Storace Bushnell, ‘Life proceeds from a new centre. The Bible is a new book. Duties are new. The very world itself is revealed in new beauty and joy to the mind.’ And of course he is in thorough agreement here, as he says, ‘This new life, therefore, manifests itself in new views of God, of Christ, of sin, of holiness, of the world, of the gospel, and of the life to come.’

(2) The change expressed in terms of metaphysics.

The Puritans expressed themselves very largely in terms of Aristotelian metaphysics.

Stephen Charnock (1626), whose discourses on regeneration were for many years the great authority on our subject, defines regeneration as a ‘powerful change, wrought in the soul by the efficacious work of the Holy Spirit, so that it becomes a new habit, the law of God and a divine nature are put into and framed in the heart enabling it to live holyly and pleasingly to God.’ The sinner is drained of all that is enticing.

We note that ‘a divine nature is put into the heart’. God’s word is expressed to him, the only thing new, an addition to nature, or ‘a change in the substance of the soul.’ ‘As in the cure of a man, health is not added to the disease; but the disease is extinguished and the healthy part set in its place. Add what you will (we are told), without introducing another form, it will be of no more efficacy than flowers, scents, and perfumes wear away the dead corruptions of the soul and remove the rottenness.’ We learn, then, that, though regeneration is ‘not an addition to nature,’ and ‘the new creation gives no new faculties,’ yet ‘a vital principle is put into the heart’ and ‘a new form is introduced.’ In regeneration there are new principles; ‘all new,’ says Charnock, ‘there are new principles’; and from him we obtain a definition of the word ‘principle,’ which we seek in vain in Charnock. ‘It is that foundation which is laid in nature, either old or new, for any particular kind or manner of exercise of the faculties of the soul.’ In other words, a ‘principle’ is ‘a new foundation laid in the nature of the soul, for a new kind of exercise of the same faculty of understanding.’

(3) The change expressed in terms of psychology.

The great Christian consciousness is causally and subjectively, is called regeneration and, when viewed in its manifest results in life and character, is called conversion (p. v.) is a psychical fact and therefore can be expressed in terms of psychology. Metaphysics is the treatise of the universal consciousness, entity, possessed of substance and faculties, form and principles. Psychology pursues the humbler path of analyzing consciousness and interrogating experience.

E.g., E. F. Scott describes regeneration thus: ‘It is like another and higher will sustaining ours, and gradually subduing the whole nature to itself—till the natural life becomes “spiritual” life.’ R. Rees describes it as ‘an abdication of our own individuality, allowing the Holy Spirit to evoke a complete metamorphosis of our human nature.’ J. Strachan speaks of it as ‘a new life which turns all the forces of one’s being into a new channel. All the energies that formerly made a man sin are now employed to make him holy.’ Paul, as though newly and radically changed in a man’s life, as those of Paul, says Percy Gardner, ‘may often be led up to by any experience which may beget in him something which may be called a violent spiritual and emotional tempest, which which raises the whole being to its utmost depths.’

4 Co 5. the metaphysical nature is left a mystery.
5 James has been much disputed by theologians, how particular experiences are able to change one’s centre of gravity so decisively.
6 We speak of ‘motor efficacy,’ but such efficacy is not possible in a new natural motor efficacy. Starbuck: ‘Who can tell what really happens in one’s consciousness when one terms regeneration as union with one’s deeper self?’ What happens below the threshold of consciousness must, in the nature of the case, evade analysis.

REGENERATION

... says of conversion (though what he says is much more true of regeneration) that it is "the birth of new powers." It is "as if there had been the liberation of fresh energy, or as if new streams and currents had been brought into human life in a new plane." "It is a process of realising the possibilities of growth; of making a draft on the latent energies... which might otherwise be insensible to our awareness," says S. Vernon Hartley. 1

The psychological expression of regeneration may well be subdivided as follows:

(o) In terms of personality. — The new personality is formed, says Dorey, "by a change in the nature of the soul's resistance to the several powers and activities..." 2 Thus, "the soul is not there to begin with, but must be gained." 3 Accordingly, says S. Vernon Hartley, if one asks, "Unite my heart to Thy name," 4 he answers, "You have thought aright in the Lord, and you have not shamed your hope on the day of your strength." 5

(2) Unification. — Every man, says Percy Gardner, "finds himself divided into two or sometimes many, intersecting, intersected, intersecting,..." 6 P. W. Headlam says, "If we are divided, we are divided in the sense that we are divided against ourselves." 7

(3) The change expressed in terms of physiology. — There seems to be a parallelism between cerebral and psychical processes, but modern psychologists have long abandoned the attempt of David Hartley and his school to maintain that mental acts can ever be divided into the simple and divisible, as brain currents or vibrations, or indeed by any physical terms. While aware of the inadequacy of physiology, it seems a fascination to some of our scientific theologians to throw their account of their cases in psychological terms.

E.g., Starbuck says: "What happens below the threshold of consciousness must, in the nature of the case, evade analysis. It tends to fill the chains in our knowledge, however, to explain it in terms of the nervous system and its functioning." 8 And again: "If we turn to the crude analogy of nerve cells and connection... we may get definite picture, at whatever cost of accuracy." 9 Accordingly, we find him describing "the phenomena which cluster about the birth of a new self as the occasion of new powers and activities as 'born of the Spirit,'" but he immediately adds: "It is as if brain areas which had hitherto dormant had now been awakened, or as if new powers and activities had been liberated, and now begun to function." 10 Starbuck insists strongly that conversion is an adolescent phenomenon; that we may not say, "The new powers and activities of the period, when the vast majority of conversions occur. In these periods

the life-forces tend upward toward the higher brain centres," 11 and biologically the new birth is "coming to live on the highest level of cerebral activity." 12 Various scholars thus symbolically, thus: that a 'new centre of personal energy has been subconsciously incubated'; 13 and Luke attaches so much importance to it as a symbolical event that he says that the really serious controversy of the future will be to determine whether religion is merely 'communion of man with his own true self consciousness, which man does not recognize as his own, but hypostatizes as some one exterior to himself.' 14

5. The efficient cause of regeneration.—(1) The power of the Spirit. — The teaching of the NT is emphatically that man needs a drastic inward change as a condition of salvation (Mt 18, Jn 3), and in the Acts and Epistles it is everywhere implied that the primitive Christians had experienced such a change (1 Co 6, Eph 2, Col 1, 1 Jn 2). It is equally clear that man is unable to effect this change by himself. There is need of the inworking of a power other and holier than himself. This power is the Holy Spirit. The NT teaches that man is to a greater or less degree controlled by an evil spirit (Ac 6, 2 Co 4, 1 P 5), and when man in his sin and weakness there stands a Divine Spirit, endowed with creative energy; and into hearts which are opened to receive Him He enters, vivifies latent faculties, and supports men in the struggle of the Christian life, so that man in him and on him, the sign, the seal, the evidence of that Divine energy, and what was once dead, animates the human spirit, ennobling, dignifying, purifying it. As A. Sabatier expresses it, "The Spirit of God identifies itself with the human Me into which it enters and whose life it becomes. If we may so speak, it is individualized in the new moral personality which it creates." 15

2 When we come to inquire more minutely what is the divine power which the Christian receives, there are three terms which are used in NT interchangeably—'Christ,' 'the Spirit of Christ, and of the Holy Spirit.' The same verbs are used with each, and the same functions are attributed to each (cf. Ro 8, 1 Co 3, 1 Th 4, 1 Co 3, 1 P 11). But doesn't identity of function necessarily imply identity of person or agent? That is a question much discussed.

There are not a few scholars who maintain that the 'Holy Spirit' of the Christian dispensation is the spiritual, sanctified Christ; e.g., A. Thouck 16 and Reuss 17 both maintained that the Holy Spirit in the NT is not a self distinct from Christ, but is Christ Himself glorified into a spirit, or the spiritual presence and manifestation of Christ in the disciples after His departure from earth. Franz Delitzsch also maintained that all communications of the Spirit, since the Ascension, are effected through the Spirit of the Son of Man. 18 G. A. Deissmann says: "The living Christ is the Spirit..." 19 The last Adam became a life-giving Spirit, "..." 20

Other scholars express themselves more cautiously. E.g., R. C. Moberly says: "The Holy Ghost is, to us, immeadiately

REGENERATION

The matter is important to insist that, since the resurrection and ascension of Christ, there has been a new potency on the earth. Whether we seek to parallel this matter metaphysically, in terms of the Church's Creeds, or, more wisely, are content to leave it unexplained, the truth is that the Spirit, which, under the Christian dispensation, regenerates and sanctifies believers, is endowed with the properties of the God-man. At Pentecost, and ever since, the Church has been animated by a new power—not the power of the Logos, but a theanthropic power, the power of the glorified Christ. 'The Holy Spirit was not yet, because Jesus was not yet glorified' (Jn 7:39). The Holy Spirit of the Christian dispensation has the value of the ascended Christ, and has become in the Church a new moral, religious, personal force—the efficiency of Him who 'became in all things like unto his brethren' that we may be 'transformed into the same image.' To quote Wordsworth:

'The Spirit of God is the πνεῦμα Χριστοῦ. As the Spirit of Christ, He carries in Himself the power to diffuse the divine-human life. In fixed historical continuity, the divine-human personal unity... is employed for the purpose of propagating the life of the God-man... Through the Holy Spirit, the Spirit of Christ, humanity is possessed by God, appropriated by Christ's theanthropic life; and this is the Church.'

(2) Human co-efficients.—The co-efficients of regeneration, on the human side, are repentance and faith.

(a) Repentance.—It has been an error on the part of some Calvinists to maintain that at the time of regeneration man is passive or perhaps even antagonistic. It is very true that no man can come to Christ 'except the Father draw him'; that God always takes the initiative in man's salvation; that 'we love him because he first loved us.' But, before the new birth can be effectually wrought, and the doors of unrighteousness and self-disatisfaction. It is not the first touch of the Spirit upon a sinful soul that regenerates. There are preparatory dealings of God with the soul. Christian experience often testifies to convictions, pleadings, drawings, remorse, and self-accusation, which may perhaps be compared to birth-pangs preceding the new birth. There are, it is true, many cases all down the history of the Church in which the new birth seems to occur very abruptly and suddenly, but the modern mind distracts the sudden and catastrophic in all departments of life. Accordingly, the modern method of accounting for apparently sudden conversions is to assume that in such cases there is a much richer, inherited subliminal self than in others, and that the uprush of latent fountains of unrest and self-taking place beneath the threshold of consciousness. Most modern psychologists very properly raise a protest against the procedure of some denominations which seem to recognize the sudden, restrained, and unexpected change of position, as if only genuine one. They do this on the ground that such experiences are entirely a matter of temperament and that some constitutions are incapable of developing psychosocially.

(b) Faith is the second antecedent to the new birth (Eph 3:17, Ro 8:9, Gal 2:9)—faith in its double meaning of (1) appropriation of a message and trust in the person whom it declares; and (2) self-surrender to a power other and purer than we, which seeks to control our life (see art. in F.R. [Christian]). (1) It may be quite true that there are ethnic phenomena which resemble conversion, but Christian regeneration can be effected only by contact with Christ—on the divine side, dynamically, by being put upon the heart of the God-man upon the heart of man, and on the human side by hearing of Christ and by trusting and loving Him. Regeneration is conditioned by personal trust in Jesus as Saviour. Every true Christian can say, 'For me to live is Christ.' (2) Self-surrender finds an important place in all religious psychology. It is compared to 'relaxation of effort' on the verge of discovery, when, after hours or days of research, the solution comes unexpectedly, perhaps immediately after awaking from sleep. Many of Starbucks' cases confessed that, after long and weary efforts to conquer sin and to secure, with the much- coveted suddenness, a sense of pardon and regeneration, they found themselves at last to desire the presence of God and to struggle, and to yield themselves up into Christ's hands. When the surrendeter is made, then often the new birth—the emergence from darkness to light, from bondage to freedom—takes place.

6. Subsidiary causes.—(1) The word.—Divines often call this 'the instrumental cause.' The efficacy of the written or spoken word as the expression of the mind and heart and will of God is often taught in Scripture. When we read that man does not live by bread alone, but by every word that proceedeth out of the mouth of God' (Dt 8:3), we are to read 'the word of God is living and powerful' (He 4:12), when Jesus says, 'My words are spirit and they are life' (Jn 6:60), and when Paul reminds the Corinthians that 'in Christ Jesus' he had 'begotten' them 'through the gospel' (1 Co 4:15), we cannot escape the conviction that a word was believed to be endowed with potency. Certainly the rabbi held this view; and, when they read in the story of Creation that God said 'Let light be,' and light was, they considered that the very words were a vera causa, operating in the physical realm, and effectuating 'that whereunto they refer' (259), as, when they repeated 'Jehovah sent a word into Jacob and it alighted upon Israel,' and as in Zec 5 we read of a curse that should 'enter a house and consume its timbers and its stones.' In a similar manner the causality of a divine word is taught in the NT, where we read that we are 'begotten again... through the word of God' (1 P 1:23), that 'God gave us birth through the word of truth' (Ja 1:18), that 'the word of the message worketh in those who believe' (1 Th 2:13), and that the gospel is 'God's σώματα' (Ro 1:16). Evidently the 'word' is superimposed as having the efficacy to regenerate and sanctify; and, when those of us who have listened to the recital of Christian experience recall how often the decision for Christ—the entrance into joy and liberty—is embodied in the effect of the spoken word, embodied in some hymn or passage of Scripture, we cannot but feel that there was some ground for the peculiarly Semitic conception of the potency of a word.

(2) Thoughts or beliefs.—The psychology of religion strongly emphasizes that thoughts are forces, that one phase of regeneration is enlightenment, and that ideas have psychical, if not indeed physical, potency.
REGENERATION

'Every idea that is relevant to our condition moves us,' says Steven, and James dwells on 'the regenerative influence of optimistic thinking' and on the doctrine that thoughts are forces. 'One's thoughts produce forth-thoughts,' says James, 'and each successive thought is a generation of one's original one.'

Undoubtedly thoughts are forces, whether they originate from our own cogitations or from suggestion by others, though persons differ very widely as to their imprescriptibility to suggestion. Hypnosis is just the focusing of suggestion. We may not enlarge on this; but it enables us to realize how efficacious it is to centre the thoughts on God, to have a firm belief in His wrath or His love as one's despair is greater and one's hope the severer, during the period which elapses when the time is spent by the Divine Spirit and the time when, more or less suddenly and joyously, the soul enters into the liberty of the sons of God.

7. Ethnic and Jewish parallels.—(1) Hindi.—In ancient India there were three castes of Aryans—the Brahmans, the Ksatryias, and the Vaishyas—who were believed to have the spiritual capacity for being twice-born. The second birth was fore-shadowed, however, by the incumbent of a intermediate stage known as aparayaana, which took place at various ages between eight and sixteen, according to caste.

The boy was brought to his guru (spiritual preceptor), and, after a prayer in ancient Sanskrit, he was given a sacred harp, which consisted of three slender cotton threads—thre, by type purity—and tied in one place by a sacred knot.

The cord was placed over the left shoulder and under the right arm and worn perpetually. It was of course usually blessed by Brahmans, consecrated by the recitation of Vedics texts, sprinkled with holy water. The ceremony was accompanied by the ten-times-repeated prayer, 'Let us meditate on the excellent glory of the Divine Vivifier (i.e. Regenerator).'

After this act of investiture the novice commenced his study of the Vedas, and by and by, according to his period of study, he became qualified to teach and expound the Vedas, to recite prayers, and to take part in religious services and sacrifices. The discipule was taught very early in a profession; indeed, in the Institutes of Menu it is enjoined:

'Of the two, the one who gives natural birth and the one who gives knowledge of the whole Veda, the latter is the more valuable of the two. The second one, however, is the divine birth itself; not only in this world, but hereafter eternally' (II. 140). ‘The true Brahman, who succeeds his master as a scholar, shall ascend after death to the most exalted regions and no more again spring to birth in this lower world' (g. 249).

8. Talmud.—In the Talmud, at an early period applied to its proleutes the ideas of birth and creation, as we see from P's 87', 'Behold Philistia and Tyre; this one was born there,' and 102'.

'A people that shall be created shall praise Jehovah.'

Similarly in Prakrit Kabbah, xxviii. 14, on Gn 140, R. Eleazar ben Zimra says: 'If all who come into the world were not together to create one, they could not impart to life; but he who induces a man to become a prosecty is as if he created him.'

Skir, L. 3 says: 'Every one who gathers one creature under the wings of the Shekinah, as soon as he creates and formed him; vii. 2 reads: 'The house of my mother'—i.e. Sinai. R. Barzachiah says: 'Why do they call mount Sinai my mother? Because there Israelites were made, infants a day old.'

Rabbah Mos., ii. 11, teaches that a man ought to reverence his father who has only brought him into this world. His teacher who taught him wisdom brings him into the life of the world to come (cf. above, 11).

Palm, notes that the name is given to one who was like a child who is newly born, because he must break away from his former teachers and principles and customs and habits, as well as from those who have influenced him. He is not a whole new being, aside his vicious habits and comport himself as he were born that very day.'

Philosophy often dwells on the necessity of a radical change before a man can secure the favor of God. He employs the figure of regeneration in a more psychic way than the Palestinian Jews and contemplates the change as a profound religious experience.

What time of life could ever transform the harlotry of a soul trained in early and habitual incontinence? No time could do this, but God alone, to whom all things are possible; even those which among us are impossible. I have learned to appreciate my own inutility (αὐτοπάθεια) and to gaze at the uncertainties of one's manifest existence. I recognize myself to be "dust and ashes" or something worse... I am so elementally changed (ἐνεργοτροπία) that I do not even try to exist. Again: How could I have known God, If He had not breathed into it and touched it extant? Or is it that sons good seed in human souls but who is the Father of them to whom begets entirethings? Our next quotation reminds us of the one-bearer of man of W. James, when Philo calls αὐτοτόκος, 'every self-taught man is one who does not grow better by struggle and conflict, but from the outset found wisdom ready prepared for him, showered down on him from above.' Of such men Philo says further on: 'The αὐτοχθωνός is everything new, surpassing description and really (συνεργής) divine, subsisting without aid by his own conception but by inspired frenzy.' And once more he says: 'If a divine thought (ζητέω) enters the διάσωσις of man, his body and heart become a new spring.'

(3) Stoicism.—Stoicism had before NT times become a religion quite as much as a philosophy, announcing its ability to free men from the domination of evil and to bring them into union with the divine. It appealed strongly to the noble and heavenly character and had a deep influence on the best men in the early Roman Empire. S. Dill speaks of Senecca as 'the earliest and most powerful apostle of a great moral revival,' and as 'one of the few heathen moralists who warn moral teachers of the perils of hatefulness'—an opinion which, I think, is justly founded. Senecca speaks of multitudes stretching out hands for moral help; and there is evidence that he himself was seized with a passion to win souls to goodness and truth, and seriously regarded it as his mission. It is surprising, however, to learn that he had taught clearly that 'no mind is good without God.'

'God comes to men, say, nearer still he comes unto men.' Divine seeds are sown in human bodies, and will grow into likeness to their original right intelligently. God is within us, inspiring good resolves and giving strength in temptation. He is with us, bestowing on us His gifts and challenging us in His wisdom.

Many Stoics taught a doctrine of instantaneous regeneration. Goodness is brought about not by addition but by the removal of evil through change. There may be a progress from folly to wisdom, but the rapid change is the actual passage from one to the other must be momentary and instantaneous. It may be a long preparation, but the sudden passage from evil to good is a sudden change of character, as, e.g., Polemon, the dissolute son of a wealthy Athenian who was thoroughly changed by listening to a discourse by Xenocrates.

(4) The mystery-religions.—In the 6th cent. B.C. a remarkable change in religious thinking took place, the cause of which was largely personal, being due

2 Quod erit, 7, 6.

9 Dialogues, p. 547.
to the influence of such men as Pindar, Hesiod, and perhaps Orphei—men who were at once poets and prophets. The period was marked by (1) a more serious appreciation of right and wrong; (2) a recognition of the material world as something to be respected, and the wicked after death, and a conviction that the wrongs of this life will be righted hereafter; (3) a deeper sense of the turpitude of sin and its defiling influence; (4) a growing belief in henotheism; and (5) a longing for fellowship with God. All this was accompanied by a disposition to give to religious beliefs a visual, scenic form and dramatic representation. Foreign rites and ceremonies were appropriated, old rustic symbols and mystic plays—in fact anything that could evoke intense religious feeling. Into these weird symbols men read new meanings, and used them to mediate a crude sense of communion with the divine—everything appealing quite as much to their highly-sensitized organs as to their physical or moral nature. Men in the distant past were far more truly ‘children of Nature’ than we are; and they experienced real pain and joy in the changes of the seasons, bemoaning the apparent death of vegetal life and rejoicing in its return again. They were keenly sensitive to the parabolic significance of Nature. Their life was en rapport with the life of Nature. Their soul was believed to be a fragment of the great World-Soul. The annual renovation of vegetation in springtime fostered two anticipations: (1) that, as Nature puts on her beautiful attire in April, after months of ugliness and deformity, so there must be a possibility, if one could only enter into thorough union with the World-Soul, of renovating, cleansing, and beautifying the human soul, and absorbing any pollution they were so painfully conscious; (2) that, as Nature lives again yearly after apparent death, so it must be possible for the human soul to undergo some processes which shall render it incorruptible and secure for it a glorious immortality. During the two centuries before and after Christ this movement spread and deepened immensely, gradually orientalizing Roman paganism and acclimatizing Phrygian, Egyptian, and Persian divinities and ceremonies in every great centre of the empire. Everywhere there was found a deep sense of the pollution of sin and a longing for immortality; and in consequence there was a readiness to submit to any crude, pre-historic charms that might help to satisfy the frenzied longing to be inwardly changed, to become a child again, and to be made fit hereafter to dwell with God. These ceremonies were the mysteries (mysteries).

(a) The Eleusinian mysteries, as held in Athens, furnished the grandest artistic display and scenic ornamentation. The great object of mystic contemplation was an ear of corn. There were ablutions in salt, purification with sulphur, and smearing with clay or with blood—all done with the intention of cleansing the senses. Then came two scenic representations of events in the history of Demeter and Persephone, on which the mystics gazed with wild, frenzied stare, in the hope that the experiences of the risen Persephone might be reproduced in their soul. Speaking of the religious emotions, Tertullian says:

*The nations ascribe to their idols the same power of imbuing water with the self-same efficacy as we do. . . . At the Eleu-

2 See art. MYSTERIES (Egyptian).

5 Kennedy, p. 106 f.; Dill, p. 572 f.

sionian mysteries, men are baptized, and they assume that the effect of this is their regeneration and the remission of the penalties due to their guilt. 4

(b) Egyptian.—In this religion Osiris was slain and dismembered by Set, and his limbs were concealed all over the world. The limbs were sought and found by Isis and her son Horus, and were reconstructed in perfect copies as the symbols of life, power, and eternal. The one absorbing desire of his worshippers was to become partakers, in a mystical, spiritual sense, of the new life of Osiris. 5

In the great Persian magic papyrus published by Carl Wesely, we find a story which has been worked over by the divinity Set, and who is instructed by the mystagogue to address the divinity thus: ‘O mighty Typhon, scorpion-bearer and destroy-er, defiling myself before thee . . . energize me (wah,npa,s3).’

Having done this, he is hidden to put on white raiment, and to say to the god: ‘I am united with thee in a sacred form. I am energized by thy sacred name. I have met the effuence of thy good gifts,’ and he assures him that he has obtained a god-like nature (arw3w wva3) which has been effected by the union with god. Another prayer: ‘Come into me, O Hermes, as children in the mother womb;’ and in another passage we read: ‘Come into the soul of this child that it may be fashioned (remova,s) after thy immortal form in thy powerful imperishable light.’

Lucius Apulicus, who wrote about A.D. 150, humorously describes how he was initiated into the sacred mysteries under the assumption that he was delivered by the priest of Isis, and was initiated at Cenchreus into the mysteries of his. He describes the day of his initiation as having been on the 10th of May, and as being a day when he was penetrated to the boundaries of death and trod the threshold of Jersey everpower. He compares this to ‘a voluntary death’s and his restoration to life to a salvation vouchsafed in answer to prayer.’ He is certain that through the goddess Isis he has been in a state of ecstasy (wv 'a,mpnas re,ma);’ and placed again on the course of a new salvation.

The Hermetic literature.—Reitzenstein, in his work Poimandres (Leipzig, 1904), publishes and copiously edits a strange compilation of eighteen secrets or sacred documents made about A.D. 200 by an Egyptian priest. The Greek fragments are of various ages and belong to several religious communities; but the type of religion presented is generally Hellenized Egyptian. Among them is a remarkable dialogue between Hermes and his son Tat on the subject of regeneration (*παλαισικα, νεο).’

The son reminds his father that he once said that no man can attain to eternal life unless he be born again. This is the world of seeming. Tat says that he has done this, and begs to be instructed as to the doctrine (λόγος) of regeneration. Hermes replies, ‘There is no soul of the body (σώματος) anything but what is in human hearts. The event is a begetting. God’s will begets. Those begetten are reborn; they are sons of God.’ Tat still persists in the wish to reveal more. Hermes asks, ‘Do you know the completion of the new nature, and asks: ‘He who is born of, what manner of being is he? God’ is born of God, and is a Buddha. There is no share in the acetic being which is in me.’ The father can only reply that such knowledge is not taught, but, when God wills, He can cause it to come to mind. 7 But the son asks again: ‘Do you mean that I who am a born descended from my father am another’s son? Explain to me the manner (ρώσσον) of the regeneration? Hermes can give little light as to the method; but the results of the change are remarkable. Form loses its outline, and magnifies loses its dimensions. The mind cognizes; no longer do the senses perceive. The injunction is: ‘Nullify the perceptions of the body and the birth of Deity will take place the ever.’

(c) Phrygian.—The Phrygians elaborated their conception of psychological regeneration from the myth of Attis, the devotee of Cybele, who bled himself to death under a pine-tree for his imagined unfaithfulness to his goddess and was restored to life by the Earth-Mother. Men weary of earthly life and of sin yearned for a thorough change—a death, a burial, a new life. Under the influence, probably, of Mazdaism, according to which a mystic bull is the originator of creation and resurrection, and the symbol of the operation of death thus receiving the strength of the bull into themselves to renew their physical energy, underwent a

sublimation of meaning, and was used as a means of acquiring eternal regeneration of the soul. This is clearly the logic which the author has in mind: that the soul which has undergone regeneration is destined to descend into a grave over which there were boards, and on them a bell was placed. The man underneath received on his naked person, and into all the orifices of his body, the warm blood, under the influence of which his sins were thereby cleansed and his nature regenerated.1 For some time the fiction of the new birth was kept up by feeding the mystic on milk and tending him as a babe (Δεσπότ Νηστικόν Ἱδρυμάς).

8. Metaphors common to A and the mysteries. The researches of late years, and especially the discovery of papyri, have disclosed that many technical NT words are also found in the vocabulary of the mysteries. In NT times the mysteries were very popular, not only the national ones, but also those of a more private character, held in halls or private houses; and almost every respectable man was a member in one or other of these mysteries.2 The ceremonies were kept secret, but the results claimed to be effectuated thereby were no secret; and Paul could not live in an intellectual centre like Tarsus without becoming familiar with the technical phrases of the mystery-religions. And, though we admit that Paul was anti-pagan to them, and though it be true, as A. Jacoby maintains,3 that the keenest struggle of Christianity with the mystery-religions, which were not secret, is not the case, we need not be surprised that Paul should borrow metaphors from them; for he often derives metaphors from the athletic games against which Christians showed vehement opposition in later years. Early Christianity did not invent a religious vocabulary; almost all its terms were in vogue at the time. The professed aim of the mysteries was  σωτρία, to secure union with God and eternal life. Regeneration is the central theme in the Mithraic liturgy, in the Isis ceremonies described by Apuleius, and in the conversation between Hornes and Tat. Hence many of the papyri which have been found.4 In these new groups of travelling preachers from the East, proclaimed the promise of  σωτρία and the assurance of life eternal, their message was bound to appeal to such an audience.5 The early Christians used familiar terms and metaphors, but infused a vastly higher meaning into them. The apostle thus briefly shows how the metaphors of the NT concerning regeneration are found, though not with the same significance,

5 Kennedy, p. 79.

9. ‘The seed is the word’ (Lk 8:11; cf. 1 P 1:22, Ja 1:19). In the Hermetic literature it is taught that regeneration is the end and aim of all revelation.6 While Tat, in silent devotion, sits listening to the instruction of his father Hermes concerning the divine potencies, these potencies manifestly enter into him and form his new ‘1’; and it is taught that the reader of the book recording the conversation between Hermes and Tat might also be regenerated, under the grace of God; but a translation of this book would not have the same effect.

1 Tat asks his father of what sort of mother he was regenerated, or of what sort of seed, and receives the answer: ‘The will of God is the sower, and the seed is the true Good.’

B. Importation of life. As we have seen, there was a deep longing for immortality in the period from 600 B.C. onwards, and the popularity of the mysteries was chiefly due to the fact that they claimed to confer life and joy hereafter. The gods worshipped in the mysteries were those who, like Osiris, Attis, and Kore, died and lived again; and, while gazing at vivid spectacular displays of their sufferings, death, and rebirth, accompanied by mournful addresses, listened to with sobbings and wailings and self-mutilations, the μώρα was in the centre of the ceremonies and death and suffering of the gods, that they might become partakers in their glorious life. In the mysteries of Attis, when the worshippers have almost spent themselves in sympathetic grief over the sad death of Attis, their hearts are once more filled with new life. ‘Be of good cheer, O mystic, since the god has been rescued from death, there is άτοκηστία for you from your toils.’

Similarly it is said of one who has become mystically united to Osiris: ‘As truly as Osiris lives, shall he live. As truly as Osiris is not dead, shall he not die.’

C. New birth. It is extremely probable that the words μωρά and μεταγενέσθαι, to describe the change which the μωρά claimed to have undergone, are pre-Christian. It was believed that the hastrae and the sympathetic dramas causally produced this state of regeneration. Of course, we need say that the change was vastly different from that of the NT. In the mysteries the phenomena were hyperphysical, due to sensuous excitement, akin to that of he faqir in India, or the prophets of Baal. In the NT the change was supremely ethical, and spiritual. In some cases, it may be, the result of the mysteries was morally elevating, but that was not their primary intent. They were designed to evoke a sensuous religiousness—to appeal to the feelings and to foster the condition in which men and women of neurotic temperament see visions and dream dreams. They encouraged maniasism as distinct from prophecy. The church at Corinth was in danger of reverting to a ‘mystery.’ It is doubtful whether those who claimed μεταγενέσθαι through the mysteries lived on a much higher moral level than their neighbours.

D. A new man or a new creature. There is everywhere in the mysteries the notion that the soul, as a highly attenuated material entity, undergoes some change of substance, and is inspired by a new spirit. In the Mithraic liturgy, the word μεταγενέσθαι was used instead of the other synonyms. We find constantly the idea of union (συνοικία) of the divine with the human, cleansing, emollient, and transfiguring. In the mysteries, Attis, the man, and Isis, the woman, were killed. They died as men; they rose as gods. If men unite themselves with them, ‘receive them,’ ‘put...
them on, they are thereby defiled. They become sons of God.1 Yet in one place we have a sort of Nestorian conception—σωματία rather than ἐναρσώματος—when Tat asks whether the inborn son of God, Simon, can be "out of the body." The soul wanders through the heavens, and receives a new ἁνάρσιον before it returns. The soul of one who is admitted to the mysteries of Isis travels through the twelve houses of the zodiac and in each sits on a different garment—twelve different transmigrations. He returns to earth wearing an Olympian garb, stands before the assembled mystics, and is revered as a god.2 So in the cult of Mithra the soul of the mystic is born again by means of wandering through the heavens. Arrived there, he calls out for his own heavenly body, which God has formed for him in the world of light, and wears it for a time; but he must lay it aside when he returns to earth, and put on the Olympian garment which is his true body. In his hierarchy the soul is cleansed of its old garb and is resurrected and cleansed of the impurities of its old life.2

E. A change of clothing.—Here we meet with the conception that the soul cannot be changed while in the body. It must first be "out of the body." The soul wanders through the heavens, and receives a new ἁνάρσιον before it returns. The soul of one who is admitted to the mysteries of Isis travels through the twelve houses of the zodiac and in each sits on a different garment—twelve different transmigrations. He returns to earth wearing an Olympian garb, stands before the assembled mystics, and is revered as a god.2 So in the cult of Mithra the soul of the mystic is born again by means of wandering through the heavens. Arrived there, he calls out for his own heavenly body, which God has formed for him in the world of light, and wears it for a time; but he must lay it aside when he returns to earth, and put on the Olympian garment which is his true body. In his hierarchy the soul is cleansed of its old garb and is resurrected and cleansed of the impurities of its old life.2

F. A passage from death to life.—Development is quite a modern conception. It was simpler to the ancients to conceive of transition, as death followed by life. Even yet we can speak of the death of the old year and the birth of the new. The great change to which the initiates to the mysteries laid claim was often represented as a death, followed by a changed life. When the initiation was being celebrated, it was usual for the μυστατά to simulate death, from which they were subsequently re-born with new names and the garb of the mystic, describing his own initiation, says: 'I went to the confines of death. I trod the threshold of Proserpine.' Among some savage tribes youths were beaten till they were unconscious, that they might enter on a new life; and for a time they were expected to behave as babies.2

G. Burial and resurrection.—This, of course, is a very similar metaphor. Burial was designed to emphasize the reality of the death. In the cult of Attis a pine-tree was felled, and the trunk adored with garlands and solemnly buried. The mystics wailed for Attis, who had died again in his sacred tree; they gashed themselves and sprinkled their blood on the altar. Next night they assembled in the temple, and found the tree had come to life and was a re-embodiment of the dead god.2

It is certain that in the mysteries all the effects believed to be followed magically rather than the ceremony produced the results irrespective of the ethical condition of the initiate. Physical contact with the water regenerated the body; the water was sprinkled over the body entered by the priest were

believed to have a magical effect on the soul. The burial and besmearing with clay or mud, followed by restoration to life, were held to produce in the votary a psychical death, burial, and new birth. The new soul prays for Hermes to come into him 'as children are in the mother's womb.'2

9. Connection between regeneration and baptism.—The subject of Paul's teaching as to the significance of baptism has been a burning question during the past decade. The disputants fall into three classes:

(1) Those who believe that baptism (which in this case is restricted to believers) is nothing more than (a) a symbol of a spiritual union which already exists between Christ and the believer; (b) a declaration of allegiance to Jesus as Master and Lord; (c) the renewal of faith in the Greek Father, Jesus Christ the Righteous, and the Holy Spirit the Sanctifier.1

(2) Those who hold the sacramentarian view that baptism ratifies all sins, original and actual; that it becomes an integral part of the mystery of the faith; and that it is accompanied by a spiritual conception, which is the soul with the germs of the Christian virtues (for this view see art. BAPTISM, vol. ii. pp. 390-400).

(3) There are some modern scholars who, trained in the rigour of modern exegetical methods, clain, in the light chiefly of recent research in the mystery-cults of antiquity, that in his doctrine of baptism the apostle Paul was inconsistent with himself and with the rest of the NT; that he was indeed a sacramentalist; and that, while demolishing with one hand the efficacy of Jewish rites and ceremonies, he admitted the validity of the Catholic rite of baptism for the soul with the germs of the Christian virtues, which was quite incongruous with his ordinary teaching.

The latest exegiastic phase," says P. Rendtorff, "is this, that with a frame of mind thoroughly disaccustomed to spiritual conceptions, so many feel themselves historically bound to ascribe such views to Paul. Such men as Gunkel, Heitmüller, and H. J. Holtmann maintain that Paul held such views and that he derived them not from the OT nor from Jesus Christ, but from the trend of thought in ethnic religions current in his time. E. Ch. W. Heitmüller says, 'Baptism, as Paul, is throughout a sacramental act, which works not ex opere operantis, but ex opere operato, and is not merely a token of incorporation into the Church, but a spiritual change. The power to be born again, the same power which is at work in the confession of faith, is in the baptism. The regeneration is not conditioned by the faith of the recipient or the administrator. Of course, faith is pre-supposed in the candidate. Only the regenerate may be received into the Church.' With this he is in line with the门户 writers who, while acknowledging the absolute necessity of faith, the will of the candidate, in the act of baptism, and who, while holding this to be so, and who, while holding this to be so, and who, while holding this to be so, it is the act of Christ in his church. It is the act of the forgiving and dying and being buried. He who allows himself to be baptized into Christ experiences thereby the death of Christ. He comes out of the water, as one who has died, but has been raised to a new life. He has put on Christ; that which happened to Christ on the cross completes itself again in the case of individuals.'

Percy Gardner writes in the same strain: 'St. Paul's view of baptism is distinctive. He speaks of burial with Christ in baptism, and being buried into the death of Christ, and of rising with him from the dead. ... In his own way, he transforms the rite of baptism, not into a sacramental, but into a spiritual act of mystic incorporation. In his baptism does not merely mean repentance for sin, and attempt at a purified life; it was burial with Christ and rising again with him; it was incorporation into the mystical body of Christ, and becoming a new creature. There can be little doubt that in this matter, as in others, Paul innovates by grafting upon a Jewish rite a deeper meaning, of which the germs lay in the Pagan Mysteries.2 So Kirsopp Lake, after quoting I0 and Gal 3, says: 'The word of Christ is the word of baptism. It is the union with Christ. ... Baptism is, for St. Paul and his readers, universally and unquestioningly accepted as a mystery or sacrament which works ex opere operato; and

RELATIONS (Buddhist)  

from the unhesitating manner in which St. Paul uses this fact and the fact that it was clearly not what Paul meant. Chris-

tian opinion did not vary, it would seem as though this sacra-

mental teaching is central in the primitive Christianity to which the earliest Christians were converted.

(3) It can hardly be doubted that Paul had some

acquaintance with the mystery-religious, and that

he intentionally used metaphors there in use; but

there are many scholars, equally eminent with

those named above, who cannot believe that

the Apostle could be so illogical as to embitter his

life for years by denying the efficacy of Jewish

rites and ceremonies to secure salvation, and at

the same time set up an external ordinance like bap-

tism as having the efficacy to regenerate the souls of

Deissmann, e.g., says: *It is not correct to say that Paul

considered baptism to mediate our access to Christ. There are

passages, as Gal 3, in which he read from their context, may

be thus interpreted, but it is more correct to say that

baptism is not the restoration to fellowship, but the sealing of

our fellowship with Christ. With Paul himself it was not

baptism which was the deciding point, but the Christophany at

Damascus. He was sent not to baptize, but to preach the

Gospel.* 2 Rendtorff maintains that *the ground presuppos-

ition of all that Paul says on baptismal experiences is faith.

Not that Paul always mentions faith, as the cause of his

baptism, but he through the *niyama paccaya* in the

Empire, 3 Ro 6, 3. The whole baptismal experience of Ro 6 culminates in the

expression *"that one may walk in newness of life." This cannot refer to a

natural physical-hypophysical new creation, analogoue perhap's to the

Nithra magical liturgical way, but it means only a positive restoration of

a religious-ethical life.* Quoting Col 3, 2 he insists that the

efficacy of the baptism rests on and consists in the forgiven-

ess of sins. 3 Clemen steadily opposes the attribution of sacra-

mentary views to the Apostle. He admits that the implica-

tions of Col 2, 12 are much as one would desire, but they do not

represent Paul's own views. As to Ro 6 and Col 2, 12, he contends

that the operation of baptism is based on the signification of the

deed itself, not on the fact that water and soul or others are united

by baptism to Christ. That would be the question of religion and

sacrament. *Certainly with him, union with the Lord, the

receiving of the Holy Spirit, the renewal of life and the birth

out of sins are all of reformation than restoration. This

conversion comes to expression in baptism which is a symbol

not of a death, but of a nature which is to happen but also of what has happened already,* 4 There is much force also in the argument of J. C. Lambert when he maintains that from Ro 6:4 to the Apostle

asserts and rests his fundamental doctrine of justification

by faith, then in 6:6 he abruptly introduces baptism, for the first

and only time in the Epistle, and consequently *it seems impos-

sible on the ground of any single reference to baptism in the

course of his longest and most-doctriuineal Epistle, to set aside his
caracteristic way of speaking at the present place as a

measured part of the whole story of salvation.* 5 Later he says: *The precise

point which he wished to enforce was the intimacy of the

unions, the bond of a close relation between the individual and

the Lord.* Baptism suggests a being buried with Christ. *But a

burial is not a death; it is only a public certification and seal-

ing of what has already been accomplished.* 6 He is no

more a convert, no man of new birth, but a man with Christ, but rather a sealing of that death in Him and with Him in the light of the whole history of Redemption. The

whole view is ably defended by H. A. A. Kennedy, in Epap. vii. 4

(1912), and in his work on St. Paul and the Mystery-Religions,

ch. 3, p. 173.

It remains now to examine what sort of con-

structive criticism the last-named scholars have to offer,

having disposed of the other two views, for,

of course, in repudiating sacramentalism, they

are equally pronounced in their conviction that the

statements in Paul's Epistles on baptism, such as

Gal 3, Tit 3, imply more than that baptism is merely a symbol of spiritual facts.

(1) It clears the air considerably that they all

agree that all the persons whose baptism is

cited as an example, were pupils in faith in Jesus

as Christ and Lord before they were baptized. 7

(2) They agree that a candid exegesis of the

passages in which Paul speaks of baptism

oblige us to admit that he believed that in baptismal experiences, 8

put on Christ; he *dies, is raised to new

ness of life.* Paul was exhorted to *be baptized in the name of the Lord Jesus Christ,* as one who *is baptized into death,* and *baptized into the death of the Lord Jesus*; and *baptism* is *laying in the water by means of the word* (Eph 5:23). Clearly the early Christians were taught to expect that in their baptism they would receive some influx of spiritual power—something rich spiritual blessing. Lambert speaks of *a nari a spiritually-infused life and power,* 9

Kennedy speaks of *a wonderful spiritual quicken-

ing; a new enhancing of the power and grasp of faith.* 10

(3) They draw a very proper and vital
distinction between 'cause' and 'occasion.' They

do not predicate of the literal act of baptism

contact with the water, or the utterance of the

formula—in any sense causes these spiritual

blessings; but they do believe that Paul taught

that it was a divine appointment that those who

obeyed their Lord by making a public confession

of Him in baptism should receive therein a rich

spiritual reward.

E.g., Clemen, speaking on Gal 3, says: *Baptism as such is not the

causative element in the act of Christ's baptism, but *he is all sons of God through faith*; accordingly baptism can only be the occasion on which one confesses his sins, not a sacra-

ment;* 11 and Lambert is equally explicit: it *was not with the

baptismal water that men were sealed, but with the Holy Spirit in the sealing, which was an expression of the act of Christ's baptism,* and not, as some say, even of the sealing itself. . . . Even this sealing of the Spirit is not a creative but a declarative act.* 12

Baptism was not the cause of spiritual gifts, but the occasion of their bestowal. Baptism does not literally wash away sin, but NT believers were

taught to expect a consciousness of pardon and a full

sense of sin forgiven in connexion with their

baptism. Nor does baptism regenerate in a causal

sense, but NT baptism was normally the occasion of

the bestowal of the gifts of the Holy Spirit—so

much so that Paul was astonished that it was

possible for any disciples who had been baptized

to receive the Spirit by the laying on of hands (Ac 19). Regarding

Jesus as their great Exemplar and His baptism as the

type of, and authority for, Christian baptism, it was

natural that they should expect somewhat similar spiritual blessings to be conferred on them to those which were conferred on Him.

LITERATURE.—This has been sufficiently indicated by the

numerous quotations throughout the article.

J. T. MARSHALL.

REINCARNATION.—See TRANSMIGRATION, SOUL.

RELATIONS (Buddhist).—Buddhist philo-

sophy has from the outset resolved all 'things,' all

'states' of matter and mind, into a flux of

'happenings.' That which happens is a series in

the flux of transient, even momentary, complexes of
elemental factors, determined and determining,

according to the fivefold law of cosmic order

(niyama). And these complex happenings are

determined and determining, both as to their con-

stituent factors and also as to other happenings, in

a variety of ways that we should express by the

term 'relations.' The Buddhist term is pacayya

(Skr. pratayya). Etymologically the word is

nearly parallel to 'relation' (pacayya = pati = re),

and any, causative of i, 'to go or come,' in place of

the Sanskrit *pati.* The word *pacayya* *, redefining!

lies in the causal emphasis of the Pali term, which

is lacking in our word. The commentators empha-

size this: *pacayya means because-of-that it

makes-to-come.* The prefix (palli) is here given

the adequate rendering of the Sanskrit term.

The most recent discussions of the notion of cause

expresses 'the general scheme of a causal law' in

terms of relations. But this is only one among

7 Rendtorff, p. 22; Lambert, p. 193; Kennedy, p. 249.
the inevitable, if unconscious, approximations of modern European ‘philosophies of change’ to Buddhist ideas.

Another characteristic of Buddhist definition of relations, beside that given above, is to assign them a place among the marks or characters of things (i.e., events) in general. Thus all things (except the philosophic Nibbāna) have (a) the three marks of impermanence, liability to suffering, and soullessness; (b) the threefold mark of the conditioned: genesis or birth, cessation or decay and death, and a relatively static point or interval between; and (c) the marks of causation, viz., relations, or correlation.

The Buddhist group of marks was developed under 24 heads in the last of the analytical works in the Abhidhamma Pitaka of the canon, called the Patthāna, also ‘the Great Book.’7 They are the most—one may say the only—distinctively constructive contribution to Buddhist philosophy in those six analytical books. The 24 heads are developed at great length in application to the material and mental facts of experience. The commentary, ascribed to Buddhaghosa, adds some useful and material matter, especially in its insistence on the necessity of regarding the correlation, or paccayatā, in every one of the 24 modes as an ‘assisting agency’ (upātikāraka):

‘Where one dhānam is by its arising or persisting is a helper to something that first-named is the (causally) relating dhānam to the last-named.’

It is impossible to say how soon after the closing of the canon, how long before Buddhaghosa’s date, this aspect was evolved. But it is of the greatest importance to an understanding of the Buddhist philosophy of change, and it has remained a keynote in that tradition to the present day. Thus Ledi expands it as follows:

‘Just as an heir normally inherits the property of his deceased parent, so does a succeeding unit of consciousness inherit all the energy, the functions, the impressions of the expired unit.’

The same is believed with regard to material units. And the legacy itself came, in later works, to be spoken of as a force, own influence of the paccaya, or causally relating term, viz., the paccaya-saṭṭhi.8

Thus:

‘In the exposition of the Patthāna relations there are three main factors to be carefully noted, i.e.:

(a) the relating thing (paccayadhamma),
(b) the related thing (paccayasopannadhamma),
(c) the distinctive function or influence (of the relation paccaya-saṭṭhi-ratna).

The 24 paccayas, under the title Paccayagāthaka (‘Compendium or Category of Relations, or Causality’) occupy eighth part of the standard manual, entitled Abhidhamma-thāna-saṃgaha. This work (in which saṭṭhi does not occur) dates from the 9th, 10th, or 11th cent. A.D., and is translated in The Compendium of Philosophy. The author, Anuruddha of Ceylon, begins his exposition thus:

‘Now let me tell thee as it is fit how such
And such a state of things related stands
To other states conditioned like itself,’

and proceeds:

‘In the category of relations we have two schemes—the law of happening by way of cause and the system of correlation.’

Coming in due course to the second, he writes:

‘The system comprises the following relations:

(1) consequence
(2) object
(3) dominance
(4) contingency
(5) immediate condition
(6) identity
(7) experience
(8) means, way
(9) association
(10) possession
(11) habitual recurrence
(12) independence
(13) causa
(14) result
(15) reciprocity
(16) identity
(17) control
(18) aposynonymity
(19) presence
(20) disassociation
(21) absence
(22) resemblance
(23) ayeṇaness
(24) continuance.’

(1) is hetu, one of several synonyms for causal antecedent, or condition, in general; it is technically reserved for the sixth in the above list of personal character: appetite, enmity, ignorance or dullness, and their opposites, disinterestedness, amiq, intelligence. (2) is object of consciousness, viz. five objects of the five senses, and one of intellect, namely, impressions and ideas. (3) refers to an overruuling factor in consciousness; at any given moment: intention, energy, volitional perception, intellectual investigation. Of (4), (5), the latter applies to a sequence in time so apparently indivisible as that of mental states or moments. By (6) ‘co-cause,’ or simultaneous and co-inhering genesis, is meant. In (7) both terms of the relation are mutually relating and related. (9) differs from (8) only as indicating a cause or group of conditions effective enough to bring about, not merely a condition; (12) = repetition so as to form a habit. (13), kamma, is the relation between an act of will and its result. (14) is literally ripeness, maturity; causally conceived, it is a relation of effortlessness. (15) implies mental or psychological states. (16) refers to a sense impression, or to the influence of psycho-physical, mental, and moral faculties or controlling powers. (17) is concentrated energy physical and mental. (18) is thought or conduct under the aspect of a shaped course of procedure towards an end. (22) positively regarded, implies ‘opportunity for a successor to arise.’ So for (23).

In comparing these groups with corresponding lists in European philosophy, we notice coincidences and discrepancies. The familiar relation of ‘resemblance’ is wanting, and one of its modes: ‘equality, inequality.’ As explanation it may be stated that (a) the Buddhist list claims to give not all, but only the most important, relations; (6) resemblance is not so much an objectively valid relation as it is an expression of a real or plural object on a subject, hence it is a species of (2); (c) resemblance, even if objectively valid, is not a causal relation, an ‘assisting agency,’ as is every paccaya. All this holds good as to ‘equality.’

Two other relations—‘subject’ attribute, ‘container-content’—indicate a standpoint that is opposed to orthodox Buddhist philosophy, viz. the positing of a substance or agent. It may be said in rejoinder that the second class of relations—‘object’—involves a subject. This is true for our philosophical tradition and idiom, but not for those of Buddhism. Arammano (object) involves no correlate of metaphysical import, such as we are entangled with, in ‘subject.’ The ever-changing ‘object’ is regarded as the thing-which-relates (paccaya); the ever-changing mental aggregates are the thing-which-relates (paccayas). The only constant factor is the concept of the specific relation.

C. A. F. Rhys Davids.
RELICS (Primitive and Western).—In the art. CANNEILLALISM (vol. iii. p. 197 f.) it has been shown that by eating the dead or part of them the eater acquires their souls or their qualities, and thus obtains power over the soul or is united to it. It is not necessary to eat the whole man; to eat part is sufficient. Among the Papuans the part eaten is the sympathetic magic that the whole is contained in the part, or that the influence working in the whole works also in the part, although separate from it. On analogous grounds the dead man’s soul or his power is contained in the part or fragment of it, from his clothes, or from any object or part of any object with which he has once been in contact. Any one who wears or carries these, who touches them, who prays to them, or who uses them in a variety of other ways, benefits by his action. The soul or power of the dead man is so far subject to him, or at all events aids him in varying ways. This is the explanation of the use and cult of relics, which of course are valued in proportion to the extent of the power, strength of the particular uniqueness of the person to whom they originally belonged, as well as of the love or respect in which he was held. The supernatural virtues of relics, originating in such beliefs as have been referred to, may be illustrated by a number of examples in all religions and in all degrees of civilization, beginning with the lowest savages.

1. Relics in savage life. (a) Just as enemies are eaten to obtain their qualities, so their kidney or ear-fat, as a special seat of life, is abstracted and used as a lubricant for the body—a common custom among Australian tribes. Similarly, relics of a dead enemy are sometimes worn for protection. In E. Africa, if enemies can unearth the body of a dead warrior, parts of it are used as charms—eyebrows, nose, little finger or toe, pudenda, etc. These are reduced to ashes, and, when not used in tutting or mixed with food, they are sewn up in a bag and worn round the neck. Among W. African tribes also parts of an enemy’s body or sometimes of an ancestor are used in making a fetish—part of the brain to give wisdom, of the heart courage, the eye influence. A spirit is supposed to be lured by these to reside in the fetish. The Teminiberese wear the vertebrae of an enemy as amulets. Among the Caribs of the West Indies the Men of Movat, New Guinea, after slaying a great warrior, wear his penis in order to increase their strength. Another method is to attach the relic to the arms, etc., used in battle. Thus in Mexico, if any one could secure the middle finger of the left hand and the hair of a woman dying in childbirth, he tied these on his shield to make him brave and fierce and to blind his enemies. Rubbing weapons with part of a dead man’s body to give them his strength and skill is sometimes practised also, as among the Koniagas (piece of dead whaler used) and Aleuts. 

(b) With many tribes magical rites are performed with part of a dead man’s body—e.g., in healing, in rain-making, as love-charms, to keep off thieves, to avenge wrongs, etc. This practice is sometimes practised in Queensland, where an enemy is slayed and his skin used to cover a sick man, there is analogy to the use of a dead man’s clothing or part of it as a relic in more civilized regions.

Reference may here be made to the so-called ‘hand of glory’ used to produce sleep or inanimate. Other parts besides the hand were also used—e.g., the skull to make one invisible like the ghost who owned it (Blackfoot Indians). Another instance is found in the use of the pointing-stick or bone to carry away from the grave the spirit of the deceased. The bone is ‘sung’ and curses are pronounced while it is pointed in the direction of the victim. The most powerful form is made out of the femur or fibula of a dead man among the Gnanji and other tribes in the Gulf of Guinea. These tribes still attach the radius of a dead man to a spear when setting out to avenge his death. The spear cannot fail then to go straight and slay the murderer. Analogous to this is the use in the Melanesian area of arrows tipped with human bone. These are much dreaded. After incantations are said over them, they acquire mana, or the ghost works through them. The danger of these arrows is proportionate to the power of the dead man whose bones are used.

(c) The practice of head-hunting and scalp-taking, in the earliest times, the purpose of which was to gain power over the ghost (the head being a seat of the soul?), illustrates these various uses of relics of the dead, and shows that the relics are vehicles of spirit-power, things through which the ghost still works. The association of the connexion of spirit and relic is found in a group of folk-tales in which a man, having stolen a skull from a churchyard, is haunted by the ghost until he returns it. (d) The custom of the widow carrying her husband’s skull as a relic or amulet, and the widespread practice of preserving heads of relatives or ancestors for cult or magical purposes have been described in the art. HEAD (§ 1), (g); cf. also DEATH AND DISPOSAL OF THE DEAD (Introductory), XXI: § 5; CHARMS AND AMULETS (Mexican and Mayan), (1). The whole body is sometimes preserved as a relic. Herodotus relates this of the Jethophylogi (Macrobius), who offered sacrifices to the body for a year, afterwards removing it to another place. So with the Kurnai the mumified corpse is cared about by the family, and later placed in a hollow tree. Among some W. African tribes all the bones of father or mother are dried and kept in a wooden chest, for which a small house is provided, and to which son or daughter must resort to hold communication. For other instances of preservation of the corpse in the family dwelling, with accompanying rites, see EREBEIV. 418 (Austral), 429—8 (Ta’it), Muong of Tongking; Baoule of W. Africa, Yunnob of S. America, Gilbert Islanders. In some instances the wife or nearest relative carries about the bones after they have been exhumed (Woodlark Indians, Mosquito Indians; also ashes of the cremated body, Taucullies). So among the Abipones the bones of medicine-men were carried about by the tribe in their wanderings. Among the Andamanese necklaces are made of a child’s bones (also of an adult’s) and distributed among the relatives. The bones cure diseases and shield from attacks of evil spirits, through the intervention of the ghost, who is pleased by the respect paid to his memory.

Separate parts of the body are sometimes regarded as sacred.

1. Finger and toe.—First joints of these, along with the nails of the toes and a lock of hair are used to form a family fetish with which the spirits of the dead are associated. Fresh relics are added to the fetish as new relatives die. The hair of children is bound to a staff (Eng. "bone") or animals' bones (also sometimes skulls or teeth) of important men are preserved in a shrine at the village in the Solomon Islands. The ghost haunts these relics.

2. The arm-bone is a sacred relic among the Mars, Anua, and other New Guinea tribes. After a year it is given to the messenger who summons to the final burial rites. The messenger carrying the relic is himself sacred, and, when he shows it to the tribesmen, they must begin their journey to the scene of the rites.

3. Hair and teeth. These are used as amulets by the family priest in praying to the dead at plough other than the headless are the skulls and teeth are stored. In Florida, Solomon Islands, in the private cult of a ghost, the worshipper wears a relic a lock of hair or a tooth of the helpful ghost when fighting; at other times it is kept in the house. Also so in the Loyalty Islands priests, when praying, tied to their foreheads or arms relics consisting of teeth, hair, or nails of ancestors. To these magical power was ascribed.

4. The jaw-bones are sometimes an important relic. They are carried by the Andaman widow along with the skull; and among the Kirivina (New Guinea) the widow suspends the jaw-bones, ornamented with beads, from her neck. But the most striking use of the jaw-bones as a relic is found among the Broughtons. A set of jaw-bones of kings are regarded as heirloom, along with their umbilical cord, in temples, guarded by hereditary custodians. The ghost was believed to cling to them and to guard them. All the dead are orderly housed and the ancient kings were thus treasured. This is undoubtedly connected with the notion of the king's being a savior to the people, a tallisman upon which the safety of the tribe or state depends. They are carefully guarded lest they should be removed and disposed of.

5. In savage custom certain articles are sometimes connected with the mythic life of gods and spirits, and may be regarded as relics. Of these the curungina of the Arunta and other Central Australian tribes form an example. Each one was connected with the corresponding Alcheringa (Gt.) period with a totemic ancestor and remained on earth as the abode of his spirit when his body entered the ground. Such cururingina and those associated with reborn spirits are carefully preserved in sacred store-houses, or eratunudanga. They are much venerated and are used in various sacred ceremonies. When ill, a man may send for a cururingina of his totem, scrape off a little of it, and drink it in water, thus absorbing part of the essence of the spirit which atone with the ribbons or hair. Besides being associated with ancestors, the cururingina have 'feelings' which can be soothed by rubbing them with red ochre. The store-houses are sometimes solemnly visited, just as shrines with other. The Melanesian hero Qal left behind him the stump of a tree. He had cut down for a canoe, and men who cut down trees for canoes sacrifice at this stump for the preservation and power of these vessels. Among the Creek Indians a powerful charm carried by war-parties consists of parts of the horns of a myna snake; these preserve from wounds. In other instances stones may be regarded as members of a divinity or supernatural being, or sacred places or instruments are thought to have been instituted over to use by gods, or sacred musical instruments represent a god or contain his voice.

6. In all parts of the world, both in the higher and in the lower culture, marks on rocks or hills are regarded as foot- or hand-prints of spirits, gods, or demons, and are in a sense their relics, which are connected with them as types. Examples of this are found not only in savage, but also in classical, Teutonic, Celtic, Semitic, Hindu, Buddhist, and Christian folklore. Where divinities are mythically supposed to drive about in vehicles of one kind or another, and where their worshippers set the image of a divinity in a cart or chariot and drive it about for ritual or magical reasons, such a vehicle would be regarded also as a relic of the god himself—his property, once used by him as it is now used for his image. Examples of such ritual use occur in Teutonic religion, as well as in Roman, Celtic, and Hindu cults.

2. Greek.—(a) The cult of relics in Greece was inseparably connected with that of heroes, mythical or real, as that in turn was linked on to the worship of ancestral ghosts. The remains of the hero usually rested in the agora, and over them was erected the heroion, a kind of chapel, but sometimes the grave or heroion was in the temple of a divinity. The cult at the heroion was one of nature, and the relics quite as much as to the hero himself, though these relics were generally not visible. Their presence within a town or district was a guarantee of safety. Sometimes not even parts of the hero’s remains were visible. The head of Orpheus was buried in Lesbos or in Smyrna, and the head of one of the Korybantes was buried at the foot of Olympus. The supposed relics of Orpheus at Libethra were never to see the sun, or the city would be destroyed by a storm. When they were exposed, the Syntymes (boat) came down in wind and overthrew it. Nothing further need be said regarding the cult of heroes whose relics rested in a grave (see art. HEROES AND HERO-GODS [Greek and Roman]). There are occasional instances of bodily relics not buried in graves but otherwise preserved. The skin of Marsyas was suspended in the city of Celene—by Apollo, according to the myth. The alleged shoulder-blade of Pelops was preserved in a bronze casket in the temple of Zeus at Elis, after having been found by the fisher Damnorinos in the sea and identified by an oracle. The bones of Tantalus were kept in a bronze vessel at Argos, over against the grave of Pelasgos. The relics of Orpheus rested in a hydra on a pillar at Dion in Macedonia. The hair of Medusa was preserved in a hydra at Taraka. At the festival of Saturnalia in Europe at Crete, where she was reverenced as Hellelotis, her bones were carried in a great crown of myrtle.

(b) When a hero died abroad, his remains were brought with pomp to the place of intended sepulture. From every city through which the remains passed priests, magistrates, and citizens thronged to them, or citizens were deputed to follow in mourning. Trophies, crowns, and armaments of state, were brought to adorn the urn, and finally the most honourable burial was given to the hero. Examples of this are found in the pages of Plutarch. The possession of a hero’s relics was important for the safety of a town or state; hence such relics were more eagerly sought for in times of danger, even when they were already possessed and honoured by another town or district. Generally an oracle

announced that it was necessary to obtain these relics and told in oracular fashion where they were to be found. The only way they could be obtained was to send a special party of youths who were to be kept secret by the owners. Sometimes the actual discovery of their position was the result of a pro-
digy, as when Cimon, seeing an ea^dearing at the ground with beak and talons, was inspired to dig there, and so found the bones of Theseus. Opposition was often offered to their removal; hence, they had to be taken by force or by fraud; and sometimes the hero himself reserved the removal of his relics. Once obtained, they were brought with the utmost reverence, the citizens from them with processions and sacrifices, they were duly buried, and a shrine was erected over the spot. A festival day was annually or oftener held in their honour. Many examples of this occur even in the case of the relics of mythic heroes, and probably they originated as a means of explaining local cults.

Plutarch describes at some length the translation of the relics of Theseus from Scyros to Athens.1 Herodotus tells how an oracle declared that they would never conquer the Tegeans until they had obtained from the Tegean territory the bones of Orestes, which were further said to lie where two wolds by hard compulsion blew and strove answered to stroke. This proved to be a blacksmith's forge—the hero's bones. The story had found there a coffin seven cubits long containing a body of equal length. Having obtained the relics, the Laconiansmen were now actually expected to conquer the Tegeans.2 Other stories occur in Pausanias, who says, e.g., that during a plague at Orchomenus the Pythian priestess announced that the only remedy was to bring the bones home to be reburied from their temple. A crow showed them the place of burial: it perched on a rock, and the bones were there found in a cliff.3

(c) In numerous instances different regions claimed to possess the relics or bones of the same hero, who had thus more graves or shrines than one. In all these particulars there is a close resemblance to the data of the Christian relic cult, but one usual aspect of that cult is lacking—the translation of part of the bodily relics instead of the whole. This occurs only in the case of the mythic shoulder-blade of Pelops.

(d) Frequently where very large bones—probably fossil bones of large animals—were discovered, they were associated to be those of heroes of the past, who were thought to have been of gigantic size. The Syrians, having found such bones in the bed of the Orontes, were informed by an oracle that they were those of a hero.4 The bones of Orestes were seven cubits long, according to Herodotus.5

Huge bones, alleged to be those of the giants, were also shown in temples—e.g., those of Hoplabadus in the temple of Asklepios at Megalopolis, and those of Geryon among the Thebans.6

(c) Besides bones, other relics of heroes were preserved and honoured. Among these weapons were conspicuous—the spear of Achilles in the temple of Athena at Phasaelis, the sword of Memnon in the temple of Aësculapius at Nicomedia, the shield of Pyrrhus over the door of the sanctuary of Demeter where he died took place.7 Of other relics, the lyre of Orpheus was preserved in more than one temple, the flute of Marsyas in the temple of Apollo at Sicyon, the sceptre of Agamemnon in Chersonese, the sandals of Helen in the temple of Athene at Pylos, the clay of Cyrus, the head which served as anchor to the Argonauts, as well as their ship and those of Agamemnon, Æneas, and Theseus in other places.8 Elsewhere chariots, thrones, necklaces, and other things belonging to the mythic personages of antiquity are shown.9

Other curious relics were the egg of Leda and the remains of the clay with which Prometheus had made the first men, which were preserved by every visitor or pilgrim. Travellers and pilgrims, but there is little known of any cult of them. The sceptre of Agamemnon was much revered at Chironoe, and daily offerings were made to it.10

A number of these were also preserved—e.g., the teeth of the boar of Erymanthus, the skin and teeth of the Calydonian boar, the bones of the monster to which Andromeda was exposed, and the like.

As has been seen, the possession of a hero's relics gave safety or victory to a city or district. They also promoted fruitfulness and fertility, ward off pestilence and famine, or caused rain to fall in time of drought. Many other wonders were related of them. Legends of their healing powers existed, and in many instances the sick were carried to tombs of heroes in order to be cured there by their power.4

3. Egyptian.—In Egypt the careful preservation of the mummy shows great reverence for the dead, but hardly amounts to relic-worship, as there was little actual cult of the dead, save in so far as the dead man was identified with Osiris. The cult of relics was largely associated with the worship of Osiris and with myths of his death or disappearance. The burial-places of Osiris or of his members are mentioned in texts giving lists of the graves of Osiris.’ The lists vary, and in some instances one member occurs as a relic in two or more places—numerous legs, the head at Abydos and at Memphis. Thus the honour of possessing some of the members was claimed by more than one city. These sanctuaries in Greco-Roman times were forty-two in number, each with its central shrine or Serapeum.

The Serapeums were so called by the Greeks without regard to the distinction between the tomb of a dead bull which had become an Osiris and the sepulchre of the god-man Osiris himself. But to the Egyptians they were the sanctuaries of Osiris, of him who dwells in the Underworld.12

Abydos owed its importance to its possession of the head, and its symbol was a coffer containing it, surmounted by two plumes. But from the XIIth to the XVIIIth dynasty the whole body was also supposed to be buried there, and an early royal tomb was known as that of Osiris. It was there an important holy place, to which numerous pilgrimages were made, and burial near his relics was considered most advantageous. At Busiris was the backbone or ‘pillar’ of Osiris, the dead, kept there as a sacred relic. It had been discovered at Mendes and brought to Busiris.4 Lucian also mentions the hair of Isis as an important relic preserved in Egypt.13 Herodotus refers to a curious myth current in the Theban district regarding Perses. Here the Chemnede had a temple in his honour, and here he sometimes appeared. A sandal worn by him was sometimes found after his visit. It was two cubits long, and its presence denoted prosperity for Egypt. As in Greece, large bones were supposed to be the relics of giants.

4. Celtic.—The Celtic cult of human heads and the myths respecting them show analogies with savage custom, and the possession of a hero’s head in any given territory seems to have been regarded as a guarantee of safety against enemies and evil
influences, just as in classical and Christian belief alike. The mythical relics of divinities seem to be referred to in a passage of the Rennes Dindshenchas, where the remarkable things in the Brug of Mac Ind Oe are enumerated. Among these are the monument of Dagda, the rampart of the Morrigan, the bed of Dagda, the two snakes of Dagda, and the sword of Dagda's wife, the stone wall of Oengus, and many tombs and carins of divine or heroic personages. Certain things belonging to the Tuatha Dé Danann are also of the nature of mythical relics. The stone of Ah, near Magh Buachaille, was placed round every king who would take the realm of Ireland. This is supposed to be identical with the present coronation stone. Out of Gortach came the unconquerable spear which Lugh had, and out of Findias the equally unconquerable sword of Nuada. Out of Mairias came Dagda's miraculous cauldron. Possibly actual weapons, etc., in Ireland were thus connected with the gods as their relics, like the cherunga of ancestral spirits among the Arabs (5 1: 5).

5. Christian. — (a) Origins of the cult. — The early Christian use of relics, like the use of relics everywhere, may be traced to affection, which makes the survivors cling to the mortal remains of a relative, and this to the instinctive reverence or for curiosity concerning any notable person. Added to this in the case of the early Christians was the desire to shield the remains from the malice of persecutors, while the belief in an after-life and in a survival of the soul led to a notion of a dwelling as a temple of the Holy Spirit naturally increased the reverence paid to the dead. It was also believed that spirits of saints hovered near their tombs and, later, the shrines where their remains were preserved. — A primitive survival which aided the reverence paid to body, relic, or tomb. Feelings of reverence for the martyr's body easily passed over to anything which had been in contact with him. In the case of the living, this principle is seen at work already in A.D. 119.

Another early instance is found in the reverence paid to a martyr's blood. Prudentius tells how the witnesses of the martyrdom of St. Vincent (a.d. 204) dipped their linen vests in his blood, so that it might be a safeguard to their homes for generations. This custom existed in still earlier years, e.g., in the case of the martyrdom of St. Cyprian (a.d. 258) and is often referred to in the lists of the martyrs.

The extraordinary reverence shown in the matter of burial, care of the grave, and in the cult which went on there, especially on the anniversary of a martyr's passion, all aided the growth of the relic-cult. The Eucharist was elaborated in the relic-cult. The body was the body, often on the stone slabs which covered the tomb, seen again in Christian use of law, whereas the stone slabs which covered the tomb, seen again in Christian use of law, were buried with the body and had the same miraculous powers.

Influences from the Jewish or Hebrew side are not discernible in the Christian relic-cult. Among the Hebrews any actual cult of relics of the dead was hindered by the idea of uncleanness which attached to a dead body (Nu 19:11) and by the disgrace which attended the use of burial. Joseph, the body of Jesus, after embalming (a custom which is here Egyptian, not Hebrew), was by his direction carried up from Egypt to Palestine and there buried; but, though it would naturally be treated with reverence, there is not the least evidence of a relic-cult here (Gn 50:25, Ex 13:19, Jos 24:2; 2). The pot of manna and Aaron's rod within the Ark of the Covenant were not worshipful relics, but in the case of a memorial of God's mercy, in the other 'a token against the children of rebellion' (Ex 16:34, Nu 11:8, De 9:4). The mention of a 'heathen custom' of the 'Maccabees' in 1 Macc 1:3; 4:17; 7:34; 9:1, 7, 29; 13:8; 14:33 and 1 Macc 2:57 (a.d. 150), remains, as it were, a relic of the early Christian era.

Theodoret says that the Lord has substituted his own martyrs for those of the world. The three bodies built over their tombs or relics just as temples were erected over tombs of heroes. But, while the remains of the pagan hero generally rested in the grave and were not seen by the worshippers, the development in the Christian ritual was to a reverence of relics in reliquaries and to an occasional visible exhibition of the same. Among Greeks and Romans reverence for the dead forbade the dividing of their remains, and severe laws existed against violation of tombs and bodies. These laws continued in force under the earlier Christian emperors. The prejudice against dividing the remains of the dead continued active in the Western Church, but both there and in the East the desire to possess the bodies of martyrs led to large sums being paid for them and to disputes concerning their ownership. But in the Eastern Church the division of a martyr's remains into relics began to prevail at a comparatively early period. Graves were rifled and bones stolen, and a traffic was begun in them, though the use of such relics was apparently a private one, as in the case of Lucilla (p. 654). At what time precisely the dismemberment of bodies of saints began is uncertain. Possibly the practice was aided by the fact that in the earlier custom of the relics, but a few bones and ashes remained, which might be regarded differently from a complete corpse or skeleton. But that it was already in vogue in the 4th century is shown by the law of Theodosius, forbidding the breaking open of a dead body already buried, the selling (or dismembering) ('neco martyrem distrahit') or buying of a martyr's remains. A law of Valentinian III. speaks of bishops and clergy who were guilty of robbing graves, and again for the case of obtaining relics. St. Augustine already speaks of pretended monks who went about selling relics of martyrs, if indeed they were martyrs, and refers to scandalous abuses in connexion with the cult. Even in A.D. 593 Pope Gregory the Great was amazed at the Eastern custom of distributing the remains of saints, and, when the empress Constantina asked him to send her the head of St. Paul for a new church to his memory, he refused, saying that he could not divide the bodies of the saints, and pointed to his own custom of involving no idol.
RELICS (Primitive and Western)

Hezekiah's day, but was destroyed by him. In all likelihood it was the image of an adopted serpent-cult rather than a relic (2 K 18).  

(b) Growth of the cult in early times.—Apart from the usual cult of a martyr at his tomb and its dedication, the Eastern Church, as in Europe or early Rome, may have built up a shrine or church over the tomb, the use of separate relics was at first a private custom rather than a practice officially recognized. This is suggested in the statement made in the account of St. Polycarp's martyrdom 1 that St. Agatha was taken by Roman authorities to prevent the least part of his body being taken, although many desired to do this and to be made partakers of his holy flesh. The Roman governor, at the suggestion of the Jews, pretended that the Christians might forsake the worship of the Crucified and begin to worship this Poly-carp. The Acta of St. Fructuosus and his two deacons tell how the brethren collected the ashes and divided them. But he appeared in a vision to some of them and bade them restore and bury the bodies, 2 and they were buried in the 26 cent. Oppos. tells how Lucilla, a Donatist, was accustomed, before receiving the Eucharist, to kiss a relic of a supposed martyr which she had procured, and for this she was rebuked by Cecilian, and thus was permitted to receive the Eucharist. In the East, in the 2nd cent., a Roman lady, Aglae, sent her favourite stewart to the East with gold and aromatics to obtain relics of the martyrs. The evidence of St. Augustine 3 to the traffic in relics is also important as a witness to the private practice of it. But there is no doubt that the cult of actual bodily relics, as well as dust from the shrine, and clothes which had been in contact with a martyr's body, was being general in the 4th cent., by which time St. Cyril of Jerusalem 4 also speaks of the cult of the relics of the first Christian, distributed piecemeal to all the world in his day. 5 The growing cult is also proved by the desire of the pagans to prevent it,—e.g., in the case of St. Polycarp, perhaps also in that of the martyrs of Lyons, whose ashes were thrown into the river that some fragment (σημείωμα) might remain to give hope of resurrection, and in the refusal of sepulchre to martyrs in the Dioecletian persecution, lest the survivors should gain courage in worshipping those whom they regarded as gods. References in the Apocalypse to relics and tombs of the martyrs are allusions that could develop into a cult of separate relics.

Gregory of Nyssa says that to touch the tomb is a blessing, and, if it be permitted to carry off dust, even better. This was probably based on the custom of touching the remains themselves, only those who have done so know how desirable it is and how worthy a person of prayer. 6 St. Chrysostom describes how the faithful gathered in crowds round the martyrs' tombs, and he praises the power of the sacred remains. Not only their bodies, but also their vestments are objects of homage. 7

The custom of dividing the remains of a martyr is certainly found in the East in the latter half of the 4th century. It, as well as the translation of the body, was now promoted for ecclesiastical and political reasons; e.g., the translation of Constantine's people with innumerable relics from other parts gave it a high standing as against the old capital of the West. Eastern Christians liberally shared their relics with others as an honour to the martyr and a widening of his circle of admirers, while it also flattened their private custom. The custom was common among the Christians of Egypt, and Chrysostom refers to it. 8 The church of Sinope presented many places with relics of Phocas. 9 In 1766 the church of St. Stephen contained its forty martyrs to other districts. 10 Paulinus of Nola placed in the church which he founded there 11

(c) 400 relics of various apostolic martyrs, including also some of those of St. Nazarius sent by St. Ambrose. 12

As has been seen, the division of bodily relics was hardly known in the 13th century, or, where separate parts of a hero existed, they were still within a grave. Yet already in the East separate relics of Buddha were known and revered, his bones, after cremation, having been divided among eight clans or individuals, and mounds erected over them. Buddhist influences on the division of the remains of a saint may be regarded as remotely possible.

Theologians soon began to recognize the cult of relics and to supply reasons for it. They referred to such statements as Ac 2:42; Rom. 12:4 and Ac 5:12 in support of the practice. The bodies of saints, formerly temples of the Holy Spirit, were now worshipped reverently, and, as their bodies were instruments which God had used and which were destined to shine in future bliss, this suggested continued reverence to them. Their bodies were endowed, with mystic power (δυνάμειαν), or grace (χάριν πνευματικάς), and so also were their graves, 13 and this power was as much in the parts as in the whole. 14 When the body is divided, the grace is divided to it. He who touched the bones of a martyr received a share of the sanctification (αγιασμός) from the grace dwelling in them. 15 This power was already inherent in saints while alive, as their alleged miracles showed, and it was then apt to overflow other objects, which could produce wonderful effects also (Ac 5:12). 16 If, then, arians, gnostics, clothes, headkerchiefs, and even the shadow of saints on earth had wrought miracles, 17 it seems natural that a blessing is certainly derived from the relics of saints by those who devoutly touch them. The relic, as containing supernatural grace or power, was like a spring which overflows and never grows dry, or like a light always sending out beams, but never losing the power of shining, and this power passes over to all persons or things brought into contact with the relic. 18 These views, apart from their theological aspect, differ little from the theory implicit in savage magic, as far as that concerns the use of relics.

Lucian did not consider that the power in the relic forms a kind of powerful stuff, and gives as an example the overflowing of oil in a lamp, 19 which is the power of a material material had passed into it from the remains. Such oil had miraculous virtues equalling those of the relic. 20

A clear distinction was drawn, however, between worship paid to God and reverence due to a saint. This was already recognized in the case of St. Polycarp's relics. Christians worshipped (εἰσκείματα, προσκυνώμενα) Jesus Christ, but loved (αγαπώμενα) the martyrs and their relics; they did not worship Polycarp, as the pagans avowed. 21 We honour the martyrs," says St. Augustine, "but do not worship (cōlumnam) them." 22 St. Jerome, in contending against Vigilantius for the use of relics, maintains that relics are not worshipped, but honoured. We honour (honoramus) the relics of the martyrs, that we may worship (adoramus) Him whose martyrs they are. 23 Popular practice probably went farther; and even now, in the opinion of leading Roman Catholic theologians, the supreme worship of latrun may be accorded to relics of the Cross, the nails, the garments of the Saviour.

(e) Variety of relics.—A relic is first and foremost the body of a martyr in its entirety or in some fragment (σημείωμα). This is the normal meaning of the term: "the body of St. John the Baptist," "the head of St. Peter," etc. Sometimes a match is made with the term "accessory" (προσόπον), and what is called a "token" (σημείωμα) is supposed to be a separate relic. When, as is usual in the case of saints, the body or head is in a tomb, the term accessory is quite correctly applied to the objects in the saint's tomb: his vestments, his table, his chalice. 24 When the body or head is kept in a shrine, the term accessory is sometimes used for the objects in the shrine. Thus, the church of St. Stephen in Rome has the remains of St. Stephen in a shrine, and the church of St. Paul has the remains of St. Paul in a shrine. In the case of the relics of the Cross, the nails and the garments of the Saviour are the objects of reverence.

RELIQUS (Primitive and Western) 655

the body remains a holy person—the whole of the
or any part of them, even the most minute
(tantimle relicus, in the phrase of St. Gregory of
NaziFlains). 1 In later theology a division as far
as rank was concerned was made between different
parts of the body as relics. Reliquia insignes
include the whole body; parts—honor-
arm; reliquis non insignes include other
parts, and these are again divided into notables
(hand, foot) and exiguous (tooth, fingers). 2 As
already mentioned, the blood of a martyr was also a
sacred relic, and the acta describe how it was
collected in drinking-skins, sponges, etc., which
were preserved as talismans. But anything which had
been possessed by, or had been in contact with or
in proximity to, a holy person or his relics might
in turn become a relic. Among these were his
books, his instruments of torture, his garments, of
which St. Chrysostom says:

1How great is the power of the saints. For the homage of
Christians is directed not only to their words and bodies, but
even to their vestments.

Earth and dust from graves, coffins, and shrines;
oil from lamps hanging there; pieces of cloth (branclcas)
laid for a time upon them, were all as
ecclesial as the remains themselves, as far as
notion and concern were concerned. Those
who had touched a relic were also reverenced. Many
names were in use for reliquies besides the general
term—e.g., exvium, busta, beneficia, lipsana,
inignia, cinera, pignora, or nenia sanctorum, etc.

A change similar to that of the elements in consecration was
suggested to have taken place in pieces of cloth after contact
with the relic. Pope Gregory the Great is said to have shown
this to the Greeks; he cut such a piece of cloth, and
blood flowed from it. 3

Among other relics those associated with
our Lord naturally occupied a high place, although in
most cases (like many other relics) they were
fictitious. The alleged discovery by the Cross was
accompanied by a miracle, and a few years later
the holy wood of the Cross had almost filled the
whole world. 4 Paulinus says that the part of it
kept at Jerusalem gave off fragments of itself
without diminishing; having imbued this power
from the wood of that Flesh which underwent
death, but saw not corruption. 5

Calvin jeers at the quantity of wood in the relics of
the Cross, so much that three hundred men could not carry
them. For in G. Rohault’s treatise there remains that existing relics would
measure 5,000,000 cubic millimetres, whereas the whole
Cross would cover an area of 45 square inches. It was
the true Cross that on which our Lord was crucified?
Honorat Nucet, writing of the multiplication of the wood of
the Cross, assimilates the latter to the Body of Christ in the
Eucharist. 6

The alleged letter of Christ to Abgarus preserved
Edessa frequently from attack in the 4th century.
The pillar to which our Lord was bound, the
crown of thorns, the spear, sponge, and Reed,
the linen clothes, the stone of the sepulchre, and
carde from the sepulchre or from the Holy Land, even
our Lord’s footprints, were all relics from the 4th
cent. onwards, and are referred to in pilgrim
toires. 7 Other writings and other pages of the
relics are the much-multiplied eodaurum, the
boards of the manger in the church of St. Maria
Maggiore in Rome brought from Bethlehem in
the 7th cent. by Pope Theodore, and the Holy
Cross of the Church of St. Peter without the
walls also belong to our Lord or to other
towns. The nails of the Cross, found with it
by St. Helena, became also much multiplied.
Many nails, however, are said merely to contain
filings of the originals, though they are usually
all of the same genuine.

Dust and earth from Palestine were most efficacious
against demons, and were brought thence in large quantities and sold
at high prices. Some relics of the Passion and the like may at
first have been part of the properties used in liturgical mystery-
plays.

Relics of the Virgin are mentioned from the
6th and 7th centuries onwards. Among the early
relics were a stone on which she had rested on
her journey to Bethlehem, the bucket and basket
which had been near her at the time of the
Annunciation, and the stool on which she
sat, articles of her clothing, her girdle, and her
headband. 2 These and the like were to be seen
in Jerusalem and other holy cities. But even at
this period relics of the Virgin
were known in Western churches or in the
possession of private individuals. Probably
the legend of the Assumption prevented the existence
of actual bodily relics, though a lock of
hair was treasured by Charlemagne, and her
milk was a favourite relic all over Western
Europe.

Innumerable relics of the Apostles came into
existence as the cult increased, and at first none
were so popular as the church of St. Peter. St. Peter
and St. Paul. Chrysostom mentions
St. Paul’s chains, and in the 6th cent. they
existed at Rome. 3 Those of St. Peter were given to the
empress Eudoxia on her visit to Jerusalem in 439, and one of them
was presented by her daughter, wife of Valentinian III., at Rome, who
built the church of S. Pietro in Vincoli in its
honour. Filings from these chains enclosed in
keys or caskets were greatly valued, and Pope
Gregory the Great was accustomed to send keys
containing them as gifts. 4

(d) Abuses of the relic-cult. — Many of these relics were fabulous, but, as the reverence for
them increased, it was natural that innumerable
new ones should be brought to light. The
inventories in churches and references in religious
literature during the Middle Ages show the extent and
the absurdity of the cult. Relics of the patriarchs
and saints of the OT became common from the 4th
cent. onwards. Their graves and
places connected with their lives were pointed out
without hesitation, and are mentioned in itineraries—e.g., the
rock smitten by Moses, the cave of
Elijah, the place where David composed the
Psalms. Among relics were Noah’s ark and the
bones of his family, those of the city of
Jerusalem, the bones of Isaac, hairs of Noah’s beard,
fragments of the Ark, foot from the furnace of the Three
Children, portions of manna, Job’s dung-heaps,
feathers from Gabriel’s wings, and St. Michael’s
buckler. Equally absurd were the breath of St.
Joseph, the Virgin’s milk, our Lord’s tears, sweat,
blood, tooth, even the praeputium Christi (in several
churches), 5 the wood of the three tabernacles
which St. Peter proposed to make, and the corner-
stone rejected by the builders! In vain were laws
passed regulating the cult. The passion for relics
became greater still, and the trade in them increased
as the centuries passed. From at least the
4th cent. many burial-places of Scriptural and ecclesi-
astical saints and of martyrs were alleged to have
been discovered by means of dreams and visions,
in which the dead man appeared and revealed

place of sepulture in order that a martyrrium might be built or due honour paid to him. Dream discovery of a saint's remains still occurs now and then. 1 Fraudulent persons early took advantage of this and produced bodies of alleged martyrs. On the other hand, the monarchs of the day were pleased to have relics of a hero or saint whose tomb was honoured as a martyr's appeared to St. Martin at his prayer and avowed his real character and crimes. 2 Pilgrims to the East and to the holy places returned with such relics as water from the Jordan and earth from the Sepulchre of Christ. Some relics were imported, but it is certain that no important relic ever reached the West before the 13th century. 3

Although prohibitions were issued by 12th and 13th cent. councils, bishops sometimes permitted the existence of avowedly false relics, on the ground that to undeceive the people was not expected to be done in public: that still, the famous relics were not uncommon and was soon regarded as praiseworthy, e.g., when the people of one district or the members of one monastery wished to gain possession of a relic from another. 4 Hence Martin, to prevent the making of relics to placate the people of Tarsus and poison the body of St. Martin. 5 The desire for relics, and for the marvellous in connexion with them, led also to the reduplication or multiplication of the same relic in different places—numerous bodies, heads, legs, etc., of the same saint; many holy shrines, coats, and the like; innumerable thorns from the crown of thorns, and pieces of the Cross. Indeed scarcely any relic did not exist in duplicate or more. 6 Credulity and pious fraud, as well as intentional imposture, went hand in hand. 7 Early extant evidence of imposture are given by Augustine, of Opere Monachorum, xx; 8 of Gregory, in his Passio, 39; Greg. Tur. Hist. Franc. i. 6. 9

a sties like Pope Gregory the Great insisted upon the assurance of authenticity. Hence arose the custom of testing relics. Those possessed by Arians and found in Arian churches were subjected to the scrutiny of the Spanish Council of Cesar Augustus in 592. This custom was common in later centuries, and liturgical forms were used in connexion with the test. 2 Before the 15th cent., the traffic in relics was forbidden, as well as the showing of them outside a reliquary or relic-case. In 1553 the Holy See ordered the new relics to be venerated without due authority, and bishops were to prevent fictions and false documents about relics from being circulated. 3 Where the cult was so deeply rooted, and where relics, whether true or false, had already wrought miracles, not even the highest authority could destroy popular belief in them. But, as their abuse was one of the grievances of the Reformers, the Council of Trent tried to regulate some of its more notorious aspects—e.g., the prohibition of the sale of relics, the use of false relics, the destruction of the visitsation of relics into revels—where no new miracles were to be acknowledged or new relics recognized unless the bishop of the diocese had taken cognizance of the one and slain them. 4

(c) Relics in churches. —The custom of building a chapel over a martyr's body gave rise in the time of Constantine to that of building churches over tombs of great apostles or martyrs. From this arose the custom of the possession of the body of a saint in order to build a church in memory of a martyr and to bring to it his relics, or to place such relics in an existing church. This gave rise to continual translation of relics. The translation, whether of whole or of partial remains, was effected with great reverence and pomp. It first occurred in the East, an early example being that of the remains of SS. Andrew, Luke, and Timothy to Constantinople. The Westerns for some time shrank from meddling with bodies, once they were buried, although the remains of St. Stephen are found first at Calama and then at Hippo in St. Augustine's time, and even in 593 Pope Gregory the Great wonders much at the Eastern custom. 5 Even when the West accepted the custom, certain restrictions were imposed; and permission of a sacred synod had to be obtained, as a council of Metz (513) appointed. In general, translation came to be preceded by miraculous circumstances attending the discovery of relics. When they were brought to the place of translation, crowds of all ranks came to welcome them and to accompany the procession with lamps and candel. The relics were enclosed in costly wrappings or in precious receptacles. Similar joyous scenes marked their passage through towns on the way. Usually the day was marked by a yearly commemoration besides the day of the saint. An early example of the manner of translation—that of the body of Phocas to Constantinople—is given by St. Chrysostom. 6 A more recent instance is that of the remains of St. Armstrong from the Catacombs of Rome to Cincinnati in 1870.

As the custom spread, the idea arose that no church was complete without relics. Traces of this are found in the 4th cent., 7 and soon relics were the superfluities to the place of new churches. Where none could be obtained neither, application was made to Rome in the 7th and later centuries, and a cloth (brandenm) consecrated by being held

over the relics of SS. Peter and Paul was sent. Old churches were also supplied with relics. Con-
secration of a church with relics under the altar was made a sign of the presence of Christ, among them (757). As the altar had previously been built over the body, so now relics were placed under it, or in a cavity within it. There was also a reference to the 'souls underneath the altar' of Rev 6. Both in the Eastern and Western Church the consecration of a church is attended by the solemn placing of relics in the altar. The cavity in the altar is known as the sepulchrum, loculus, or confessio; and in the Latin Church it must contain relics of two or, since 1606, one martyr.

In the Eastern Church a relic or relics, generally associated at the dedication of a church, are used, but several may be balled at the same time. Relics are poured out with a fragrant gum; oil is poured over them by the bishop, and, dis-

tilling on to the corporals, is supposed to give them all the virtue of the relics. The Eucharist must be celebrated on them for seven days, after which they are sent forth as they are wanted. In use this corporal is spread out on the altar at the beginning of the liturgy. It is practically sacred.

Relics were sometimes placed at doors of churches, where the faithful kissed them, and in various parts of the architecture of the building, and were also contained in precious reliquaries, in cupboards on the left or right of the altar, or in sarcophagi. They were also carried in procession and exhibited to the faithful, who were blessed with them, generally on a specific day. Numerous pilgrims flocked to the place for this purpose. Booklets where the relics described, and also gadgets, which the pilgrims to follow the ceremonies at their public exhibition, were for sale, and contained instructions as to the indulgences to be obtained.

Receptacles of relics, or reliquaries, had a variety of names (casea, licta, phiale, synodicon, thalamus, etc.); and were made of different materials—wood, metal, bone, ivory, glass. Many of them were richly ornate. Their form was equal in various. Some were made to inlaid the church, or a reliquary, or sarcophagus. Some had the form of a cross, others of a stauere, a bust, or a medallion. Still others were shaped to resemble their contents—foot, head, etc. Besides reliquaries for use in churches, a smaller kind was made for carrying on the person.

Relics in connexion with relics.—Relics being so sacred and powerful, an early custom arose of taking oaths upon them. As prescribed by Dagobert in 630, the compurgators placed their hands on the relics containing the relic. The accused put his hands above the relics, so that Gregory the Great might help him and the relics under the hands which he holds that he may not incur guilt in the matter of which he is questioned. Another custom was that of obtaining a saint's advice by laying on the altar where his relics were, a letter with an account of the case for the answer, which was sometimes given in writing, sometimes not at all. There is some analogy here with modern methods of spirit-writing. The assistance of saints was also thought to be obtained at ecclesiastical councils by the presence of their relics. While at first buried near a martyr's grave was avoided, it soon became a matter of strong desire to be interred near relics of a saint or martyr. St. Augustine wrote a treatise in support of this doctrine.

Relics and miracles.—The veneration of relics soon led to the belief in them as powerful to work miracles. Being associated with the spirit of a
dead saint or filled with his supernatural grace, they were naturally supposed to possess such miraculous powers as he had possessed in his life-time. A close analogy is evident of this, but one which showed that the belief was already strongly grounded, is found in St. Augustine's account of the relics of St. Stephen first at Calama and then at Hippo. He mentions as many as seventy accounts of miracles already written within two years after the coming of the relics. He describes the miracles as countless, and gives cases of the cure of blindness and other diseases even through flowers which had come into contact with the relics, of cures of goit, fistula, stone, and broken limbs. This was in connection of the dead to life. Augustine's theory is that the martyrs died for the faith of Christ and can now ask these benefits from Him. The miracles attest the faith which proclaims the resurrection of the flesh to eternal life, whether or not this actually occurred in their time, or by means of angels—at the prayer of the martyrs. Augustine also refers to miracles wrought through relics as common in London etc. through relics of St. Laurence and Gervasius. Other early instances are the miracles ascribed to the relics of St. Cyrilian by Gregory Nazianzen, and those recorded by St. Gregory of Tours, especially in connexion with the relics of St. Martin, the miraculous use of relics of the martyrs of Lyons. He also tells how a nail of the Cross thrown into the Adriatic by Queen Rudegund made it safe ever after for navigators. Pope Gregory the Great, whose veneration for relics was extreme, either composed or revised by means of relics in his Epidotes. Where relics were possessed by churches and wrought miracles, it became common in the 5th cent. to hang up models of limbs which had been cured—a practice continued long after. At the translation of relics miracles were matters of frequent occurrence, as well as at their exhibition, and at the shrines of famous saints. From the 6th cent. onwards, with increasing force during the later Middle Ages, the credulity of the people increased, and miracles by means of relics, genuine or false, or by means of articles in contact with them, or at the shrines which contained them, were multiplied and were frequently of the most absurd nature. Not only were the sick healed, the blind given sight, the deaf made to hear, the dead raised, and demons tormented or chased away, but relics cured of evil, or had power over storms, thunder, rain or floods, gave victory when carried in battle, or kept enemies at a distance, overcame robbers, and supplied succour of every kind. See also art. CHARMS AND AMULETS (Christian), vol. iii. p. 427a.

While miracle-working relics in any given church or monastery were usually welcomed as a source of revenue from the crowds which flocked thereto, these miracles were sometimes a source of annoyance to the course of monastic life.

Relics were worn on the person as amulets from early times, usually hanging in a case from the neck or in a small box or case. They were also worn with the union of the wearer with the saint whose relics were worn. Warriors placed them in the hilts of their swords; kings wore them in their crowns and regalia, or parts of crowns were themselves made of most sacred relics—e.g., the fillet of the iron crown of Lombardy from one of the nails of the Cross. St. Thomas Aquinas discusses the propriety of wearing relics round the neck as a protection, and approves of the practice, provided ostentation and superstition be avoided. This opinion was challenged by other theologians.

(Opposition to the cult of relics. — Cultures, palaces, mantlets, the Church, the Limbo of the relics of martyrs — men 'hateful to gods and men' — and Julian inveighs with scorn against the practices in connexion with the tombs and relics of martyrs and the worship of the wood of the Cross. While some of the leaders of Christian thought protested against the extravagances of the cult, most of them admitted its value. Protests arose, however, from time to time against the whole practice. Vigilantius, a Spanish presbyter, wrote against the cult and its superstitions, and describes its results. He quoted a letter written to him by the Bishop of Auxerre. The body of Saint Martin is known only from the violent reply of St. Jerome, who maintains that the souls of martyrs hover round their relics, but that Christians neither worship nor adore but only venerate relics of martyrs, in order the better to adore the martyrs' God — a statement hardly true of the popular attitude. In connexion with the iconoclastic controversy, the emperor Constantine Copronymus desired the abolition of the cult of relics, though the iconoclasts generally had no objection to them. Many relics were thrown into the sea, and popular feeling was aroused by the loss of such as had been highly valued. At a later date, in the West, Claude, bishop of Turin (c. 871), desired to see religion from a different point of view. He attacked the use of relics, intercession of saints, and pilgrimages to their shrines, while he caused the destruction of relics in his diocese. He was condemned by a local synod. In his work, de Pignoribus Sanctorum, Gratian, about 1170, after having attacked the worship of saints and relics, and its many anomalies and absurdities — e.g., reduplication of relics — and, in particular, he proved the imposture of the tooth of Christ, alleged to be possessed by the monks of St. Denis. Among the mediæval mystic groups, faith in relics was sometimes set aside, though not by all. The pantheistic mystics of the 13th. century scoffed at the reverence paid to the bones of martyrs. Individual Reformers (e.g., Wycliff) and reforming groups before the Reformation (Walenses and Lollards) were opposed to all practices connected with relics, and the Reformers themselves indignantly repudiated their use. Calvin wrote a Traité des reliques, in which he pours contempt on those who profane them. The Thirty-Nine Articles of the Church of England describe the Roman doctrine concerning them as 'a fond thing, vainly invented' (art. 22), and the Second Book of Homilies (1563) is still more energetic. In the 16th. cent. the use of relics has been abandoned in all Reformed churches. Nevertheless, so strong is the instinctive feeling of reverence for anything pertaining to a great man that various things belonging to famous divines — letters, books, apparel, furniture, and the like — are carefully treasured, and are objects of interest, and of some degree of reverence by both Protestant and Catholic admirers. Further, in all Protestant and Roman Catholic countries relics of interesting periods of the past, apart from saints, are often treasured with every sign of interest and respect.

The modern Roman Catholic doctrine of relics is based on that of the earlier theologians already cited, and is set forth by the Council of Trent. The bodies of the saints and martyrs are in the temples of the Holy Spirit and members of Christ, and will be raised with him. The church of God would venerate them. Through them benefits are bestowed on men by God. Hence those who deny the power of relics and the folly of the veneration of them are to be condemned. Reference is made by the Council of Trent to such passages as Ac 16:12 R 13, Sir 4:14, J. H. Newman finds in the view which Christianity takes of matter as susceptible of grace, and in the fact that matter as well as spirit recovered through the Incarnation, atonement, and resurrection, the result of the Fall, a sufficient reason for the sanctity of relics.

1. Occasionally the name of a Catholic and Protestant writer is cited, lest it should be supposed that certain opinions are those of the Catholic Church alone.

2. The result of the Fall, a sufficient reason for the sanctity of relics.

3. The result of the Fall, a sufficient reason for the sanctity of relics.

4. The result of the Fall, a sufficient reason for the sanctity of relics.

5. The result of the Fall, a sufficient reason for the sanctity of relics.

6. Conclusion. — Although reverence for the remains of the dead or the treasuring of some of their more personal belongings is natural and may be held to, the preservation of these remains in whole or in part in Christian veneration seems to involve greater faithfulness and goodness, or as reminders of the example offered by the lives of their whilom owners, is a forcing of that instinct beyond its legitimate place. There is not a little that is barbaric in the dividing up into larger or smaller fragments of the mortal remains of a saint and disseminating them over a wide area even for purposes of veneration. The admitted great uncertainty which surrounds any relic, the certainty of impostures, the occasional falsification and reproving of relics, and the superstitions and abuses to which they have given rise and which have attended the cult from early times, far outweigh any positive good which they may ever have done.

This is a curious likeness between the classical and the Christian cult of relics. Circumstances attending the discovery and translation of relics, the rivalry of different places for them, fighting for or theft of them, falsifying and reproducing them, the religious advantage of relics, and prodigies associated with them, the safety expected from them, are instances of these. But, while the influence of the pagan cult of relics upon the origin of the Christian cult may be affirmed, most modern Christian documents owe their existence to similar results following from similar conditions, rather than to influence from the pagan side. There is also the fundamental difference already noted — viz. that pagan relics of heroes were almost invariably enclosed in a tomb, were not divided up, and were not visible, while those of saints were at an early date dismembered, enclosed in reliquaries, and made visible to the faithful.

RELIICS (Eastern).—The worship, adoration, or veneration of relics is widely diffused in Asia, and is not wholly confined to the adherents of any one sect, but is observable in all Buddhist oases over their existence by Buddhists. The Tridentine definition of relics as comprising (1) the bodies of the saints, or portions of them, (2) such objects as the saints made use of during their lives, or as were used at their martyr-
RELICS (Eastern)

dom,' applies to non-Christian Asiatic usage. Class (1) is known to the Buddhists as stūrīka, 'body- relics,' while class (2) is termed parībhojika, 'objects used,' the term 'used' being understood in a wide sense as connoting 'closely connected with.'

In Asia relic-worship rests on the same foundations as in Europe. The relics may be venerated simply as memorials of the sainted dead, serving, like images, as points of attachment for the reverence and devotion of the pious; or they may be regarded as intrinsically possessing magical powers which enable them to work miracles. The treasuring of relics as memorials or souvenirs of the dead is not new. That Buddha venerated 'former Buddha' relics, for instance, is attested in the earliest Buddhist literature, just as it is attested in the earliest non-Christian literature.

The four canine teeth, the two collar-bones, and the frontal bone of Buddha were termed 'seven great relics.' The other fragments, which were numerous, were believed to comprise grains no bigger than a mustard seed. The relics were collected and are said to have been dispersed all over the Buddhist world, the dispersal being associated with the legend of the name of Aṣoka. Some of the pieces, genuine or supposed relics, were connected closely with the person of Buddha, command similar reverence. The Buddhist passion for relic-worship is so ardent that anything said to be a relic is certain to secure much popular attention, without any question as to its genuineness.

Relic-worship need not be either those of Buddha himself or objects associated with him personally; fragments of the bodies of the saints and things used by or connected with them are valued almost as highly. The Tibetans carry their interest in relics of recently deceased or even living Lamas to a disgusting extreme.

The smaller objects of veneration naturally were enclosed in suitable reliquaries or caskets, which were made of various materials, including among others soapstone, coral, ivory, and its derivatives, silver, and gold. Many examples have been discovered in India, Ceylon, and elsewhere.

The earliest known specimen appears to be the stūpa of Pipāravā, erected probably soon after the death of Buddha. There is reason to believe that the fragments of bone in that casket were genuine relics of Gautama Buddha, and that they were enshrined in a reliquary of local pottery or his Śākya clansmen; but absolute proof of the genuineness of the relics is necessarily unattainable, and the
date of the monument is the subject of differences of opinion. The reliquary, with a crystal bowl and other vessels, stood on the top of a massive, cylindrical stupa of grey-green soapstone, 2 ft. by 2 ft. 2 in. constructed with perfect skill from a single block of fine sandstone. Another exceptionally interesting reliquary is the gold casket from a stūpa at Birmam between Kāmbal and Jalālābād, currently in the Ghorpapur museum. Respectively, third is the Kaniska casket made of an alloy of copper and found in the ruins of the great stūpa at Peshāvar.

The pious people who deposited relics in carefully-prepared, costly receptacles usually honoured the precious fragments by placing with them a multitude of objects of intrinsic or artistic value, including jewellery of various kinds. All the known examples of ancient Indian jewellery seem to come from such honorific deposits. The workmanship both in metals and in gems is of high quality. We are thus indebted to relic-worship for the greater part of such knowledge as we possess concerning the jeweller's art in ancient India.

Relics, whether sarīrīka or paribhogika, were usually secured against accidents by burial in a stūpa (thūpa, ‘tope,’ ‘dagoba’), which in its early Indian form was a low solid cupola of massive masonry, with a relic-chamber in the interior, or an annexe, or the base. Such buildings, although not so difficult to enter as the Egyptian pyramids, were sufficiently impenetrable to offer no small degree of security. Some ancient monuments of the kind preserve their secret involute to this day, some were depopulated ages ago, and others have yielded their treasures to keen archaeologists in recent times. Although stūpas were built occasionally merely as memorial towers to mark sacred spots, and in that case contained no internal chamber, most of them in ancient times were erected specifically for the purpose of enshrining in safety highly venerated relics of either Buddha or his saints. The modern chorten (q.v.), the equivalent of the stūpa in Tibet, rarely contains relics.

The story of the stūpa as an architectural form, beginning with the low solid hemisphere of Piprāvā and ending with the slender Chinese pagoda, is a long one. That long development would never have taken place if the cults of Buddha, Mājñun, the Impersonal God, had not been so interwoven from the first. The architectural form evolved in different countries in different directions, and in the present day the most characteristic relics in the kind still standing probably are those found in Ceylon and Burma. The ancient stūpa at Anurādhapura in Ceylon, inaccurately called the Jetavanarama, stands on a stone platform nearly 8 acres in extent, and is still 251 ft. high. The Siwā Dāgon pagoda at Rangoon, a more modern building, 368 ft. high in its existing form, is reputed to contain within its inner eight stories the relics of Gautama Buddha, as well as the bathing-garment of Kaśyapa, the water-dipper of Konāgamana, and the staff of Krukechanda—i.e. articles used by the three latest of the ‘former Buddhas.’

Among the destroyed stūpas, one of the greatest was the famous monument at Peshāvar constructed c. A.D. 100 by Kaniska (q.v.). The relic-casket excavated from its foundations has been referred to above.

The gigantic monument at Boro Budur in Java is essentially a stūpa, but there is no record of its erection or of the relics which may lie hidden somewhere in its recesses.

Buddhist public worship in India and Ceylon during the period of the stūpas is naturally centred in the relic-stūpas, which formed the goals of innumerable pilgrimages. Kings enunciated another one in the lavishness of the ceremonial with which the relics were first enshrined and then from time to time exhibited to the people. The most important of these ceremonies are those given repeatedly in the Mahāvamsa, a monastic chronicle of Ceylon, written about the 5th century A.D.

Ch. xxx. relates how the site of the Mahāvihāra was consecrated by the enshrinement of the ashes of Lanka, the ashes of monks, including deputations from the foreign lands designated as Pālavihāraka (Persia) and ‘Alexanda the city of the suns,’ probably meaning Alexandria in Egypt. Ch. xxx. is devoted to an exposition of the glories of the spacious relic-chamber, the reliwār, of Mahāvamsa. It describes the operations of securing the enshrining of the relics and the many miracles accompanying the act. The theory governing the proceedings is frankly stated at the end of ch. xxx. in these words:

If the wise man who is adorned with the good gifts of faith, has done homage to the blessed (Buddha) the supremely venerable, the highest of the world, who is freed from darkness, while he was yet living, and then to his relics, that were dispensed abroad by him who had in view the salvation of mankind, and if he then understands ‘herein is equal merit’—then indeed will he revere the relics of the Sage even as the blessed (Buddha himself) in his lifetime did the enshrining of the relics and the many miracles accompanying the act.

The same intense belief in the efficacy of relics still prevails; and, when occasion arises, as on the presentation of the Piprāvā relics to the king of Siam, the sacred objects are welcomed with extreme enthusiasm, although the splendour of the ancient ceremonial in Ceylon may not be emulated.

In A.D. 1763 certain pagodas at Shwebo in Burma were dedicated by the four queens of the reigning monarch. At the close of 1802, thieves having rifled the contents of one of the buildings, the local authorities decided to open the other pagodas and remove the treasures enshrined in them to a place of safety. A silver scroll, forming part of the deposit and then taken out, records the motives which influenced one of the royal ladies to erect her pagoda.

"Finally," she observes, "by virtue of the merit acquired by me through building this pagoda, in which the relics of Buddha are enshrined, may I enjoy such happiness and prosperity as I cannot obtain in earthly life. May I not be cast forth in every form of existence counting from the present one till the attainment of Nirvāṇa. May I be free from the hollow world of desire and Ceylon, and at the time of my entry into Nirvāṇa, without the necessity of further transmigration, at the feet of the coming Buddha Ari Metteyya."

In the preceding sentences, the lady who henceforth, and involved in the sacred act of dedicating the temple, the members of the royal family, the ministers and officials, and had professed at the "the spirits of the pagodas, trees, flowers, birds, fish, and ghosts, who inhabit the deities of the earth," might share in her merit, is written down as a devout Buddhist.

The document affords interesting and conclusive proof that the modern practice of relic-worship in...
Buddhist countries is turned to extremely practical purposes. The relics are regarded as an excellent and profitable investment. It is clear that in the Sino-Japanese countries it was often to verify the alleged relics, because another scroll in one of the adjoining pagodas declares that the relics of Buddha consisted of 3001 large pieces, with the same number of small pieces, besides a multitude of other fragments still more minute—which is manifestly incredible. The so-called relics were placed in an amber bowl of great value, which was enclosed in a miniature pagoda made of silver, gold, and glass. The miscellaneous objects deposited in the reliquaries as honorary and protective additions by the queens includes an extraordinary variety of things, hundreds in number, and duly catalogued in the accompanying inscriptions. Besides many jewels and articles of gold and silver, the collection comprises copper or brass models of war-boats, cannon, and images of various kinds. The figures of soldiers, horses, and elephants, with the miniature guns and weapons, were intended to protect the relics. Thirty-four years later (1797) P. Ormston Cox, the British Resident at Rangoon, was allowed to inspect the collection prepared for deposit in another new pagoda, the relic-chamber of which measured no less than 64 ft. square on the inside. The treasure-chamber was not without its principal character. As those collected by the queens, were numerous and included the strange item, one of Dr. Priestley's machines for impregnating water with fixed air. Ancient honorific deposits were only incidentally converted into mementoes bearing that term in a wide sense—and coins, including specie, are of great value as rarities or curiosities. That practice explains the frequent occurrence of Roman coins of various reigns in the stūpas of Afghanistan and the Panjab.

Relic-worship attained its highest prominence in ancient India and Ceylon. Burma comes next in devotion to the cult. In all other Buddhist countries the adoration of relics is but a minor incident of popular religion. The Sra monastery to the north of Peshawar is a splendid example of the metal thunderbolts (mjra, or doje) of the god Indra, which fell down from heaven, and was used by Buddha; but Tibet, on the whole, sets little store upon ancient relics, while keen on the other hand in the Lhasa province. It is said that a statue of a modern or living Lānas, which are believed to possess magical curative properties of the highest value.

Certain monasteries in China rejoice in their custody of famous relics; but the number of notable places of the kind does not seem to be great. One of the most celebrated of such places is the temple, or stūpa, on the Five-peaked Mountain (U-tai-shan) in N. China, built by a Wai sovereign in the 6th century. The abundance of the number of relics has not escaped the ridicule of Chinese scholars. In A.D. 819 Han Wan-kung, an eminent writer and statesman, deeply offended the reigning emperor by mocking at the honours paid to an alleged finger-bone of Buddha, preserved at a pagoda in the prefecture of Fung-tseang. His censure was punished by official degradation, and he narrowly escaped execution. But ordinarily, in all countries, sceptics have been content to perversely silence the sages and their fanatics.

Japan, Korea, and Siam seem to care little for relics properly so called, although the Siamese venerate a much-esteemed alleged footprint of Buddha.

Pura-worship excepted, most modern Buddhist countries prefer to expend their devotional enthusiasm on images rather than on alleged relics. Sometimes copies of the sacred books serve the same purpose as relics and are used to consecrate by their presence some Bodhisatva pagoda, built primarily to gain a store of merit for the donor.

In Burma 'pagodas are built over relics of the Buddha, or models of them, over the eight utensils of a mendicant, or copies of them, or copies of the sacred books.' No work of merit, 'the same author observes, 'is so richly paid as the building of a pagoda,' and the structure, in order to have proper efficacy, must be sanctified by the inclusion of relics, if practicable, and, when they are not available, by the best possible substitutes. In a benefice India also copies of sacred texts, such as the twelve Nidānas or the so-called 'Buddhist creed,' were often used as a substitute for relics in order to give the requisite sanctity to a stūpa or an image.

2. Brāhmaṇical Hinduism.—The veneration of relics seems to be practically unknown to Brāhmaṇical Hindus, one reason being that their ill-defined religion has no recognized founder like Jesus Christ, Buddha, or Muhammad. All accounts agree that the rude log which does duty as the image of Jagannāth (q.v.) at Puri encloses a mystical deposit which is transferred when the image is periodically renewed; and, according to one story, this deposit consists of various beads of various kinds. It is possible that the deposits thus handled are more a relic of the age in which the deposit was made than a relic of any intrinsic value, but there appears to be no clear instance of relic-worship practised by Brāhmaṇical Hindus.

3. Jainism.—The statement of Ferguson, that the Jains 'have no veneration for relics,' although possibly true for the present day, is not quite correct when we refer to ancient times. Jain stūpas, indistinguishable from Buddhist ones in appearance, were numerous, and some of them may have contained relics, although no record of the existence of such contents has been published. Bhagwān Lāl Indrajit, referring in terms to Jain literature, admits that the Jains revered the honoured bone relics of the Tirthānakaras, corresponding to Buddhás, and that survivals of the ancient relic-worship may be traced in modern practice.

He states that 'at the present day the Jain Sādhus of the Khārātārī gaccha use for worship a five-toothed sandal-golden called thaṭapana, and this is a copy of the jaws of the Tirthānakaras. So the Jains use the same kind of shell (sajjha) which they take to be the three-bones of Mahāvīrādān.'

A Jain stūpa was built in honour of Akbar's friend and teacher, Hiravijya Sūri, who was cremated in A.D. 1592 at Unā or Umanpur in the Jānagār State, Kāthāwār. Various miracles having occurred at the spot, the stūpa was erected to mark the holy ground. It has not been desecrated, and may or may not contain relics. Recent European works on Jainism do not make any allusion to either relic-worship or stūpas. Mrs. Stevenson, however, mentions that childless women attempting to become the parents of a man strive to tear a piece from the dead sūdāṣṭhā's dress, believing...
that it will ensure their having children. That practice is a novel approach to relieve-worship.

RELIGION.

Mahomedanism.—Although the treasuring and veneration of relics are hardly consistent with the spirit of Islam, Musalmans have followed to some slight extent the example of their heathen neighbours and have been tempted occasionally to cherish and reverence tangible memorials of their Prophet. Such limited compliance with non-Muslim practice has not produced any considerable effects, and the few instances of Mahomedan reverence for relics which can be cited are detached phenomena and of no special significance. Certain places pride themselves on the possession of hairs from Mahomet’s beard. Two such relics (dānt) were brought to Bijapur in the Deccan, India, at some time in the reign of Sultan Ibrahim II. Adilshah of Bijapur (1580—1627), and were deposited in a palace now known as the Asar Mahal, ‘Relic House,’ where they are treated with much reverence. Even foreign Mahomedan potentates send rich offerings in honour of the relics, which are venerated by a special occasion on the Prophet’s birthday, 12th Rabī’ I. The box in which they are kept is never opened, so that ‘no one living has seen the relic.’ Rohri (Rāhī) in Sind boasts of a similar treasure, a single hair, which is kept in the house of a person named the Wār, or Wāl, Mubarak, a building erected for the purpose by Nūr Mahomed in or about A.D. 1745. The relic is exhibited to the faithful once a year, when, by means of some traditional words and movements, the adoration being regarded by the crowd as supernatural.

‘In the Mogul armies, before the introduction of European tactics, an elephant always marched in the van, bearing on its head a relic of the Prophet which was professed or reputed to have a magical influence. Sometimes this was followed by another elephant carrying a rich howdah, on which was placed a box containing a precious relic, which usually was, if one may believe it, an actual hair from Mahomet’s beard.’

Certain relics of the Prophet are kept in the Topkapi Palace at Constantinople and visited by the Sultan at the beginning of a new reign. The reputed footprints of the Prophet on rocks or slabs of stone are venerated in many places, which need not be specified. J. Burgess mentions examples at Ahmadābād, Gaur, and Delhi, and many more might be collected from various countries. Pilgrimages paid to shrines, such as numerous pirs, or reputed saints, in Mahomedan lands are near akin to relic-worship, but are not quite the same thing.

RELIGION. I. INTRODUCTION. — 1. The subject.—From time to time men find themselves forced to reconsider current and inherited beliefs and ideas, to gain some harmony between present and past, and to prepare some position which shall satisfy the demands of feeling for definition and give confidence for the future. If, at the present day, religion, as a subject, of critical or scientific inquiry, of both practical and theoretical significance, has attracted increasing attention, this is partly due to the fact that (a) there is a scientific knowledge and thought; (b) the deeper intellectual interest in the subject; (c) the widespread tendencies in all parts of the world to reform or reconstruct religion, or even to replace it by some body of thought, more ‘rational’ and ‘scientific’ or less ‘superstitions;’ and (d) the effect of social, political, and international events of a sort which, in the past, have both influenced and been influenced by religion. Whenever the ethical or moral value of activities or conditions is questioned, the value of religion is involved; and all deep-stirring experiences invariably compel a reconsideration of the most fundamental ideas, whether they are explicitly religious or not. Ultimately the question which is the supreme destiny, God, and the universe; and these in turn involve problems of the relation between ‘religious’ and other ideas, the validity of ordinary knowledge, and practicable conceptions of ‘experience’ and reality.

The very nature of the subject, therefore, forbids any one-sided treatment. No one particular aspect or phase can form the basis; nor can it be ignored that upon no other subject are there such differences of opinion so acute, and the risk of causing offence and pain so great. The subject of religion inevitably involves both the religious and the non-religious, or secular, and the ‘anti-religious’ (irreligious, blasphemous, etc.); and, while its very intimacy compels a restrained and impartial treatment, its importance demands an impartiality and objectivity which in turn may easily seem ‘irreligious.’ None the less, the actual problems of such a subject, that of any critical or scientific treatment is once legitimate (and everywhere there is a tendency to treat quite fairly the religion which is not one’s own), it must be pursued as thoroughly and as impartially as the consideration by the convictions of others that one would ask for one’s own (the Golden Rule of criticism) and with the clearest recognition of the fact that the religions of the vast and varied mass of human beings, all of whom may, on purely scientific grounds, be regarded as closely related—physiologically and psychologically.

2. Definitions.—(1) The term ‘religion,’ whatever its best definition, clearly refers to certain characteristic types of data (beliefs, practices, feelings, moods, attitudes, etc.). Its use presupposes criteria, and therefore some preliminary conception of what does and what does not come under the category. But it soon appears that there is no absolute gulf between religion and what, in some one respect or other, closely approximates it (e.g., art, morality). Different people draw the line differently. A man will be swayed by his conception of what religion is or is not; but such conceptions vary, not only among individual members of the same society, but even in the lifetime of one person. Once to be reconciled with his mental or psychological growth does a man acquire the conception and come to distinguish between

2 Two terms are commonly used in one connexion, ‘confession’ and ‘denomination,’ de Nat. Deor., ii. 28: ‘qui autem omnibus, quae ad cultum deorum pertinent, prohibet, et religiis renuntiat, et tarnen religiens, sunt diti religionem, ex religioso, et religionem tanquam a diligentibus, ex intelligente intelligentes, eius praejudicibus; et sic, si inuest in scientia (quod in religione), the other from religions (so Lactantius, Div. Inst. iv. 28: ‘hoc vinum pietatis obstricti deo et religiis mundi; unde religio per exitur ut etiam inhabitantis apprehensio et consent. 1. Religion is something which is read and reflected upon, or whether it had the idea of obligation, what was more to the point was the meaning of religion and its relation to superstition (see Mayor’s note on de Nat. Deor., loc. cit.).
RELIGION

what is and what is not religion; and this develop-
ment is of the greatest importance to 'significant'
ence for the individual—finds an analogy in the
history of the race, where the distinctions which we
draw (e.g., between religion and law or ethics)
are not found among rudimentary or backward
peoples. Herein lies the fundamental importance
of such questions as: How and why do we come
to distinguish the 'religious' from the 'non-
religious'?) Is there a border-line, and If we
rely upon a prior definition, how did that defini-
tion arise? Can we tell in what sense the believer is
seen to involve not only (a) the various beliefs and
practices which obviously belong to the subject-
matter, but also (b) the mental or psychical aspects
of all the individuals concerned. In a word,
beyond the ordinary stock of religious data, one
to consider the individuals who, as a result of
rare vicissitudes in their development, have the
beliefs which are called 'religious,' or who, again
as a result of their experiences, will differentiate
between the religious, the non-religious, and the
unchristian.4

(2) A survey of the numerous definitions
of religion would be more informing than any new
one that might be proposed. Even the simple
minimum suggested by E. B. Tylor (religion is
the 'belief of other-worldly things,') brings up
the question of the nature of these beings, the
origin of the belief, and its validity for every indi-
vidual.2 Every definition ultimately implies
hypotheses of reality and indicates the place that
religion should hold in the person's thought.3
Directly or indirectly, some very sig-
ificant terms are involved (e.g., 'death,' 'heaven,'
'sacred,' 'supernatural,' etc.). These require
definition and justification, and, when pursued
logically, may lead to the collapse of the whole
body of thought, both religious and non-
religious. In general, the definitions themselves
are a valuable contribution to men's conceptions
of what religion was, or should be. They con-
vincingly demonstrate the personal interest in the
subject: even the one-sided and unsympathetic
definitions show how intimately the self feels itself
at stake. They point to subjective convictions of
the most vital importance; they characteristically
resemble the dogma of the times, and are influenced
while at the same time emphasizing feelings of
the closest relationship with or the most absolute
dependence upon a 'higher Power.' Especially
characteristic are (a) the admission of the strength,
support, peace, and consolation afforded by reli-
gion to sacred things, that is to say, things set apart and forbidden
—beliefs and practices which unite into one single moral com-
mitment all the needs of man. (b) The line of thought is
the consecration of the individual to sacred things, to
distinguishing the religious from the non-religious.

1 On the 'genetic' and 'psychological' treatment of the
subject see below, § 10. On the importance of tracing these differ-
entiations cf. A. Sidgwick, Distinction and the Criticism of
Beliefs, London, 1912, The Use of Words in Reasoning, 1907.

2 P. V. 924. For criticisms of definitions see J. H. Leuba, A
Psychological Study of Religion: Its Origin, Function, and
Future, New York, 1912, ch. ii. and appendix; E. Durkheim,
The Elementary Forms of the Religious Life, Eng. tr., London,
1915, bk. 1. ch. li; G. Galloway, The Philosophy of Religion,
Edinburgh, 1914, ch. iv. Durkheim's definition may be noticed:
'a religious life is that life which is subordinated to the
sanctification and consecration of a sacred element of
life, of which the adherents believe that it is superior to
all the others.' (Social Conceptions, London, 1912, 3d ed., p. 65,
Eng. tr. p. 47). Galloway (p. 181) suggests tentatively that
'sacred things' is man's faith in a power beyond himself whereby
he seeks assurance of his essential needs of existence and
of life, and which he expresses in acts of worship and service.'C.
C. Curtis, The Sacred, London, 1909, p. 7). "If the human life is the
basis of religion, then the basis of religion decide the
shape of religion,' he says (pp. 36-37). Now, as M. L. Boss
(New York, 1916, p. 59) asserts, on the other hand, 'I do not myself
believe that Religion can be defined.'

3 Cf. Leuba: 'A man's religion, if it is sincere,
is that consciousness in which he takes up a definite attitude
to things, and which affects all the meaning of his
life. Of course, the man's world may be, and in early times
is, a comparatively narrow one (Religion of Religions, Glascow,
1884, I. 51).

emotional and intellectual, leading to practical,
pragmatic, aesthetic, speculative and other effects.
The results for the individual are now narrow and
egoistic, and now broad, self-less, and social; and
while, on the one hand, religion typically has its
'supernaturalist' aspects, on the other, all the
profondure and more permanent values of life are
in some way religious or quasi-religious, even
though the characteristic supernatural or other
typical religious features be wanting. In other
words, there is that which is of supreme personal
significance whether it conceives the self (1) alone,
or (2) in its relation to others, or (3) in its relation
to a higher Power. Thus, as opposed to any
attempts to set religion in a watertight compartment
by itself, there is evidence which represents it as
belonging to so many phases of life that religious
data are, so to say, only a special form of other-
wise non-religious data. Religion none the less
claims to be sui generis; hence it is explicable
why some observers see only the features which
distinguish religion from that which is non-
religious, whereas others do not recognize the dis-
tinctive features. The paradox of the immanent
and the transcendent rests upon the fact that
certain kinds of experience and evidence tend to
destroy the distinctiveness of religion, whereas
other kinds strengthen and enhance the subjective
convictions of the transcen-
dence and distinctiveness of the divine. Other
paradoxes relate to 'this' world and 'the other,' to
the ideals for mankind and 'this' life, and those
for a future which, since it transcends the world,
Paradoxical features are also very marked in the
varying normal, abnormal, and pathological
aspects of religious life, which clearly prove that
the problems are ultimately bound up inextricably
with those of the human condition as such. In a
word, the subject of religion inevitably involves the
problems of personality and existence, and the
deep vicissitudes of life and thought.

3. Method.—(1) Every reader tends to approach
the subject with certain more or less definite pre-
conceptions touching some of the most essential
terms or elements of religion. Herein is clearly
seen the individual's implicit reliance upon his
personal experience, reflexion, and ideas of truth
and reality, and his limited capacity to use any
method of method at once in the problems of religion,
it is impossible either to start with theories or
convictions of the ultimate realities or even to
adopt some one standpoint as opposed to another.
Yet, though much may be disputed, there can be no
dispute that men differ profoundly over the
ultimate facts, and that their inmost convictions will
tend to be entirely authoritative and to regulate
their lives. So, e.g., whatever be the ultimate
realities underlying the data of 'psychical research'
and the like (occultism, astrology, angelic visit-
tions, etc.), no one can doubt that there are three
typical attitudes: (a) believing, if not undis-
credulous; (b) incredulous, if not contemptuous;
and (c) disbelieving, if not the lack of any cre-
dibility. These are real facts of importance for human
nature and the history of religion, inasmuch as such as a
rational conception of religion has to find a place
for all the evidence and dare not ignore the in-
convenient data. Now, beliefs are not merely
beliefs, explanations, and the like, as apart from
their particular value for the inquirer and the
ultimate facts themselves. Hence, although
religion concerns the most vital truths of man and
the universe, there can be a critical, objective, or
RELIGION

...scientific treatment which considers, not the goal or destiny of things, but men's beliefs and theories on the subject; not the ultimate facts, but men's convictions of them; not the final objective reality, but religious and related conceptions of this reality.

(2) Just as every religious individual has his non-religious side—and the term distinguishes certain data from those outside the category of religious objective reality—a scientific treatment can also adduce and analyze religious which would find a legitimate place among the other conceptions which, forced by experience and reason, have been the beliefs and meanings of the entire range of human experience. In other words, the best conception of religion will not be severed from the best conceptions of artificial and natural phenomena; for no other possible connexion in and by itself, but, in the whole world of life and thought, has ever been, can be, or will be, a satisfactory and complete, quite characteristic of modern research has been the study of religion along non-religious and purely technical lines and from various points of view. But, owing partly to differences of method, scope, and aim, and partly also to the difficulty of controlling an enormous field, the more synthetic and comprehensive works have been no more convincing than the more analytical and specialist. Still, the collection of material and the organization of it proceed pari passu; improved methods lead to a better treatment of the evidence, and the latter in turn discovers defects in past methods. Everywhere difficult problems arise, and the persistent curse is the conflict between the infelicitous conviction that religion can be handled in a way that satisfies the reason and the individual's refusal to go against his beliefs. Hence throughout the logic of the methods or consistently formulated. Preliminary questions of method therefore have, beyond the one, for the one subject to an entirely blank mind, but these questions will also serve another purpose; for we have to assume that, between the various values of whatever there the scientific and current conceptions of them, there is no absolute guilt. Of these conceptions we can gain some notion by continued comparison and classification and by psychological interpretation. Moreover, only through some implicit or explicit theory of reality can we handle and interpret the data. Consequently, the methodological questions contribute both to our own conceptions of reality and to a better understanding of those which have already been; cf. i.6.

II. METHODS, PROBLEMS, AND CRITICISMS.

4. The comparative method. (1) Among the most conspicuous features of modern research has been the application, in their widest extent, of anthropological and comparative methods of inquiry. The effect has been to break down racial, social, intellectual, and psychological boundaries, and to bring into relation all classes and races of men, all types of organic life, all forms of matter. Step by step the most advanced and the most revealing comparisons between physical remains and artifacts are related and classified; these are brought into connexion with the rest of the universe, and his conscious, purposive thought-activity comes into line with all types of psychological and other energy. New conceptions thus arise of man's past, present, and future, of the universal, of the personal, of the social, of the psychological—a co-ordination, correspond to the cosmogonies and cosmologies of rudimentary and early peoples, whose general body of religious and non-religious thought was more or less organized and coherent, but whose store of knowledge was, relatively speaking, extremely small. Now, the comparative method is the unbiased co-ordination of all comparable data irrespective of context or age. It has led to the accumulation of much valuable material. As a popular, simple, and interesting inquiry, it has familiarized many people with the miscellanies of folk-lore and religion. It illustrates popular beliefs and practices, and reveals a remarkable resemblance among peoples the world over in both written and oral literature. Of various theories and explanations, it does not prove that others are excluded. Moreover, similar practices can have different meanings or motives, and similar ideas and beliefs can be differently expressed. It does not follow that a belief or practice in one environment has precisely the range of feeling, meaning, or application that its parallel or analogy has elsewhere; nor is the apparent origin of any datum necessarily significant in itself. But the method may be legitimate in cases where mere comparison may be legitimate for some purpose—as, e.g., between men and apes—but in every problematical situation the question of the validity of particular inferences is exceedingly urgent, and it is the individual's task to form a non-naive comparisons and rash inferences. Hence, where sweeping theories have been suggested on the basis of comparison (e.g., primitive promissory, ignorance of paternity, phallic, serpent, or astral cults, the priority of magic over religion), they must invariably be tested by other methods.

(2) The comparative method is commonly bound up with certain persistent and prevalent notions of the 'evolution' of thought and the 'survival' of rude, superstitious or otherwise irrational beliefs and practices from an earlier and more backward stage in the history of culture. But every datum which can be regarded as a survival must be viewed with great care; for the individuals whose beliefs and practices are so stigmatized are not actuated solely by the mere fact that these belong to the past or have an ancestry. Some feeling of value is characteristically present. The 'survivals' have survived because, while much else has been neglected or forgotten, they have been selected and retained along with the entire rational data which also have come down from the past. To regard certain data merely as survivals is to ignore the question of their origin, persistence, and function; for the type of mind or the conditions which explain their rise may also explain their continuance. Besides, comparison itself reveals innumerable subtle differences; and these indicate that there has been no artificial or mechanical borrowing or imposition, but a process of re-adjusting and reshaping for which the individuals concerned have a certain responsibility. In fact, whenever beliefs and practices can be compared, a distinction can invariably be made between the factors in which lies the character of the method in which it recurs. The types of beliefs and practices which are selected, assimilated, or reshaped are not to be confused with the external aspects which can be treated historically. Thus, beliefs in witchcraft everywhere contain similar elements, and so do magic rites (with context and psychological aspect, e.g., the tendencies responsible for their persistence and retention), and (b) the more external details, which may be of traditional or legendary interest, due to borrowing, external influence, etc. Indeed, an analysis of typical survivals reveals a fundamental resemblance between data that are distinctly religious and those that usually rank as superstitions or survivals; but, while the latter will generally be neglected or forgotten, the former is, as a rule, thought, the former will be more or less organized, socially and intellectually, and will at least claim to be in accordance with the 'best' thought.

(3) The presence of survivals, superstitions, and other so-called 'spurious' or 'irrational' beliefs indicates that method shows that, as a general principle, any apparently rudimentary or irrational datum need not

1 E.g., one may note the case taken by J. G. Frazer in The Golden Bough to emphasize the difference between the great mass of material collected and classified in this monumental work, and the smaller section dealing with the assumption that every one admits that there are truths and realities of ultimate validity, even though men now differ as to what they are.

2 On the no less conspicuous employment of psychology see § 101.
on that account alone be older than one more advanced or elevated. Moreover, a culture can decay, even of one type or of less organized type. Not only has this only often happened in the East, but in Arabia, e.g., the old civilization reflected in the Minean and Salvaran inscriptions was followed by the pre-Islamic Dauliya, the age of savagery or barbarism, and this in turn by a new growth—the rise and development of the specifically Muhammadan culture. Facts of this sort bring intricate problems of the rise and fall of systems or cultures, and their conception for the development of thought. Although we have undoubtedly been a profound advance from the first appearance of man onwards, but the persistence of all that is styled irrational or superstitious, and the frequent cases of decay, retrogression, and new growth, shatter all facile theories of a simple, continuous, mental or psychical evolution.

(4) Evolutionary ideas hold such a prominent place in conceptions of religious development that it should be noticed that there are really two types of theory. The one involves ideas of survival, retrogression, decadence, recidivism; and it lays the emphasis on the necessary processes of the past. The other does not measure the difference between the civilized and uncivilized by centuries or millennia, but it sees the civilized man as the product of the uncivilized man, as the through the vener of culture, and so on. The former seems to offer an easy explanation of the presence of many survivals or survivals in an advanced stage, but it is not a complete explanation of the changing of the times, and the changes in the nature of life, and the changes in the nature of the individual who are involved. Hence, whatever may be proved to be due to herd and pre-historic evolution, more attention must first be paid to the traditional stages with all the difficulties for the development of man's psychical nature. These stages, and the dependence of the infant upon the mature and the environment, as fundamental for his psychical life as the more complex and obscure factors of heredity, or the influence of human and animal relations with their various biological, are fundamental for the development of the individual. The actual history of mankind shows that there is no inherent momentum in a culture or a religion; it is not dependent upon the individuals who are involved. Hence, whatever may be proved to be due to herd and prehistoric evolution, more attention must first be paid to the traditional stages with all the difficulties for the development of the individual.

5. Historical and sociological methods. 1 The purely comparative method of inquiry has emphasized the necessity of constructing conceptions of religion upon a wide basis of data. While indicating resemblances between different religions and customs, even to an extent that will require examination, the significant differences, whether in single environments, at some given time, or in the course of their historical development. Religions can be fruitfully studied in their relations to the political, economic, social, geographical, and other features of the people or area where they flourish. Here attention is paid to the influence of surroundings (mountains, plains, deserts, swamps, etc.), to the proximity of higher or lower cultures, and to means of intercommunication. Special importance are the food-supply and means of livelihood. Thus, hunting and agriculture conduce to different types of mental and therefore, also, of religious outlook; and, where the food problem is negligible, the religion is without the positive features that recur when the supply is limited or a source of anxiety. Sociological and economic interests upon an earlier religion is especially noticeable in the vicissitudes of the Homeric gods. The differences among the various religions are thus due very largely to quite recognizable and visible factors of socialization; and a distinction can be drawn between the history of religions, which is that of definite systems, peoples, or areas (so far as the material permits), and the history of religion, i.e. of the development and advance of the religious ideas and relations that substance, generally. It is the task of the latter to determine the character and principles of the development; but the two inquiries are interdependent, and it is a natural presumption that the various religions reflect the working of similar principles, which, moreover, will hold good in the future. But every treatment of the development of religion forces some recognition of 'lower' and 'higher' stages, of which the latter will irresistibly be relative to our present understanding of human values, and our own ideas of what must be the outcome of a progressive development. As for the 'lower' stages, primitive pre-historic men are unknown. 1 But one can estimate confidently all the religious and spiritual ideas and accomplishments before the artists. 2 If, on the other hand, primitive man once lacked the traditional experience of the lowest of modern savages, on the other, there are tribes so rudimentary that a lower level can hardly be conceived, while possibilities of development are recognized today as the result of some called (relatively) primitive', even though their beliefs and practices are complex and have a history behind them.

(5) Thus the relation between a primitive religion and the actual religious system of a primitive pre-historic people is fairly analogous to that between the child or the savage and the actual childhood of mankind; there will be certain parallels, but there will be essential differences, due to the fact that the environment in the one case has a history and an experience which in the other case are quite wanting. It should be observed that, although some typical developments can be discerned everywhere, we nowhere find the actual dawn of man religion in an entirely non-religious environment. Further, all theories founded on the idea of religion in a non-human, collective, and development has been due, not merely to individuals (who often find no following), but to the tribes, societies, or even civilizations, which have been involved by them. Consequently, every conception of the lowest stage of religion must refer, not to the first 'religious' individual, but to the group of which could be conceived to separate ideas, beliefs, or concepts, but to the whole mental fabric or system in which no individual could be conceived a system; behind this one can scarcely go. In like manner one can conceive exceedingly rudimentary or primitive groups of individuals, but not isolated human beings who had not yet associated with one another. Only in this way can the problem be methodologically pursued; and it is the great merit of sociological inquiries that they illuminate the relatively stable and coherent beliefs and practices of ordinary social groups, and not the individuals who may be exceptional, extreme, or even abnormal. On the other hand, one cannot ignore the individual and what society owes to him. The social status of the artist is not an accidental, undifferentiated, and self-moving unit. Every body that can be regarded as a unit moves through those in whose respect are moved, and known, and can be influenced by the taking into consideration the environment. No group is actually a closed system, but it is necessary to regard it as a

1 A culture would be absolutely primitive if no antecedent mental development whatever could be presupposed.

3 All article and other human workmanship will imply some mental equipment, or culture, but not consciousness, or sense, or feeling, or dream, not social, ethical, or moral interests. In any case the data will point to some other environment not comparable to the certainties, probabilities, and possibilities, and not (say) to suppose that the artists of the Reindeer were not in any degree influenced by their sensitivity or the context of the data is obvious when one observes the very different beliefs and practices which are associated with any particular god (e.g. Jahweh in the OT) or the divergent conceptions entertained of some particular significant term.
simple unit and to neglect provisionally the more complex and difficult details. The group, like the concept, is a methodological necessity, and not an ultimate reality. See, further, § 13.

6. Social practice and meaning are a vivid light upon the interconnection of life and thought among rudimentary societies and upon the place that religions and related ('superstitious') beliefs and practices hold in the life of the individual or the social group.

The birth of the child brings ideas of legitimacy and kinship, incubation or rebirth, tabus, and various 'superstitious' usages (of which there is a list in § 8). Of course, there is no way of initiating into the group all the deep values of the group. Marriage and marriage-ban involve highly complex, non-verbal, tabus. Hence, the religious and the tabus of the dead almost invariably bring beliefs of the relation between life and death. Religion embraces all that is for the continuity and safety of the group—entry into the group, adoption, expulsion, outlawry, vengeance, manhood, blood-feud; the protection of property (including women and slaves); the rights and responsibilities of prominent or representative individuals; defence and war; fear of the animal and plant food-supply and means of livelihood. Here are inextricably between ritual, moral, and religious requirements, or between religions, economic, and legal ideas. The appearance of social division of labour, the development of special departments of life and thought (e.g., astronomy, anatomy, law, physics) continue on higher levels the early and rudimentary processes which at previous stages enabled man to divide his interests and classify similar and disparate events in order to describe their experience and organize their scanty knowledge. In this differentiation, specialization, and co-ordination there are typical processes which subsequently account for the co-existence of the various conflicting religious and non-religious views of the universe.

(2) A special problem is that of the relative value of the evidence contained in ritual behaviour, social practice, etc., and that of the meaning and the like (see art. Mummification). The controversy 'myth versus ritual' arose as a reaction against excessive reliance upon myths. Myths appear to be of secondary value in so far as they are intended as rational and have secondary aims which are political, ecclesiastical, philosophical, or whatever. They are the other half of the coin; the concept may be a lifeless inheritance from the past, bereft of its original significance or motive, and modified by reflexion or myth. They are, in any case, necessarily assimilated by the group to its own feelings and ideas, and the latter in their turn can express themselves in very different forms. This is one of the clearest results: the common basis of ideas (even if the actual theme, the behaviour or action is earlier than reflexion upon it or the desire to explain it; the groups presuppose fiction, myths, and needs of which men may be barely conscious. But myths—however artificial they may be, are significant for some stage of thought and for its movement, even though their uses be useless for modern knowledge. Both ritual and myth bring difficult questions of the meaning of each for a people. The true meaning of a rite for us (i.e., our interpretation) is not necessarily that which has for those who practise it; and the ritual, either as ritual, belief, or myth (and subsequent reflexion, explanation, myth, interpretation, etc., is analogous to that between imputive, instinctive activities and those based upon reflexion and the conditions between any activity and the apparently obvious purpose which, however, was not recognized at the time. In fact, one of the most interesting features of the more rudimentary religions is the presence of earlier forms of what is fully explicit in the higher religions (e.g., elementary and the higher belief in the resurrection), of apparently logical transitions, and of a striking continuity or development, such as to permit continued re-interpretation of an original pre-sociological or theoretical idea or the like (cf. also the view in Gal 339). See, further, § 32.

7. The group unit theory.—(1) It is a fundamental postulate that social life and social-religious practices cannot be founded upon hallucinations; the basic feelings and convictions are both genuine and effective. Moreover, while, on the one side, all maxims, principles, and rules of life, business, recreation, etc., are for the better ordering and organization of activities, on the other side, all practical working life or activity implicates principles which, however, may not be consciously realized or formulated. Systematized social religious organizations imply systems or principles of regulative ideas; and all social organization or disorganization corresponds to a sufficient equilibrium of the ideas involved or to an absence of the indiscernable harmony. The interaction between the constituents of any effective group, or between different groups, depends upon the essential ideas which unite or disunite; and the development or decay of any art or philosophy (e.g., religion) is probably coincident with that of the constitutive ideas. An active group or body does not ask, 'Is it true?' but in the stress and conflict of life, as also in the stress of beliefs and ideas and the like, or in reflexion upon the ideas and principles that underlie or are implied in its life, the group may test a hypothesis. Hard events and explicit discussion thus try the effectiveness of the convictions and ideas; and every state of equilibrium, after a period of severe crisis or disintegration, points to some equilibrium of ideas, or to the collapse of a religious persuasion or group. Hence we may speak of a system of ideas, even though they are not necessarily consciously recognized.

(2) Now, at certain stages of development the social and religious ideas form an inseparable part of one and the same system—a practical system; life and thought are relatively undifferentiated, and every man is born into the nexus of beliefs and obligations which obtain throughout the group. Such a system, with its body of cult practices, religious beliefs, and traditions, implies a system of ideas, ways of thinking, explanations, etc. But, further, Robertson Smith, whose Religion of the Semites brilliantly illuminated the sociological aspects of religion, especially with his important fact that 'the circle into which a man was born was not simply a kinsfolk of fellow-citizens, but embraced also certain divine beings. 'The social body was not made up of men only, of men and gods.' The gods are part and parcel of the same natural community with their worshippers. Here, then, ideas of gods and men and of the supernatural and natural, would tend to form part of a single coherent whole—a unitary system, so to say, of thought and practice. It is necessary to study with its body of cult practices the 'psychical' solidarity of such groups with those situations where life and thought are extremely differentiated, where religion is kept quite apart from the non-religious, where the social system is undeveloped, or, finally, where (as in totemism), there are no clear ideas of gods as part of the social

31 See Rel. Serv., p. 11, 20 ff., 28 ff., 61, 58, 74, 255, 296 ff. Note also p. 22: 'The principle that the fundamental conception of ancient religion (as of all later belief) is the admixture of gods and their worshippers as part of one organic society (with common interests and common affairs) (p. 31), carries with it important consequences. This may be supplemented by Durkheim's purely sociological investigation (esp. bk. IX. ch. iii.), and by his argument that the idea of the social or religious counterpart of the world is interrelated in one solid system all parts of which are closely united.' In the present article, also, the attempt is made to develop Robertson Smith's main ideas, partly suggestive statements.
system. In a word, the conception of a system of belief and practice where gods and worshippers are very closely related and belong to the same system of nature, is a development from the idea of divine immanence and transcendence, of the nearness or remoteness of a Supreme Power, of the permanent or negligible part that this Power takes in mundane affairs, and therefore all views, both of the necessity of a distinctively concept 'God' and of its meaning, depend essentially upon the coherence or systematization of the leading relevant conceptions of life, and upon the interrelation between the differentiated aspects of life and thought.

4. Totemism as an Evolution.—Some extremely interesting questions are raised by totemism and exogamy. Totemism (q.v.) is especially remarkable for its striking contrast to all anthropomorphism or anthropopathism, where the spirits or gods who are venerated, respected, or feared are thought of or described as partly or wholly human and with human traits. In totemism the social group, and particularly an exogamous one (see §9), stands to a species of animal or plant (generally edible), or to an object or class of objects, in an intimate relation of friendliness or close kinship; and the totem is treated, not precisely as a deity, but as a cognate and one to be respected (e.g., not to be eaten or used, or at least only under certain restrictions); but the latter is either an actual cult (with some remarkable forms in Central Australia); but 'individual' totems are also found (notably the 'spirit-guardians' of N. America). There are many variations, and it is disputed (e.g.) whether the totemism is to be treated as typical, and (b) whether totemism is a primary and invariable stage in all human evolution. Animal features (theriomorphism) frequently recur on higher levels of this; there are noteworthy examples in Egypt of the Hellenistic age. But here we have not so much pure totemism as totemic tendencies and modes of belief and practice analogous to those which among really rudimentary peoples characterize totemism as a social or individual system. As for anthropomorphism, it is certainly not absolutely necessary to represent totemism as more primitive than anthropomorphism; and, when the latter appears on the higher levels, it is not the thoroughly going system of the lower levels. While typical totemism has not reached the level of typical anthropomorphism in the latter, it is definite, inadequate, and crude. The late Egyptian theriomorphism is best regarded, not as a mere survival, but as a popular and unsystematized tendency at a period when the national religion was decadent and unsatisfying. What is really most characteristic of all totemism is its non-anthropomorphism (below, §17 ff.); but, while the totem is impersonal or 'sub-humaan' to the outside observer, to the totemist it is as personal as is the doll or toy-animal to the child. To some extent, and all theriomorphic features involve problems of symbolism, imagery, and the consciousness of human personality in its relation to animal and other life. A feeling of peculiar affinity with animal or plant life is by no means confined to totem-clans or rudimentary peoples, but the characteristic system distinguish totemism from all those cases where the theriomorphic details might seem, in the absence of evidence to the contrary, to point to totemism or its survival. In any case, the alleged survival or re-appearance of totemism on a generally higher level of society will indicate typical modes of feeling and thought which help to explain the undeniable totemism of the lower levels. Here are data of the greatest significance for the development of the consciousness of human personality. 1

5. (3) In its purely historically 'unatable anthropomorphism.' The imagination in its highest exaltation in the whole, anthropomorphic, 'but often in the ecstasy of imagining the figure of the gods, they felt the indescendable and straitened for their struggles sense of the Infinite. Then the expression becomes mystic, and . . . avails itself of theriomorphic imagery.' Thus, totemism is now: (a) an extremely curious animal (and plant) cult, but it illustrates anthropomized and socialized modes of thought which recur 'outside' as well as below the anthropomorphic mode of thought. The anthropomorphic ideas—perfectly familiar and intelligible in the highest religions—are not only not of primary origin, but they do not always do justice to human experience, and that on many different levels. The tendency then is to find an outlet in ideas which are non-anthropomorphic and, for this reason, are often spoken of as 'mystical'; but. strictly speaking, it is the same question whether mystical ideas are then really superior or inferior to those that they replace. 2

9. Exogamy and kinship.—(1) Although exogamy (marriage outside the group) in contrast to endogamy (marriage within it) concerns the history of kinship and society rather than that of religion, certain facts concerning the social nature of exogamy are worthy is the classificatory system of kinship, where a man's status and marriage-rights are the criterion, and the social practices and the terms of relationship refer to a group or class as a whole, not to the father, or even to the mother. Now, exogamy proper avoids the close and incestuous marriages which occur in an endogamous society, exogamous tendencies sometimes appear, and even to the extent of forbidding marriage between persons of different districts, it may be that this is by no means a rare or special cases of exogamy and endogamy proper. On the other hand, definite ideas are implied throughout: endogamy made for solidarity, unity, and oneness, whereas exogamy avoided the physical and psychic ties that exist in the family, and the complex nature of marriage. In other words, the practical working group is not necessarily united by ties of blood-kinship as we reckon it. 3 Any group of individuals united by profound ideas may look upon themselves as one group, and the belief in totemism regards the particular functions of that group than

1 See art. ANTHROPOMORPHISM, PERSONIFICATION, and, for a suggestive treatment, Caird, J. 213 ff., 264 ff., 270 ff., 294 ff.
2 J. R. Farnell, Greece and Babylon, Edinburgh, 1911, p. 55, also p. 130, note 13; cf. 23 ff., 47 ff.
4 Marriage into another group constantly forces adjustment of beliefs and practices, and the lower there may be a tendency to be dedicated to the husband's deity (Frazer, Totemism and Taboo, 1885, p. 95), and at the same time his own totem and paint on his face that of the family of the bride (E. S. Hartland, Primaeval Pottery, London, 1909-10, ii. 44).

Note the confluence of adoption, blood-connexion, artificial kinship, the levirate, etc.
the bond between the members and actual blood-relationships who are not members. The group feeling, it is true, can kindle extreme ideas of communism and oneness; but, although physical and sexual factors are near at hand, and grave excesses can come in group, the idea is largely logically or fundamentally physical, and in fact, the sentiments, religious systems, sexual aspects of life are explicitely regulated and subordinated to what may be called the ideal (cf. also below, § 23 [3]).

(2) The group is not without exogamy or marriage proper, as primitive social systems, and exogamous or endogamous tendencies is analogous to that between totemism and totemic exogamy and endogamy. The distinction of society and that of thought do not advance pari passu; none the less, localistic vices and the religious ideas cannot be interated. The closer the social unity, the more do gods and men form a single whole—the gods are 'our' gods, and not of the royal, priestly, or any other exclusive class of society. Moreover, the conception of a dominant goddess implies ideas of dominant women, and the entire psychological of sex will reflect itself in ideas concerning female saints and deities. Hence also the paradoxical extremes, where goddesses and priests are prominent—obesity and gross imparity, tenderness and fierceness. Again, the conception of the Fatherhood of God would be meaningless where patriarchy was of little account, an egotism, and a personality itself inseparable where there is no experience of overrule or lordship. So ideas of social equality and democracy influence the way in which religion is thought; and, conversely, the conception of deity involves adequate views of the relations between the individual and God. Convictions of the 'chosen' people or of some primitive 'national' God reflect in their turn the interrelation between current social structure, political, and economic, and they emphasize the fact that man's religious ideas and conceptions, where genuine, cannot be torn away from his ordinary life and thought, but all form some sort of a system, however imperfect.

10. Psychology.—(1) Theories of religious development must be based upon observation of actual historical vicissitudes and the psychological aspects of religion. Complexity of thought, found even in Central African totemism and other primitive cults, points to complexity of history; for complex religious ideas make complex thought. Here, principles of historical criticism are indispensable. There is a common tendency to focus upon outstanding persons, events, and periods changes more numerous and greater than those for which they are actually responsible, and to assume periods of almost absolute adjustment, cataclysm, and relaxation. On the other hand, movements of thought are, alternately, relatively slow and fast; sweeping and sudden changes are not permanent in themselves, though they can leave permanent results, and they not infrequently result in new and more profound movements which may not be recognizable. The whole environment invariably moves more slowly than the reformers or the reforming tendencies, which are usually local, one-sided, partial, specialist, or extreme. The actual facts of religious development, and the relationship between different stages of the process, can be directly ascertained by historical study. Against the apparently obvious cases of immediate and deep influence must be placed the cases of gradual adjustment, cataclysm, and relaxation and failure. These prove that beliefs and customs are not mechanically accepted or assimilated, and that the ethiological and historical factors have their psychological side (cf. § 4 [2]). From a psychological point of view, questions of external influence are not necessarily so important as the mental factors and processes which are involved—e.g., the ability of the individual to accept, retain, and utilize certain ideas, the preliminary mental development which determine the psychic, moral, or spiritual needs and aspirations. A psychiatric method is concerned with men, their states, their interests and values, and the relation between the religious and other aspects of their life and thought. It considers the subjective value of the beliefs and practices of the individual. Many relatively simple inquiries must be made before complete synthetic statements can be ventured, and considers the influence of natural or primary psychological factors, causes, or elements can be presupposed. That men have experiences which compel them to distinguish what they call the 'divine' from the 'human' no one can dispute; but the psychological method must turn to the human side of the great questions, as apart from the problem of the actual underlying realities.

(2) To the psychological department belong many extremely important topics, such as growth and development (the mind of children and of savages), the relation between human and animal psychology; (6) the dawn of religion in the young, and especially a further analysis of the functions of the individual states of the individual and the effect of the 'regeneration' upon his ideas, attitudes, and conduct; (c) the varieties of religious experience (the title of a striking work by William James [London, 1902], together with the facts of religious survivals, mysticism, spiritualism, occultism, esotericism, and psychism; (d) the 'authentic' nature of religious facts, although the elementary facts show that that of which the individual is conscious is not necessarily to be assumed. That he can attend only to partial aspects, and that theoretically there must always be a less imperfect synthesis than that which is gained by experience, and this he can do less well; there must be the possibility of a less imperfect, less undeveloped religion than that of one; (e) not only are the elementary facts of the effect of mind upon body (faith-healing, Christian Science, New Thought [p. v., etc.], and nice errors, all of which are significant in different respects, and rely on different religions, distinguish as the physical and the psychological. Further, (j) through abnormal and pathological phenomena a clear idea is obtained of the value and historical mind-handling power of the mental, and of continuity of interests, of extreme and morbid egoism, of all of persistent and individual peculiarities, which is scientific, the physical and the psychological sides of the individual (illustrated especially at adolescence, in the sexual life, and in ideas associated with both), and the relation of the religious account must be taken by any science of religion. No doubt the enormous stock of data from which to reach a just conception of religion includes much that belongs to the extreme, the irrational, and the abnormal. There is much that is without the elements of practicability, permanence, and progressiveness, and that forces a contrast with those conditions where these elements recur, and there is a certain equilibrium of religions which are both local and social and individual, and not purely antagonistic, has the future in view, and a just conception of religion must treat religion as a persisting phenomenon; hence it is necessary to determine the line which can be drawn and distinguish them from the features which, however strongly they may be drawn, and which often make religious the poet and philosopher. Proceeding in this way, we have to consider man as the outcome of a lengthy evolution, a progressive, thinking animal, able to speak, to form ideas, and to express them in words, and to write in and to think, and to express, and to read, and to write; and, by so doing, able in greater measure to shape the future. Man is thus in part our own organic life which has made its appearance on the course of the history of the universe; and as a result of development he is able to differentiate the human and the non-human, the psychic and the physical, the religious and the non-religious. From these biological, anthropological, and evolutionary points of view, the development of man is that of increasing knowledge, function, and ability, though what is most significant is the individual's increasing consciousness of the past, of the self, and of the universe; for this development in consciousness is one of quite another type.

II. The psychological method.—Characteristic of the psychological treatment of religion are (1) the insistence upon the human aspects, and (2) the association of observation of growth with the beliefs and practices. The general aim is to fasten upon the features which unite the religious and non-religious sides of our common human nature. Thus, the dedication of kings, saints, and heroes to the past and to the present, and the search of the hero-worship; the individuals throughout are personalities qualitatively different from others. Again, the psychological efficacy of the fetish and that of the modern mascot are akin. Moreover, the initiation ceremony and the religious ideas, which recur wherever it is a question of entrance into privileged groups or private societies jealous of their rights and of their solidarity; even
RELIGION

11. The theory of interpretation.— (1) Important methodology. Since it has been observed that savage or rudimentary men are psychologically so different from the civilized individual that the latter's interpretations of them are inapplicable. But the savage is, by definition, a human being; some intercommunication is possible between him and the civilized. Besides, all men share certain instincts, and on ordinary biological and other grounds some essential resemblances must recur among all men. The problem is obviously the finding of such common elements, if any. Every interpretation, no two leaves or stones are absolutely identical in all respects. But ordered thought must invariably start with the possible common elements and work upwards through progress and what is necessary is to ensure that these justify the conclusions drawn, and that the latter are not invalidations of what was found. Hence, obvious psychological universalities can be inferred, and the task is to determine the limits of these common elements, of the principal of the subject under consideration. The interpretation may lie between two extremes, as when the care of animals for children is parallelizable to the care of parents for their children, or, on the other hand, is treated as merely mechanical and devoid of all suggestion of feeling. Every in-

1 The most important literature on religious psychology is Freud's The Interpretation of Causes . I. King, The Development of Religion: a Study in Anthropology and Social Psychology, New York, 1910; E. S. Ames, The Psychology of Religion, New York, 1912; E. H. Stobbs, Psychological Study of Religion: Its Origin, Function, and Future, do, 1912; G. A. Coe, The Psychology of Religion, Chicago, 1913; E. B. Titchener, The Development of Psychology, New York, 1914. The new study of religion can treat religion as a human phenomenon, and in this respect it is an approach that cannot be disregarded. But it cannot nullify the subjective distinctiveness of religion, nor can its theories of the objective source or foundation of religious phenomena be accepted. But if we are to understand the meaning of the term, it must be understood in its religious significance. One of the main objects of religious thought is to show that the universe, with all its individual phenomena, is subject to a single controlling principle (on which cf. § 4 [12]) will be found below.

terpretation involves some notions of reality, which of course are ultimately definable, but every theory or interpretation, however absurd or defective, does provide some basis for our conceptions of reality to do apply. But we intuitively demand an interpretation which is definitely religious and not assume a psychological relationship (see above, [1]). If every theory of the beliefs and practices on levels other than our own is in some way legitimate and valid, by the same rule every conception of reality, this psychological and humanistic type of interpretation is sounder than a crude rationalism which be

Besides, all men share certain instincts, and on ordinary biological and other grounds some essential resemblances must recur among all men. The problem is obviously the finding of such common elements, if any. Every interpretation, no two leaves or stones are absolutely identical in all respects. But ordered thought must invariably start with the possible common elements and work upwards through progress and what is necessary is to ensure that these justify the conclusions drawn, and that the latter are not invalidations of what was found. Hence, obvious psychological universalities can be inferred, and the task is to determine the limits of these common elements, of the principal of the subject under consideration. The interpretation may lie between two extremes, as when the care of animals for children is parallelizable to the care of parents for their children, or, on the other hand, is treated as merely mechanical and devoid of all suggestion of feeling. Every in-
Although nothing seems more real than the individual with all his self-consciousness, there must be some more ultimate reality of which he is but a part. A group or organization may be more real, in the sense that it is a whole of which it is a part, or an environment by which it is surrounded, and there are other individuals outside it. Moreover, the human group came into existence by a gradual process; it is not at a single stage in the development of the universe, and such is the relationship between human and other life, and between the organic and the inorganic, that ultimate reality may be a question of fact in sociology, psychology, economics, or any other organized activity; or even in mankind (as in some modern types of ethics). If the human group is shown to be ultimately interconnected in a way, the real value of which depends on its relation to itself or others. The more conscious and purposeful selection and choice of its components, the greater is the contribution of the individual to the group; and as such an individual generally serves to develop the group, the more he is itself, the less is the whole group, which is generally beneficial and useful and serves to develop the group. The group is a real entity and is a goal in itself, and it needs to be balanced by the recognition that not every religious expression or practice is effectually religious (cf. v. 28).

Religion characteristically tends to set an exceedingly high standard of morality, thought, and conduct; it demands an absolutely sincere manifestation of the innermost self, and an absence of selishness and guilt (cf. 1 Cor 13). Hence religion must be regarded as involving all that which is profound, that is comprehensive, more complete, more absolute, more universal, and without the ephemeral, casual, and superficial things of life; it is bound up with a development of personality which is to be in all respects whole and healthy. Consequently, to determine the essential nature of religion, it is necessary to look beyond the surface of men's beliefs and practices and determine what is dynamic. The problems of ultimate truth and reality, whether among rudimentary or among advanced peoples, are bound up with our knowledge of the depths of human personality. It is known that a Supreme Power to whom all 'reality' is known can see into the hearts of men and distinguish 'true' religion, really implies that ideas of a Supreme Power, of Ultimate Reality, and of the underlying and the ways in which it is substantiated (e.g., beliefs in a soul, or in a superhuman guardian, or in an approaching 'new age', etc.).
Here another important distinction is to be drawn, viz. between that which has a psychological basis in immediate experience and the further secondary more or less logical element. A genuine psychological faculty can rest primarily only upon certain experiences which seemed to find a natural expression in terms of relationship (e.g., the relationship of the individual to God). But this can be done by an analogy or an analogy, and errors multiply whenever the origin of such terminological procedures, taken in a literaristic manner, form the basis of argument uncheckered by resort to the original data of experience. Similarly, the idea of a ‘Kingdom of Heaven’ may be justified by analogies (comparisons, longings, etc.), although it is at once capable of development suggested by the experience of earthy kingdoms. The world here is a place in which we come to a profound transition from concrete imagery, which was open to the ancient psyche, to a more psychologically dependent point of view, and this in turn is capable of a certain psychological development which, however, can go astray.

15. The theory of reality.—(1) On sociological, biological, and even chemical grounds, the individual is in various respects a part of that which is greater and more permanent than his growing and dying body. Not only do his intuitions and convictions testify to some greater and more permanent reality, but these are the mainspring of his mental life. That which is called material and physical, and that belongs to space and time. The various polytheistic and monothetic convictions of men, like the conflicting religious, philosophical, and other conceptions of the individual, are not either stable or dependable realities or that it men’s convictions and conceptions of the realities that vary and develop. The latter is the only rational view if there is to be any effort to think coherently about the world; and an intuition of the ultimate realities of experience indicate that it must be of subjective and not objective validity. That variation and development are to be expected is shown also by the vicissitudes of religion, due to individuals who are unable to accept what to others has absolute validity, and who have convictions which are felt to be more real than those already current. Human personality is profounder than any given system of life or thought, and consequently the soundest theory of the universe is based upon (subjective) conceptions of reality which obtain among men. These and their vicissitudes provide the material for the most logical theory of reality.

(2) Explanations, interpretations, theories, and the like all imply some notions of ultimate reality. Thus, e.g., the popular theories of primitive or universal serpent, stone, phallic, or astral cults, if taken seriously and rigorously pursued in their implications, would have the greatest significance for all conceptions of God, man, and the universe. As a general rule, even sweeping theories may seem immediately plausible or absurd, as the case may be, but the logical aspects are invariably complicated, and the theory will be favoured, because it explains a certain number of facts, or condemned, because of the facts which are ignored or interpreted in some forced manner. Indeed, the most absurd theory covers some unappreciable facts; but, when it has once been obtained, evidence is forthcoming or less incendiary twisted to it and it becomes Procrustean. Conceptions of the origin of the world, of the soul, of the chthonic and divine elements, and you have this twofold aspect—their origin in the presence of data which have already experienced and must be interpreted and organized, and their subsequent application of data to reality when they use the data, instead of being used to test or control them, are tested by these facts. The present discussion is devoted to the problem of (a) modern theories, beliefs, convictions, concepts, etc., which flourish because of the sound elements they contain, and are able to account for some aspect of the world, and (b) those of old, in which manner must have flourished only because of their effective elements.

(3) Of the first importance for the theory of reality is the idea of the origin of reality. It is obvious that any persistence of both must be due psychologically to certain effective elements (e.g., subjective satisfaction). But, since magic is admittedly imperfect and unprogressive, and religion admittedly has had its periods of decay and revival, both contain certain ineffective elements which, in the case of religion, are more irremediable. Both include elements which are often styled irrational; and both involve convictions of man’s relationship with the powers and processes of the universe and of the possibility of utilizing or of co-operating with them. But magic typically involves attitudes of compulsion and coercion; there are processes in the universe which are not beyond man’s control; whereas dependence and humility are characteristic of religion. Yet the latter are not the essence in religion (cf. § 18 [3]), and there is frequently a mystical and attitude which can be styled magico-religious, being magical in its ‘irrational’ and external aspects and religions in its temper and spirit.

Thus, we find convictions of a really profound relationship between man and the universe which are not confined to magic, but there are two fundamentally different attitudes (direct coercion or command, or indirect appeal or prayer), and, where the contemporary religion and magic are in control, the latter is typically anti-social and individualistic (cf. art. MAGIC[Introductory]).

Here, magic is felt to be not so much untrue as a wrong handling of the truth; and it is regarded as irreverent and blasphemous, and is feared and reviled. This is partly the reason why magic as a religion involves (a) our own views, both of religion and of what is antithetical to it and to the progress of society, and (b) our own views of causation and reality; for we rely upon our own ideas of the relations between ourselves and the universe, and we must assume that the ultimate realities are the same everywhere. It follows, therefore, that the concept ‘God’ is fundamental: (1) because, from a theistic point of view, God is the ultimate reality before the idea of the universe; and (2) because, unless we have definite ideas of the ultimate realities and of God’s place in the processes of the universe, the crassest magic cannot be finally estimated—for to hurt a rival by sticking pins into an image, and to expect rain by sympathetic magic or by prayer to a rain-god or a Supreme Deity, is to imply a theory of some ultimate interconnexion and causation, and upon this we have to make up our minds.

16. The theory of reality.—(1) The value of all convictions and theories of God, man, and the universe must be at the mercy of the ultimate realities themselves, whatever these may prove to be; and this fact obviously conditions all critical inquiry. The concept ‘God,’ however it may be limited, both influences and is influenced by conceptions of reality and truth, and the fundamental problem concerns the necessity of the concept and its content. The theist will naturally accept the concept which, however, will tend to control his argument and as a rule will be only imperfectly analyzed. On the other hand, a procedure which seeks to be purely inductive and to construct a systematic view of the universe will, if it admits the parallelism, tend to use it illogically and without the wealth of significance which characterizes it for the theist. All the theories of the origin of religion are, therefore, extremely instructive for what they both spontaneously conceive and imply. They are naturally obliged to assume some most essential feature (e.g., foreknowledge, omnipotence); or they confuse what evokes a religious feeling with the origin of it. It is meaningless to suggest to the true theist that his belief in a loving God, originated in the ancestor worship, solemnism, and nature; but the fact of the uniformity of a reason is part of the fallacious theory of survivals (§ 4). However presumable be the parallels, however striking the links between theistic and other beliefs, the external observer can easily overlook
the qualitative differences and the different ‘systems’ involved in each. The most rudimentary form of a feature is not thereby the origin of what appears in more advanced forms, and the data of totemism suffice to prove that the origin of a religion is not so practicable a problem as the interpretation of the most primitive type of oceanic man’s God.

In the concluding paragraphs of his essay, Durkheim introduces the problem of totemism and its relationship to religion. He suggests that totemism is a primitive form of religion, and that it is related to the concept of the collective unconscious. He also notes that totemism is a means of social control, and that it is a way of organizing the group. Finally, he notes that totemism is a means of self-representation and self-identification.
tomet is the emblem, badge, symbol, or link; it is more than the mere animal or plant species, and it is not always the individual totem, but a group, in the system of beliefs and practices of which it is the centre. Though it has been denied that totemism is a religion, it is undeniable on the border-line, and there are variations such that, in Sumatra, e.g., the totems are almost, if not quite, gods.1 No single element by itself is a proof of totemism; e.g., animal names alone have no weight. The point lies in the context or system of thought, even as any given name compounded with Bal or Nebo does not necessarily prove the existence of a contemporary belief in those gods.

The suggestion that totemism arose through a literal interpretation of metaphorical, symbolic, or similar names, or that an animal or plant nickname was the origin, does not explain the organic system of cult. This suggestion emphasizes the use of the object, but finds no relationship with the object from which their names are derived.2 But it beges the question; for a name could originate totemism only if we grant the psychological and other factors which await explanation—viz., the meaning of 'superstition,' 'mythic,' and 'rapturous.' What is important, however, is the assumption that all totemism, and is the center since the ancient system of ritual and the presence of many gradations of totemism, proving that totemism is a parallelism of these varying types of totemism, and other ideas, tell against the view that it can be explained by pointing merely to a particular element (viz. the name) and not by regarding the system, and the organic whole.3

(2) In fact the names of totems usually function similarly to those in other types of cults. For (a) not only will a particular stock of names often be reserved for the members of a totem-group, but (b) sometimes these refer to the totem-like names, as compounds of Jah-wah, Bal, or Nebo indicate some sort of relationship between the god and the people.4 Sometimes it is a solemn duty to keep the names in use, for otherwise the totem will feel neglected. Sometimes a feeling of lying down or rising up will murmur the name of his totem, which is believed to be helpful only to those who belong to the particular group. Again, the name of a totem must not be spoken heedlessly, or it is referred to, indirectly; thus the Warramunga of Australia tell of a huge world-snake which is not called by its proper name, because to mention it too often would cause them to lose control over it, and the reptile would come and eat them up.

(3) Characteristic everywhere are the associations of the name of revered or sacred objects, and what they betoken or presage (omen,omen), but also the claims involved when names are taken as totems. The name indicates the known, and there is a common tendency to identify the name with that for which it stands, to connect the name and the nature of a thing. So it is that change of name often suggested or indicated change in orientation or personality, or a new stage in the history of an

1 This is only to be expected, for, where we find the earliest stage of what we agree to call 'religion' (or 'ethics),' the distinctive features will appear in an environment which admitted of such development, and is, as is the case wherever the necessity for a new concept appears, must be a combination of old and new and distinctly new.2 Andrew Lang, in Ed.27 xxvii. 96, Secret of the Totem, London, 1905, pp. 121, 122.3 This may be applied alike to these and upon their context their general system are a common cause of fallacious argument, when the comparative method is incorrectly employed. Cf. the case of New Guinea view that their names have been taken with the addition of the belief in the God (above, p. 679 a), n. 2. For the 'gods' of New Guinea, see J. G. D. Macgregor, The sudden rise of tribes, 1896, p. 5, J. B. Wace, Annals of Archaeology and Anthropology, Liverpool, 1910, ill. 222 f., of new religious cults in British New Guinea (Z. E. Lordn., 1911, p. 3), of the new names of castes in India (with an entire caste system), of cults of deified men and gods, and elsewhere, and the strange cult around the ideas of Fatherland, Liberty, and Revolution by another name.4 For (a) and (b) respectively see Frazer, Totemism and Exogy- mpy, ii. 343, 673 b, it. 360, and 5.65 f., ii. 373 f., iii. 34 f., 77, 101 f., 672.

RELIGION 673

VOL. XX—XIII

II. The name is the written symbol or mark representative of the name. A name will be kept secret lest an enemy by knowing it should have power over the holder of it; and the greater the owner, the more potent the name and the greater the need for care. To name the dead is to bring them vivally before one, and hence the names of deified and sacred beings, as also of harmful and evil ones, may not be used freely. The customs are psychologically quite intelligible. Consequently, the names that have valued or treasured associations, that mean much, and need to be respected, are forgotten or used relatively and secretly. Two trances are possible: the one is to keep the name secret, to avoid it, to replace it by another which will not have the old psychological force; in this way it falls out of use, or it is retained among the few, or it has a magical value—it is self-effective, automatic; the other makes the name used familiar and robbed it of its earlier worth. Two stages can therefore be recognized—one where a name is effective on psychological grounds, as being associated with some pre-existing situation, sentiment, or idea, and the other where it becomes isolated and barren, with little or none of the former psychological, social, and intellectual significance. The latter stage is evidently ineffective for all management, and the name must have recurred from time to time; for, whether the name stands for what is visible (e.g., the totem species) or for the invisible (the distant, dead, a spiritual deity, etc.), it has an effective value only because it has the appropriate spellings or ideas which it evokes. The first stage, then, is essential for all progressive development.

(1) Taboo against looking at or touching things is rarely applicable; so are totems. The species is generally common; but they apply to the objects or vessels used in the totem cult. Everywhere there are sacred objects which may not be heedlessly gazed at or handled. Just as a sacred name calls up that to which it refers (i.e., typically, the reality itself, as it is apprehended), so objects stand sacred and effective because of the associations. Thus, relics, bones of saints, etc., are used for magic; and parts of a man's body, or even his shadow or footprint, are regarded as essentially himself.5 If, on the other hand, someone has an object which may lose its sanctity (cf. the viscidities of the bull—roarer and of sacred marks), on the other hand, an object that is treated as sacred appears as an organic part of an entire rite, cult, or system.

18. The sacred relationship.—(1) Psychologically, the sacredness of things (names, visible objects, etc.) is to the name. One person has one's treasured souvenirs and memories are concerned, where one's inmost personality is felt to be at stake, and where there are ideas which are neither to be obliterated or forgotten nor treated with familiarity and tactlessness. The fear of gazing heedlessly upon sacred objects applies also to particular individuals (priests, kings) who must be kept in seclusion because of the tabus.6 The OT, in turn, illustrates the real danger felt in being in the presence of a divine being. The psychological foundation throughout is similar; there are some things which are too closely bound up with ideas of ultimate reality and personality to be lightly handled, or even to be treated objectively.

4 That 'the pure in heart shall see God' (cf. Lk 6) is

1 Hence the idea of changing a name in order to change the personality finds a concrete parallel in the custom of changing relics into a living image, which is another.7

6 Cf. the evidence collected by Frazer, G!

7 See, e.g., the sacredness of names and the reality fuse into one, as among the Benei-Taboo, and the Perils of the Soul, London, 1911, pp. 77, f., 569 f.

8 Cf. e.g., fr. ii., Taboo, ch. i., lv. f.

9 Cf. e.g., fr. ii., Taboo, ch. i., lv. f.

10 Hence I would put myself in the attitude to look in the eye an abstract truth, and I cannot.1 I blush and withdraw on this side and on that. I seem to know what he meant who said, No man can see God face to face and live.'
the complement of the fear of an individual (Is 68), and the convictions herein involved are quite inexplicable unless they were based upon certain intense experiences and endorsed throughout the ages by those who had similar types of experience and could realize their validity. The evidence naturally varies in significance and from totemism and upwards purificatory ceremonies on all solemn occasions abound. Among rudimentary and simple people the practices are extraordinarily concrete: fire, water, ablation, secrification, etc., are performed upon an individual for the sacred ceremony. So, too, guilt is treated as something physical or material, to be washed away, removed by an emetic, or dispatched upon a scapegoat. The data represent a pre-ethical rather than an ethical stage. What we call ethical was not born in a day (cf. p. 673, n. 1); and practices which were purely external could have no psychological or subjective efficacy. Ritual can be accompanied by its appropriate psychological, moral, or spiritual accomplishment, and can readily lose it; and the difference is between an apparently magical (or rather magico-religious) rite and a purely magical one (§ 15 [3]). Of the two, the former and not the latter can permit progressive development. The apparent obfuscation, the psychological transitions from free to fixed, from spontaneous to assumed, from accidental to momentary, relief, forgiveness, and the like, and the persistence of the rites in practical social groups are incomprehensible unless the data are treated as entirely bona fide and rational within their limits. It is to be supposed that the psychological and similar ceremonies are for practical purposes, when great values are at stake, and the welfare of the people is concerned. They have the effect of producing or strengthening a certain psychological state, a desired result, and such ceremonies have the character of confidence and security recur even among rudimentary religions in the midst of strange and apparently quite irrational tabus.

(2) Even the totem is supposed to help and succour the clansman who respect it, and the individual totems or spirit-guardians are ready to strengthen those who own them. The help may be of a very general character, or the beliefs may be shaped by the attributes of the object: thus the eagle gives keen sight, and the bear gives strength—but the bear is slow and clumsy, and hence it may be the result of the rite that religious feelings and beliefs will thus stimulate thought; hence it is possible to consider separately (a) its objective nature, characteristic of all (totemism, totem, ancestor, etc.), and (b) the effects, needs, and psychological nature of the worshipper (or worship) upon which the rite is based. If the totem is some implicit source or centre of definite or indefinite efficacy; and it is not unrelated to the perfectly vague and implicit reliance upon something in the air, or upon spirits to do the totem, the effect will generally be that the worshippers will feel that confidence and security recur even among rudimentary religions in the midst of strange and apparently quite irrational tabus.

(3) Especially noteworthy is the intuitive idea of reciprocal relationship; the evidence is strong enough to suggest the do ut des formula of sacrifice (q.v.). Yet the idea of a mutual understanding which may seem a veritable bargaining (cf. also Jacob in Gen 28, etc.) is not necessarily so crude and unethicised as it may appear (cf. the ideas in the Deuteronomistic threaten and rewards—e.g., Dt 28 f.). But the conception of a god as unremitting and unfalterable is the pattern for all religions of magic or for magic. There are convictions of a certain uniformity, and a free response (cf. Mt 7:11), which make the promises of religion a free gift to ‘everyone thatareth’ (Is 55:2), and a reward for importunity (1 K 3:14), conviction of the trustworthiness of the tabu to maintain a gulf between the sacred and the profane is the respectful friendliness, or the easy, confident, and even naive behaviour, as reflected, e.g., in popular stories in the OT (Abraham [Gn 15], Moses [Ex 3]), Gideon (Jg 6:11, 22, 26, 32), Hezekiah [2 K 20]). The child-like attitude in all its phases—good and bad—has parallels in personal religion and mysticism, and stands in the strongest contrast to the attitudes of subservience, humility, resignation, and submissive faith. So, in the OT itself, quite opposed to the spirit of the popular narratives in question is the institutional teaching which sternly forbids man to ‘tempt’ the Deity (i.e., put Him to the test). The data are exceedingly instructive, especially when viewed in their historical development, because (a) the attitude to all that is delicate, sublime, and sacred readily passes from naive, free innocence to an attitude that is blasphemous—in this manner a relationship with one who is felt to be psychically superior can pass through familiarity to one with loss of respect; and (b) the institutional religion, like all organized thought, has commonly to restrain a certain individualism which from being markedly individualistic becomes extreme, antinomian, and irreligious. 19. Ideas of imitation and identification.—(1) Signs, symbols, and totem-marks can be used, like names, to express and intimate the function of groups; and they are effective, provided they have an appropriate meaning and call up the required feelings and ideas. The symbol which stands for the totem, spirit, or god may be carved upon weapons, boundary-stones, utensils, etc., to signify the presence of a protective being, to warn off the evil-doer, and so forth. The symbol may even be cut or painted upon individuals, or the latter may wear skins, helmets, etc., to represent or symbolize the totem or spirit. But it is the feelings that represent its power. Whether we find a realistic imitation or a symbol more or less conventional or no longer intelligible, the individual is very closely associated with a being who, however superior, stands in an intimate personal relationship with him. In war, e.g., the wooden images of dead ancestors may be invoked or taken into the fight; and there may be an appeal to old heroes or to war-gods (who are sometimes deified heroes). But, when the warrior in some primitive society to which we have given the name ‘hominism, there is a virtual identity—the warrior does not fight for his god, but with or rather as his god. Sometimes the totem is painted on the dead, or otherwise associated with the corpse—a fitting climax to the fiction. When the painting or the application of the symbol is not upon the individual, but upon the object to be protected, the symbol may be of the same substance, and the man is born of the totem stock. Even in totemism there is a certain identity of nature of man and his totem, together with the realization of a difference, and this co-existing ‘immanence’ and ‘transcendence’ faithfully reflects feelings of the paradoxical relationship between what we call the ‘human’ and the ‘sacred’ or ‘divine.’

(2) The various imitative practices occur in communal ceremonies (e.g., where dead ancestors are supposed to be present) or if the group is not brought together, but is always the relationship is more intimate personal relationship with one. In war, e.g., the wooden images of dead ancestors may be invoked or taken into the fight; and there may be an appeal to old heroes or to war-gods (who are sometimes deified heroes). But, when the warrior in some primitive society to which we have given the name ‘hominism, there is a virtual identity—the warrior does not fight for his god, but with or rather as his god. Sometimes the totem is painted on the dead, or otherwise associated with the corpse—a fitting climax to the fiction. When the painting or the application of the symbol is not upon the individual, but upon the object to be protected, the symbol may be of the same substance, and the man is born of the totem stock. Even in totemism there is a certain identity of nature of man and his totem, together with the realization of a difference, and this co-existing ‘immanence’ and ‘transcendence’ faithfully reflects feelings of the paradoxical relationship between what we call the ‘human’ and the ‘sacred’ or ‘divine.’
increase of edible animal and plant totems, etc. In these cases (especially in Central Australia) the groups or the headmen, by virtue of their relation- ship, or by virtue of some accretion, were able to exercise some control over it for their own purposes. The practices are noteworthy for the solemnity, self-denial, and restraint which accompany them and force us to style them purely magical. Elsewhere it is not uncommon for groups or individuals to be ascribed power and authority over some one department of nature (rain, winds, crops, etc.), and the general principle implied is twofold: A can control B because of some relationship (re- semblance, etc.) between these; or, to control B, or gain B’s help. A must first enter into some close relationship. The manifold beliefs and practices turn upon ideas of likeness, resemblance, and identity; and the main lines of development are: (a) a testing and verifying of the ideas; (b) the choice, on the one side, of special individuals, and the recognition, on the other, of special sources of activity such that, instead of a rain-totem group, we find (a) individuals credited with the power of controlling the rain, and (b) spirits and gods, either unconnected with or subject to some restrictions (see § 25). (3) Throughout, what is fundamental is the imitation, whether of the venerated being, the particular need, or the activity required. Now, the idea of holiness or the assumption of divinity (e.g., Mt 58) could not spring up suddenly; the desire for a spiritual, ethical, and inward resemblance cannot be separated psychologically from the rudimentary rites where men, externally at least, in some way assimilate themselves to their sacred beings, and not rarely with every sense of earnestness and solemnity. In this psychological state there is a communion, approaching identity, with the object of the profoundest ideas; there is a typical desire to reach the state and to profit from it. All imitation gives a certain reality to the conception entertained of the person who is being represented. Moreover, intense ideas and desires will tend to realize themselves in appropriate gestures and activities. Hence the apparently most out of place of rainfall—unconnected with any special psychological form of an act (not an act of passivity) to the supremacy of the divine will.—Thy will be done. On the other hand, in magic ‘there is too much “My will be done” about it all.’ But there is the third attitude, naive and confident, and for this the formula would be ‘Our will be done.’ This corresponds to the group-unity where men and their sacred beings form part of the same social system, and it is taken as a matter of course that the gods and men perform one another’s will (cf. § 7 [2]). Moreover, logically speaking, this is a primary attitude and one that tends naturally to become that in which the individual acts as though he had only to control, coerce, or set in motion the required activities. The first attitude (‘Thy will’) is certainly not primary; and, while it is easy to understand the transition from an implicit ‘Our will’ to ‘My will,’ it is impossible to explain, psychologically and logically, any transition if the magical attitude is original for all relationships of religion; the apprehension of a qualitative difference must be taken as primary and fundamental. All human activity implies that there are processes 1

1 See the critical summary by Durkheim, bk. iii, ch. 11. 2

20. Sacrifice and prayer.—(1) The data of sacrifice undoubtedly include some gross ideas of mere bargaining, and of enjoining and feeding the gods; they typically point to a relationship for utilitarian purposes, and thus the sacrifice appears as a preliminary gift in order to win the favour of the gods, or as a thank-offering afterwards. But, in its more suggestive form, the sacrifice is communal—it is a ceremony in which members of a unit participate in a religious act peculiar to the time at least, a stronger bond of connexion than ties of blood. In such a unit or bond the profoundest ideas are realized, and men and their sacred beings are brought into the closest relationship. It is presupposed, and it is necessary, for a sacrifice to be effective, that some representative ideas are obtained by sacrifice and self-sacrifice. Hence extravagant asceticism, torture, and extraordinary self-mutilation (the last even before a light [Gp, pp. 160 ff.]) can produce a state of exaltation, infatuated strength, of the one who is performing the act and of the one for whom the sacrifice is forthcoming. Indeed, violent measures may be adopted in times of crisis or distress; and gloomy rites can reappear or be more intense in order to bring help or to stave off disaster or decay. Healthy asceticism, sacrifice, tor- ture, are not all the evils; but all, in the ultimate, are beneficial—can thus take perverse forms in order to ensure, or virtually to compel, the benefits that are sought. That man by these measures can achieve his ends is in keeping with what proves to be a common presupposition; that the efficacy of ‘nature’ and the course of ‘natural events’ in general, are connected with the behaviour of men, and particularly of such powerful and representative individuals as semi-divine kings and priests (cf. § 29 [5] and art. BRAHMANISM, vol. ii, p. 800). Sacrifice has as its central idea the implicit or explicit assumption that there is some connexion between human behaviour and natural causation, whether directly or indirectly (e.g., through a deity), and such an assumption goes behind the usual different- 1 The fact that we distinguish human and divine (and other antitheses—e.g., man and animal) means, not that the two are absolutely distinct and unrelated, but that we realize a distinction between different and complementary aspects of certain natural powers. 2 For the latter of A. Barth, Religions of India, p. 274, and see, in general, W. E. Smith, Rel. Soc., 1906, ch. 10.
charm involves ideas of self-sufficiency and compulsion, and of a mechanism which has only to be set going. The pray-er may make a call upon the inner self, and is typically a communica-
tion with or an appeal to a Superior Power. But from the explicit prayer to a Heavenly Father for the daily bread there cannot be isolated the devotional prayer, as when St. Paul cried to God in the land of his enemies: 'Heaven! grant that I may have something to eat this day.' On the one side is the psychical nature of man, whose appeal is formu-
lated to a sacred being who either is the centre of a person's affection or is of thought or is perfectly vague and unsystematized; on the other is the question of the ultimate realities—whether the prayer or wish has any effect save upon the man himself, his courage, confidence, etc., and whether the Supreme Power pays heed to the appeal, be it systematized or vague. Moreover, the earnest prayer or wish cannot be severed from the earnest behaviour which requires or manifests needs to be satisfied. That prayer easily decays and becomes the spell, charm, or magical formula is well known in the history of religion; the efficacy is then thought to lie in the expression itself, as apart from the psychical state which is typical of prayer. This primary psychical aspect of prayer is fundamental, and it is instructive to observe amongst the religious peoples of the world the practices of an apparently magical character.1

Under the stress of emotion men help out their ideas with gestures, and there is always a ten-
dency for feelings and ideas to realize themselves in action; prayer commonly takes the form at which it impresses them (see p. 6755; n. 3). So it is that upon the lower levels of mankind there are rit-
tories for explicit needs, whereas on the higher levels there will be explicit prayers, and also a recongnition of direct power over events at which an appeal can be made. But all earnest, sincere activity is purposive, implying wants and aims, and the growth of knowledge and the development of religion are marked by better conceptions of the necessary factors and means to achieve success. Hence a clearly visible purpose in all such purposeful activity and a prayer for some effective activity.

Sooner or later the need is felt of some theory of reality to connect, rationally, human activity and the processes at work in the world. This is commonly based upon the periodical scepticism and of credulity, of doubt and of faith—do not affect the man of every age and place, whatever his make or origin, and what is implied in religious, magical, scientific, and philosophi-
cal conceptions points, not to many different realities, but to different and even contradictory apprehensions of one reality or system of realities. It is because the religious conceptions claim to be the nearest to truth, and because the consequences of an infall conviction are so potent, that serious differences between religious and non-religious conceptions are feared or resisted; and indeed the history of religion from the most remote times upwards proves that these differences are vital for the progressive development of life and thought (see § 25 i.).

21. Ideas of soul and spirit.—(1) A survey of the whole field of religion brings to light two fundamental convictions or, rather, presupposi-
tions: (a) there are ideas of agency, causation, activity, or function in the universe, such that man can enter into relationship with the effective processes and utilize them; (b) man is more than the

1 E.g., in one case a mimetic rite is employed when a woman desiring to have a child offers a number of a kind of plant (Atkinson, The Magus, Art. I, 72; Hardtow, Primitive Paternity, 139 ff.). To con-
clude that whether the latter is really pure magic or not depends upon the observer is unscientific and unattainable. For all critical inquiry the issue concerns the psychical state of the observer, and such persons are either unaware of what is magical or not and our view of the ultimate realities—in other words, (1) what is the rite in the eyes of God? and (2) how much efficacy is there in it, according to whom our own conception of the universe (cf. §§ 15 [3], 24 [14]?

sensible body; there is a part which is separable, which can leave the body temporarily (a common occurrence in illness, fainting, illness, is not annihilated at death, may continue in the old haunts, or may enter another body, or be reborn. These ideas overlap: the ideas of a soul or of some non-bodily part of man are extended and refer to the life after death and the unseen; and the ideas of prayer or charm take up the form of interaction with powerful individuals (especially dead ancestors and heroes), saints, spirits, deities, and powers of nature.

But the ideas are never consistent, nor are the categories dis-
tinct. Life, feeling, consciousness, mind, spirit, and soul are always confused; and psychological, physiological, aesthetic, theological, and physical interpretations are unreflectively mingled. The progress of differentiation marks the process of observation and classification. The 'spiritual' part of man may be thought of as a double, material, minute, and ethereal, or it may be identified with certain parts or constituents of the body. Modern Western thought, with its attempt to distinguish the material and the non-material, goes back to the antici-
pation of body and spirit as a grosser and a finer material. But it is in form probably consistent when it distinguishes at the same time mind and matter, living and non-living, organic and inorganic. Consequently, it is impossible to determine clearly the ideas of those men to whom such categories are not at all or only imperfectly as-

ally as our modern categories are confused and not co-ordinated.

It is sufficient to observe that everywhere it is possible to dis-
distinguish between a man and his soul (a man and his body inorganic), but every separation of an A and a B (e.g., the living and the dead, body and mind) invariably raises the question whether there is not a further separating deeper than the one regarded as different forms of some one underlying substance.2

(2) Ideas of soul and spirit are not to be treated as 'survivals,' though special beliefs and practices may be truly religiously (though not rationally) interpreted. There is a tendency to accept the ideas and to justify them—e.g., by reference to dreams, of which, however, only those will be cited which are actually in harmony with the predisposition. Much also depends upon the extent of the individual's experi-
ence and knowledge by which he is able to dis-

criminate between the waking hours and dreams, or any unusual subjective experiences (e.g., 'ghosts') which may seem to have objective reality. The ordinary familiar theories of the 'origin' of the ideas do not account for the great social and intellectual systems with which they are organi-
cally interwoven, and which could not in any case be based upon isolated ideas or dream-experiences left. But it is obvious that the interest in one's own experience is something which has arisen independently of the general conceptions of the spiritual world. The theory of the spiritual world can be considered satisfactory which applies solely to a particular age, land, or sect; and a careful distinction must always be drawn between the particular ideas under consideration and the common psychological and philosophical systems which later are not sufficiently, or at all, in this way (cf. our use of [Holy] Spirit and Power).

The words are characteristically applied (a) to what has an emotional effect, exciting surprise, wonder, marvel, admiration, reverence, and awe; and (b) as is quite intelligible, it is especially when an individual has been influenced by particular conceptions and perhaps by the presence, or at least by the appearance, of his ideas of spirit or of the spirit world, in which case his presence and effectiveness is commonly and quite spontaneously acknowledged.2

2 Cf. medieval ideas of a more or less material soul (Tieleco, Bacon); cf. also the Jewish views above, vol. iv. p. 485.

3 Cf. the controversies between the dualistic and monistic systems, and the relation between polytheism and monothelism.

and (6) to the unusual, impressive, striking, and inexplicable examples of all kinds of causation. Religion, then, comprehends, and magical aspects and interwoven; and everywhere the tendency is to differentiation (religion, moral, aesthetic, physical) which depend upon the current tradition, knowledge, and stock of categories. The psychological status of such-and-such a person, or a primitive or mysterious or profound cause or activity outside the run of ordinary experience; increase of knowledge may seriously disturb the beliefs, by making the activities 'natural,' but a distinction must be drawn between the psychological tendencies and the particular beliefs which prevail. Hence, theories of nativism and the like do not really explain origins, but only show how the religious ideas could be engendered and brought to the birth. In like manner, theories of the translation from polytheism to monothelism, or (as can be suggested in the case of India) to pantheism, overlook the important fact that the recognition of a number of phenomena which can be classed together and given one name, because they are similar in some one respect (e.g., as being gods or spirits), logically implies an apprehension of some underlying undifferentiated unity. It seems impossible for the observer to draw any line objectively, save with the help of some prior presuppositions and conceptions. It is necessary to admit the prevalent and normal apprehension of some 'power,' or the like, the nature or quality of which is realized only when it is identified, and that on the basis of current categories and in accordance with the very act of categorizing or naming shapes the apprehension and interpretation and gives it a form. And, while continued comparison of the data of religion tends to weaken the barriers between the manifold manifestations of nature, etc., it is solitary through the categories, differentiations, and distinctions that the progress of knowledge is possible, even though the underlying unity be ignored from time to time.

Life and death.—Among other ideas which are presupposed and which rule and control human activity, conscious and unconscious, is especially that of the persistence or continuity of the individual. No rational description can be given of oneself or of others without implying it, even though the arguments which are conclusive proofs of existence after death to one man may make no impression on another whose personal experience and body of thought are different. But the conviction, instead of being distinctly 'religions,' is one taken up by religion, regulated by it, and sometimes even abused. The firm conviction that death is merely the gateway into another realm, or that the individual cannot escape some sort of continuity of existence, is not in itself religions; it has justified barbaric cruelties and irrational practices, and in India religion is devoted partly to remedying the evils of rebirth. The wide prevalence of initiation or of baptism ceremonies illustrates the tendency to prepare the individual for a life of which bodily existence is only the prelude. Here the crucial point is not death, but the continuity, or rather the strata of one's body in some other form. Thus, one must ask: does the individual become a part of an enduring body—the group, the community, society, church.1 The persistence of the individual is felt to be in some way ensured by becoming part of a larger, perhaps even eternal, unit. Does the individual go to his country?2 The point is: Is death the occasion of feelings of grief and distress (significantly rare, however, among the dying), of peace and sublimity, of doubt and uncertainty. Moreover, the life of the individual, or death, is held to result in a state of rest (allowing, among rudimentary and barbaric peoples, horrible sacrifice and callousness), and even an astonishing self-complacency (as being one of the 'elect,' and so forth). Again, the 'next' life has often been regarded as essentially a replica of one's present life, or as a journey to another form of existence, either outside or inside the country. Thus, everywhere psychological and logical factors intermingle in the history of the ideas; but those which represent the apprehension of a qualitatively different state are in every respect more vital than those which view the other world as a mere 'super-world.' Indeed, the fact of some qualitative difference alone explains the analogical character of the results of the intuitions. To admit of a comparative ethical difference, is to attempt a rational description of man unless there were fundamental psychological facts which transcend the ordinary conceptions of 'this' world. Conceptions of 'another' or the 'next' world are therefore a secondary development, or a move toward a larger existence, and unless 'this' world, as he understands and describes it, is the empirical description of some part, phase, or aspect of a pro-founder reality the full comprehension of which transcends human mental processes.3

13. Synopsis of the evidence.—(1) It is a common belief that the 'soul' (vital principle, etc.) can be, temporarily at least, separable from the body; it can departs when a man dreams or is ill; it can be lost, stolen, or stolen (f.d., pl. II. Tabo, aha). It can also be transferred; hence the common idea of the 'soul' has been described as 'a man believes himself to be secure as long as the 'soul' is hidden or guarded in some safe, remote unknown spot (D.B., pt. viii., Builder the Beautiful, ii. 56-75). This belief can be expressed in saying that the belief of a written, or a piece of one's person (e.g., hair) or property left, in some holy place as an essential part of oneself and for one's future use. It is a responsibility (on a higher level) that the soul can be entrusted to a saint or deity or be in his care (see a curious form of this in I. & 5022). Moreover, a man's life may be passed by his relations with a 'belt,' his 'index' or 'sign' of life, indicating his strength, weakness, or death; or, again, the weakening may be symbolically united with a tree to gain thereby something of its strength and vigour.

(2) Trees, like animals, plants, and even inanimate objects, may be said to 'live'; deities may eat the 'spiritual' part of the food-offerings presented to them, and utensils may be broken ('killed') in order that their 'soul' may accompany the dead. Animals and inanimate objects can contain a man's 'external' soul or his 'twin' soul; they can also be the vehicle of some power or spirit (see art. Faroques). Both among men and among inanimate objects the 'spirit' can be ceremonially transferred; and it is necessary to distinguish between any object (human, etc.) viewed (a) as a vehicle, a representative of some power or spirit, or (b) as the actual power itself.4 It is

1 The practice of associating oneself with that which outlives one is illustrated by the means whereby men endeavour to make their name 'live' (so notably in ancient Oriental thought), by building temples (e.g., a pyramid), by inscribing their name upon lasting objects, other beings, etc., and by association with a 'dead' man's, shade. Meanwhile, the 'dead' man's shade will not soon be forgotten, and so forth.
2 The word 'soul' is explicite or inchoate. According to which (bodily) life is only part of a larger existence represents a psychological and logical sophistry, 'unit' or 'universal' of discrete components. Thus, one must ask: does the individual go to his country? The word 'country' has a precise, factual, empirical, and personal meaning. One who has a country (the logical and empirical) account which goes far beyond actual knowledge, involves metaphysical problems, and leaves out the prime fact that the individual has a country.
an especially common belief that the vital essence of some person is transferred at death to another individual, or to something associated with him; hence the virtue of relics, the dust from the tombs of saints, etc. Human life can be vitally bound up with another human life and the idea of an essential connection to the dead may reappear in another human form (whether in the family or not) or any other form. It is hard to believe that this belief, of which it is true that the faithful tend to be of private and temporary value, is not a general feature of all religion. The idol is generally the centre of a more permanent cult; and there is no reason to suppose that the idea of the indissoluble connection of belief, of the individual cult, to the life of the clan. The question of the stability and sacredness of the sacred object is far from clear, as much of belief is, indeed, generally based on the supposed stability of the individual cult, the totem is rather the affair of the clan. The evidence is not complete, and the individual object may be shared by father and son, by brother and sister, and by the current totem group. The totem is accepted by other families, or is put upon them. There are many gradations between the purely individual cult of a spirit-guardian and the cult accepted by a confederation of clans that whole people, between the most ephemeral of cults (cf. art. 1914.1) and those which are a fundamental part of a people's life and thought.

(3) Thus, the ideas of a 'spiritual' relationship between the individual and something outside him are extremely complex, and everything depends upon the social and local co-ordination. Throughout, the ideas tend to resolve the cruelly physical or literal aspects. The beliefs are usually far from simple, and the common ideas of re-birth and re-incarnation make it difficult to distinguish (a) the individual who will be reborn, and (b) the maintenance of his identity after death. Which belief is true? If every birth is due to natural causes, every death to supernatural causes, then every birth is necessarily the selfsame individual, and every death is necessarily the selfsame individual, and which it will return.1 A great deal of evidence, it is true, might seem to support the theory of a primitive ignorance of the state of the body after death, and it is true that in certain cases every belief in a sacred object is supposed to rejoin some sacred object or nucleus, as it were; and from birth to death the man is periodically in and out of the spirit world; from birth to death, and which he will return.1

1 The religious and philosophical systems of India are especially important for the different ways in which essentially similar ideas are developed.

2 For this see Hartland, 'Primitivity and Patriarchy', ch. 1. 'Spiritual Conception', ch. ii. 'Magical Practices'; Frazer, 'Tolstoy and the Joneses', etc.

3 Cf. e.g., the corporal and spiritual husbands of the Akamba women (Frazer, 'Tolstoy and the Joneses', ii. 452 ff., 467, pt. i, etc.), the practice of a man marrying the wife of his father, further quoted in the following pages, i. 586 f., 576, ii. 83, 90 ff., iv. 257; Hartland, 'Primar. Pat. i. 46, ii. 148; and B. Spencer, Zhores, 'Native Tribes of the N. Territory of Australia', London, 1914, p. 265 f.; and especially B. Malinowski, J.R.A.I. vol. lviii. 1932, p. 460 ff.

4 Cf. above, §§ 6, 9 (1). The complexity and inconsistency of ideas of life and soul, even among so rudimentary a people as that of the South Seas of Polynesia, is apparent. An attempt to present a perfectly logical and co-ordinated picture of such ideas is the result of long dissection and comparison: the recurrence of similar types of problems on different levels (viz. in cremationism, transmigration), and the necessity of a more methodological treatment (e.g., of co-ordinating logically all the evidence together with modern knowledge and conviction).

24. Analysis of the concept 'God.'—(1) The widely different conceptions touching the validity and content of the concept 'God' prove the difficulty of making any statement that can be considered adequate. What is most prominent is the characteristic conviction (feeling, doctrine, etc.) of a profoundly vital personal relationship between the individual and an external transcendent Power (see § 18). But convictions of some relation and if they are widespread, and there is remarkable variation touching (a) that with which the individual is very intimately related, and (b) the ethical, social, intellectual, aesthetic, and other ideas involved. Moreover, although the data of religious experience are generally of a psychical state of such intense subjective value that the experience will be felt to be 'divine,' yet the common recognition of a difference between 'true' and 'false' religion, prophetism, mysticism, etc., forces the necessity of distinguishing between the subjective and the objective value of every such experience. Besides, the individual who feels a close and intimate relationship with an external protective Power does not necessarily consider himself to be 'religious,' and the interpretation may tend to interact, and the various beliefs in the reality of spirit-guardian, genius, ancestral spirit, or deity combine essentially similar types of experience with essential differences of form and expression, which are obviously of great importance for the history of religion. The ordinary facts associate the human and the divine in such a way that a criticism of them may seem almost blasphemous, and this in itself is an indication that the human and the divine are combined with the realities which the experiences involve.

(2) Moreover, the great concept involves ideas of causation, the manifestation of power, etc. The belief in a divine Power is typically in its effectiveness. This will commonly depend upon man's behaviour, and will entail ideas, not of magic (automatic or mechanical working, coercion, compulsion), but of religion (dependence, prayer, sacrifice, necessity of moral behaviour, etc.). While, on the one hand, the concept 'God' raises the question, What do men expect from their Deity?, on the other hand, all important functions, operations, and departments of life and nature will often be attributed to a patron or beneficent power.2 Thus if one man has certain personal needs and interests are concerned; this is true not merely of concrete activities (e.g., corn-goddesses), but also of those which we treat as abstractions, but which none the less could be regarded as real and meaningful (e.g., the spirits and deities of piety, concord, righteousness). In this way we also obtain the results of continued observation of operations, the classification and co-ordination of functions and processes, the determination of the mean.
The religious development of a society is a complex process involving various stages and influences. The text discusses the relation between different societal concepts and the development of personal and religious ideas. It highlights the importance of religious ideas in preserving cultures and traditions, and the role of religious institutions in shaping societal values and norms. The text also explores the relationship between religious beliefs and the development of personal identity and consciousness. The integration of religious ideas into a society can lead to the establishment of specific religious practices and rituals, which in turn can shape the development of social structures and relationships. The text emphasizes the importance of understanding religious development within a broader social and cultural context, and the need for continued study and research in this field.
Now, men in elevated positions are commonly felt to represent the divine power, and those to whom important or valuable powers are ascribed tend to acquire position and authority. Such individuals, all the world over, have a significance which is both psychological (because of the ideas entertained of them) and ritualistic (because of their actual abilities), and in the way the authority acquired by the ‘nagician’ or any other potent individual and the powers ascribed to chiefs, kings, and other authorities are factors that are continuously at work in the history of societies. Some thought (see especially G.B. p. 1, The Magic Art, 1.)

(2) The Central Australian totem-group that officiates for the increase of its totem (e.g., the emu) stands to the rest of the tribe like some departmental god (viz. emu-god) on another level. The group is almost wholly debarred from tasting the totem-food, except on the occasion of the ceremony. But among the Dieri it is the headman of the seed-totem group who is effective, and who boasts of being the stay of life; while on higher levels not only are there gods equally able and closely associated with particular departments of nature, but the firstfruits will be the property of the god or his representative, the priest. In this development of the different constituent features of the once simple cult, it was the complexity of the other elements, for his powers, readily becomes hereditary; and frequently there are religious rulers, chiefs with priestly powers, or priests with secular authority— a circumstance which soon leads to rivalries between priestly and secular by men, and downwards, the chief’s abode and the sacred place are most closely associated, and the claims of the palace (or the king) and of the temple interact in the history of taxations, of royalty and priestly regalia and ecclesiastical, as well as secular, distinction of the personnel, and the pantheon. It is in the course of such social development that initiation ceremonies are no longer for the group as a whole; they are for special classes, or for entrance into brotherhoods, sects, guilds, or secret societies (q.v.). The habit has been transferred to the single specimen, or to an image of it, is easy, and the anthropomorphic treatment of the object can turn the latter into the god of the tribe or the whole tribe. Although gods are never sacrificed, and the elements in their cults or myths are not necessarily derived from totems, sometimes the animal can be clearly traced (cf. Frazer, Totemism, p. 50, a bird, a fish, a bear, which is significant but as yet obscure development is that of ideas of growth, of development, and the occasional gods who have married mortal women over the many of these, and these may be exercised before a woman marries away. But elsewhere there has been the Zeus primus noster—the claim asserted not by a group, but by a local head or representative, or by a priest (who is the representative of the god) or there has been a preliminary dedication to the god. It is conceivable therefore that the earlier rights of the group were taken over by a representative (a) of the group, or (b) of the group’s deity, and that the custom on the higher levels is connected with what is found on the lower. That the custom has a primary psychological explanation is suggested also by the law of the Council of Carthage in 298, on which cf. EB 11, 493.

(3) Where a group and its sacred object (totem and totem-group, god and tribe) practically form, as it were, a single unit (§ 2), the selection of a representative (headman, priest, king) would tend to disturb it. The effect of the development is illustrated in the varying relations between a people or land, a ruler or priest, and the god or gods. The intermediary is the representative of the divine power, god, or gods, and the religions of China, Egypt, and Babylonia there are many examples of the consequences. Moreover, the king is often regarded as the source of the people’s prosperity and is responsible for the development of the central figure, and therefore there are tabus to protect and safeguard him; he may be kept in seclusion or supplemented by a secular partner. In fact, the representative individual, king or priest, is so essentially associated with processes in the universe that his death may be a sort of cosmic catastrophe. Hence it may be thought necessary to ensure that he is always vigorous, and even to kill him before his powers weaken. The ‘divine’ chiefs or kings are of considerable, like the Brahman priests and in the Western world, where occupational functionaries exercise a great influence over the course of thought. As ethical ideas prevail, such men must possess moral attributes; and, when things go wrong, they—the like all representative individuals—must be responsible for the misfortune, and most tangible scape-goats. Throughout there is interaction between ideas of the effective gods (the ultimate realities) and the very human representatives, incarnations, and the like; men’s ideas of the gods are swayed by the good or bad behaviour of these individuals as truly as, in course of social development, conceptions of the moral nature of the universe are influenced by the good or evil which men find in their environment.

(4) Intercourse with other groups, the rise of a central body, the ideas of the visible universe invariably forces movements in religious thought. The local god, the chief, and the district find their parallels in the national, god, the king, and the land; there are units within a larger unit, and in the pantheon of the various gods of the local districts and of the whole area. This co-ordination can be regarded as one of convictions, ideas, etc. The local gods, patron deities, and saints (cf. the Muhammadan vela) are felt to be near at hand, and directly interested in the small circle—like the local chief; and, often, while a land, viewed from without, seems polytheistic, the average individual is monotheistic. The problems of co-ordinating the local cults are illustrated by the relation between the Israelite-Jehovah and the Baals, the Muhammadan Allah and the vela, or the Deity and the saints and Madonnas in Roman Catholic lands. When the local being was identified with the national god, the result was partly to drag the latter down to the popular level, partly to elevate the former, and partly also to remove the former away from popular veneration to the court and temple. In the many vices that occur, and in the ebb and flow of ideas, there are complex problems (a) of the psychological and (b) of the quasi-logical developments of doctrines and ideas of the gods. Personal experiences and the theories of the universe and the gods have to be adjusted to each other. Especially significant are the vicissitudes of the intimate relationship between the gods and their representative individuals; for, although the latter are, properly speaking, subordinate to the former, yet, because they are visible, accessible, and more ‘real’ than the unseen powers, there is a tendency to regard them as actual gods (cf. G.B. pt. i., The Magic Art, i, 397, 401). This tendency is in harmony with the readiness of all individuals with functions and powers to ignore their subordinate position and (when they become increasingly conscious of their value) to be a law unto themselves. The data point to profound vicissitudes in the beliefs and convictions of the men concerned, and are of the

1 This is the motif of the Golden Bough; see Frazer, Totemism, B. 693 ff., and cp. G.B. pt. i., The Magic Art, ii, 5, 332, pt. iii., The Dying God, London, 1894, ch. ii. As a result, all these ideas are not everywhere applicable as a whole, they refer to intermediate between the ideas which occur, in one form or another, almost universally.

2 Hence, in the development of society, one of the most difficult of problems is that of responsibility and conceptions of responsibility. Such problems are much less serious in undeveloped communities, where there is little differentiation of function and religious ideas are not separated from social life.
first importance for any attempt to deduce the nature of the religious realities. See § 32 (2).

(5) The necessity of maintaining the unity and security of every group, tribe, and people explains the various means that are taken (e.g., in rites of adoption). Ideas outweigh purely physical considerations. Feelings of deep-seated conviction of their worth and feeling that powerful representative individuals should be above change and criticism. There are many examples in the beliefs which refer to their immortality, rebirth, reincarnation, etc., while, later, attention is directed not to the individual, but to the function. If the death of the semi-divine king was more or less a ceremonial dishonored death, the superhuman significance is shown. The superhuman significance of representative individuals explains the emphasis importance attached to their participation in religious ceremonies, and the late emphasis on the supernatural, also, a greater interest attached to records, myths, hymns, etc., relating to them, and to the careful preservation of them (cf. the priestly hymns of the Romans, Babylonian ritual, and penitential hymns). While the life and thought of the ordinary people are generally colourless, with few distinctive features, the representative and other outstanding individuals leave their mark upon a people's history, although they, in their turn, are far more subject to change than the ordinary level of thought which pursues its way, rejecting what it cannot assimilate and rebuilding, there is no doubt in a new form of beliefs and practices which well-meaning prophets and reformers had sought to eradicate.

26. Eras of crisis and transition.—(1) As the vicissitudes which we have been noticing break upon the social or national unity, with it disappears the common bond of interest. The law of protective feeling and the absence of a feeling of harmony of aims and interests proceed pari passu with a great increase of individualism. Individualism is already present in some degree where there are individual loyalties or spirit-guardians, or where the man has his own protective genius and does not share that which either is common to the group or is tended by a recognized representative. But the differentiation of society, labour, intellectual and all other work, steadily increases the heterogeneity of convictions, modes of thought, interest, etc.; and, as it disintegrates the thought of the environment as a whole, there is the more urgent need for some new strong unifying impulses. Now, there is always a logical relationship between the character of a people and their religious convictions; thus one may note the combination of fanaticism, gloominess, and fear of divine anger both among the barbarous Assyrians and among the fierce zealots of early Arabia. And, as regards individuals, the character of Charles Gallet, of a Francis of Assisi, and Luther, of a Paul and a John, of a Hesper and an Israel, illustrates varieties of religious character which will be even more varied, though naturally of very different value, whenever individualism becomes excessive.

In other words, where there is excessive individualism, there is every opportunity for markedly different varieties of religious and other strongly subjective convictions, and also for a dangerous amount of extremism, which at other times would be checked and suppressed by the great body of average thought. The experiences, ideas, etc., will always be subjectively impressive, but there will be no cohesive body of objective thought which has a real value.

(2) In the disorganization that ensures coherence of social life and of the fundamental ideas gives way to an incoherence which has a disturbing effect upon the religious conditions. The early social order, in which spirit and mind are both theoretical and practical and their traditional authority; religion tends to be severed from life and is often mechanical or magical. Scepticism, agnosticism, and pessimism find fertile soil; and the needs once nourished by them, and now strong, must be satisfied by other supplies. Old beliefs return, foreign and incompatible ones are added, fanaticism and superstition balance trustful faith and a new spirituality. The vision shifts to the 'next' world, or it ignores it—only the 'visible' is real; there is a deeper insight into social conditions and a fresher attitude to sacred things. Amid many extreme tendencies in all directions there will be found dangerous excesses (cf. the frightful human sacrifice of the Aztecs, gross licentious cults, irrational and suicidal fanaticism, and pantheism, as well as incapability of development or persistence, are not to be regarded as typical of normal religion or life.

(3) Meanwhile there is a general loosening. The divisions which had disturbed and earlier universalities are blurred, the privileges of the few are claimed by the many and become less distinctive, and exclusive ideas are common property and are popularized. In Egypt, e.g., the belief in a life after death, once demanded on behalf of the king, was extended to ordinary men; it involved their recognition of the moral requirements once imposed upon the monarchs, but at the same time the belief was loaded with popular superstition. The general effect of the transitional process with its secularization and disintegration is that all features that certain toys (e.g., the bull-roarer), and of games. The traces of a foundation-sacrifice have been found in the game 'London Bridge is broken down,' and echoes of grim rites lingered on in the old Bombay temple ceremonies. The new holy places are passed. European folk-lore has thus preserved remains of old barbaric religion; and elsewhere traces of earlier organized cultures can be recognized by their incompatibility with the current systems of thought and of new ideas, and the great arts among rude peoples may sometimes be the last fragments of earlier and even more primitive beliefs and practices that are caused by the recurring periods of decay and new growth.

(4) The factors which, taken by themselves, would make for change and disintegration, and those which, by themselves, would lead to conservatism and stagnation, interplay and produce new growths, the inauguration of new ages, periods, cycles, etc. They involve a harmony of the deepest ideas, and thus affect the history of religion. Characteristic of every new beginning is the religious spirit by which, first, individuals and then whole peoples are stimulated and undergo development. When, as in the history of Judaism, Buddhism, and Christianity, the religion of exceptional individuals becomes that of a people, it must adapt itself to many different classes, minds, dispositions, and needs. The tendency then is for the religious and other aspects of life and thought to become harmonious, an adjustment is made between new and old, and the religion is a socialized one, as distinct from theosophical, ethical, or philosophical cults of select minds. Everywhere these transitional periods are profoundly significant both for individuals and for peoples. The line of development is not necessarily snapped; a land will undergo periods of new reorganization, as, e.g., in India and in early Babylon and Egypt. On the other hand, the teaching of the Israelite prophets apparently caused a drastic revolution in the old Hebrew religion, and the absolute conviction that their unrest by a conscious and artificial return to the conditions of a happier and distant past. Centuries later, one line of development ceased.

2 It is now a religion which the diverse minds of the social body can understand and elaborate; the whole environment thus receives a new stimulus, although the steps from the mental needs of individuals to the practical social-religious results in the environment as a whole may seem to mark a retrogression.
RELIGION

with Rabbinical Judaism, while a fresh growth begins with Christianity; but both passed outside the land of their home. The rise of Islam is virtually a new beginning, just as Arabic itself represents the ‘proto-Semitic’ language more closely than do any of the other languages. After mainly in the old credit religions, after the Hebrew ethical monotheism, Hellenistic syncretism, and the conflicts between Rabbinical Judaism and the young Christianity, there is seen a new religion. It is in harmony with the psychology and cultural level of the age; rather than attempting to compete both earlier Jewish and Christian doctrine, which was above their level, and to the remarkable syncretism which in fact appealed only to the educated and governing classes.

The new religion re-introduced God (Allah), not new conceptions of God or new developments in earlier ideas. Yet, although Islam thus begins at an earlier point than Judaism or Christianity, it speedily developed beyond the grasp of popular thought, and, although the lands were, as a whole, culturally above the level of the earlier age, Islam quickly reached a high level, since it was able to utilize in some measure the theological and philosophical work of Greek and Christian thinkers.

In such vicissitudes (illustrated in other ways in India, Turkey, Egypt, etc.) there is a relationship to earlier stages, though under different circumstances, and the earlier stage of a (chronologically) later religion can be more advanced, in certain respects, than a later stage of an earlier one; just as, in the psychological growth of the individual, the youth will certainly represent an earlier stage than his mature parents, but in various respects may be more advanced. Hence the danger of unchecked comparison and of facile theories of evolution, and the necessity of a deeper analysis of the content of religious thought (see § 4 [3]).

27. The advance of thought.—(1) Throughout the social-religious development can be suggestively viewed in terms of thought, the organization and disorganization of every social body corresponding to that of the implicit or explicit ideas which prevail (§ 7 [1]). That there has been some great advance is shown (a) by the fact that, even though cultures and civilizations disappear and sweeping reforms fail, the apparent retrospectively with more or less traces of the influence of the preceding stage. Moreover, (b) although theriomorphic and low anthropomorphic cults may be prominent in times of decadence or relapse, there is not that characteristic totemism which is essentially pre-anthropomorphic (§ 8). Again, (c) the serious crises and hard vicissitudes have put the current ideas to the test and have compelled practical, adequate, and acceptable solutions of the difficult problems of life and thought. Consequently the recurrence of similar types of belief and practice is significant, and more especially when the old reappears in some new form—the new testifying to the positive progress of thought. The crises that bring scepticism and despair also bring new faith and hope, and the history of religion is the repeated justification and re-expression of old values (§ 33 [2]). The death of a member of a totem species was to be deposed; but, when a single animal was venerated, the death of a single individual, or indeed any death, was (e.g., in ideas of rebirth or re-incarnation) the disturbance of beliefs was remedied. But the former case, with its less disastrous consequences, belongs to a lower stage; and, in like manner, endogamy, with its general and consequent limited solidarity, is relatively lower than exogamy, which at once brought new and difficult problems. The problems become more complex as life and thought develop; they take new forms and require new solutions in harmony with the thought of the time. At one stage there is a natural relation between the group and its sacred being; and, when this is viewed as an automatic or mechanical condition, it is psychologically harmful—it is magic. But at another stage it is God who becomes the supernatural being, and, thus, ties the ideas are more advanced, and there is a logical development which, whatever be the ultimate realities, is extremely important both for deducing their nature and for the study of the human mind.

27. The advance of thought.—(2) Where life and thought are in harmony, the profound concepts have each a sufficiently similar meaning. But widely different conceptions—e.g., of the term ‘God’—will represent a very secondary stage, because the terms must previously have been used to denote that which was distinctive and which had a certain identity of meaning for all concerned. Only as complexity of life and thought increases do the differences in meaning and application have counterparts. In some stages where the religious and non-religious concepts become harmonious that the varied aspects of life and thought are in a state of equilibrium. The presence of some body or system of thought at one time guides and regulates, and at another it represses. It is weak or lacking at critical periods of the development of both individuals and peoples. Then it is that men, being without the help of a system tested by past experience, are at the mercy of the new, or perhaps outside the limits of what had been normal. The nature of personal experience is profoundly varied, and of great subjective significance, whatever be its value for the environment. The less normal 1 W. R. Smith, Rel. Sem.3, p. 439. See, generally, G. O. G. Macrop. The Principles of Religious Development, London, 1903.

2 G. O. Moore, Hist. of Religions, i, 174, 194.
experiences and convictions which abound at the critical periods find it possible to resolve them by some sort of psychological process. It is therefore not a question of whether men are religious or not, but of the nature of their religiosity. The essential element in religiosity is not the but religious experiences.

Therefore, in this view, the religious element in the human psyche is an inherent and essential part of the human experience. The question is not whether a person is religious or not, but what kind of religious experiences they have and how they interpret and respond to those experiences. This view also suggests that the religious experiences of different individuals and cultures may be fundamentally different, leading to a diversity of religious beliefs and practices.

IV. RELIGIOUS AND NON-RELIGIOUS THOUGHT

28. The differentiation of thought.—(1) The foregoing sections would, at this point, be properly followed by some account of the steps which lead from the more rudimentary stages of thought to the highly differentiated and specialized thought of modern life (see § 6 [1] ad fin.). But it must suffice to say that the comparative study of religion not merely affects the ethical, theological, and philosophical ideas of the inquirer; it also offers a vehicle for a critical and comparative study of ethics, theology, philosophy, etc. The typical prevailing religious beliefs and practices imply principles, ideas, and convictions which become explicitly recognized and shaped; and represent the experience of observation, and reflection of men of different temperaments and at various stages of the history of thought. As a result of continued application of the comparative method similar fundamental and prevailing principles and ideas can be traced underlying the different religions, ethical, theological, and philosophical expressions. Such are, e.g., the presuppositions or the conscious convictions of the individual's continuity, of his intimate relationship with something grander and more permanent than his brief bodily existence, and of his essential underlying the many various differentiated aspects or divisions of life and thought. Only in the light of such unity can one gain any rational conception of the many complex temperamental and other variations in his life. It is an effect of the elimination of the logical basis, not in any ultimate heterogeneity, but in processes of differentiation with developments in various specialist, diverging, and individualistic directions.

(2) Religious and non-religious thought, therefore, is the comparative study of the phenomena of ecstasy, inspiration, mysticism (pp. xxv ff; cf. also artt. Possession, Schism, and Youse). Here are

1 Cf. M. Aneski, Nakhiren, the Buddhist Prophet, Cambridge, Mass., 1916, pp. 67 f., 72 ff., 95, 97, 100.
involved the rarer psychical states where the individual has immediate realization of a deeper and profounder self, of the one behind the Many, of the Reality beneath all phenomena, or of the immediate and ultimate connection in the universe of all things. In these states of intuition and Buddhist thought, in particular, the problems of the many have been diligently studied; and, instead of the old mythological and speculative elaboration, this search for the secret behind man and his innermost self, and between the outside world of appearance and the ultimate truth, is not in the hands of one forceful by actual experience (§ 13); and efforts were made to analyze and classify (a) the constituents and processes of the more meritorious individuals, and, the end. While Indian thought went its own way, Western thought found its ‘spiritual home’ in Greece, where the problems were apprehended and treated at a higher and more developed stage of development. Consequently the East has preserved more of a primary undifferentiated experience; it has a more comprehensive view of the Reality which Western thought has become highly specialized and ‘scientific,’ the tendency being for the unity to be obscured, if not ignored. Yet it is soon found that no adequate synthesis can be made by combining the results of extreme specialist analysis of experience; there is a unity in experience, and in the experience of Nature, and analysis destroys. None the less, although continued differentiation and specialization tend to destroy the unity and give disunity and multiplicity, it is the more the more of a law of Nature that genuine synthesis is all the richer for the prior stage of disintegration. After a certain stage in the development of a subject, the different specialists are fuller when the mind has had a laborious preparatory discipline, so the deep-searching introspection of Eastern thought is to be the greatest of all the objective, laborsome, but unscientific specialist discipline of the West; and, while the one has a clearer view of the problem, the other has the better tools, for what is fundamental in the development of religion and non-religious thought is the character of the concepts which both inhere and are influenced by the interpretation of experience.

(3) Complexity of thought corresponds to the complex mental structure of individuals who are at a higher and more developed stage than those in rudimentary society. All classifications, whether complex or not (law, morality, religion, etc.), are the result of growth, and they are not stationary. There is that in the conscience and in the ideals of the individual which tests, criticizes, and adjusts the thought, legal, moral, religious, aesthetic, and other and objective concepts, the environment. Such individuals go beyond current conditions and work for an unknown future. To say that they are ahead of their age is to beg the question, for the question is whether, and to what extent, they are able to preserve, or else objective valuable as they are adjusted to and assimilated by the environment. Hence the development of thought in history must undoubtedly be regarded as the collective result of the growth of the individual, as well as of the growth of the ideas, aims, and processes in the whole environment will then represent some of the primeval ‘whole’ which transcends the conscious individuals themselves. At the same time, all existing systems, institutions, categories, and classifications — by which alone rational life is possible — are transcended by the individuals who frame, accept, or amend them. Thus men are unconsciously shaped by processes, certain aspects or parts of which at least they are able to shape; they are an integral part of that of which they are a part or less objective critics. Consequently, the most complete description of reality must take in the developing individual who both controls and is controlled by his concepts of reality. It is a necessary and inescapable result that the ultimate results of the conceptions are imperfect approximations, and consequently even the most complete view of reality would have to be regarded as itself the outcome of a natural process of mental development still un- formed and ungraduated, imperfect and inadequate, in the limitations of the human mind. So, in human development there is a combination of the transcendent and the immanent; there is a process which transcends the man who are consciously and unconsciously a part of it.

29. Fundamental ideas. — (1) Every activity has its necessary conditions and principles, which are indispensable if it is to be successful. Everywhere there are to be recognized necessary fundamental principles, in the various systems of knowledge, of science, of ethics, and of politics. These are associated with various forms, and associated with our own ideas of efficiency, law, order, right, and truth. Every group and every activity which can be regarded collectively as a unit has its unifying and necessary principles upon which success and efficiency depend; consequently, from a system of existence, involves adherence to some indispensable requirements. Liberty and subordination to law, freedom and discipline, are thus correlated, and they also involve ideas of aim and purpose. In practical life the difficulties usually concern the precise requirements, the relative value of the units and their aims, and the relations between these. At all times the social group has acted up to certain obligations which group-unit alone could depend; but often it is only periods of crisis and incoherence that manifest the vital significance of members formerly unrecognized, obscure, or questioned. Now, every genuine feeling of group life was from the beginning, and is the essence of collective privilege and responsibility; the members participate in another one another’s merits and misdeeds. Among rudimentary peoples this unity will frequently include both the gods and the processes of nature (§ 7). Hence, we can feel that the gods are felt to be near at hand, the behaviour of the group is bound up with that of the processes of nature controlled by the gods; e.g., the common belief that great crimes will disturb the order of nature. But the action of the gods in the actual world is a manifestation of the collective unity, not of an inner or one form of a fundamental conviction uniting man with the rest of the universe. Often certain representative individuals are directly connected with the welfare of the people or land, and they are responsible for the safety of the country (§ 25). If the god applies to the evidently conscious men, who is it determined who are ‘the salt of the earth’ (Mt 5)? The fundamental ideas, partly of common responsibility, partly of a profound interconnection, are of more than passing interest, as they concern the ideas implicit in ‘magical’ control or in ‘religious’ prayer, in explicit curse or appeal, and in vague denunciation and adjuration, in instinctive ideas of retribution and recompense, and in emotional, aesthetic, and ethical ideas of man’s kinship with nature or the universe. And notably in law and justice, and in the instinctive resistance to what is felt to be inimical to man’s welfare, the individual is no longer an ‘individual,’ but as his ‘brother’s keeper’ implicitly associates himself with the progress of the universe as a whole and with the uplifting of its principles, in so far as he realizes and can apply them.

(2) There is a continual rediscovery of a universal unity and interconnection which specialized thought must necessarily ignore. But confusion arises when concepts, the result of such specialization, are criticized on account of what they lack, as, e.g., when nature is spoken of as impersonal, blind, and morally and spiritually indifferent. Now, in so far as concepts of nature have been based upon phenomena where personal, moral, and spiritual attributes are irrelevant, or of little signifi-

Conversely, an examination of customs, light can be thrown upon an otherwise barely recognizable social system (e.g., W. R. Smith in his Kinship and Marriage in Early Arabia, London, 1903).
what in their sphere corresponds, in a rudimentary way, to the attributes that we apply, in another sphere, to adults. Similarly, the processes of nature are the 'natural' counterpart of the adult process in the sciences. In the 'natural' and the 'spiritual' laws reflect essential similarities differently shaped according to their realm. Yet, in contrast, a law from the essential part of some effective process or activity, while, regarded subjectively, it is our most conscientious and deliberate effective for regularizing phenomena. True, the concept law has undergone different vicissitudes as nature and human society are considered separately, but it appears to be the fact that in the 'natural' law there is involved the explicit recognition of some unmanifest and effective principle, which hypothetically is not real in a form that it is real.

1 (3) The objective value of every group or activity lies in its relations to others, and ultimately, therefore, to the whole of that of which all of them are part. This applies equally to principles, ideas, concepts, and theories; their real value is felt by their relation to a larger and than that where they are first recognized. So the value of all that can be treated as a unit or whole lies in its place in the ultimate whole; and in practical life there are conflicting theories, activities, principles, groups, and sects. Moreover, if there is the ultimate realities are incoherent and discordant—which is clearly irrational—or there is a final solution which we shall judge rational. Of such conflicts those between law and mercy, between men's and the others, may be specially mentioned. Yet the highest love is compatible only with the strictest regularity of cause and effect; and God's forgiveness of the penitent sinner is not arbitrary, but in conformity with some greater law, some profounder order, which, in the individual case, is manifested. Moreover, the realm of nature's regard for the whole lies the hope of him who is an integral part thereof; for by nature's disregard of the individual we mean the conflict between our largest 'scientific' concept of order in the universe and the ever-developing individual who can command Nature only by obeying her. In either case there is a higher explanation, such that the absolute uniformity (order, justice, or love) is for the ultimate advantage, happiness, and consolation of the universe. By law, order, and justice are the outward and others may suffer by rebelling against it. To pursue this further would be to turn aside to the burden of the law, the question of free will, and the need for mediation and atonement.

2 (4) The responsibility of the individual is seen in the fact that, just as the total conditions at any time are the result of everything that has preceded, so all men are jointly and severally contributing to the good and evil conditions of the future. Consequently, the religious aspect is particularly significant, whether when evils and wrongs arouse the cry, 'Can there be a God to allow such things?' or when men more or less instinctively feel themselves the guardians of justice and order in the universe. Moreover, the individual is the underlying postulate. All insistence upon the worth of the individual is, therefore, a deeper and more personal explanation of the fundamental interconnexion of the universe, of the autonomous value of all the constituents, and of the entire dependence of the efficiency and welfare of the whole upon all the constituents. Throughout, we have to seek a rational explanation; for, as apart from the question whether the universe is ultimately rational, only by treating it as such can we find an explanation, and, if we can, of mental suicide, and develop in the future as we have in the past.

The most perplexing vicissitudes lead now to

1 Another important example of specialization with tendencies to forget the differentiated aspects is afforded by the contrast between the terms 'psychical' and 'physical.'

2 Cf. esp. the ideas as expressed in Mt 10:16f., 12-14, Lk 15.

doubt, skepticism, and despair, now to some firmer and wider conception of life; but the latter has been the line taken in the history of progressive thought. Self-sacrifice and renunciation of all that is most obvious and tangible find their rationality as the expression of a greater reality than the known. So, too, the frequent disturbing success of evil is a guarantee, not of lawlessness, but of the success of perfect good; for, when evil succeeds, there are, on analysis, elements of success—although for us at times factors which have not the elements of permanence and progress. And, when examples of this are clearly realized, one gains a more rational conception than if good and evil are treated as absolute, conflicting entities. The ultimate must be regarded as rational, else there can be no ordered life or thought.

30. Myth and knowledge. (1) Ideas of the fundamental unity of the universe are implied also in the remarkable initiative and other ceremonies where men represent spirits, gods, etc., or perform the desired 'natural' processes themselves, or otherwise act on the assumption that the effective controlling powers exist. The term, 'myth,' which for rudimentary thought, or recital or description of processes or operations is often felt to be potent, so that, e.g., myths are not things to be lightly or irrevocably spoken, because they arouse the sacred beings to whom they refer. In the commingling of stirred and sacred events in the past has a very real value for the future; it stimulates appropriate feelings and ideas, and gives a new and intense vividness to the reality of the sacred beings who are the sources of action. Moreover, the very existence of 'natural' myth and mimetic representation, and to these processes of absorption and identification can be joined the deep mental concentration and the effort to realize for oneself beliefs and truths. In this way ideas are realized, if not realized; they are so assimilated that, e.g., in ancient Egypt an effective means of escaping the perils of death was to identify oneself with some saving god who had successfully overcome himself. From the myths and traditions we derive the inner and outer reality, the sacred beings, of the universe. Which is the easy step to the esoteric aspects, the secrecy of all knowledge which is in any way potent. Not only are there innumerable examples of the fact that knowledge is power (cf., e.g., the possession of the name of a god), but the means and method of knowledge upon the individual is exceedingly instructive from the religious point of view. The inter-relations between knowledge, wisdom, reverence, and the 'fear of God' are, however, disturbed by the progress of thought and by the usual arbitrary and subjective distinctions between sacred and 'secular.' None the less, it will be freely admitted that moral and ethical qualities (sincerity, intellectual honesty, patience, sobriety, moderation, etc.) are requisite for the best 'esoteric' or 'scientific' views. In this way the whole self, and not a human intellectual machine alone, is involved. Thus the complete outlook (Weltanschauung) of the individual becomes, so to say, the mathematical function of his current stage of intellectual, ethical, aesthetic, and
RELIGION

spiritual development; and, in so far as 'like is known only by like,' the complete concept of reality requires the complete conceivable development of personality.1

(2) All myths and all conceptions of the universe, even the very complex and multifaceted (see p. 600) of those who (a) add to our knowledge of reality; (b) illuminate the mental structures of the individual; (c) contribute to the further study of the way in which the mind experiences and interprets its experiences, and thus point to the limits of the mind from which it can be logically apprehended. The emotional, poetical, metaphorical, and undifferentiated characteristics of myths correspond to the psychical characteristics of the whole of those who believe in them or believe in them as such. The spontaneous mythologyizing, anthropomorphizing, and persification is only the further development of the religious and the universal. The human mind, in the course of reason, logical, and intellectual effort, is objective and impersonal, and to avoid irrelevant or misleading concepts. While myth is 'personally' interesting and intelligible, it is, when at its best, 'super-personal'—like the ballad—representing aspirations, ideas, and modes of thought that are collective, national, or universal, and not merely individualistic. In course of time the myth may become a fixed, authoritative statement, embracing the dogma of the nature of right and wrong, and perforce the faith, fortiy the sceptic, and even excuse the wrong-doer. It may then pass from being 'super-personal' to 'impersonal,' when it is no longer in touch with the people. There will be a failure to analyze and distinguish the permanent from the impermanent features—although this distinction can be made from the purely logical point of view by any theory of religious or other thought against their opponents. The moral, religious, or the like, on the one hand, and the rational, logical, subjective and theistic, on the other, can interpenetrate; it may be arbitrary and subjective by myth, but it tends to leave out human personality with all its richness of feeling and potentiality. It is the latter which is in the psychopathic relationship with the experiences of the gnostic man. It will acquire a false 'impersonal' objectivity, and become dogmatic, rigid, and unchangeable. Hence, although the idea of religion can exist for a time side by side, sooner or later the question arises of the validity of its several concepts and on their value for the further progress of personality.2

(3) The course of thought is directed by what is known, and it is in terms of familiar experience; so, e.g., cosmical processes have commonly been thought of in terms of human vicissitudes (birth, conflict, marriage, death). In the course of thought, on other levels, liberal, democratic ideas, sovereignty, or an age of mechanism will be reflected in both the religious and the non-religious thought.3 Conceptions of the universe are influenced by the current cosmical, and vice versa; and in the development of thought the efforts to explain experiences and phenomena often proceed without the necessary reference to the primary data themselves. The psychological and logical paths then diverge, and the religious and the non-religious can be illustrated in the varying personal and impersonal conceptions of Providence, Nature, God (cf. the word 'agency' itself, used of both process and agent). The result is that isolated religious terms can be used to express aspects of the subjective content, although there may be noble and quasi-religious feelings outside the religious phraseological framework, and associated, e.g., with art, science, or humanity. The expression of feelings, it is true, may seem to pertain to the religious, yet, from a point of view which must be reserved as primary and ultimate, religion must be treated as sui generis and distinctive (§ 33 [3]).

A belief in a life after death has no ethical or religious value in itself. It is not the same as the belief in a henotheism or the polytheism which most practical religions have. The word 'God' may express more of a logical or intellectual necessity than the personal experience of a Supreme Being. Yet the experience of some transcendent 'Presence' is not necessarily interpreted as that of a deity, and men have had their daemon, guardian-angel, or some psychologically effective experience of a personal presence in their conceptions of reality and the thought of the environment. The interdependence between experience, interpretation, and development is the development of development. The development of the idea of such words as Heaven, swnsiva (see E.B., or 'Elements'), the Chinese Lao-tse, and the Buddhist Buddha and the various personal, ethical, and religious conceptions of Buddha himself. A simple and typical example of development is the passage from the crudest or most common conceptions of Buddha to the conceptions of Buddha in the later Buddhist religions or magical according to the precise ideas that accompany it (cf. p. 674, n. 1). If it persists as a mere rite, the efficacy lies merely in the act itself, not in the psychological state of the magician. Proceeding to the other extreme, men avoid the ceremonial, or at least the ritualistic aspects as a piece of worldly luxury, and misguided religious delusions in atoning and tormenting the body. Again, the utilitarian purpose can be retained and the religious aspect ignored, and this secularization is very common in the history of culture; cf. the rise of astronomy, anatomy, and medicine from the astrological and more or less divinistic to its more strictly naturalistic and so styled. Thought cannot be treated atomistically, and the fact is that purely non-religious thought can or cannot find a logical place in a religious system, and vice versa, just as two departments of natural science may be in some respects entirely separable, but are often so intertwined that the problems of the one cannot be severed from those of the other. Now, the evident view of all the varying relations is the individual mind and the connexion (such as it is) between the entire contents involved in its concepts and ideas. Differentiate as one may the religious and the non-religious, the moral and the non-moral (where morality is irrelevant), and the emotional and intellectual, all these find an ultimate common ground in the intellectual, and this can be the case if the final aim of science is not the perfect systematization of the many diverse tendencies and departments of thought, but the systematic treatment of the systematizations—of the metaphysical, the philosophical, the theological, the scientific, and all other minds rationative and naive. Co-ordination of different legitimate interests, and not a perfect homogeneity of interests throughout will then be the goal.

31. Immanence and transcendence. (1) Characteristic of religion is the combination of the known and the unknown, the natural and the supernatural, 'this' world and the 'other,' immanence and transcendence (see art. IMMANENCE). Despite the fact that there has been a member of each pair, they are the outcome of experience; and, while the difficulty has been to give a rational statement and justification of the experience, counter-criticism and objections, often of a religious or philosophical kind, overlook the prevalence of similar types of thought and effort and attack the particular forms in which it is interpreted and presented. The members of each pair are correlative; and therefore, as regards the last, the conception of immanence or of transcendence taken separately has no meaning or progressive value. The belief in a transcendent Deity has led to religion falling into the hands of the few; the God of the State or of the Church has seemed remote from the ordinary

1 So, too, the great religious and other leaders, through their own total personality, have enabled their disciples to gain deeper and more powerful conceptions of reality.

2 Cf. A. G. Hunter, The Religious Impulse: Four Stages of Greek Religion, New York, 1912, pp. 121 f., 115, on the conception of Fate as a goddess just at a period when rite was in a phase of the same; and for a similar development of a religious theme, see A. A. G. Hunter, Religion and Race, London, 1916, esp. p. 190 f.

3 Cf. A. G. Hunter, "Mood, Tone, and Climate," Four Stages of Greek Religion, New York, 1912, pp. 121 f., 115, on the conception of Fate as a goddess just at a period when rite was in a phase of the same; and for a similar development of a religious theme, see A. A. G. Hunter, Religion and Race, London, 1916, esp. p. 190 f.
individual, and the latter has relied upon some intermediary, or else in some more private or individualistic cult has found an outlet for that which the institutional religion would otherwise have guided and developed. In the course of this process, ideas, ideals and experiences clearly undergo profoundly important changes. Again, in the Deism which makes God a supreme Majestic Being with no place in ordinary life and thought, He becomes as remote as when He is the unknown or unknowable God. Thus the concept may be a historically intellectual, and without the immediate personal significance which it has when God is felt to be near at hand. But, when in many forms of popular and personal religion God is felt to be near, this feeling of His greatness can subsequently be lost, and then the gulf diminishes between the frail individual of a few decades and the Supreme Power of an inconceivably vast universe. Through the experience of immediacy there is no need for any external, ceremonial, dogma, or mediator; even reverence may disappear. Thus both immem heacy and transcendence have their extreme logical sequels. The God who is solely transcendent becomes remote and unknown: to say that there is (:.:,) some God, or that we must know all about the infinite and incompleteness, but the next step is to be unconscious of the gulf, and then to ignore how the experience of it could ever arise and persist. On the other hand, the conception of the immanent God is maintained, and so can lead to the absence of any religious distinctiveness in the term. In this way the distinctively religious content of the concept God is lost; and, while it is easy to trace the secularizing process, it is impossible to explain how the psychological value of this supreme concept, unless some immediate personal experience is regarded as logically primary. The history and vicissitudes of the concept become intelligible only if the immanent and transcendent aspects are retained, only if there are ultimate realities of the universe—of human existence—of which these apparently paradoxical terms attempt to interpret the experiences.

(3) The religious ideas of immemence and transcendence are a fundamental part of human nature, and are but the most intense form of what otherwise is not peculiar to religion. They are also the basis of human relations (e.g., between parent and child), where complete understanding and friendliness are regarded as the best means of psychic comfort (cf. § 32). Moreover, there is a similar co-existence of the attitude to those great human figures who are not idolized by those who admire them in the sense that, when at once on a much higher level than ourselves, yet are felt to be thoroughly intelligible and near to us. It corresponds with this that every individual can gain a more vivid realization of himself and a profounder and more potent personality when he strikes and subordinates himself to that with which he identifies himself, so that, in apparently becoming one with the environment, and therefore ‘lost’ in it, he rises above it and transcends it. It is the paradox of religious and other thought that, according to the viewpoint, the processes of the universe can be described individually, so that men have no need of the concept God, or ‘in himself, and have our God.” and the experiences of immemence and transcendence co-exist.

(3) The key to the correlations, mentioned above, lies in the progressive development of the individual, and in the phenomena of imitation and attraction which are familiar in personal, religious, and non-religious experience, and are significant for personality.1 Development follows in man’s striving to satisfy needs, reach goals, follow ideals, attain some psychological equilibrium, or bridge some gulf. It is essentially no passage from the known, but a clearer or closer approach to the unknown, that a clearer or closer approach to the unknown.

1 Cf. e.g., the Invitation of Thomas a Kempis, and the well-known words of St. Augustine, ‘Lord, Thou hast made us for Thee and art good: and our heart is restless till they rest in Thee’; also the frequent testimony of people who have attained to degrees (‘One step enough for me’) towards a Supreme Personal Being or to some personally vital ideal or goal.

newer apprehension of that of which one was already in some degree conscious. But here the process of attraction, when there is a successful issue, is readily followed by a satisfying and complacency which would impede further progress. Not, however, the intellectual development (e.g., the research after some hypothesis), but most significantly in personal relationships of all kinds, can the psychic gap which formed the attraction give place to indifference. Yet, however complex these processes of phase, transition, or development are not objectively complete, and especially in religion there prevails a spiritual pride, arrogance, or consciousness of ‘election,’ which is as harmful for the further progress of the individual as for religion itself (see § 32). Even the saint has still to strive and may yet fall; and various attempts are made to determine the final goal of human development, and to distinguish, e.g., between conversion or baptism into a new life and the state after death (p.r.), or to determine whether the final stage is reached immediately after death or after some purgatory.1 The most intense consciousness of the ultimate realities appears readily combined, now with a greater complacency, but also more quickly with that which is uninterpretable, unworldly, which the very nearness of the ‘divine’ enhances the frailty of the individual and his entire dependence upon God. Whatever be the best formulation of the experiences and their consequences, what we have called the whole development of the individual is at stake, for all development depends upon the possession of some transcendent object of attraction which shall call forth the utmost from the individual and be for the completion of his being.

(4) All ideas, aims, needs, and quests are potent for personal development; but men’s varying attitudes to some manifestation of ‘divine’ discontent, as it is felt to be, illustrate the difference between its singular impressiveness for the subject and its worth as viewed from the outside by others. Personal development is due both to the individual nature in its entirety and to the total environment. Thus the child is influenced in varying degrees by the toys, playing-mates, etc. His potentialities are actualized and shaped by the ‘object’—by its psychological inferiority, equality, or superiority, and by its ability to respond to the child and to shape his growth. There is a subjective feeling of personal relationship even with the toy and the animal, as distinct from the objective personal or impersonal character of the ‘object,’ whatever it be. So, too, in the history of religion the centre of religious beliefs and practices has been inanimate or animate, totem, spirit-guardian, or ancestor; and there has been throughout a (subjective) feeling of ‘personal’ relationship, although in course of development we pass (objectively) from the totem, fetish, or idol to a Supreme Being. Whatever be the actual reality, whether a Supreme Power—or any process outside man—takes in shaping this development, it is at least possible to recognize that men’s ideas will be shaped differently according to (a) their empirical knowledge of the totem-animal or spirit, whether it is derived from an earlier race or the conceptions which they entertain of the sacred object or being, whether visible or not. The latter, (b), is fundamental, for in both religious and non-religious thought development depends on the fullness of the concepts used.

(5) It is of course evident that neither the empirical objects nor the conceptions of any object can in themselves account for the phenomena of religion—it is precisely when the totem is
RELIGION

merely an animal, when the once defined ancestor is merely a dead man, or when the god is merely a name or an intellectual term, that the distinctively religious colouring is wanting. It is his case, first, that primary, and what is impressed upon the consciousness of the individual is that which is logically anterior to the phase when the process of spontaneous inspiration is wonted. The correlative (illumination and transcendence, etc.) could not arise except together and in some sort of system, and there is no mark of the evolution of the spiritual yet unknown and unattained, as apart from what is already known and attained, else there could be no consciousness of any epoch of the process (or any other epoch) which may be a part of some ultimate whole; for one can attend only to processes of which he is informed, is provided with duties and performed with signs present only the results of his own individualistic and partial development. By means of objective comparison, therefore, something is known of the origin of the religious states in which men collectively or individually feel to be essential for themselves or for the universe. Whatever the complete totality of experience and consciousness may be—and this would at least require the most ideally complete personality—exhaustive classifications can be attempted (e.g., the categories of the Good, the Beautiful, and the True); and these point conclusively to the objective inadequacy of any conceptions of the religious which resemble (because they give partial satisfaction) the objective inadequacy—such that the sources of the conceptions of this world and of the other lie within the scope of the single individual, and the character and interpretation of the rarer states are conditioned by his prior development (cf. § 14 [1]). Individuals will usually connect the rarer states with the objectively divine (cf. also ‘divine’ discontent, above, § 31 [4]); but the social, intellectual, and genuine states are only that part of the ideal and the lower of these states is prevalently tested, and every claim to inspiration and other divine privileges is, sooner or later, submitted to intellectual, practical, social, and ethical tests. Good and bad mysticism, true and false prophetism, beautiful spirituality and harmful religiosity exemplify the necessity of objective tests; and the environment or the course of history enables one to determine the result. Thus the supernatural and unknown in religion are not necessarily taken at their own valuation; the average prevailing type of mind insists upon passing its own judgment upon the data, and the holy is so, not because it happens to survive or is merely imposed upon men (cf. the notion of ‘universal’ type of social practice, the ordinary one between the mind, of its own will, recognizes it as such. The natural and the supernatural, the known and the unknown, come within the horizon of the individual consciousness, and in the lengthy history of religion, the individual opinion, spontaneously recognizing the necessity of distinguishing between good and bad religion—a distinction which again and again individuals are genuinely unable to realize.

The character of the experiences of the ‘divine’ is the consciousness of uplifting power and strength, such that the self-confidence and mastery which characterize ‘magic’ have a certain kinship with religious confidence and conviction. But ‘magic’ has no place for transcendence; and

a very striking feature throughout the history of religion is the recurring insistence upon the gulf between the human and the divine—an emphasis upon the transcendent rather than upon the immanent. In religion, generally, the two fundamental conceptions of mana and tabu (p. 57) are correlative: one without the other, the power which a man may, can, and should utilize and, on the other, the indispensable heed and caution; for mana without tabu becomes magic, and tabu without mana can lead to grovelling superstition. This co-existence of the two has become, in the development, a spiritual experience which is experienced for the two. It is extremely instructive to notice the data preserved in the Bible, for the religions of the Semites, as opposed to Indian quietism and pantheism, and to Chinese practical ethical religion, constantly manifest a passionate reverence which in its religious aspects will at one time insist upon the might, jealousy, and arbitrariness of the Deity (corresponding to the psychology of the old Oriental despot), and at another will emphasize His favouritism for a people or for an individual who is the divine instrument, representative, or incarnation.

The data in question are of the ‘fall of Lucifer’ type (Is 14:12), where the gulf between man and God is arrogantly crossed, and the man who, in God’s estimation, as a conviction of divine privileges is very intelligently balanced with ideas of greater responsibility, as in Am 3:1. Yet the religious data, profoundly vital as they are, are in harmony with the non-religious, the psychological (or rather physiological, or natural), and with a distinction in the idea of the gulf to be bridged, in the detestation of arrogance, of conceit, and of δικαιοσύνη, in the need of modesty in good fortune and success (even to the feelings underlying the ‘evil eye’ or ‘jealousy’), in the importance of the individual, not for granted or in trinity with one’s deepest realizations and ideas, there is a recognition of the vital necessity of dignity, respect, reverence, as regards both oneself and others, in order that personality may develop wholesomely. These disciplinary and dynamic features of human nature are only more comprehensive, personal, and ultimate in their religious counterparts, and they tend to form a system, and that a dynamic and not a static one.

(5) Among rudimentary peoples the initiation ceremonies take place as a part of normal life, but at a critical phyco-psychical period provide him with regulative and steadying ideas. Social-religious beliefs and practices cover the matters of everyday possibility, which, however, are of the deepest significance for the individual concerned (§ 6 [1]). Where the individual is thrown back upon himself, so to speak, in all the great crises and occasions of life, a way is found between what would be utterly indifferent, callous, and animal-like and what would tend to be ultra-sentimental, emotional, or ascetic; for either extreme would preclude practical life and could not long persist. Thus, although the ‘other world’ is so near that death is gained, yet to act heedlessly upon this would be dangerous. Moreover, the intuitive feeling of disapprobation, fear, and dread as regards suicide is confronted with an intuitive appreciation of all self-sacrifice. Killing in war and murder are commonly distinguished even among those who condemn them, and with average recognition of what is essential for continuous progressive movement, and the conventions touching sacred and delicate matters afford

2 Viz. the story of the expulsion from Eden (Gen 3:23f.), the king of Tyre (Ezek 28:12), Nebuchadnezzar (Dan 4:2-31), the tower of Babel (Gen 11:1-9), Moses and Aaron (Num 20:24-28), Is 2:24, Ps 109:27; cf. also the stories of Nabod and Abihu (Lev 10:4-5).

many examples of one aspect of a self-educative and discriminative process whereby life and thought are systematized so that with every new growth of consciousness the individual may be able to develop in a way useful to himself and others. Things may be true (e.g., God's forgiveness of the sinner) which can also be understood as capable of existing in isolation, and the system of which each is part goes to the depths of the individual. Therefore the individual is now infinitely small and frail, and now one whose beliefs and principles are taken as with the greatest and most ultimate realities. An aspect of the imaginative or irrational save as a part of some larger existence, and the severity of its discipline unjust as save as a training; the audacity of man's aspirations would be childish or outrageous save as a genuine thought up to its ultimate effective forms. The idea of not merely cognize to those implicit or explicit in non-religious life and thought; they also represent the apprehension of realities which are nowhere set forth in completely systematized form, but which appear (when spared the variation they are not, and the variations are many independent and variously differentiated forms. There is not some single body of truths 'imposed' upon men from without, but there are truths of which men become conscious in their own individual, non-worldwide, temperamental manner, and according to their own development and that of their environment.

The common psychological effectivity (a) of artificial means to produce mystical and similar states, (b) of magical beliefs, and (c) of the actions of all the childish or superstitious or irrational brings up again the difficult question of ultimate effective forms. Whether the answer be in terms of new or not, conceptions of ultimate order, power, and rationality are involved; thus it is 'God' who sees into the hearts of his children, grants their [true resides, consents and guides them; or it is 'the nature of things' that what is effective is so far reasons, which, if we only knew them, we should judge rational. If the absolutely irrational or evil succeeds, there is no foundation for ordered life and thought; only the postulate of an ultimate and absolute good and rationality of nature allows any systematization of experience, and our human nature is ultimately deceiving us if this postulate is not true and final (cf. above §4 & 5).

Moreover, it is evident that many beliefs and practices (e.g., in metals and curses), however irrational they may appear, are effective because they are like forms similar to the "true". The whole system of cause and effect becomes self-supporting, as it were, and cannot be explained. The conflict of the credulity of a past age is not so helpful as attention to the efficiency of the system in which one lives—the dead must be left to bury their dead. Besides, condemnation is not only the recognition of a standard by which one may be judged in one's own turn; it is due to a new development of consciousness which is significant for the individual himself. Finally, all condemnation seriously affects one's conceptions both of theodicy and the rationality of human nature and of the ultimate order of the universe; the choice lies between absolute justice and absolute chaos, but the latter is logically unthinkable.

33. The dynamical aspects.—(1) Fundamental in development is the explicit recognition of evil which appears not repressed but expressed and put in all that which can no longer be done with impunity. When good comes out of evil, either evil has not been justified—punishment—and this would mean an ultimate rational universe—or, in the midst of a complex process and among all the present vicissitudes, good is soon to predominate. But to do evil that good may come is to assume a complete knowledge of and power over all the processes or factors that are necessary. 1 When, therefore, the religious hope is implied that, as apart from man's own activities, the Supreme Being will ensure the cooperation of the totalities of conditions necessary. The whole system of cause and effect is involved, and it is precisely in times of difficulty and crisis that, while the immediate future is non-human (and so divine) factors always persists. If the convictions are sincere, the subjective and objective aspects can be viewed separately. The unanswerable prayers, and other instances of defeated hopes, are not necessarily followed either by despair or by unbelief; there are subjective psychical transitions and developments which are often more recognizably significant for the individual than would have been the objective fulfilment of the particular request. Throughout, the sincerity of the individual is at stake, and various developments are forced as his faith becomes blind, as his behaviour becomes 'magical,' or as he seeks to determine what processes are 'natural' and what are 'superstition.' God's actual or explicit convictions of Him, and of the inevitable processes of nature, is a mark of unsystematized thought which paves the way, not for simple faith (which has no theory of causation), but for crude superstition, or for the strictly rational and other—naturalistic and materialistic conceptions of the universe do not logically permit those subjective notions and convictions of the ultimate reality which are expressed in more or less religious phrasing. The true nature of the conceptions of God's power or existence, if claimed to be rational, must be in harmony with those which he has of 'natural' processes, and vice versa. So—mention only one point—it becomes irrational for the individual to protest against conditions without inquiring into the nature of that freedom and liberty which he claims for himself; he has first to see whether the fundamental principles upon which he is entirely dependent are not those which are working in that which he is condemning, and whether or not they are not the symptoms of another form of that upon which he himself relies.

(2) Men can justly be judged in the light of those principles which they consciously recognize, although their beliefs and practices imply a profounder system in which they are unconsciously participating. The growth of consciousness breaks down the current conceptions; they are no longer taken as starting-points, but are first tested in the light of the individual's own experience. It is a 'deeper' self that criticizes the categories and thoughts of its environment, and all profounder experience transcends them and commonly finds them inadequate. Development results, not merely in the use of new terms and formulas, but more especially in the subjective changes, the attitudes, points of view, the contents of one's terms, and in all that fresh flow of experience which language seeks to interpret and express. Now all deeper feeling compels a certain modification of the assumption and expectation of thought, and all sincerity and intellectual honesty must be based upon the realization—although unfortunately the data which are not readily amenable are easily handled in some new Procrustean manner (see § 15 [2]). In the long run sincerity and goodness are the more likely to be the marks of the reconciliation after a quarrel does not justify another quarrel to reproduce the experience, nor, in the religious sphere, does the 'grace abounding' for the penitent sinner justify continence in sin (Ro 8:35).

VOL. X.—44

---

1 The pragmatic test—that the religious truths can be proved by the individual—is so far conclusive as against the objection that bliss and futility is all that every man can accomplish in this life (the dollar in his pocket) must exist. The religious argument is that there are ultimate and absolute good and rationality, which can be elaborated and described, and which under certain conditions can be put to the test, so that the description (seemingly intelligible) and such that it can be put to a living experience in another.

2 The following is a simple case: In 1 S 20:20-23 (a) David commits his cause to Jahweh, (b) the guilty Nabal is convinced, and (c) the immediate common ground is the body of conceptions shared by David and Nabal. But the psychological effectiveness of witchcraft, black magic, etc., rests equally upon the system of ideas shared by the parties concerned.
potent than what is cygymal, indifferent, and merely conventional; and throughout its history, whatever 'higher' alternatives were recognized, the latter alone caused progress. Were there no sense of the lower and higher, there could be no consciousness of progressive development. The lower and all less must lead to deterioration or progress in any rational universe, while the higher constantly elude an immediately natural explanation, and manifest themselves in self-sacrifice, remuneration, self-denial, faith, and confidence in the future or the next world. Higher factors are both the religious and the non-religious life; and either one must infer that progress is due to the apparently irrational side of man, or—since this again, allows no ordered conception of the universe.

The tendency of religious thought is to extend philosophical and naturalistic principles to the whole. 1 It is impossible in the long run to sever human activities from those throughout the entire universe, and, although it is necessary to differentiate for practical purposes, the differentiation is never consistently maintained, and there is throughout a virtual co-operation of phases not 'divine' and 'natural,' 'supernatural,' and 'cosmical' (cf. § 28 ff.).

(3) The factors that make for progress and development do not exist in isolation and cannot be severed from the field where they are manifested. Further, all that makes for permanence and progress must form the basis of concepts, not only of religion, but also of science, art, ethics, hence, though religion in the course of its history has had very many, extreme, unhappy, unprogressive, and imperfect manifestations, there is an underlying and essential core of thinking which has been, is, or will be. Men's ordinary working concepts are based upon the presupposing and average conditions; and the progressive tendency to concepts is apparent in determining what to select for its purpose, not only the process inevitable, but each concept has to be adjusted to the rest of the system of thought with which it belongs. And, further, not only is the process of selection one of which men are primarily unconscious, but concepts will have characteristic 'ideal' aspects, with standards and criteria which enable men to realize approximations and defects. The origin of such 'ideal' aspects and criteria is the result of inquiry, the cause in the spiritual life there is a frequent conviction of a 'fall,' a real experience which it has been difficult to express except in terms of a 'fall' or metaphor. The reason, perhaps, is that man is gradually rising from a state of maximum ignorance toward a state of maximum perfection, where the man 'fallen,' in the terms of the Biblical narrative. None less the consciousness of a certain deterioration and decadence is fundamental, and is the principle of 'believe the other is to be within his capacity. The experience, which has its spiritual, aesthetic, ethical, and other forms, is bound up with the principle of attraction and with a recurring consciousness of or vision of some great worth, existence, and reality which can and must be recovered.

Actual development is not to be described as from a part to a whole; but, like that of the child, it is from a rudimentary system to one less so (cf. § 23). Nor can thought be traced back historically to simple ideas, but only to rudimentary systems of what may be called 'psychical ability.' Yet even here the legitimacy of the term 'psychical' will be questioned, and it may be observed that what can be regarded as developing (e.g. 'mind' or psychical ability) will go back to some stage where it is non-existent, or where we are in another realm of conditions, or where our present thought cannot follow. Either the vital force as viewed as the nature of our concepts, or, again, the limitations of our experience will precede the solution which we seek. The limitations of the mind and the limitations of the particular limitations of experience; the mind can determine the conditions of the solution, rather than the solution itself, of some great problems of which it becomes aware. Thus the question of the origin of religion can be treated only as a problem of method or logic. It is, as R. B. Braithwaite puts it, 'life.' Any question that appears in the history of the universe, the prior situation was such as to permit the development (cf. § 673, n. 1), and it cannot be conceived in isolation from the present or the future. For in its isolation the mind can determine the conditions of the field in which it is itself recognized. Neither in the individual nor in history could the obviate 'difficulties upon the field from which He had before been isolated. The mind is unable to pierce the ultimate realities themselves and, from primitive cosmologies and conceptions to the latest philosophical and other syntheses, it is confronted with a similar difficulty—

experience of the absolute transcendence and priority of a Supreme Being or Principle, and the necessity of some conception of the actual steps in the differentiation of the universe. Where the differentiations lead to the differentiation of a non-differentiated unit; but so far as our evidence goes we reach more and more rudimentary types of differentiation until the process of analysis becomes impossible. The reason of the system, and consequently it is important to distinguish between the static, subjective, and the dynamic, objective, and the development, and a dynamic one, which, if true to the history of the individual and the race, would embrace all the constituent or differentiated conceptions of man (e.g. the State, Church, etc.), which cannot be regarded as eternal. There are progressive steps from ideal to ideal and system to system, like the conscious evolution of natural conceptions. We can distinguish the vision and the reflection upon it, the ideal in the subconscious and the mind's process of selection, the ideas, the idea-forms, the method, and all that 'organizes' material, and the material itself. There is, however, a tendency to give each the same status; rather, one must select and so also to the plan or purpose which appears to precede the development, but continuously undergoes development itself. This tendency reflects itself in static conceptions of an absolutely prior vision, a heavenly origin of the soul, primitive archetypal ideas, some primary all-containing concept or principle, and a pre-determined (static) reality which is slowly being recognized, and of which new portions are being discovered from age to age. On the other hand, there is in point of fact a continuous process which takes us back to earlier stages where thought can no longer follow, and it points forward to an ultimate principle that will blend with them all, known for this is characteristic of the growth of consciousness.

34. The rationality of the unknown.—(1) It is wholly in accord with familiar religious conceptions of the universe, of the 'divine' and the 'natural,' of the 'supernatural' and the 'cosmical,' that, a for a future, that human thought must not expect to comprehend the ultimate truths. If man cannot see God and live (cf. §§ 18 [1], 32 [2]), if perfect Truth is with God alone, he is confined to his thought, although the significant fact is the mind's sure consciousness of its being limited. Hence what is truly rational is not the ignoring of the unknown, but the realization of all that is essential for every new step of development. Just as our knowledge of anything in space and time is fundamentally incomplete if we ignore the environment, prelude, or sequel, so the true point of view of human life must be based upon the most comprehensive ideas, and one must 'think universally' (cf. p. 677, n. 2). The term 'supernatural' signifies that there are unfortunate associations, and need careful definition, but they can be used rationally when they imply a God who is not arbitrary, but One whose laws transcede those of which men are cognizant. A disbelief in the supernatural may come from a justifiable fear of only assume an ultimate impartial law and order in the universe to which certain alleged phenomena would be entirely contrary. While an unchecked credulity lingers progress of thought, by giving facile explanations of all truths, an irrational incredulity, on the other hand, can be as repressive as the typical rationalistic treatment, for both Burke inquiry or offer facile explanations of no rational or scientific value. The issue is faith in a Supreme Personal Being who is absolute justice, or in a supreme impersonal process or principle. In the history of religion now the personal and now the impersonal ultimate stands at the head; and all exceptional occurrences and phenomena which disturbed current convictions have led typically to wider conceptions of the universe, until the term 'supernatural' is only a prejudicial examination of the evidence, and (b) they also cannot form the starting-point of any rational argument; cf. Leising's important remark: 'Accidental truths of history can never become proof of necessary truths of reason.'
They are in this respect a priori. He who avers that God's ways are just, or that honesty is the best policy, has neither counted the cases nor seen the consequences. Without these, the whole becomes no more than a logical or etymological assurance. But he can make the principles his standard, part of his life, and he lives up to them. There is a common and largely unconscious recognition of regulative principles which might seem to find innumerable exceptions everywhere, but they become permanent and ultimate. Men make them so. Thus do men lay down the lines of their future and form the framework of the unknown; and, like the organism, they will tend to be 'true to type.' The process of making this, they will become explicitly conscious of the type to which they must be true, if their personality, in its ultimate development, is to be in every respect efficient (§ 29 [1]). When in the course of mental development the implicit becomes explicit, there is a rigid logical connexion between the old and the new; the lines upon which development will proceed have already been laid, and the data are viewed, selected, and systematized in ways conditioned by earlier processes of selection. And this selective process, as it appears, e.g., among the young, is one of which they cannot be said to be conscious; and, while its extraordinarily beneficial character cannot be gainsaid, it is very conducive, as a result of this increase of consciousness, to be marked by biased, one-sided, and so forth. Development thus brings greater freedom and a more conscious choice of action, and the individual more deliberately shapes his life in the light of consciousness. This increase of consciousness gives the impression that the early years were blind, unconscious, and so forth; but consciousness is never complete, as the developing individual can realize on retrospect. Even the very young have an individuality of their own. The selective process, with the gradual recognition of guiding principles, is at work in these rudimentary beings, and we may speak of some 'system' embracing the child, his immediate environment, and all the factors that make for development. Of those influential factors, individual habits, and continued increase of consciousness makes acute the relation between the individual's conception of himself and the supreme realities, so far as he has apprehended them. Now, whatever these mental habits may be, they must have had a significance, such that that of which man becomes conscious was already existing and had some meaning for his earlier stages. The entire process in the midst of which man develops must embrace all that which comes under the category of the transcendent, the supernatural, and the unknown; and in the course of his purposive, self-guiding development he becomes a more responsible part of that co-operative and progressive process which he can now more deliberately help or hinder. It is at this point that the comparative and historical treatment of all ideas of sin, forgiveness, and atonement deserves fresh attention (see artt. EXPiation AND AtonEMENT, CONSCIENCE, Sin).

(3) In various forms there prevail beliefs and practices of entire surrender, whether to a Supreme Power or to principles in the universe, or of throughgoing asceticism or quietism. But self-surrender and surrender are in themselves neutral things upon which even religious thought, they are necessary in a greater or less degree, as against inhibition, objectivity, and insistence upon one's own individuality and point of view. Especially significant is the surrender of self to another: the self is the body or thought or a Church, and, of course, in all cases where the self entrusts itself to another personality. Throughout, the step has its important consequences, and the realization of the step becomes more impressible until in it is felt to be a veritable leap into the unknown. The ideas and theorems of the new view, with which the person to whom one surrenders oneself will to a greater or less degree affect one's unknown future. The process, a normal one, thus involves the question of the objective value of that to which the surrender is made, of that which is to be assimilated and realized. Progress is throughout due to innumerable acts of faith, trust, surrender, and reliance; and, as the occasions vary in intensity and objective significance, some part of the self is afflicted and developed, and at times the whole self seems to be renounced only to gain a 'higher' or a better self. However intense the feeling of surrender in human relationships, it is in the religious sphere that the significance of the step is most profoundly felt, and here the leap into the unknown is no less an one, even though there is the confidence that 'underneath are the everlasting arms.' Here are experiences varying in degree and uniting the individual and his ordinary life and thought with that which is most profound and ineffable in the universe, correlating uniquely the non-religious and the religions, the known and the unknown, and forming the basis of all adequate conceptions of existence, knowledge, and reality.

35. Reality.—(1) It will have been seen that the trend of thought has advanced the study of religion to a new stage, and has interwoven it with the progress of other departments of research. In this process, his book, he has pointed the reader to the wider field in which the study of religion must be placed, and to indicate some of the more important questions. Much more might of course be said, but the central problem would still remain: the underlying ultimate realities. Here it must suffice to observe that by the religious consciousness must be meant a consciousness of reality. The realities of religion must be more personally vital than those recognized outside the realm of religion; in fact a religion that would live must all ten claims in its approach on these ultimate realities. But even in religion we have to do, not with reality itself, but with intimations, apprehensions, or convictions of it. The religious mode of thought appears to be essentially a very intense form of the religious emotional, in which the most characteristic features of reality are a highly distinctive form of what otherwise is not peculiar to religion. Religion is 'natural' because the ultimate realities must be a 'natural' part of the universe of which man becomes conscious. Ideas of 'this' world and of 'the other' originate in the mind of one and the same experiencing individual; and there can be only one total existence of which he has such varying intimations and conceptions as his nature, temperament, and training favour. Moreover, not only is there an interconnexion between the progress of religion, its increasing wealth of expression, and the general development of thought; it is also self-evident that the deliberate effort to raise the level of thought and to improve the mental equipment (e.g., in education) enables one to experience life more fully and to utilize its data more effectively. Indeed, one has only to consider the member life of primitive men to perceive the essential parallelism in the development of the light have contributed to the general advance of religion, and to a clearer apprehension of all that is felt to be profoundly real and true. Thus thought—especially in its dynamic aspects—and reality are not to be supposed apart.

(2) But, while progress brings better conceptions

1 Cf. also the "dark night" of the mystical experience; see artt. MYSTICISM, NEO-PHILosophY.
of reality, at the same time it certainly increases men's abilities, duties, and responsibilities. It magnifies the possibilities of good and evil. The development is thus the inevitable constant transformation of the relation between men and reality, whether one considers (a) the actual progress of physical science and the strides taken in utilizing the realities of the physical world, or (b) the deepening recognition of the necessity of higher standards of moral, spiritual, and intellectual life. Thus, the development of conceptions of reality powerfully affects human welfare as a whole. Moreover, they correspond in their remarkable variety to the variation of individual temperament, training, experience, and so forth. It is obvious that the striking differences—ethical, spiritual, and intellectual—in men's conceptions of God are due to differences, not in the nature of God Himself, but in human nature. "God" is the name given to that sublimest of realities, of which man becomes conscious as standing in a uniquely 'personal' relationship with him. Whatever be the true objective reality, it is evident that both the Reality and man's own individual nature contribute to the resultant varying conceptions of all the main realities, as formulated, are man's imperfect conceptions of them, conceptions whose vicissitudes can be objectively studied, and which can develop further and, in so doing, lead to newer and more effective concepts. Consequently it is necessary to observe, on the one hand, the evident significance for the individual of his own conceptions of reality, and, on the other, the problem of the part taken by reality throughout. To the genuine theologian this is essential. If not the only reality, and it is impossible to isolate His working in the universe from the man who has an erroneous conception of God, or, perhaps, no consciousness of Him at all. None the less, it is of essential importance whether men's conceptions of any reality are adequate or not, and, to some extent at least, God's influence upon men is admittedly conditioned by men's conceptions. Hence the question is vital, how far God can influence men as apart from man's explicit consciousness of Him, how far God Himself is affected by human activities (con, by gross evil) contrary to man's consciousness of His nature. (For we must evidently distinguish between human activities not yet recognized by men to be evil and those which they know within themselves to be wrong.) Moreover, since 'God' is theistic consciousness of reality, the problem is essentially that of the relation between the ultimate realities in general and men with their varying consciousness of them. Vitaliy significant as this is on practical grounds, it is also a problem of the greatest methodological importance, i.e. If the data of the growth of consciousness, of religion and magic, and of science and philosophy are to be rationally and thoroughly handled. Reality must always be significant for men; it must have some effect, as apart from their explicit consciousness, of what they actually do. Only in this way can one gain a coherent view of the universe. Consequently there is need both of (a) an adequate conception of the ultimate realities to take the place of those felt to be imperfect, and of (b) methods of making these conceptions universalize, i.e. of such conceptions in human history, the development and differentiation of thought, and all that makes for the greater fullness and richness of life. (3) All growth of consciousness brings increased powers to deal with evil, but not so much of the self alone as of an environment or a system of relations of which the self is the centre. The development demands continued discipline and reorganization, for the consequences are harmful if the self is lacking in responsibility, morality, and all that encourages healthy progress. The limit of such development furnishes the conception of absolute coherence, perfection, truth, justice, etc., whether as regards (a) an absolutely absolute, non-evolving cosmos, or (b) an impersonal system of regulative principles and uniformities, as manifested in the universe—the ultimate 'environment'. Now, the entire complex field of religion becomes more manageable and intelligible only when notice is taken of the beliefs and practices which connect humanity with those of the universe, whether directly (especially in magico-religious and magical data) or indirectly (e.g., through prayer to the gods). But this fundamental underlying interconnexion, implicit in life and ground throughout the universe, furnishes the necessity for differentiation and differentiation of thought—when, e.g., spiritual and non-spiritual forms of energy are distinguished, and definitions or theories mark off matter from mind, and the physical from the psychical. The primary logical interconnections are continually being obscured through the growth of special knowledge, which, however, brilliantly illuminates the varied departmental (moral, spiritual, aesthetic, intellectual) aspects of the universe. There is a perilous kinship between religion and magic; typically and characteristically they are respectively right and wrong ways of dealing with what is regarded as fundamentally real and true. Common strong convictions and extremely intense states of consciousness are the more potent for good or for evil, there is a bifurcation such that what can take a religious form might also become magical or irreligious. Thus, there is a sane and an insane supernaturalism, a healthy and unhealthy mysticism, and genius has its cases of perversity and depravity. Accordingly, it is possible either to distinguish the good and the bad examples or to refuse to admit the latter within the category; that is to say, either we have good and bad religion, genius, etc., (or examples of these) or the bad cases come under another category, as, e.g., in the antithesis of religion and magic, (good) mysticism and (irrational) occultism, and the like. Whatever course be generally adopted, it is extremely important to discriminate between and to distinguish the subjective aspects of data from their logical and other more objective value. It is important to distinguish religion, genius, etc., as a whole or absolute feeling and the more specialized forms which are examples of religion, genius, etc, and which can be more objectively regarded. In this way, the fact can be emphasized that, although the ultimate realities are in a sense religious (e., as relating to a Supreme Deity or to life after death), they are not religious in themselves, although religion is directly concerned with their apprehension and formulation. For the subjectively impressive experiences so easily lead along beneficial or harmful roads, either to religion or to its worst enemy, that a careful disciplinary and regulative hand must be kept on and required for the sake of both the individual and society. In other words, reality—i.e. our own subjective conceptions of it—at once requires a formulation, a logical theory, an embodiment. (4) Freely choosing among alternatives, etc., are one of many phases, aspects, and departments of the totality of existence. The most 'religious' individual has his non-religious side, and the most 'non-religious' individual has his religious or rather irreligious occasions. The test of a religion lies in its relation to what is, as such, non-religious, viz. to the most non-religious, i.e. to those who have not been touched by the age as manifested in conduct, thought, ideals, and so forth. But, owing to the differentiation and specialization of thought

---

1 The latter is not the objective universe of the senses, but a logical construction, and the former depends upon man's present stage of consciousness. The ultimate which the mind can conceive depends upon the stage of development reached by the mind.
REQUISITE FORMS
—(with the corresponding (objective) incompleteness of individual minds—no one mind can form a logically adequate estimate. It is impossible for any individual to grasp totalitly as it is, although he may possibly get to the edge of any of the points as he going on and improving current conceptions, definitions, and other tools of his mind, this is in a very slow, of advance of thought, and in the better organization of the data of experience, one comes to realize more vividly and truly the universe of which one is an integral part. For the individual is in a religious life, in the human, and the rest, the scientific or critical treatment of religion is considered in determining those and in maintaining the progress of thought, inasmuch as nothing is more potent than the continued knowledge of reality and the convictions which sway mankind. The apprehensions of reality in the man and objective reality itself, and, varying, as they do, according to the individual, they are a key to a science of human nature and experience. It is obvious that there must be realities of a sort to allow the prevalent types, although the ultimate realities of the universe are not to be confused with the realities of our human nature. Thus, a conception of 'God' can be formulated and accepted: it will correspond and answer to personal experience at a certain stage of psychological development; it can prove the most vital and stimulating truth that man can possess. There must be some objective reality such that men become conscious of it in ways varying according to their individual nature and stage of development. Moreover, human personality is such that the conception of a reality in a personal relationship to man is a natural and true way of realizing a subjective reality; it is demanded by the data of religion, by the characteristic features of personal development, by the consciousness of the necessity of continued development in every direction which man feels to be good, beautiful, and true. In a word, the religious conceptions of the man is to give a rational account of himself so far as his intellect allows him, and the most objective theory of reality must be based upon the human consciousness.

5) All the ultimate realities themselves lie beyond human vision (cf. 1 Co 13:11). Between them and the self there are, as a psychological veil, the impulses, ideas, convictions, and theories, the whole body or world of thought which makes every man what he is. Here reality.' Some mysteries of reality, from a psychological point of view, are hinted at in the strange data of psychical research, occultism, and ecstasy, in all abnormal and pathological phenomena of the mind, in the disabilities of consciousness of the development, in some adequate body of thought, some favorable outlook upon the universe, which will enable them both to
direct and understand their experiences and to realize the significance of human existence so as to be prepared to do their duty. The problem of the good of a universe from which they can never escape. Upon their body of thought depend their sanity and effectiveness. Even reality itself seems to some extent to be powerless against the will which we regard as bad and evil; while, on the other hand, how far reality can be objectively and positively influenced, under given conditions, is a vital problem which can at least be theoretically handled. Certainly religion has not been without direct contributions of the practical relations between God and man—and, suppose religion proved to embody the truth about reality?

So the study of man's psychical tendencies, his ideas and ideals, his modes of thought, his beliefs and practices, his doctrines, theologies, and philosophies—all contribute to one's knowledge of human nature and of the universe. In the investigation of the development of conceptions and of the workings of the mind, whether in its immediate consciousness of reality or in its reflection upon past experiences, one comes to know a little more of the realities themselves and of the objective relationship between them and man. If, then, it is judicious to venture upon a definition of reality, as a point of departure, it is clear that the following may be suggested, provisionally: Religion primarily involves some immediate consciousness of transcendent realities of supreme personal worth, vitally influencing life and thought, expressing themselves in forms which are conditioned by the entire stage of development reached by the individual and his environment, and tending to become more explicit and static in mythologies, theologies, philosophies, and scientific doctrines. But, as this article has tried to indicate, there is a positive development of consciousness and thought in history, and consequently it is possible to seek to correlate both the static aspects, which are essential for all stability, and the dynamic, which are indispensable for future progress. For to do justice to the ultimate facts of harmony and of development in the universe is one of the main functions of a living religion.

LITERATURE,—The more important special technical works have been mentioned throughout the article.

RELIGIOUS ORDERS (Christian).—I. GENERAL CHARACTERISTICS AND CLASSIFICATION.—Under the title 'religions,' in the Christian Church, are included all those who make profession of a life in conformity with the precepts and counsels of the gospel, and who withdraw from the world in order to practice life more perfectly.

The art. MONASTICISM deals with the origin and chief characteristics of this form of life, of which monasticism is the principal species. In monasticism we have the religious life in its essential elements; and it may be said that, from the 6th to the 20th cent., it has been a question merely of combining those elements according to diverse interests and serve special purposes, and that no new conceptions and no essential difference has been introduced—nothing, in fact, that was not already existing in germ in the monastic life of the earliest centuries. The vows of poverty, chastity, and obedience, the practice of mortification, labour, prayer, and silence—sometimes even preaching and other external work were the obligations of religious life in all ages, whether under the cenobitical or under the eremitical form. We are concerned in this article with the different forms of religious life in the modern classification. The first task of the historian, in presence of the number and variety of these forms of the religious life (they exceed 350 in number, even without counting certain religious societies of minor importance), is to define the classification. This is not an easy task. Neither geographical nor chronological considerations will serve as a basis of classification, since, owing to the universal character of Christianity, these religious families are found in every nation and every race, and shoots in every age and thus belong to no one century more than to another. The attempt has been made to group them in families, placing side by
side those which offer analogous features or which follow the same line. Here, the historian and canonist will not be in perfect accord.

If, e.g., the attempt is made to place under the same rubric all the orders in which the Rule of St. Augustine is followed, the result will only lead to confusion, for these orders respect questions quite distinct. The Dominicans, hospitalers, and several congregations of women, e.g., all alike follow the Rule of St. Augustine, but they differ entirely from one another as regards the end and object of their respective institutes. This results from the fact that the so-called Rule of St. Augustine consists in reality of a set of general principles of spirituality which can be adapted to any form of religious life. It is the constitutions of each order, rather than the Rule, that give it its distinctive character. The Carmelites originally followed the Rule of St. Augustine. Some orders have followed different Rules at different times. The Premonstratensians combine the Rules of St. Augustine and St. Benedict. The Dominicans, who also follow the Rule of St. Augustine adapted from that of the canons regular, especially the Premonstratensians, seem to belong, with practically equal right, to two very different forms of life, the Rule of the canons regular and that of the mendicant friars. The Brothers of St. John of God, who are hospitalers, were attached to the mendicant orders by Urban v. It was the same in the case of the Jesuits to a certain extent, although these 'religious' belong to a totally different category—that of clerks regular. The title, in fact, of 'mendicant friar,' which distinguishes certain orders, came in time to be attached to those which were not originally comprised under this designation, such as the Augustinian Hermits, the Carmelites, as well as the hospitalers and others mentioned above. The Theatines and Barnabites, who are clerks regular, received the privileges of the canons regular of the Lateran. Some—e.g., Verneersch—regard the question from the point of view of canon law, and classify the orders according to whether they possess solemn vows, simple vows, temporary vows, or a mere promise. This method of classification, while legitimate in itself, has no historical foundation. Moreover, it leads to confusion, for some orders have solemn vows, simple vows, temporary vows, or have even practised both systems simultaneously for different members of the order. Finally, if we take as specially characteristic of an order the particular work undertaken by its members—education, care of the sick, preaching, etc.—it is not easy to judge to what class certain orders belong that exercise all these various activities at once.

Without flattering ourselves that it is in all respects a perfectly satisfactory system of classification, we shall adopt here, as the most practical for our purposes, one that is both chronological and pragmatic—one that keeps in view the different periods of time, while grouping together those orders, which follow the same principles, in their relative place. We shall also keep to the traditional mode of designation.

1. From the 1st to the middle of the 3rd century: virgins, widows, and ascetics. In this and the following sections, the words "the faithful" or "the pious" signify the faithful who lived a life more austere than that of their brethren and who formed a class apart. Among these ascetics there are even indications of an attempt at community life. They may be regarded, as the earliest representatives of the religious life.

2. From the middle of the 3rd to the end of the 12th century: the monks and the canons regular. —Until the end of the 12th century, the orders comprised the hermits and anchorites of all descriptions, the cenobites or monks living together in community, and those who combine both elements in a life partly eremitical and partly cenobitical. To the same period belong the canons regular, whose life was more or less directly connected with that of the monks, and who enjoy the same privileges.

The Brothers of the Common Life, Beghards, and Beguines form a category of their own, but may be classified together with the monks and the canons, since their life is founded on the principles of the monastic and canonical state.

3. From the 11th to the 16th century: the military orders and the knights hospitalers. —Strictly speaking, these orders might be classed with the monks, since they usually followed one of the monastic Rules (e.g., that of St. Benedict). But they possess so marked a character of their own that it is better to treat them separately. They are as follows: the Knights Hospitalers of St. John of Jerusalem, Templars, Tontonie, Knights, Knights of Evora or of Aviz, Knights of St. James of Compostella, Knights of Calatrava and of Alcantara, Knights of the Order of St. Lazarus.

4. From the 11th to the 20th century: the hospitalers (non-military).—These include the Order of Mercy, the Trinitarians, the Servites, the Paulinians, the Alexians, the Jesuati or Hieronymites, the Ambrosians, the Brothers of the Apostles, the Good Brethren, the Order of the Holy Ghost, the Brothers of St. John of God.2

5. From the 13th to the 16th century: the mendicant orders or friars (fratii).—The friars adopted a mode of life differing in many respects from that of the monks or canons regular, viz., the absence of the element of stability in a particular place, the absence of all privileges of any description save the exercise of the sacred ministry, preaching and teaching, reduction of the solemnity of the clerical office, suppression (at least originally) of all property and all power to possess lands or money even in the name of the community. They are called mendicants because, unlike the monks, having no possessions and no stable means of livelihood, they were obliged to live on alms.

The four principal mendicant orders are: the Dominicans of St. Dominic, the Franciscans of St. Francis, the Carmelites, the Augustinians.4 There are, besides, other lesser mendicant orders in some of which the Rule of St. Augustine is observed, in others that of St. Francis. Among the former are the Order of Poor Clares or Poor Sisters of St. Clare, the Order of Poor Minor HH., the Congregations of the religious orders (Christian)

ORDERS OF WOMEN ARE THE BRIGITINES, ANUNCIADAS, URSULINES, ANGELICALS, SALESIAN SISTERS, PENITENTS, ETC.

7. FROM THE 17TH TO THE 19TH CENTURY: RELIGIOUS CONGREGATIONS. — THESE RELIGIOUS CONGREGATIONS RESEMBLE THE CLERKS REGULAR, AND THEY ARE CALLED IN CANON LAW 'QUASI-REGULAR.' THEY HAVE USUALLY ONLY SIMPLE VOWS AND ARE DISTINGUISHED FROM THE CLERKS REGULAR PROPER BY THIS FACT AND ALSO BY THE MORE RECENT DATE OF THEIR FOUNDATION.

8. FROM THE 18TH TO THE 20TH CENTURY: MISSIONARY SOCIETIES OR CONGREGATIONS. — THESE SOCIETIES, FOUNDED ESPECIALLY FOR THE FOREIGN MISSIONS, MAY BE CONSIDERED, AS REGARDS THEIR MANNER OF LIFE, AS CLERKS REGULAR, BUT NOT AS SUCH. THEY HAVE NO COMMON END IN VIEW, AND THEY HAVE PLACED THEM TOGETHER IN A GROUP APART.

TARY ORDERS AND HOSPITALIERS. — I. CANONS REGULAR. — (a) THE NAME. — THE NAME 'CANON' IS OF ANCIENT ORIGIN. THE COUNCILS OF NICE (314), CHALCEDON (451), AND 'IN TURNO' (592), SPEAKING OF THE CLERICS ATTACHED TO THE SERVICE OF CERTAIN CHURCHES, SAY THAT THEY ARE 'SANCTI SEDIS OR DE SACERDOTE,' I.E. INSERBED IN THE SAIN'TS, THE MATRICA, TABULA, OR ALBUM. ACCORDING TO DU CANGE, A CANONICUS IS ONE WHO IS INSERBED SUB CANONE FRAMMENTARIO, I.E. IS MAINTAINED BY THE REVENUES OF THE CHURCH. ST. ANTHONY EMPLOYS THE TERM 'SANCTUS.'

IN THE WEST THE 2ND AND 3RD COUNCILS OF TOLEDO AND THAT OF FRIULI (791) SPEAK OF CLERICS 'SUB CANONE ECCLESIASTICO.' THE 3RD COUNCIL OF ORLEANS IN 533 AND GREGORY OF TOURS MAKE USE OF THE TERM CANONICUS TO DESCRIBE THE CLERGY OF A CHURCH.

THE COUNCIL OF CLERMONT IN 533 EXTENDS THIS TITLE TO ALL PRIESTS AND EVEN DEACONS ATTACHED TO A CHURCH, WHETHER IN TOWN OR IN COUNTRY. THESE PRIESTS AND DEACONS WERE OBLIGED, AT GREAT FEASTS, TO ASSEMBLE IN THE CATHEDRAL CHURCH TO CELEBRATE DIVINE SERVICE TOGETHER WITH THE BISHOP. IN 533 THE 3RD COUNCIL OF ORLEANS DEPRIVED THE TITLE OF 'CANON' OF ALL CLERICS WHO REFUSED TO OBEY THEIR BISHOP. IT MAY BE GATHERED FROM THESE DIFFERENT TEXTS THAT THE TITLE OF CANON WAS GIVEN TO TWO CLASSES OF PEOPLE DIFFERING WIDELY FROM ONE ANOTHER. ON THE ONE HAND WERE CLERICS, LIKE THOSE OF THE DIOCESE OF HIPPO, WHO LIVED WITH THEIR BISHOP IN COMMUNITY AND IN THE PRACTICE OF MONASTIC ASECISM. ON THE OTHER HAND WERE THOSE WHO LIVED IN THEIR OWN CHURCHES, PRACTISING NEITHER THE COMMUNITY LIFE NOR MONASTIC POVERTY, AND BOUND TO THEIR BISHOP BY AN OBLIGATION THAT DID NOT PRESS VERY HEAVILY UPON THEM. THIS VAGUE USE OF THE TERM LASTED THROUGHOUT THE AGES. IN ORDER TO AVOID CONFUSION, THE COUNCIL OF CLERMONT AROSE TO DISTINGUISH BETWEEN THE TWO CLASSES OF CANONICS BY CALLING THE FIRST 'CANONS REGULAR' AND THE SECOND 'SECULAR CANONS' OR 'CANONS' PURE AND SIMPLE. THE LATTER CANNOT, OF COURSE, BE REGARDED AS IN ANY SENSE BELONGING TO THE RELIGIOUS ORDERS; IT IS WITH THE REGULAR CANONS ALONE THAT WE ARE HERE CONCERNED.

(b) CANONS REGULAR TILL THE 10TH CENTURY. — IN ART. MONASTICISM WE HAVE SHOWN THAT IN THE 4TH CENTURY THERE WAS A TENDENCY AMONG MANY BISHOPS TO GROUP THEIR PRIESTS TOGETHER, AND TO LIVE WITH THEM IN THE PRACTICE OF ASECISM ACCORDING TO THE EXAMPLE OF THE MONKS. THE ATTEMPTS THAT HAVE BEEN MADE TO FIND EXAMPLES EARLIER THAN THIS DATE, IN ORDER TO TRACE BACK THE ORIGIN OF THE CANONICAL ORDER TO THE TIMES OF THE APOSTLES, ARE ENTIRELY WITHOUT VALUE.

ST. AUGUSTINE, WHO WAS SO WELL VERSED IN THE KNOWLEDGE OF THE ECCLESIASTICAL INSTITUTIONS OF THE PAST, DOES NOT EVEN MENTION THE CANONICAL LIFE IN HIS DE MORIBUS ECCLESIAE CATHOLICAE, WRITTEN IN 388, ALTHOUGH IT WOULD HAVE AFFORDED HIM AN EXCELLENT AND MOST NATURAL OPPORTUNITY FOR DOING SO, HAD ANY SUCH INSTITUTION EXISTED BEFORE HIS TIME. NOR CAN ANY TRACES BE FOUND IN THE WRITINGS OF ST. CYPRIAN OR ANY OTHER WRITER OF EARLIER TIMES.

ST. AUGUSTINE WAS THE FIRST TO HAVE THE IDEA OF GATHERING HIS CLERGY AROUND HIM IN ORDER TO LIVE WITH THEM IN COMMON IN THE PRACTICE OF POVERTY AND RELIGIOUS DISCIPLINE AFTER THE EXAMPLE OF THE CENOBITES. HE MADE HIS FIRST TRIAL OF THIS RULE AT HIPPO IN 388.
RELIGIOUS ORDERS (Christian)

301. We have accounts of the life led by the monks and nuns of St. Augustine and of the Venerable Bede, as well as of the life led by the monks and nuns of the monastery founded by St. Benedict. The life of St. Benedict is described in the Rule of St. Benedict, which contains the regulations of the monastery and the duties of the monks. The Rule of St. Benedict was adopted by many monasteries throughout Europe, and it became the standard model for monastic life in the Western Church.

302. The Rule of St. Benedict was based on the principles of the Gospel, and it emphasized the importance of prayer, work, and community. The monks were to live in a simple manner, with a strict diet and a regular schedule of prayer and work. The monks were also to be obedient to the abbot, who was the spiritual and temporal leader of the monastery.

303. The Rule of St. Benedict was a significant influence on the development of monasticism in the Western Church. It provided a framework for the life of the monks and nuns, and it helped to establish monasticism as a recognized institution in the church. The Rule of St. Benedict was adopted by many monasteries throughout Europe, and it became the standard model for monastic life in the Western Church.

304. The Rule of St. Benedict was based on the principles of the Gospel, and it emphasized the importance of prayer, work, and community. The monks were to live in a simple manner, with a strict diet and a regular schedule of prayer and work. The monks were also to be obedient to the abbot, who was the spiritual and temporal leader of the monastery.

305. The Rule of St. Benedict was a significant influence on the development of monasticism in the Western Church. It provided a framework for the life of the monks and nuns, and it helped to establish monasticism as a recognized institution in the church. The Rule of St. Benedict was adopted by many monasteries throughout Europe, and it became the standard model for monastic life in the Western Church.

306. The Rule of St. Benedict was based on the principles of the Gospel, and it emphasized the importance of prayer, work, and community. The monks were to live in a simple manner, with a strict diet and a regular schedule of prayer and work. The monks were also to be obedient to the abbot, who was the spiritual and temporal leader of the monastery.

307. The Rule of St. Benedict was a significant influence on the development of monasticism in the Western Church. It provided a framework for the life of the monks and nuns, and it helped to establish monasticism as a recognized institution in the church. The Rule of St. Benedict was adopted by many monasteries throughout Europe, and it became the standard model for monastic life in the Western Church.

308. The Rule of St. Benedict was based on the principles of the Gospel, and it emphasized the importance of prayer, work, and community. The monks were to live in a simple manner, with a strict diet and a regular schedule of prayer and work. The monks were also to be obedient to the abbot, who was the spiritual and temporal leader of the monastery.

309. The Rule of St. Benedict was a significant influence on the development of monasticism in the Western Church. It provided a framework for the life of the monks and nuns, and it helped to establish monasticism as a recognized institution in the church. The Rule of St. Benedict was adopted by many monasteries throughout Europe, and it became the standard model for monastic life in the Western Church.

310. The Rule of St. Benedict was based on the principles of the Gospel, and it emphasized the importance of prayer, work, and community. The monks were to live in a simple manner, with a strict diet and a regular schedule of prayer and work. The monks were also to be obedient to the abbot, who was the spiritual and temporal leader of the monastery.

311. The Rule of St. Benedict was a significant influence on the development of monasticism in the Western Church. It provided a framework for the life of the monks and nuns, and it helped to establish monasticism as a recognized institution in the church. The Rule of St. Benedict was adopted by many monasteries throughout Europe, and it became the standard model for monastic life in the Western Church.
or Austin Canons. Their houses were at first independent of one another, but were later united in a congregation which had its general chapters, its statutes, etc. The decrees of the 4th Lateran Council and those of Benedict XII, in 1339 are concerned with the Austin Canons. In spite of all this, the identity of the religious order among them had but a short period of brilliancy.

In the 14th cent. new efforts at reform were attempted by Cardinal Branda de Castiglione, by John Bush, and by Nicholas of Cusa.

Reformation:—The reform struck a fatal blow at the Canons Regular of St. Augustine properly so called. Other societies, however, had been formed on the Augustinian model under a severer Rule, and these were better able to resist the shock of the great upheaval. Some of them are still in existence at the present day, such, e.g., as the Canons Regular of the Lateran, the Premonstratensians, and several other congregations. We can give here only an outline of some of the principal ones.

Premonstratensians.—The Order of Premontré is the most illustrious of all among the canons regular. Its founder was St. Norbert († 1134), a canon of Magdeburg, who established himself at the Prémontré with a few companions in order to lead a life of prayer and to separate themselves to preaching and the sacred ministry. Their life was ordered according to the Rule of St. Augustine and guided by the example of the Canons Regular of St. Victor of Paris. This order developed rapidly owing partly to the sanctity and personal influence of its holy founder, partly to its object and nature, which had a special appeal in an age in which the idea of clerical and monastic reform had given rise to institutions such as the Cistercians and the Cluniac monks, both of which St. Norbert founded, besides the canons regular, a second order for women, which also had great success, and a third order for lay people. At the present day the order possesses five provinces or circles (circuiti), seventeen abbeys, five priories, eight convents of nuns of the second order and three of the third order, besides parishes, missions, and a few colleges. The members number 977 men and 258 women.

Canons Regular of St. Augustine along with special statutes of their own. At the head of the circle is the circulator, whose rank and office correspond with those of the provincial in other orders. Their constitutions resemble those of Citeaux. The abbot of Prémontré is abbot-general of the whole order and is assisted by the abbots of Floreffe, of Laon, and of Cissay, the first houses of the order. The general chapter is held at Prémontré. This constitution came to an end before the Revolution, and in 1833 a new constitution took its place. The habit is white and resembles the monastic habit except that in

1 The Rule of St. Augustine is divided into twelve chapters and contains only general principles (of an extremely elevated character) such as the love of God, and our neighbour, humility, prayer, fasting, duties towards the sick, purity of soul and body, obedience, etc.

choir a rochet, the badge of canonical dignity, is worn, and in winter a mantle also.

This order has rendered signal services to Christianity by its missions on the banks of the Elbe and the Oder and in the Low Countries, by the institution of hospices for pilgrims, the making of roads and canals, the foundation of libraries and schools, but especially by its reform of the clergy and the foundation of parishes. It even had an influence on architecture. It has produced also a certain number of chroniclers, historians, and ecclesiastical writers.

Canons of St. Victor. From the point of view of theology and literature, the Canons of St. Victor hold the first place. Their founder, Guillaume de Champeaux, is known as one of the most illustrious doctors and professors of the 12th century. These canons take their name from a chapel erected in honour of St. Victor, the martyr of Marseilles, on Mt. Sainte Genevieve in Paris. They were, moreover, actually affiliated to the Canons of St. Victor Major. However, it is their most illustrious member among them, who became the greatest theoretician of the mystique. The Canons of St. Victor were established in a number of churches in France (notably in that of Ste. Geneviève in Paris, whence their name of 'Genevain' and also outside France. St. Victor de Paris remained the centre of the institution. Unfortunately divisions soon arose within the order, and after the beginning of the 14th cent. it began to decline. On the eve of the Reformations it existed in a state of mere vegetation.

The school of St. Victor is most important for the history of scholastic literature, and the works of its teachers are still of great value.

Like the greater number of canons regular, the Canons of St. Victor followed the Rule of St. Augustine, with their own special statutes composed by Gillain, one of their abbots, and inspired to a great extent by the Rule of St. Benedict.

Canons of the Lateran. — The Augustinian Canons of the Lateran were founded shortly after the Lateran Council in 1073, and were attached to the cathedral of St. Peter in Rome in 1103. They possessed a considerable number of houses in Italy and Poland. They were obliged to leave the Lateran basilica for the first time in 1299, for the second and last time in 1471. They have to-day houses at Rome, and 24 in Italy and 27 in France. The Church of St. Peter ad Vincula in Rome.

2 Besides Hérot, Heimbuacher, Chevalier (sive. "Laten, Chanoines reguliers," see P. Cavaliere, Bibliotheca compositi degli uomini illustri della congr. de canonicis regulari del SS. Salvatore Lateranensi, Veltier, 1856.
Canons Regular of St. Maurice.—The congregation of Canons Regular of St. Maurice of Agaune in Switzerland owes its fame to the martyrdom of the Theban legion. An abbey existed at Agaune from the 6th cent., in close relation with that of Lérins and having, like the latter, the patronage of St. Martin. In 1031, several monks were transformed into canons regular—an event of frequent occurrence at that time.1

2. Brothers of the Common Life.—This religious society, like that of the Beguines and the Beghards, formed an offshoot from the history of the two monastic orders. From some points of view, it would seem to belong to the monastic order, from others, again, to that of the canons regular. In any case it forms one of the most interesting pages in the history of medieval religious life and mysticism. It is treated separately under the title BRETHREN OF THE COMMON LIFE.

3. Beguines and Beghards.—These congregations originated in the Low Countries. According to some, they go back to the daughter of Pepan de Landen, in the 7th century. But it seems that their founder was, in reality, a priest of Liége, Lambert Beghe (or ‘le bègue,’ †1187). These beguines are not nuns or ‘religious’ in the strict sense, for they take no vows. They are simply pious women living in community. In certain towns a special quarter was given up to them. They lived there in little hermitages, sometimes singly, sometimes several together, under the direction of a superior (known nowadays as ‘la grande dame’). They had a common chapel, in which they met for their religious exercises. Some followed the Rule for the tertiaries of St. Francis, others that for the tertiaries of St. Dominic. The Reformation in the 16th cent. and the French Revolution put an end to many beguineges. Some, however, still exist in Belgium, Holland, and Germany. This institution never had a very wide vogue, but it presents certain original characteristics worthy of note.2

The institution of the Beghards was founded for men on the analogy of the Beguines. They soon underwent the influence of the Lollards and other heretics, and were condemned by several popes and councils.

4. Military orders and hospitalers.—In the 11th cent., sprung up a new class of religious orders which, from a certain point of view, are connected with the monastic order, while possessing their own marked characteristics. Some of these were purely military in character; others were concerned also with the care of the sick (hospitalers). The hospitalers pure and simple form a third category, which will be treated apart.4 The military orders were regarded by the Church as true religious orders. They had the three vows of poverty, chastity, and obedience, celebrated the divine office, were under the discipline of a Rule and an observance of fasts and abstinence, and enjoyed the same privileges as the monks, being exempt from duels, being defended in law, and able to approach the Holy See. Some followed the Cistercian statutes, others the Rule of St. Augustine, and others that of St. Benedict. It is for this reason that we regard them as belonging, in a sense, to the monastic order. Contemporary with the Crusades, their principal object was to fight against the Saracens and to protect the Christian pilgrims to the holy places. Their life may, in fact, be regarded as one of perpetual war against the Musulman. In these orders, at their origin, we have united in one the ideal of the monastic life and of the life of chivalry of the Christian knight. This ideal stood them in good stead in those far-off days, while the Christian world was imbued with the spirit of religion. Unfortunately such an ideal proved to be too high, and elements so incongruous as the religious and the military could not long endure together.

Knights Hospitalers of St. John of Jerusalem.—This is the most ancient of all the military orders. In 1048 some Italian merchants built a hospice or hostelry for pilgrims and for the sick in Jerusalem. Certain French noblemen who served it formed an order which was approved by the pope and regarded as a religious congregation. This was the cradle of the order. Gérard de Tenque (of Martignes in Provence) organized it into a military order, i.e. an order in which there were brethren attendant on the sick and members who were knights, and who had as their special object to defend the Christian pilgrimage against Muslim hosts and raids. The order was approved by Pope Pascal II in 1113 under the name of the Order of St. John of Jerusalem. Later its members were known as the Knights of Rhodes and, later still, Knights of Malta, from the fact that they defended both these islands against the Musulman. Foundations were soon established along the shores of the Mediterranean and, at one period of their history they possessed houses to the number of 15,000.

The knights acquired a wide influence and power and also considerable riches, which enabled them to serve as money-agents or bankers to princes and kings.1 They rendered great services to the Christian religion, and their prowess in the wars against the Turks won them great renown. Their heroic defence of Rhodes and of Malta against an enemy six times their number forms a veritable epic. The most illustrious of their grand masters were Pierre d’Anubusson, Villiers de l’Isle Adam, and La Valette. Napoleon conquered their last stronghold, St. Elmo, which he gave to the French and Nelson annexed Malta for the English Government. The title of Knights of Malta still exists as a title of honour. Those who bear it form a society and give themselves to works of charity.

Knights Templars.—Although of more recent date than the Knights Hospitalers, the Templars soon became of greater importance and greater power. Their founder was Hugues de Payens, a French noble, who in 1118 gathered together a number of companions for the defence of the pilgrims to the Holy Land against the Saracens. The name of Templars, or ‘Order of the Temple,’ was given to them because their house in Jerusalem was built on the site of the Temple of Solomon. St. Bernard, in 1128, drew up a Rule for them adapted from the Rule of St. Benedict and the Statutes of Cîteaux. The order comprised the knights (all of whom had to be of noble birth), ‘sеньors,’ who were of the bourgeoisie and who acted as esquires, and pages, who were dependents of the clergy. The first grand master was Hugues de Payens.1

1 Héloy, ii. 27 ff.; Heimbucher, ii. 24 ff.; Chevalier, s.v. 'Saint-Maurice d’Agaune'; DACL, s.v. 'Agwayne', i, col. 550 ff.
2 Coudry, 'Beguines et Beghards'; Grégoire Le Breton, 'Beghinecurans, Liege, 1629; J. L. von Mosheim, Die Beghards und Beghardsins, Leipzig, 1794; Héloy, vii. 1 ff.; Heimbucher, iii. s.v. 'Beguines'.
3 Natalis Alexander, Histoire ecclésiastique, Venice, 1773, vii. 538—556; F. A. Zucarri, Teologia, Madrid, 1734, iv. 101 ff.; Gourdon, 'Les Beguines, note 2'; Chevalier, s.v. 'Begards.'
4 We shall say nothing here of the secular orders of knight-hospitallers, which, like the military orders, were included in the history of the Order of St. John of Jerusalem, but which did not form part of the military orders but were in reality purely civil and instituted by kings and princes as a reward for the services of their subjects, e.g., the Orders of the Garter, the Bath, the Thistle, etc.
The order was purely military. We need not here enlarge on the great part played in medieval history by the Knights Templars, on the influence which they wielded far and wide (they had in the 12th cent. 9000 manors distributed through every land in Christendom), on the services which they rendered to Christianity against the Saracens in the Holy Land. A calcium, which had crept during ages accumulated and which were the cause of their downfall, the abuses which crept into the order, or, finally, their lamentable end under Philip le Bel and Clement v. after the cruel execution of their grand master, Jacques de Molay, and the Revocation of 1307.

The Templars were succeeded in Portugal by the Order of Christ, and in Spain by the Order of Monte-Span.

Other orders were founded on the model of the Templars and the Hospitalers, but we shall speak only of the principal of these lesser orders—the Teutonic Knights, the Knights of St. James, and the Knights of Calatrava and Alcantara.

Teutonic Knights.—About 1128 or 1129 a rich merchant of Germany who had taken part in the siege of Jerusalem, struck with compassion at the sight of the sufferings of the pilgrims, built a hospital for them, in honour of the Blessed Virgin. He was soon joined by others, with whom he organized an order on the model of the Hospitallers of St. John, to care for the pilgrims and protect them against the Saracens. After the capture of Jerusalem by Saladin they were constituted one of the military orders (1190 or 1191) and chose their name from 'Hospitaliers of the Blessed Virgin' to 'Teutonic Knights of the Hospitality of the Blessed Virgin.' They adopted a Rule similar to that of the Templars and the Knights of St. John. The order was composed of laymen with their servants, esquires, and chaplains. To the three vows of religion the Teutonic Knights added a fourth—to devote themselves to the care of the sick and of pilgrims, and to combat the enemies of the faith. They celebrated the divine office and other prayers, and were under a superior or prior. At the head of the order was the grand master, and under him the grand commander, the marshal, who was the lieutenant of the grand master in battle, and a grand hospitalier, who supervised the hospitals under the care of the order. The members were always of German nationality. The knights took part at first in the struggle against the Saracens, then joined forces with another military order, the Knights of the Order of Christ in Livonia, which had been founded to fight against the pagan nations of the Baltic. While thus devoting themselves specially to the war against these pagans, they did not cease to take a part in the Crusade against the Saracens in Palestine. The emperors of Germany, Frederick I. and Frederick II., gave the order their protection and endowed it with vast possessions.

When at the time of the Reformation the grand master became a Lutheran, the order was divided, one part following the grand master in his apostasy, the other taking up the cause against the Protestants. The order fell from its first fervour, and Napoleon took measures to abolish it in 1809. It still survives, however, as an order of hospitaliers in Austria. There are 20 professed knights, who are bound to celibacy, and 30 knights of honour, not so bound. Both classes of knights must be of noble birth. The grand master is always one of the imperial archdukes. The order has charge of 50 hospitals in South Germany, the service of which it supports two congregations of priests and four of sisters. Its members also do ambulance work in war-time. There is a Protestant branch of the order in Holland.

Other military orders were founded at the same time in Spain and in Portugal, on the model of the above, in order to fight against the Moors. That of Aviz in Portugal arose in 1147, in the reign, it is believed, of Alfonso I. The knights followed the Rule of St. Benedict in its Cistercian interpretation. They were known at first as the 'New Soldiers,' then as the Knights of Evora, and finally of Aviz. Their campaign against the Moors was conducted with success.

The Order of St. James of Compostella was founded to protect the pilgrims to the shrine of that saint against the brigands and the Moors. Those of Calatrava and Alcantara had also as their aim to make war against the Moors.

The Order of Calatrava owed its origin, in 1158, to a Saracen who became its first grand master, his monks being transformed into knights. It remained in union with Citeaux and was victorious against the Moors. Unfortunately its members took part in the civil and political contests in Spain and were later declared by Pope Innocent II. to be the true and only representative of the power of the Spanish kings, ceasing to be a religious order and becoming an honorary order of knighthood. Meanwhile it became united with the Orders of Aviz and Alcantara. The latter, founded by Archbishop II. of Toledo and also called the Order of St. Benedict and was affiliated to Citeaux. The knights also made war on the Moors, but, like the Order of Calatrava, they took part in politics and ended, like them, in becoming a courtly order of knighthood.

Among less celebrated orders are the Order of the Holy Sepulchre, which claimed to go back to the time of St. Helena; the Order of Christ or of the Sword, founded by Guy de Lusignan, king of Jerusalem, for the defence of Cyprus against the Turks; the Order of Alcantara, founded in Livonia in 1234, to fight against the heathen in that country; the Order of the Cross or Army of St. Dominic, against the Albanians; the Order of St. Thomas of Canterbury, an offshoot of the Knights of St. John of Jerusalem, for the service of pilgrims in England, etc. The innumerable orders of knighthood founded by kings and princes in order to confer honour upon and to reward their dependents were not religious orders and do not belong to our subject.

The Order of St. Lazarus, of which St. Basil was the reputed founder, and which was united with that of St. Maurice de Savoy for the care of lepers, had several dependencies and annexes in Palæstine and was also an order of military hospitaliers. It acquired its military character after the first Crusade, and resembled closely the Templars and the Knights of St. John. This order constructed a vast number of leper-houses.

2 It was the custom at that time for knights to be accompanied, when on horseback, by envoys to require and assist them.
building bridges over streams and rivers for the convenience of travellers. They also built hospitals and houses for the poor, and maintained hospitals and bridges in Spain, Portugal, and other countries. Divided at first into two sections—one under the general of Granada, the other under that of Rome—they were united in 1878. At the present day the order possesses 9 provinces and 105 hospitals with 14,962 beds. There are 1572 members.

With the Brothers of St. John of God must not be confused similar congregations, some of them called by the same name, such as the Brothers of Montauban, the Brothers of Mercy of St. John of God, the Brothers of St. John of God. These others were all local societies founded in the 19th cent., and have not the same importance as the Brothers of St. John of God strictly so called.

Two other congregations, the Brothers of St. Hippolytus, founded in the 16th cent. in Mexico, and the Bethelites, founded in Guatemala in 1655, were devoted, like the Brothers of St. John of God, to the care of the sick and also to educational work. The first of these societies still possesses 12 hospitals in 1885; the second was suppressed in 1820.

The Camilians, who were also occupied with the care of the sick, are treated below. There are, besides, a large number of other communities of hospitalizers, a list of which will be found in Helyot and Heimbucher.

III. THE MENDICANT ORDERS.—1. Dominicans

(a) Origin.—The founder of the Dominicans, St. Dominic, was born in 1170 at Calaroga in Old Castile. He was thus only twelve years in advance of St. Francis of Assisi. He made a thorough study of theology at the University of Palencia, and in 1195 became a canon of Osma and gave himself to the work of preaching. He associated himself later with the reform of those canons upon whom the bishop imposed the Rule of St. Augustine. We find him next in close relation with the papal legates sent against the Albigensians, in the south of France, and it was there that his future vocation was to be decided. He preached against the heretics, not only by word of mouth, but also by example of evangelical poverty. It was then that St. Dominic conceived the idea of founding a religious order for the conversion of the Albigensians—an order consecrated to the work of preaching, but of the mendicant order.

2 A. König, "Der Orden und die Genossenschaft der barmh. Brüder," in Charitas, i. (1896) 145-170, iv. (1897) 130-131; Heimbucher, ii. 245-246, "Die barmherzigen Brüder."
the study of divine things. In 1215 he went to Rome and obtained from Pope Innocent III., during the 4th Lateran Council, the approbation of the new order. The saint returned several times to Rome at a later period, and obtained fresh approbation from Honorius III. and also numerous privileges for his order. The latter developed rapidly, and convents were founded in France, Spain, and Italy. During one of his journeys in Italy St. Dominick had a meeting with St. Francis, in whom he recognized a true spiritual bond. An agreement was made in Bologna on 23rd, 1221.

(b) Constitution. — The Dominicans follow the Rule of St. Augustine, with which St. Dominick had become acquainted while a canon of Osma, and with which he combined the usages of the Premonstratensians, who held a place in the first ranks of the canons regular. From this point of view, the Dominicans form an order that is essentially clerical and hence differs from the monastic order. Their principal object is preaching, with which, as a logical consequence, they combined the exercise of the sacred ministry and teaching in the schools. Unlike the monks, the Dominicans have no bond of stability to unite them to any particular monastery; they may be sent from one house to another and are not necessarily subject to any one abbot. Like the Franciscans, they are mendicants, i.e. they are forbidden to possess property and depend for their maintenance upon Christian charity. They are governed by a master general and a general chapter—an institution borrowed by St. Dominick from the Premonstratensians. The constitution of the order already established at the general chapter of Bologna in 1220 was confirmed by Jordan of Saxony and his successors. At the head of each convent or priory is the prior, at the head of the province is the provincial, and the general chapter is held every three years. It is composed alternately of provincials and definitors or delegates from each province, and has very wide powers. The general is elected by both provincials and definitors united in chapter—originally for life, now only for twelve years. He resides at the Convent of the Minerva in Rome. The provincials are elected by the provincial chapters composed of the priors of the province and delegates from each conven
t. They may be vincible for two years, and the prior is elected by the community for a term of three years. He has under him a sub-prior. The priors are confirmed in office by the provincial, the provincial by the master general. The actual constitutions given to his order by St. Dominick were curtailed and rearranged in better order by St. Raymond of Pennafort, and they are added to and completed by the decisions of the general chapters.

(c) Studies. — The Dominican Order gave itself from an early date to the study of theology. The general chapter of 1248 instituted four provinces—those of Provence, Lombardy, Germany, and England—in order to found, in these regions, a studium generale at the four cities of Montpellier, Bologna, Paris, Oxford, and Tholos. St. Thomas Aquinas greatly promoted the element of study by the brilliancy of their renown. Each province was obliged to send two students every year to the studium generale. The convent of St. Thomas of Aquas (surnamed St. Thomas) soon formed the chief centre of Dominici
can studies. In each convent there was also a studium particular. In 1239 the general chapter of Valenciennes (of which Albert the Great and Thomas Aquinas were the memori
tions of a system of studies for novices and lectors to last eight years—two years of philosophy, two of fundamental theology, Church history and canon law, and four for the study of scholastic theology. At the end of this course those who merited it received the title of lector. After seven years of lectorate the student became magister studentium, then bachelor, and finally magister theologii—a degree equivalent to that of Doctor of Theology. For merit in preaching the title of praedictorum ordinis—equivalent to that of Master of Theology, was bestowed.

The life of the Dominican is one of austerity, implying perpetual abstinence, fasting, and other practices of asceticism—silence, life in community, and the observance of a choir. His chief work is preaching and teaching. In 1231 the Dominicans had a Chair of Theology at the University of Paris. They were the first of the mendicant orders to arrive at Oxford in 1221—the Franciscans did not come there till 1224, the Carmelites till 1234, the Austin Friars till 1268. They soon possessed chairs at Bologna, Padua, Salamanca, Cologne, Prague, and Vienna. Their activity as theologians and preachers was directed principally to the Jews, Moors, and Albigenses. They also played an important part in the tribunals of the Inquisition.

There are no fewer than 152 commentaries written by Dominicans on the Sentences of Peter Lombard. Under their influence colleges of Oriental languages are founded for the study of Hebrew and Rabbinic.

(d) History. — In 1214 St. Dominick founded in Rome the convent of Santa Sabina, which has remained a centre of Dominican life. In Paris he founded the monastery of St. Jacques—whence the name of Jacobins by which his sons were sometimes known. He founded other houses also at Bologna, Seville, and other places in Spain. After his death the order continued to make rapid progress, and was reckoned eight provinces—a province in Provence, France, Lombardy, the Roman Province, Germany, England, and Hungary. Later, foundations were established in Norway, Sweden, etc. Under the generalate of Jordan of Saxony (+1287) a great advance was made. The master general founded nearly 250 houses in Europe, Asia, and the north of Africa, and received more than 1000 members into the order. At the beginning of the 14th cent. the order had 562 houses in 21 provinces, and many monastic houses both of men and 64 of women. In 1281 the pope granted to the mendicant orders the privilege of preaching and hearing confessions in any church without having to obtain the special permission of the bishop of the diocese.

During the course of the 14th cent. the era of decadence set in, brought about chiefly by the Great Schism, which divided the order into two ‘obediences,’ each with its rival general chapter and master general. Unity, however, was restored in 1409, and from the time of the schism efforts were made at reform. To one of these reforms belong Fra Angelico and St. Antoninus from the cloister of Fiesole, as well as Savonarola. Another reform was started in 1389 by Raymond of Capua, who became of the order of St. Germain-des
de-Port. This reform had success in Italy and Germany. In the 15th, 16th, and 17th centuries reformed congregations arose in different countries—in Holland, the province of Toulouse, Brittany, Provence, etc. In England the Black Friars, or friars of the English Province, carried out reforms that was established in France by Lacer
daire (1850), who won for himself a special place in the history of the order.

To the Dominican Order belong a considerable number of saints, among them founders of monasteries and chapter houses, holy women, and artists. To those already mentioned we may add here St. Hyacinth, Peter of Tarentaise (who

became Innocent v.), John the Tenton, Humbert de Romans, St. Celeus, St. Vincent Ferrer, etc. The order numbers among its members four popes, 80 cardinals, and a large number of archbishops and bishops.¹

Second Order.—This order, founded for women by St. Dominic at Prouille in 1206, also follows the Rule of St. Augustine together with special constitutions. The sisters devote themselves to a life of prayer, silence, and manual labor, and are distinguished by a plaited white crown. The real date of the foundation of the Dominican nuns that of the establishment of their first convent in Rome, the Convent of San Sisto (1219). The Second Order spread rapidly.

(7) The Third Order.—The Third Order of St. Dominic comprises a number of different societies of brethren and sisters, some of whom are ‘regular,’ i.e. live in community and follow the religious life, others ‘secular,’ i.e. live in the world. It is impossible to go into their history here.² The best known among these societies is the Order of Friars Preaching Order of St. Dominic, which was founded by Lacerdaire in 1892, and had the direction of the famous colleges of Arceuil, Oullins, Sorère, etc.

2. Franciscans.—Under the general title of Friars Minor, Franciscans may be reckoned all those ‘religious’ who recognize St. Francis of Assisi as their founder. They are divided into a number of different groups—the result of the divisions that took place among the sons of the saint almost as soon as he was dead, and even during his lifetime.

(a) Origin.—St. Francis, born at Assisi in 1182, is one of the saints who have exercised the most profound influence on the interior life of the living Catholic Church. The example of St. Francis in his youth lived a somewhat dissipated life, but, being converted and consequence cast out by his father, he gave himself to a life of voluntary poverty, depending for his support upon alms. His beautiful and fertile nature, his wonderful gifts, his generosity and heroic sanctity attracted numerous followers. The society thus constituted received an unwritten approbation from Innocent III. in 1209; in a few years’ time it numbered thousands, and was spread all over the world in every part of Christendom. The first constitution for preaching the gospel of poverty and the love of God. In 1212 Clare, a daughter of one of the noblest families of Assisi, associated herself with this apostolate and founded the Poor Clares, the Second Order of St. Francis. Clare and her companions, in 1212, withdrew from the preaching friars and founded an order for lay folk, who were thus affiliated to the Franciscans, while remaining in the world. This was the Third Order of St. Francis, which soon also numbered its thousands and exercised a vast influence far and wide. Francis himself longed to go and preach the gospel to the Saracens and thus gain the crown of martyrdom, but the divisions that so soon arose in his religious family obliged him to give up the idea and to return to Italy. The Rule of St. Francis was published in 1224 on Mt. Alverno and died on 3rd Oct. 1226.² The name by

⁴ Ibn. Helyot, iii. 245 ff.; Heimbucher, ii. 169 ff.

which the Franciscans are usually known, that of Friars Minor, was given to them by St. Francis himself from motives of humility and is based on the words of his Rule: ‘et sint minores et subiti omnibus.’

(b) Rule of St. Francis.—The first Rule of St. Francis is very simple. It was approved by Pope Innocent III. in 1209, but underwent frequent modifications in the chapters or general councils of the order held by the saint every year. During his lifetime the Friars Minor were in a grave crisis, in consequence of which St. Francis drew up in 1221 another Rule, more complete than the first. This is known under the very incorrect title of ‘First Rule’ of St. Francis. The saint twice modified or rewrote this Rule, and it was solemnly approved by Honorius III. in 1229. Its most striking characteristic is its insistence on the practice of poverty in its most absolute form, not only by each ‘religious,’ but by the community; The friars could possess no fixed revenues, but lived upon the voluntary offerings of the faithful.

In 1242 fresh difficulties arose concerning the Rule. An authorized interpretation was given by the four chief authorities of the order, at the head of whom was Alexander of Hales. This did not, however, settle the matter; and the form of the order—the Rigorists and the Mitigated. St. Bonaventura, who was minister general from 1237 to 1274, belonged to the latter party. The Rigorists, who called themselves ‘spirituals,’ ended by denying to the Church the right of interpreting the Rule of St. Francis and so fell into schism. The friars of the Mitigated Observance took for their distinctive title that of ‘Conventuals.’ The popes, Nicholas III. (1279), Martin IV. (1285), Eugene IV. (1431), were obliged to interfere in order to regulate the question of the observance of poverty, the source of all the divisions in the order. A party among the spirituals formed themselves into an independent congregation under the name of ‘Poor Celestial Hermits’—a tribute to Pope Celestine v., who favored them. Angelo Clareno, chronicler of the order, and Ubertine da Casale, also famous among Franciscans, belonged to this party. Under John XXII. part of the order took up the cause of Louis of Bavaria, archbishop of Lyons, who succeeded in forming a schism with an anti-pope at their head.

(c) Foundation of ‘the Observance’.—In 1334 certain heritages and convents were established in Umbria and the Marches, in which the observant Franciscans practised their Rule. The foundation of a branch of the Observants, which was revived in all its austerity. These houses belonged to what was called ‘the Observance,’ and the friars were called ‘Observants.’ St. Bernardine of Siena, St. John Capistran, and St. James of the March belonged to this branch of the order. The Observants, kept in the background under Benedict XIII., Alexander v., and John XXII., succeeded in gaining their cause at the Council of Constance in 1415.
by creating two distinct branches of the order—the Observants, with whom were united all the other reformed congregations under the title of Friars Minor of the Regular Observance, and a more approved form of their observance of the Conventuals, or Friars Minor Conventual. (d) Capuchins, Descended, Reformati, Recollects. New divisions soon arose in one or other of the two branches. Among the Observants arose in Spain the Franciscan Order of the Capuchins. In Italy the Amadeans (Blessed Amadeus of Silva) and the Poor Hermits of Angelo Clareno. But the most important of all these reforms is that of the Capuchins under Clement VII. in 1529, to whom they shall return shortly. Besides these are the Recollects, so called from their convents named ‘recollection-houses,’ where a stricter observance of the Rule was practised, and where the more fervent withdrew to renew their spiritual vigour.

The Conventuals also had their difficulties and their efforts at reform. Within a province they broke off from them and attached themselves to the Observants. Nevertheless they continued to hold their own in Italy, France, Switzerland, and other countries. At Assisi it is the Conventuals who have the guardianship of the sacred tomb of St. Francis, and at Padua that of St. Antony.

The Capuchins, however, were destined to become the most prosperous of all the branches of the order. They were founded in 1525 by an Observant friar, Matteo di Bassi. In spite of the strong opposition directed against them from the first and the miserable end of their second founder, Louis of Possonbroecke, who was turned out of the order, they continued to prosper and to spread their influence in Europe, in Switzerland, Germany, Austria, etc. Their constitutions were approved by Urban VIII. in 1643. The name Capuchin, derived from their long pointed hood, has remained their characteristic title. Pius X. restored closer relations between the three Franciscan families—the Friars Minor of the Leonine Union, the Conventuals, and the Capuchins.

(c) Activity of the order. In spite of its divisions and internal strife, the Order of St. Francis has taken an important part in ecclesiastical history. A number of the friars, especially cardinals, have come forth from its ranks. Many of its friars have filled confidential posts at the courts of kings and popes and have been directors of their consciences. St. Francis carried on the apostolate among the infidels by preaching the Gospel in the East. An example of this was the campaign of 1230 the Franciscans founded a house in Jerusalem. Later they evangelized the north of Africa, Egypt, Ethiopia, Russia, Scandinavia, and Lapland. The travels of John of Plano Carpini in 1245 in Mongolia, of William of Rubruck in Tartary and Tibet, of Odocone of Pordenone in China are well known. Not less known is the mission of John of Parma, sent by Innocent IV. to bring about reunion with the Eastern Churches. In India Thomas of Tomelino was martyred in 1621. The friars were the first to set out for the New World. In the 17th cent. the Capuchins were in the Congo, Brazil, Abyssinia, and the Levant. In the front ranks of the adversaries of the Albigenses, the Teutonic and the Patarians we find the Friars Minor. St. Louis of Toulouse is celebrated for his opposition to the Hussites in 1456; St. Fidelis of Sigmaringen and many others were martyred by the Protestants in Switzerland, England, Holland. In the latter country we have the celebrated Catholic Action. Considerable number of Friars Minor have gained renown as preachers and missionaries—e.g., St. Anthony of Padua, St. Bernardino of Siena, St. James of the March, Joseph of Leonissa, St. Leonid of Fort Maurice, Bernardino of Feltre, Ladislaus of Gielhow, Angelo d’Acri, etc. There were also theologians and savants among them.

In the early days of the order there was a certain degree of hesitation regarding the question of study, because the friars were entirely opposed to the 'secular learning.' But St. Francis never showed himself hostile. As long as the interior spirit of his children was not thereby endangered, study might well find its place in their life. Hence we find at an early period Franciscans teaching in the universities of Louvain, Paris, and Oxford. Certain houses, called studia, were established, as among the Dominicans, for purposes of study. The various branches of the order have produced a large number of theologians and men of learning. The most celebrated of them are mentioned.

of Berthold and the hermits who lived with him in Carmel under the patronage of Elias. The patriarch of Jerusalem, Albert de Vercelli, gave them a rule which was a literal transcription of the Rule of St. Augustine. The hermit priors possessed hermit cells, and give themselves to manual labour. They met together for the divine office in their oratory. Their life was, in fact, a blending of the cenobitical and eremitical elements, like that of the early monks and of the Carmelites. Other similar foundations of the 11th and 12th centuries.

Foundations were made from Carmel at St. Jean d’Acre, Tyre, Tripoli, and Jerusalem. They were, however, in part destroyed by the Saracens, some of the hermits suffering death at their hands. Other colonies were founded in Cyprus, in Sicily, at Marseilles, at Valenciennes, and in England. St. Louis of France paid a visit to Carmel in 1254 and brought thence with him some of the hermits whom he established at Charenton and other places.

(b) Migration to Europe.—A new phase in the history of the Carmelite Order is marked by its migration to Europe. At the first chapter held at Aylesford in England St. Simon Stock, an Englishman (1244-1309), introduced some provisions into the primitive Rule to a certain extent, and obtained for the order in 1247 an interim approbation of Innocent IV. The order was finally approved by the Council of Lyons in 1274, though not without some difficulty on account of the decree of the Lateran Council in 1215 which forbade the foundation of new orders. It now undertook a new development. Foundations were made in the towns; community life took the place of solitude; and various mitigations were introduced into the primitive Rule. The solitary life was transformed, in fact, into mendicant friars and obtained the privileges attached to the existing mendicant orders. The original title of ‘Frates Eremitae de Monte Carmelo’ or ‘Eremitae sancte Marie de Monte Carmelo’ was changed into ‘Frates Ordinis B. M. de Monte Carmelo.’ St. Simon Stock, the great partisan of the active life, founded houses in Oxford, Cambridge, London, York, Paris, Bologna, Naples, etc., choosing cities that possessed universities, and always seeking fresh foundations for his young ‘religious’ and also to obtain recruits for the order among the students. But this new and rapid development was not without its dangers; and, when St. Simon Stock died, he left to his successor a difficult situation to cope with. The latter, Nicholas Gallicus (1265-71), was opposed to the active life and wished to bring back the order to a more contemplative ideal, but was obliged to resign his office. In an unedited work entitled Ignis Suppletio he denounced strongly the practice among the Carmelites of preaching and hearing confessions. The order continued, however, to develop in this direction. It met with great success in England, where the kings themselves founded houses. Many of its members were in council the professors of Oxford and Cambridge, and performed important missions for their royal masters. Among these was Thomas Walden, who accompanied Henry VI. to France. The English Carmelites never accepted the reforms introduced into other provinces of the order, and the houses were never properly organized. Under Henry VIII. the greater number submitted to the Act of Supremacy and separated themselves from the other branches of their order. Only two of the English friars remained faithful, and the rest were modelled on the French. For the suppression of the other houses, however, did not prevent the suppression of their order in England, the plunder of their possessions, and the dispersal of their libraries. At the time of the Reformation there were 39 Carmelite monasteries in England.

(c) Constitutions and studies.—The earliest constitutions of the Carmelite order are those of 1284, but it seems that an earlier reduction existed in 1256. The constitutions of 1284 divide the order into two regions, one belonging to the different nations. At the head of all is the general chapter. At each of these chapters he was obliged to give an account of his administration, and was then either confirmed in or deposed from office. His ordinary place of residence was Rome, and he was assisted by regular officials. The general chapters were held at first every three years, then every six years, and even as rarely as once in sixteen years. In England the court usually contributed towards the expenses of the general chapter—the journey, horses, hostels, etc. The provincial chapter chose the definitors for the general chapter. It was the business of those officials to receive reports on the administration of the provinces, to confirm or depose the provincial officials, to appoint the accounts, to nominate the professors for the universities, to revise existing laws and add new ones, and to reward or punish members of the order according to their merits or demerits. The acts of the general chapters of the first century, consisting of fragments and unconfirmable data, such as they are, have been published. The provincial chapter, which was usually held once a year, was composed of all the priors or vicars of the province. Four definitors were chosen at the chapter. These officials exercised in the province the same duties as those exercised by the definitors general in the whole order. They had power to depose the priors, to choose those who were to be sent to the houses of study (studia generalia or particularia) or to the universities, and to decide on the foundation of new houses. Each house had its prior, assisted by a vicar. The administration of the prior was controlled by three guardians. He could be confirmed in office every year, inde- limitly. Certain monasteries were set apart for the study of philosophy, others for that of theology. In 1284 there were eight studia generalia—Paris, Toulouse, Bologna, Florence, Montpellier, Cologne, London, and Avignon. Their number increased until at last every province had its house of study. The houses of study (studia) of Paris averaged 300, in London more than 100. Some students went through a short course only, others remained as long as twelve years in the universities. It may be said that the order, from its approbation at the Council of Lyons up to the Great Schism, continued to develop steadily. There were certain abuses against which the general chapter itself continually raised its voice, such as the entrance into the order of poor students who came for the purpose of pursuing their studies gratis, the seeking of ecclesiastical benefices or posts of honour outside the order by certain of its members, the attempts of superiors to make their office perpetual or the fact that they showed favour to nephews or other relatives. Again, the professors in the various houses, called the singers or from choir, took their meals outside the monastery, caused the lay brethren to wait on them as their servants, etc.

A first attempt at reform was made at Mantua in 1415. The province of England had placed under the general John Soreth (1351-71); another at Atri in 1499, which issued from that of Mantua. In 1514 we have the reform of Mt. Olivet near Genoa; in 1609 that of Rennes, and in 1744 that of Genoa. Another reform was the most important (see below). The reform of St. Elias, or the Italian congregation inaugurated at the instance of Clement VIII., established itself in Genoa, Rome, and Naples, and also in France, Germany, Austria, Poland, and Lithuania. In
1731 this reform numbered 4193 members. It gave
greater scope for activity and the exercise of the
same sort of spirituality. The Spanish Order of the
Diet, the DACL, Mathias Séraphin, Thomas Scott of Norwich and
the Blessed Jeanne de Toulouse.

(d) St. Teresa's reform.—St. Teresa (†1552),
assisted by St. John of the Cross, founded at Avila
a convent in which a more austere observance of
the Rule was carried out in the practice of poverty,
penance, and the contemplative life. The account
of her subsequent foundations and of the reforms
carried out by her in several Carmelite convents,
bOTH of nuns and of friars, will ever remain unique
in the annals of the religious orders. This reform
was introduced into France by Madame Aculeau
(Blessed Marie of the Incarnation) and by the
celebrated Cardinal de Bérulle. It has always
been possessed in France a special character of its own
and has always been very prosperous. Among its
most celebrated members are Louise de la Miséricorde
(Louise de la Vallière), Thérèse de St. Augustin
(Madame Louise, daughter of Louis XV.), and
Anne of Jesus.

(c) Affiliated members.—The Carmelite Order
has also its affiliated members. Several communi-
ties of Beguines in the 15th cent.—notably those
of Gueldré and Dinant—were affiliated to the order
and thus originated the Carmelite nuns. From
these, foundations were made in France, Italy,
and Spain. As among the Dominicans and Fran-
sicans, there was a division of labor, some members
living in the world, while others live in community.

(f) Missions.—The Carmelites had some flourishing
missions in America (Mexico, Peru, Florida,
Rio de Janeiro, Guadeloupe, San Domingo). St.
Teresa, although her great object was to bring
back the contemplative life to her order, favored
missionary activity on behalf of heretics and
pagans. In 1584 the reformed Carmelites sent a
mission to Constantinople, to endeavor to establish
itself at Baghdad, at Basra, and in India.
Flourishing missions were also founded at Bombay
and at Goa; others in China, Turkey, Armenia,
Syria, and North America. The Carmelite nuns
of Spain founded convents in America—in the
Argentine, Bolivia, Brazil, Chile, Colombia,
Ecuador, and Peru. Among the Carmelite mis-
sionaries there were several martyrs. Colleges
existing for the missionaries, which contributed
toward the support of the famous Congrega-
tion of Propaganda at Rome.

(g) Desert convents.—An institution peculiar to the
Carmelite order is that of the 'desert,' or con-
vents where the purely contemplative ideal was
carried out. This institution owed its foundation
to the memory of the eremitical life led by the
ey early members of the order on Mt. Carmel and to
the passages of the Rule and constitutions that
encourage the contemplative life. In these and
in other documents this form of life was recommended
for certain convents to be founded apart from
towns or cities, in forests or desert places. The
idea of the 'desert convents' properly so called
seems to have been originated by Thomas of Jesus,
Discalced Carmelite of Spain. Several of the
brethren in these convents were destined to remain
there always, but the greater number came only
for a year and then returned to the houses whence
they had come. The first 'desert' was founded in
1552, and the last one near Tegus in New
Castle, and soon after one was founded for
every province. The total number was 22. These
'desert' followed the plan of a charterhouse, and
the life resembled that of the Carthusians, but
was even more rigorous. The pietas of the practice of strict silence,
fasting, and other penitential exercises was in
honour. Attached to each 'desert' were
separate hermitages, where the brethren could
retire to lead a life more completely solitary even
than that of the 'desert' itself. There were also
anchoresses and recluses attached to some convents,
among them the famous St. Teresa of Jesus, Thomas Scott of Norwich and
the Blessed Jeanne de Toulouse.

(a) Activity.—We have seen that in many of
their provinces the Carmelites friars gave them-
selves to the active ministry and to teaching in
the universities. There, where their influence was
disputed by the Dominicans and Franciscans, who
were already in the field—there was no room for a
third school of thought. The Carmelites then,
instead of creating a school of their own, followed in
the Dominicans and Franciscans. They have had
among their numbers theologians of renown. St. Teresa and St. John of the Cross
were founders of a school of mysticism which has
produced some remarkable writers.

4 Herrits of St. Augustine.—We have already
dealt with the Canons Regular of St. Augustine
and other congregations of canons who follow
the Rule of that saint. Here we are concerned
only with the hermits of St. Augustine. These
hermits, sometimes called simply Augustinians, date from
the 12th–13th century. At that period there were
certain communities of hermits who, either
or subsequently, followed the Rule of St. Augus-
tine. Chief among these were the Williamites
(Guillemites) founded by William of Malvay
in 1155, near Paris, who were spread almost
in Italy, Germany, Belgium, and France.

Besides these there were the Bonites (so called
from their founder, the Blessed Jean Buonl, †1249); the
Brittish (founded by St. Blasius ofBrittany in
the Marches of Ancona in the 13th cent.); the
Tuscan Hermits of the Blessed Trinity; the
Brothers of the Sack (Frates Saccati, Saccophori,
Saccetti, Saccchesi), so called from the shape of
their habit. The last were also known as the Brothers of
Penam.

So many different congregations, leading what
was practically the same life with the same object
in view, needed to be brought together; and Alex-
ander IV., on 4th May 1526, promulgated the bull
of the 'Carmelites and Realists,' which united them
in a single order under the title 'Hermits of St. Augustin.' He exempted them from episcopal
jurisdiction. A general chapter of all the superiors
was held in Rome in 1526; the Rule of St. Augus-
tine, the only one the order had practised, was
imposed upon the hermits; a superior general was
elected; and the order was divided into four
provinces—Italy, Spain, France, Germany. In
1567 Pius v. included it among the mendicant
orders, giving it rank after the Carmelites. At
the period of its greatest prosperity the order
possessed 42 provinces and 2 vicariates, number-
ing 2000 monasteries and about 30,000 members.
The title of 'Hermits' was not altogether
appropriate, at least in the case of some of the
now united 'Carmelite' hermits, whose members practised
the conventual life and had their convents in
the midst of towns and cities.

In the 14th cent. efforts were made to reform
certain abuses that had crept into some of the
houses of the Order, and new constitutions were
formed—e.g., that of Iliceto in 1385, that of St. John ad
Carbonariam (in the kingdom of Naples) in 1390,
the Congregation of Lombardy in 1430, that of Our Lady of Consolation, and others.1 Two reforms of greater importance were effected in Spain: the first, in 1430, imposed on all the houses of Castile; the second, more austere in 1538. These were the reformed Discalced Augustinians or Recollects, extended to the Spanish colonies, the W. Indies, and the Philippines. There were reforms also in France, among which must be mentioned that of the 'Petits Augustins' who were obliged to live as if they were monks or friars. The members of these reformed congregations had flourishing missions in the E. and W. Indies, in Mexico, Peru, China, Japan, and India. In Spain, where they were always more prosperous than in any of the other provinces, the reformed Augustinians were favoured by Philip II. Among celebrated Augustinians we may mention St. Thomas of Villanova, Panvini, Lupus, Lancillot, Noris, Luis de Leon, one of the greatest writers in Spain, and Florez.

From the 15th cent. onwards efforts were made by the Augustinians to bring about the reform of their order in Germany. One of these efforts at reform—that of Andreeus Proles (+ 1503)—was extended under his successor Johann von Staupitz by the desire of the pope to all the Augustinian friars of N. Germany. Seven houses opposed the reform, and the dispute was settled by the decisions of the Diet of Erfurt, which Martin Luther belonged. The apostasy of Luther brought about the ruin of the Augustinian order in Germany. Many followed the arch-Abbot of his revolt against the Church. But some of these German Augustinians were, on the contrary, determined opponents of the Reformation. In 1526 the communities that had remained faithful to the Roman Catholic Church were united to the province of Lombardy. In France the Revolution of 1789 struck another blow at the Augustinians, and the greater part of the 157 monasteries, while in Spain the Revolution of 1835 closed 105 out of 153.

In recent years the Augustinians have begun to flourish once again. Leo XIII. endeavoured to bring about greater unity among them in 1890. Nine constitutions were rewritten, and the Order was divided into 23 provinces, distributed among two congregations, and it numbers about 2300 members. In Rome the Augustinians possess the church of St. Agostino. The famous Angelica library formed by one of their friars, Angelo Rocca (+ 1627), was presented to the Mercedarians. They have also at Genazzano, in the neighbourhood of Rome, a celebrated place of pilgrimage.

Sons of the order of worthy mention are St. Nicholas of Tolentino (+ 1305) and St. John a S. Facundo (+ 1479). Among its members must also be reckoned a certain number of theologians, dogmatical and moral, of erudites, and of missionaries.2 The Assumptionists, who form a branch of the Augustinian order, are treated below, p. 706.3

The bull 'Lietect Ecclesiæ Catholicae' which in 1591 placed the Augustinians among the monastic orders, was never enforced against the nuns. Each convent remained autonomous. To this congregation belonged St. Juliana of Mt. Cornillon at Liége (+ 1528). The reform known as the Recollects was one of its branches.

After the four great mendicant orders come a number of others known as the lesser mendicant orders. We have given a list of these above (p. 5) and can speak here only of the principal ones. The greater number of them follow the Rule of St. Augustine.

5. Trinitarians.—The Trinitarians (or Order of the Blessed Trinity for the Redemption of Captives) were founded by St. John de Matha and St. Félix de Valois, at Cerfroid in the diocese of Meaux, in 1248. The order was created by the founders of the Discalced Augustinians or Recollects, extended to the Spanish colonies, the W. Indies, and the Philippines. There were reforms also in France, among which must be mentioned that of the 'Petits Augustins' who were obliged to live as if they were monks or friars. The members of these reformed congregations had flourishing missions in the E. and W. Indies, in Mexico, Peru, China, Japan, and India. In Spain, where they were always more prosperous than in any of the other provinces, the reformed Augustinians were favoured by Philip II. Among celebrated Augustinians we may mention St. Thomas of Villanova, Panvini, Lupus, Lancillot, Noris, Luis de Leon, one of the greatest writers in Spain, and Florez.

From the 15th cent. onwards efforts were made by the Augustinians to bring about the reform of their order in Germany. One of these efforts at reform—that of Andrees Proles (+ 1503)—was extended under his successor Johann von Staupitz by the desire of the pope to all the Augustinian friars of N. Germany. Seven houses opposed the reform, and the dispute was settled by the decisions of the Diet of Erfurt, which Martin Luther belonged. The apostasy of Luther brought about the ruin of the Augustinian order in Germany. Many followed the arch-Abbot of his revolt against the Church. But some of these German Augustinians were, on the contrary, determined opponents of the Reformation. In 1526 the communities that had remained faithful to the Roman Catholic Church were united to the province of Lombardy. In France the Revolution of 1789 struck another blow at the Augustinians, and the greater part of the 157 monasteries, while in Spain the Revolution of 1835 closed 105 out of 153.

In recent years the Augustinians have begun to flourish once again. Leo XIII. endeavoured to bring about greater unity among them in 1890. Nine constitutions were rewritten, and the Order was divided into 23 provinces, distributed among two congregations, and it numbers about 2300 members. In Rome the Augustinians possess the church of St. Agostino. The famous Angelica library formed by one of their friars, Angelo Rocca (+ 1627), was presented to the Mercedarians. They have also at Genazzano, in the neighbourhood of Rome, a celebrated place of pilgrimage. Other sons of the order of worthy mention are St. Nicholas of Tolentino (+ 1305) and St. John a S. Facundo (+ 1479). Among its members must also be reckoned a certain number of theologians, dogmatical and moral, of erudites, and of missionaries.2 The Assumptionists, who form a branch of the Augustinian order, are treated below, p. 706.3

The bull 'Lietect Ecclesiæ Catholicae' which in 1591 placed the Augustinians among the monastic orders, was never enforced against the nuns. Each convent remained autonomous. To this congregation belonged St. Juliana of Mt. Cornillon at Liége (+ 1528). The reform known as the Recollects was one of its branches.

After the four great mendicant orders come a number of others known as the lesser mendicant orders. We have given a list of these above (p. 5) and can speak here only of the principal ones. The greater number of them follow the Rule of St. Augustine.

1. Cf. for details Heinbucher, ii. 184 ff.
2. A. Lübbe, Heinbucher, ii. 190 ff.
4. Pierre de Sainte Hêlène, Abrégé de l'Historie des Augustins déchaussés, Rouen, 1877; Helyot, iii. i. 1.; Heinbucher, ii. 177 ff.; Besse, Augustin, Règle de S. in Diet. de Théol. cath.; Chevalier, etc. 'Augustins, canonises révélées,' 'Augustins, ordre d'ermites.'

6. Order of Mercy.—Another order founded with the same object as the Trinitarians was that of Montjoie in Spain, but it had only a short existence (1180-1221) and was incorporated, after a term of 40 years, with the Order of Calatrava. In 1218, however, St. Peter Nolasco founded in Spain an order that was to become a rival of the Order of the Blessed Trinity. This was the Order of Our Lady of Mercy (de la Mercède), whence the name of Mercedarians, or Fathers of Mercy. Like the Trinitarians, the Mercedarians undertook to save to the Moors, or of redeeming—those occupied by the pirates of Barbary—and were occupied also in the service of the galley-slaves and in missions to the heathen. Their special field of operation lay in Morocco, whereas that of the Trinitarians was in Asia Minor and Algeria. The Order of Mercy was approved by Gregory IX. In origin it was a military order composed of knights, chaplains, and serving brethren. The name of St. Raymond Nonnatus is one that is quoted with pride by the order. The Rule of St. Augustine is followed, and the Order of Mercy has sometimes been reckoned among the Augustinians.2

7. Servites.—The Order of the Servants of Mary, or Servites, so called from their special devotion to the Blessed Virgin, was founded in 1233 on Monte Serrano, near Florence, by seven members of seven patrician families of the city. The Rule is that of St. Augustine together with special constitutions which were approved in 1249. St. Philip Benizi was the fifth general of the order. It was on the point of being suppressed in 1274 in consequence of a decree of the Council of Lyons, renewed by the 2nd Council of Lyons, but it was finally approved by Benedict XI. in 1304. It spread abroad in France, Spain, Hungary, Bohemia, Poland, and even as far as India. In 1910 the order numbered 700 members and 62 monasteries.4

RELIGIOUS ORDERS (Christian)

Considered as belonging to the mendicant orders are also certain congregations of women which follow the Rule of St. Augustine. Chief among these are the following.1

8. The Brigitine Order, founded by St. Brigit of Sweden (+1573), resembles in some respects that of Fontevraud (see art. MONASTICISM, vol. viii. p. 796). In each convent there were 60 nuns, governed by an abbess, who had also under her jurisdiction, in a separate house, 13 priests, 4 deacons, and 8 lay brothers. There were houses of the order in Norway and Sweden, Flanders, Prussia, Poland, Russia, and England. There exist now only 9 communities, in Germany, Holland, and Spain, and 1 in England—the last a pre-Reformation foundation.

9. The Ursulines, founded at Brescia in 1537 by St. Angela Merici, devote themselves to Christian education. St. Charles Borromeo gave them his protection. They were very successful. In France alone in 1789 there were 350 convents with 9000 nuns. At present there are about 7000 nuns in some 300 convents scattered throughout the world.

10. Order of the Annunciation, or Annunciades. This order is divided into three branches: the Annunciades of Paris (founded by the Blessed Charles of St. Ambrose), founded at Pavia in 1408, the Annunciades of Italy (or Celestial Annunciades), founded in 1604 near Genoa, the Annunciades of France, founded by the Blessed Jeanne de Valois (+1565), and the Annunciades of England.2

11. Order of the Visitaton of the Blessed Virgin Mary.—These sisters, who also follow the Rule of St. Augustine, desire to place themselves in the history of the religious orders, both on account of their founders, St. Francis de Sales and St. Jane Frances de Chantal, and on account of the special spirit of the order and the wonderful fervour shown by its members during the early years of the foundation.

IV. CLERKS REGULAR. — 1. Jesuits. In order of time the Theatines, Barnabites, and Somaschines rank before the Jesuits; but in number and importance in the history of the Church the Jesuits occupy without dispute the first place among the clerks regular. See art. JESUITS.

2. Theatines.—Founded at Rome in 1524 by St. Gaspar de Bengala (+1549), the celebrated Cardinal Caraffa, afterwards Pope Paul IV. (1555), the Theatines are in order of time the first society of clerks regular. From his entry into the ranks of the clergy, Gaetano was possessed with the desire of forming a community of zealous priests for the service of God and the works of preaching. He founded first the Society of Divine Love, then that of the Theatines,2 which closely resembled the former foundation, but had a stricter Rule. Its object was the renovation of the priestly and apostolic life by means of prayer, the practice of poverty, and study. All its members were to be priests. Poverty was to be observed to an extraordinary degree and in an altogether new manner. The society must possess no revenues, and must not ask alms like the mendicant orders, but simply accept whatever the alms of laymen and guilds might give. This was decided by Clement VII. in 1524, who gave to its members the privileges of the Lateran Canons. He decided, moreover, that the Theatines should take solemn vows, follow the Rule of St. Augustine, and elect their superiors from among their members.

The name 'Theatine' comes from Theate (Chieti), a city of the Abruzzi of which Caraffa was bishop.

1 For congregations of women occupied with the education of girls see below.

2. The Theatines were formed by Gaetano Angli, cardinal of Pavia, and in 1492 established a convent in Florence. In 1502, the pope, Clement VII, confirmed to the Theatines the rule of St. Ambrose.
Cross († 1775), was known for his great austerities and his zeal for souls. Pope Clement XIV. gave them the famous Church of St. John and Paul in Rome, and the church in the Lateran, which was the see of the bishop of Rome. They spread abroad in many lands of both the Old and the New World, and is divided into thirteen provinces with 1400 members. The Passionists give themselves to preaching and mission work.1

2. Redemptorists.—The Redemptorists (Congregatione Redemptoris Mundi) have as their founder the celebrated St. Alfonso Liguori (q.v.; † 1787), whose great theological knowledge has won for him the title of Doctor of the Church, and who exercised great influence on the Catholic doctrine and piety of his times. The members of his congregation devote themselves to the work of preaching in the towns and country districts. Like the Passionists, the Redemptorists are spread all over the world. They number at the present time 4000, possess 215 colleges or hospiaces, and are divided into 29 provinces.

3. Oblates.—The Oblates (of Mary Immaculate) were founded by Mgr. de Mazenod, bishop of Marseilles, at the beginning of the 19th century. Their work is preaching, the education of the clergy, and foreign missions. They have at the present time 3100 members.

4. Marists.—This congregation was founded at Fourvières in 1816. The members follow the Rule of St. Augustine together with special constitutions. Like the Oblates, their work is preaching and religious education.

5. Assumptionists.—The Assumptionists were founded in 1850 at Nimes by P. d’Alzon († 1880). Their activity is employed in the direction of pilgrimages, the press, mission work, the education of children, etc. They form a branch of the Congregation of the Holy Rosary, and their official title is ‘Assumptionists of the Assumption.’14

II. SOCIETIES OF SECULAR PRIESTS.—With these congregations may be compared, as regards date of foundation, manner of life, and special object, certain societies of priests, either with or without lay brothers (oradjiors), who usually take simple vows or are bound only by a promise. These societies, like the above religious congregations, are employed in the education of the clergy, the study of sacred science, preaching, and, of some of them, in foreign missions. They have community life and receive their stipends from a diocesan office, and they are under episcopal jurisdiction.

1. Oratorians.—This congregation has played an important part in the history of the Counter-Reformation of the last few centuries. It is divided into two branches—the French and the Italian. In the Italian Oratory (to which that of England owes its origin) each house is autonomous and independent, while in the French Oratory they are united under a superior-general. The former was founded by St. Philip Neri in Rome, about 1575, as a society of secular priests devoted to the exercise of the sacred ministry and to study, under the title of ‘Patres Oratorii.’ Most illustrious among its many well-known members is the historian Baronius. The names of Aringhi, Bianchini, and Gallandi also deserve mention, while, in England, they are well represented by the immortal lustre of the Oratories of Birmingham and London. Their centre in Rome is the house of La Vallicella with its magnificent library. The French Oratory, founded by Cardinal de Bérulle in 1611, vied with that of Italy in carrying on the work of clerical reform, and presents us with names such as de Condren, Bourgoing, Lejeune, Jean, Moreau, etc. The Congregation has spread abroad in many lands of both the Old and the New World, and is divided into thirteen provinces with 1400 members. The Passionists give themselves to preaching and mission work.1

2. The Lazarists, Eudists, and Sulpicians worked along with the Oratorians for the education and sanctification of the clergy, and exercised themselves in the sacred ministry, preaching, and mission work.

2. The Lazarists, founded by St. Vincent de Paul in 1625, took their name from the priory of St. Lazare in Paris, which had been handed over to them. They form a congregation under a superior-general with assistants, a general chapter, and visitations. Their houses have been established in Persia, Mexico, Chile, Tibet, Constantinople, and Palestine. They possess 240 houses and 3000 members.

3. The Sisters of St. Vincent de Paul, or Sister of Charity, were founded by that saint with the assistance of Mlle. de Marillac (Madame de La Gras) in 1634. They are the largest of all the congregations of religious women and form an army of 35,000 members with more than 3600 houses. They are to be found in almost all the countries of Europe and America, and in the greater number of the colonies. They nurse the sick and the poor in hospitals, orphanages, schools, etc.

4. The Eudists, founded by Jean Eudes at Caen in 1643, and dispersed at the Revolution, were afterwards brought together again and now number about 400 members.

5. The Sulpicians devote themselves exclusively to the training of the clergy. Their founder, M. Olier († 1657), belonged to that company of zealous priests who were the friends of St. Vincent de Paul and Père de Condren. In 1695 the Sulpicians possessed 148 monasteries and seminaries in Canada and the United States. They number about 300.1

6. The Salesians, founded in 1859 at Turin by Don Bosco, are occupied with mission work and schools, especially for poor children in order to fit them for the different trades. They developed rapidly, and exercise a wide influence. At the death of Don Bosco 130,000 pupils had passed through the schools of the institute. In 1885 it had 550 members; to-day there are 4157. There are 94 provinces with 339 hospiaces, schools, oratories, orphanages, schools for the arts and crafts, seminaries, printing-presses, and mission-stations. The last are found principally in Patagonia, Tierra del Fuego, and other parts of S. America.

The Sisters of Mary, Help of Christians, or Salesians nun upon foundation, by Don Bosco, are engaged in the education of girls, and number more than 2000. They have 250 foundations.2

3. Missions aux Anglais de l’Assomption, Paris (periodical); Heimburcher, iii. 345.

7. Paulists.—In 1857-59 Thomas Hecker, with a number of companions, left the Redemptorists, to whose congregation he belonged, in order to found his own missionary society—that of the Paulists—whoe principal object should be the conversion of Protestants in America by means of sermons, lectures and public discussions, the press, and social work. The number of converts made by the society from 1838 to 1904 was 1485; in the year 1905 it numbered 1000. The society has to-day about 100 members.1 There are many other less important societies of priests, formed on the above models. For a list of these see Heimbucher, ii. 519 ff.

Heimbucher, iii. 477 ff.

Heimbucher, iii. 508 ff.

Bull. Hist. des societes.

5 H. F. Gillon, L'etat missionnaire et la peuplemente, Rome, 1899, does not enumerate all these societies, and their number has increased since 1900. There are about 200, according to its latest statistics, which is about 30 per cent more than the number it gives for 1900.
VII. TEACHING BROTHERS AND CONGREGATIONS OF RELIGIOUS WOMEN.—I. TEACHING BROTHERS.—Ever since the 17th cent. there has existed an apostolate for the education of the poorer classes. For this purpose new congregations were formed, in which those members are simply "brothers," bound usually, and even by vow, to give up all idea of aspiring to the priesthood. These brothers take simple vows, sometimes only temporary, and their activity is consecrated to the work of teaching, and especially of educating the poor. 

The Brothers of the Christian Schools, or Christian Brothers (to give them the name by which they are commonly known), is the best known of these institutes. They were founded by St. John Baptist de la Salle (1651-81) and have since served as a model for many other societies of the same nature. Before the founder's time there had been several similar attempts, notably that of St. Joseph Calasanz, none of which was so successful. The success of the Christian Brothers is due, no doubt, in the first place, to their vow, to the purity of their founder, his wonderful power of initiative, the excellence of his educational methods, and the wisdom and solidity of the constitutions that he gave to his congregation. At his death in 1719, in spite of the opposition of the Jansenists, schoolmasters, and the authorities, the brothers spread, and in 1791 they possessed 27 houses and 122 schools with about 10,000 pupils. It spread rapidly beyond France and founded primary schools, schools for the arts and crafts, agricultural schools, orphanages, and young men's societies in England, Ireland, Italy, Spain, the United States, and S. America. In 1904 there were 15,472 brothers, 2019 schools, and 326,000 students. The superior-general and his twelve assistants are elected by the general chapter, which is composed (besides the above) of the procurator-general, the secretary-general, the procurator of Rome, the provincial visitors, deputies from each district chosen by the professed members, and sometimes former superiors or assistants. The twelve assistants form the ruling authority and are placed over the fourteen districts.

It is unnecessary to do more than mention the names of the other institutes of teaching brothers, since all are formed on the model of the Christian Brothers of St. John Baptist de la Salle, pursue the same object, and make use of the same methods. Among the principal are the Irish Christian Brothers (an independent foundation), the Brothers of the Society of Mary, or Marianists, in France, the Brothers of Christian Doctrine in Lorraine, the Brothers of Christian Instruction founded by Father Jean-Marie-Robert de Lamennais, the Brothers of St. Gabriel, and those of St. Vincent de Paul in France, the Josephites in Belgium, etc. For these congregations and for their bibliography cf. Heimbucher, III. 336 ff.

CONGREGATIONS OF RELIGIOUS WOMEN.—The greater number of the older orders have seen arise side by side with them foundations for women subject to the same Rule and inspired by the same spirit. Thus we have the Benedictine nuns, the Cistercians and Trappistines, Franciscans, Carmelites, and, still more, the nuns of the various orders of canonesses. These foundations are usually in close connexion with and dependent on the orders to which they are affiliated and, as far as the Rule and constitutions are concerned, possess, with the exception of the Canonesses, but from the 16th cent. onwards we find that, apart from certain institutes already referred to in treating of the Salesians, the White Fathers, and others, the greater number of sisterhoods or societies of religious women that have arisen since that period are entirely independent of any existing order of men. These institutes deserve a special place to themselves in the history of religious orders, since many of them owe their foundation to original ideas, and possess in their annals many an interesting page. But in an article like the present it is impossible to enter into a detailed history or even to give a complete list of these congregations; a few of the principal names must suffice.

1. The Sisters of Wisdom were founded in the year 1703 by Grignon de Montfort. Like the Sisters of Charity, they devote themselves to the education of the poorer classes, to the service of hospitals, and to every work of mercy. In number about 5,400, they are to be found in nearly every one of the Christian nations. The centre of their congregation is at St. Laurent-sur-Sèvres.

2. Sisters of Évron.—This institute was founded in the 17th cent. at Évron in the department of Mayenne, France. Their work is chiefly in the education of children, but they also look after the sick.

3. The Sisters of Nevers were founded in the 17th cent. by a Benedictine monk, J. B. de Sauve, who devoted himself to the education of children and to the service of the sick and to the education of poor children. The institute numbers about 2,200 sisters.

4. The Sisters of the Good Shepherd were founded in the 17th cent. The congregation was re-organized at Angers by Marie de Ste. Euphrasie Pelletier and possesses houses of refuge for women and young girls. In 1906 they had 248 houses and 7,400 members.

The beginning of the 19th cent. witnessed a wonderful increase in new foundations of religious women. We give here some of the most important.

5. The Sisters of Nazareth were founded in 1829 by Madame de la Rochefoucauld. They are an institute of teaching and nursing sisters. They have houses in France, Palestine, and Syria.

6. The Little Sisters of the Poor were founded at St. Servais, Belgium, by B. of St. Joseph, a Benedictine who lived in the 16th cent. and of the aged. In 1906 they had 5,400 members occupied with the care of more than 40,000 sick or old people, in 290 hospitals.

7. The Society of the Sacred Heart of Jesus was founded by Madame Darat (1865) in Paris and has 142 schools and 6,500 members.

8. The Sisters of St. Joseph of Cluny were founded for the education of young girls and poor children by Madame A. M. Javeouhey. In 1886 they had more than 300 houses (several of which are situated in missionary countries) and 4,000 members.

For all those congregations cf. Heimbucher, III. 370 ff., 555 ff.

VIII. ORGANIZATION.—I. Internal organization.—The constitutional history of the religious orders may be divided into two periods: (1) the 3rd to the 13th cent., and (2) the 14th to the 20th century.

(1) In the first period religious life presents an aspect of great simplicity and appears in only two distinct forms or types—the hermits, who lived alone, and the groups who lived in community. Somewhat later we find certain forms of religious life in which the eucaristical and the cenobitical elements were combined—e.g., the Cana- doles, Carthusians, and Vallombrosians. The characteristics of each order or family of these orders, are hardly to be distinguished from the monks (cenobites), at least as far as their constitution is concerned. The military orders form a

1 We have drawn attention above (p. 707) to certain exceptions—e.g., the nuns of Pontremult, the Brigittines, etc.

1 For the Sisters of Charity see above, p. 709. 
class apart. They came into existence, moreover, only towards the end of this period, and may be regarded as local and religious institutions of a new kind.1 Hence it may be said that, during the first nine or ten centuries of its existence, the religious state was characterized by its uniformity. We find everywhere the same life either under the monastic (eremitical or cenobitical) or under the canonical rule. Furthermore, as yet, found various religious houses or congregations; each monastery forms, with its superior and various officials, a unit of its own, autonomous and independent of any higher monastic authority. The first attempt to unite monas-
tes, St. Rogier, whose kind of footwork was made in the 9th cent. by St. Benedict of Aniane. But it was unsuccessful and can hardly be regarded as even the beginnings of a congregation. Cluny, in the 11th cent., had more success, and united those monasteries which accepted its reform in a very close union under the supreme authority of the abbot of Cluny as head of the ‘order.’ Under this authority the autonomy of the monasteries—of those, at least, that depended directly on the great abbey—almost completely disappeared. The reform of Citeaux was inspired by a principle of centralization, and the reformation of Cluny, but tending towards the same result. The close union of monastic with monastery was assured by means of a hierarchical organization that sub-
mited some houses to the authority of others, whenever it was reciprocated, in a way that guaranteed the permanence of the system, by the institution of general chapters, visitors, and a superior-general. This tendency towards cen-
tralization continued and increased from the 13th to the 20th century.

2. The second period presents certain new char-
acteristics. In substance the religious life remains the same as in the earlier period, but new forms begin to arise. We have now the foundation of the mendicant orders, or friars, whose life is very different from that of the monks. The clerks regular, again, find the 16th cent. richer as much from the friars as the latter from the monks. Certain congregations founded during the period from the 16th to the 20th cent. —e.g., the Sulpicians, Oratorians, and the various missionary societies—form a new class distinct from that of the monks. The life of these religious women founded independently of any of the existing orders of men are a still more striking development of the religious state. The tendency to centralization is emphasized more and more during the course of this period of history. The friars have a superiors, the general chapters, visitors, prov-
incials. The monastery, which in the preceding period represented the unit of monastic organization, loses all autonomy. The superior of each convent is elected, generally speaking, every three years. Often the nomination of the superior is in the hands of some, not in his hands. He is, in fact, but the representative (and that for only a short period) of an authority whose seat is elsewhere. The ‘religious’ themselves are not permanently attached to any one house, but can be sent from one to another, of the houses, into which the religious houses are united to form a province under the authority of a provincial. The various provinces united together form the order, which is governed by a superior-general and a general chapter, com-
pounded of religious, and deans and dele-
gates elected by each province. The centralizing process reached its perfection in the 16th cent. with the Society of Jesus (see art. JESUITS), which has served, at least in its general outlines, as a model for a great many religious orders and has often been added to a certain extent by some of the older orders.

At the same time, it must be remarked that this law of centralization was not absolute, and it must not be forgotten that at this time certain societies were found, which were defying the authority of the monastic order or of the See, of which the bonds of union between the different communities were, as in earlier times, of a more or less elastic nature. Besides this, the general tendency towards centralization did not exclude another tendency which, at first sight, would seem to be opposed to it, i.e., the development of new forms of religious life. This is, in fact, one of the most striking characteristics of the period with which we are concerned.

Down to the 18th cent., as we have already seen, all ‘religious’ were either monks or canons, the latter scarcely differing at all in their mode of life from the former. In each monastery a similar life was lived and practically the same Rule was followed, and yet, thanks to that autonomy which was the law of primitive monasticism, each monastery was practically independent of the others (affairs introduced by Cluny and Citeaux) possessed its own special physiognomy. The foundation of ‘orders’ like the Camaldolese, the Carthusians, the Vallobrosians, and the orders of Fontevrault and of Citeaux brought new ideas into the old one of religious life. The hospitaliers, military orders, and mendicant orders (Dominicans and Franciscans) accentuated still more the growing tendency to variety, so much so that a reaction took place, and councils and popes in the 13th cent. issued decrees forbidding the foundation of religious orders—a vain attempt. The movement was too strong; first one, then another new order—the Carmelites leading—forced the hand of author-
ity and obtained recognition, in spite of the decrees of councils and of popes.

From the 16th cent. onwards the older forms of religious life seem to have sunk into the back-
ground, and hardly a quarter of a century goes by without the foundation of a new order correspond-
ning to every separate need of society. There are orders whose object is to combat the attacks of heresy, such as the Dominicans, for the care of the sick, preaching orders, mis-
ionary orders, etc. In the 19th cent. it seems as though every sluice-gate had been opened to the flood, and the multiplication of orders attained to such a pitch that fresh attempts were made at the Vatican Council to set a limit to this love of novelty. At the same time efforts were made to amalgamate different religious families having the same object and to reunite those which had been divided into different branches. Hence we see that the tendency towards at least, some form of religious life was counterbalanced by a tendency equally strong towards an excess of individualism.

2. Laws. —The laws of each religious order are to be found in a species of code known as the Rule. We have already discussed in art. MONASTICISM the origin of the monastic Rules. The chief Rules are those of St. Basil, St. Benedict, that attributed to St. Augustine, and that of St. Francis. These four may be regarded as the source from which all later Rules have been derived and the greater number of these Rules adopted by one or other of them. But, since they are usually somewhat general in character—e.g., the Rule of St. Augustine—or because it has become necessary to modify some of their prescriptions, each order or congregation possesses in addition to the Rule its own special usage called ‘Constitutions,’ which

2 The 4th Lateran Council (1215) and the 2nd Council of Lyons (1274).
have the force of law. It is these constitutions, in reality, that give to each order its special characteristics; hence to attempt a classification according to Rules is not practical. The best-known constitutions are those of the Dominicans, the Carmelites, the Capuchins, the Theatines, and the Jesuits.

3. Dress and costumes. — It might be said with some justice, that the existence of the various tendencies above referred to could be gathered from the history of the costume of the religious orders alone. From the earliest days a special dress was worn by those leading the religious life, and this soon became traditional. It consisted of a tunic, girdle, scapular with hood, and of the stockings, and sandals; sometimes a kind of breeches were also worn. All these garments were of an inferior quality (see art. MONASTICISM). Naturally, considerable variety existed with regard to shape and colour. This costume was the rule for many centuries and remains so still for the older monastic orders, having undergone but slight changes and modifications in the course of time. The mendicant orders adopted the monastic dress in part—tunic, girdle, scapular, and hood, cloak, or cowl, and stockings. The importance of the recognizance of the details of shape and colour than the early monks. It was the colour of their habit that often gave to these 'religious' the name by which they were popularly known. Thus the Carmelites were known as the White Friars, from the white mantles which they wore; the Dominicans, who wore a black mantle, were called Black Friars. In our own day we have the White Fathers, as the missionary fathers of Algeria are called; while the Cellitines bear the name of Black Friars, and the Beguines are called Grey Sisters, or Blue Sisters, after the colour of their dress. Sometimes it is the shape of part of the habit that provides the distinctive title. Thus, as already mentioned, the Capuchins are so called from the special shape of the hood worn by them, the Friars of the Sack from the sack-like form and stuff of their dress.

Some orders attribute the special form and colour of their habit to a divine vision, as, e.g., the Order of Mercy. Again, the return to a more strict observance of the Rule outwardly symbolized by the adoption of a costume. The adoption of 'Discecd to the reform in the Carmelite order for men and women, and to a number of other orders or divisions of orders.

The military orders adopted a costume that was more in keeping with their character and only distantly related to that worn by the monks, with whom, however, they were connected by their rule of life. It was quite an innovation when the clerks regular, in the 16th cent., forsook the monastic habit together with so many other monastic observances and adopted the costume of the secular clergy.

With regard to the nuns and sisters, those who belonged to the older orders adopted, as was but natural, a form of the habit worn by the monks or friars. The later and modern congregations have, on the other hand, more often and consciously been guided by mere fancy, apart from all tradition. On this point, it is said, the Vatican Council had also intended to introduce a reform.

IX. ACTIVITY: SCIENTIFIC, LITERARY, SOCIAL, TO THE RELIGIOUS SERVICES OF RELIGIOUS ORDERS, DIFFERENT WORKS. — We have already seen in art. MONASTICISM that the monks had no special object in entering that state of life beyond their desire to lead a life in closer conformity with the spirit of the gospel. But by force of circumstances and from the fact that both manual and intellectual work had from the beginning a special place in monastic life, they were led to develop their external activity and thus to exercise considerable influence on society at large. The monastery became in most cases a centre of civilization as well as of religious life and often a nourishing growth of art. Many monastic orders had their schools of literature, and of grammar, their song-schools, and their schools for the arts and crafts. Libraries that often became famous were formed in the cloister. It was in the monasteries that MSS were copied and preserved. Thus they were for centuries a refuge for the sciences and the arts. The clearing of forests, the making of roads, bridges, and canals, the cultivation of the wide lands that belonged to them—all this was the work of the monks. It was in the cloister, too, that the great missionaries who went forth to conquer the pagan world for Christ were trained—Augustine, Boniface, Adalbert, Anschar, and many others.

In the 13th cent., the social influence of the monastic order, which had begun to decline, passed by a period of the most intense activity and importance. The latter came to being at a period when Christian society, disturbed and upset by the errors of the Albignoses and other heretics, had begun its process of disintegration. Their object was precisely to arrest this process—in the case of the Dominicans, by means of schools; in the case of the Franciscans, by means of a living example of evangelical poverty and by the exercise of the sacred ministry among the people. The Carmelites, the Augustinians, and the other orders that rose between the 13th and 15th centuries, also engaged in this work. Other orders founded about this time had a more special object in view: for the Order of Mercy and the Trinitarians this was the redemption of the Christian captives taken by the Moors; for the military orders, the protection of pilgrims to the Holy Land and the war to be waged against the forces of Islam; for the hospitals, the care of travellers, the poor, the sick, and those stricken with leprosy. In the 16th cent., and onwards till the 19th, the activity of the religious orders was extended on a larger and larger scale. They fought the battles of the Church with all her foes, by means of their preaching, their schools, and their spiritual direction. The Oratorians, the Sulpicians, the Eudists, and the Lazarists devote themselves more especially to the education of the clergy. The Theatines, the Barnabites, the Passionists, and the Redemptorists show them the example of an austere and holy life, and assist them in the sacred ministry. The missionary societies are spread abroad in every quarter of the globe, to bear the teaching of the gospel to the heathen nations. The teaching brothers and sisters give themselves to the education of the poorer classes of society—each order or congregation has its part to fulfil in the carrying out of the Church's mission on earth.

We may here give a résumé of the services rendered to religion and society by the religious orders. The mission work and that of preaching and teaching, carried out in the earlier period almost exclusively by the monks, the canons, and the secular clergy, is from the 19th cent. in the hands of the mendicant orders—the Capuchins, Franciscans, and others founded at that time. From the 16th cent. the clerks regular, the religious congregations, and missionary societies — Jesuits, Lazarists, Assumptionists, the Fathers of the Holy Ghost, etc.—extended far and wide the domains of the Church. It was especially in the 19th cent.
that the missionary movement began to spread. It is estimated that in 1792 of every 557 men 174 were Christians. At the present day for the same number is 158 Christians. This progress is due to the activity of the missionaries. 1

Out of 18,000 missionaries 15,000 belong to different religious orders. Besides these must be reckoned 120 congregations of women with 53,000 sisters and 10,000 nuns. 2 During the period of their prosperity the monasteries served as schools for children and youths. The 12th cent. saw the foundation of the universities, which soon gathered around their chairs of learning students from every part of Christendom. In these universities, after a long and violent conflict, the Dominicans, Franciscans, and Carmelites succeeded in gaining a foothold and became renowned for the brilliance of their teaching. In the 16th cent. the Jesuits, especially as regards teaching in the secondary schools, are found at the head of the movement, while the societies of teaching brothers take up the work of teaching the children of the poor the elements of learning and the various trades. Other societies, again, like the Sulpicians or Eudists, are founded for the education of orphans and the congregations of women that continually arise devote themselves to that of young girls.

Study, the copying of MSS, and literary work of every description remain, to a great extent, the prerogative of the monastic bodies. In the new orders of mendicant friars, and, later still, the clerks regular dispute this prerogative with them. Dominicans, Franciscans, Carmelites, Augustinians, Jesuits, Oratorians, Sulpicians, Barnabites, and Redemptorists—all these can quote from the names of theologians, historians, critics, mystical writers, and savants of outstanding merit.

Special orders or congregations are founded to preach the Word of God to the country people, too long neglected, or to the poorer population of the cities. These orders have been founded by St. Vincent de Paul, the Oratorians of St. Philip Neri, the Piasts, the Barnabites, the Redemptorists, the Passionists, etc.

From the 11th cent. onwards it is chiefly works of charity that absorb the activity of the religious orders. The friars, however, have been the first of the order, since the work of mercy carried on in early times by the monasteries and to the liberal hospitality shown to pilgrims and travellers in the guest-houses and hostleries that abounded all along the roads leading to the important places of pilgrimage, such as St. James of Compostella, Rocamadour, Rome, etc., and which marked out the various stages on the way and were to be found especially near bridges and ferries. 3 Besides these there were houses of refuge, leper-houses, and other charitable establishments that depended on the monasteries, and abundant alms in money or in kind were regularly distributed at the monastic gates. To give one example alone: we find in the Monasticon Anglicanum and the Notitia Monastica a list of about 115 leper-houses in England and Scotland. 4 The friaries and the centers that followed up to the 15th, with the foundation of the orders of hospital-tellers—already spoken of and of the 'Maisons-Dieu,' the 'Hôtels-Dieu,' the leper-houses, and other charitable institutions, form together a richly developed history of charitable activity, but it is especially from the 16th cent. onwards that the activity of the religious orders in works of charity and alms work is at its greatest extent and is found ready almost every ill that human nature is heir to. Vincent de Paul, Camillus de Lellis, and John of God are counted among the greatest benefactors of the human race. As an example we may notice that the Brothers of St. John of God in Paris, 1792, had 135 hospitals with 41,400 beds, while in that of Rome they had 150 hospitals with 7210 beds.

In the province of charity the congregations of women exercise a more important office even than the orders of men. In 1904 the statistics give us 457,000 sisters throughout the world devoted to works of mercy—in charge of orphanages, homes, hospitals, homes of refuge for penitents and Magdalens, infant asylums, homes for the old, for consumptives, and for lepers, and many others who are occupied with the service of sicknesses. 5 This is just one token of the manifold activity of the religious orders, but the subject, to be treated, would require volumes. 6

P. CABROL.

RELIGIOUS ORDERS (Indian).—The religious orders in general are already partly treated in art. ASCETICISM (Hindu), HINDUISM, MONASTICISM (Hindu), and some of the different orders in art. AJIVIKAS, JAINESM, PATMOKKSHA, etc.; the doctrines which feed the religious life of the 'friars' are studied in such art. as BHAVAGVAD-GITA, BHAKTI-MARGA, JAINA-MARGA, SAIVISM, VAISHNAVISM, while the artit. AUSTERITIES, FASTING (Introductory and non-Christian), YOGI, DRAVIDIAN (India), vol. v. p. 16, etc., describe some of the outward features of this life.

The aim of the present article, therefore, is to draw up a general survey of them, including the technicalities and especially the intricate and innumerable details of modern institutions, it is possible to state the most important features of asceticism as organized in the religious brother-hoods, and the most remarkable steps in this organization.

I. 'FAUGRI.'—1. Crude asceticism.—The chief

2 Cf. Heimbucher, l. c. 92.
5 Cf. B., where numerous proofs of this wonderful activity in works of charity are given. See also art. CHARTER, ALZINIGUINO (Christian).
element—the raw material—of the Indian religious life is what we may conveniently style 'faqrism.' This word is of course modern and its technical meaning is precise, but it has been chosen in accordance with the Latin word to summarize the crude ascetic, mystical, and orgiastic beliefs and practices which, as far back as our information goes, have been characteristic of the Indian people. Such beliefs and practices may be traced in almost all primitive civilizations. Outside of India, they have been crushed or chastened to a large extent by the progress of social life or of a religion which found its leading motives in ideas more human and more truly religious than a bare asceticism. 5 In India, on the contrary, the ascetic tendencies underwent an enormous development owing to certain climatic and racial circumstances, and, moreover, they were one of the chief factors of the religions and philosophies themselves. From time to time throughout history spiritual leaders succeeded in organizing and moralizing these tendencies, constructing theosophic or devotional theories of no mean moral and spiritual value; but the starting-point of these theories is often to be found in raw asceticism. The Buddhist—the Jain or the Triratna—is a philosopher, but he is also a chaste ascetic. 6 for his purposes Plutarch, which all is in modes but a chastened and moralized asceticism. Outside of India, the ascetic tendencies have remained outside the great orders and formed only lay associations for begging or not much more. Nowadays, even when he is backed up by a Church and professes to be a member of an order endowed with a literature and with high-sounding and holy garb, he is but too often a man of a low intellectual level. His literary or doctrinal knowledge is frequently confined to a few mantras, or formulas; his sectarian peculiarities (form of dress, amulets, etc.) are not much more than a profession of faith. The ascetic is not safe to infer that this state of things is an old one.

The Indian orders are apt to split up and to degenerate. The old crude faqrism is eternal and really unmodifiable. When we compare the data to be found in the Buddhist Pitakas, in the Jain Agamas, and in the Greek sources with medieval and modern descriptions, we are struck by the constant recurrence of the (1) penitential (tapas), (2) mystical (yoga), and (3) orgiastic (prāṇāyāma) practices.

The earliest references that we possess to ascetic mystical practices have been studied by A. Barth and H. Oldenberg. The long-haired ascetic, or munī, naked or dressed in rags of reddish colour, is 'possessed with the gods,' and, inversely, the good Sun is once celebrated under the aspect of a munī. 7 Here we have a living picture of the old Vedic world, still confined as they are in the narrow limits of shamanism, not yet purified by the aspiration to the finite.

(a) Tapas.—The 'religious' of the old and of the new times is often a penitent (tapasa) who indulges in extreme mortifications, or in moral self-torture or mutilation, e.g., the Bákhatas, feeding on excrements (Aghoris), holding the arms or the face upright until paralyzed; 8 imitating the cow, the horse, the dog, or the rock; 9 (govard, aovekara, kakkakautara, kakakvarta.

Tapas culminates in suicide—a common practice in ancient times. While the Brāhmaṇs forbid suicide as a religious act, they nevertheless admit it as an atonement for certain sins. 10 With the non-Brāhmaṇs suicide, by starvation, drowning, fire, or exposure, is a regular way of salvation. 11

(b) Yoga.—Mystical devices, comprehended under the general name of yoga, are as a rule associated with tapas or, at least, with a semi-ascetic life. There are a number of āsana, postures of sitting or standing, with or without a seat, which induce a state of trance, rejection of strange sets of formulas, countings the respiration or stopping it (prāṇāyāma).

(c) Mahāvāna.—On the organic side of faqrism, the use for 'religious' purposes of the live mukārās, the fire that is, is one of the most important. The word is used with all things, fish, alcohol, copulation, and mūdra—we are too well enlightened as regards medieval and modern times; but we are rather in the dark as to old Hinduism. With the Jains (q.v.), before their reformation by Nātapūta, and with the Buddhists, mukārās were not one of the obligations of the ascetic. There are unmistakable signs that the unliminality of the modern Sāttas is not a new development. In the days of the Jatajñali (2nd cent. B.C.) the violence of the fanatical devotees was already a proverb; in the words of the sūtras, this was not one of the obligations of the ascetic. They are unmistakable signs that the unliminality of the modern Sāttas is not a new development.

By penance and trance a devotee obtains important advantages and is supposed to obtain some sort of immortalization.

(1) This mode of life, not always very uncomfortable, assures a living. No one will refuse alms to an ascetic mendicant. Further, the ascetic is able to render many services, either of white or of black magic. The mass of the ascetics practised the 'low arts' which are enumerated in the Buddhist suttas as unworthy of a monk. 8 The list is a long one and is as valuable for modern times as it is for ancient.

(2) A religious mendicant, especially when

43 See Strabo, xv. l, 61, 69; art. HINDUISM, vol. vi. p. 701, on the Tirthabhakshas, Nākina, Akṣamahāk, etc., according to Indian historians, and to the British Museum, the MSS. of Strabo (63), which has been translated into several languages.

48 See art. BARH, p. 181.
49 See art. KARB, p. 181.
qualified in penitential observances, in ecstatic devices, or in thamaturgic formulas, is supposed to possess magical powers. One of the methods or sādhanas of the classical yoga, elsewhere bhūtis, was able to communicate with all sorts of supernatural beings, male and female. He was assured of a happy rebirth, as a god or a demon. But Śākyamuni states that the yogin (govercita) a man is reborn, not as a god, but as a cow.

2. The task of the religious leaders.—This was in short (1) to group ascetics under a certain rule of life, and (2) to give a spiritual meaning to the ascetic, mystical, and orgiastic practices of the Vedic period.

While adherents of a formulaic religion are the earliest steps towards the organization of the orders. All the evidence points to the conclusion that religious non-Brahmanic bodies had been flourishing for a long time when Indian history begins with the Jina and the Buddha. The former was only the redoubled brotherhood and the latter adopted from the non-Buddhists some of the most important rules of the cenic life (fortnightly meetings, etc.). A dogma of both Jains and Buddhists is that there have been in the past a number of Jinas and Buddhhas; this dogma is historically true. (2) While a mendicant, who was hitherto his own master, has to become a member of an organized body, to undergo a novitiate, to submit himself to the authority of a fixed rule or of the elders (thera, thiri), he is expected to become at the same time a philosopher who strives towards a supernatural goal. Penance, trance, and even the maṅgāras are turned by the spiritual leaders into means of spiritual progress.

Some leaders try to check the exaggeration of penance and ecstasy and prohibit the maṅgāras; others systematically approve of the most morbid form of asceticism. Nevertheless, the various degrees of discipline may be illustrated by two instances: (1) the gods were scared by the penances and the pious deeds of the future Buddha, fearing that he would dethrone them by the magical power which was the natural fruit of such penances and deeds. The future Buddha comforted them: a saint does not care for the outer advantages with which his only aim is nirvāṇa. (2) The mystic discipline is two-fold—raja-yoga, an intellectual theosophy, and hāṭhayoga, a theory or mechanical theosophy in which medicine and trance are mixed. The former represents the loftier side of Indian mysticism, and is the work of the thinkers; the latter embodies the doctrine of the ascetics.

A few topics may be mentioned. (a) Ancient Brāhmāṇism regarded penance as a method of atonement for sin, and Jainism strongly emphasized this view, which is a general one. 'With the Buddhists penance, either moderate or severe, is expected to crush desire. With the devotional sects one pleases the gods by self-torture. (b) As concerns trance, a Brāhmān employs in the grand tour of deliverance in this life the very devices through which a ājñā induces trance and obtains magical powers. Since the nāma-sūtra is used and the Soul dwells in the heart, an ascetic might draw the self from the non-self' and concentrate his individual soul in the real soul. With the Buddhists trance does not directly work out nirvāṇa, it is none the less necessary; in order to be efficiently efficacious, it must be 'with the hand.' The devotional sects the devotee realizes during trance a transitory union (yoga) with his god, a foretaste of heavenly happiness. (c) As concerns the maṅgāras, no moral distinction can be made between them. The former, the Vaiśeṣika, and the latter, the Jaina, ceremonies, whether Buddhist, Śaivite, or Vaiṣṇavite, which aim at the identification of the ascetic (yogin) with the god—by intercourse with the god, or by impersonation of the god (abhiseka) or 'marks' (nyāya), has been transformed into a Bhagavati (a female Budha), into Bhairavi, into Dādā, a Buddhist becomes the Buddha Vajrasatva, a Śaivite becomes Bhairava, a Vaiṣṇavite becomes Kṛṣṇa—and, on the other hand, the gods are turned into ascetics who have an immense proclivity to the fanatical girls known as 'mothers,' yogini, dākinī, etc. But the Tantric ceremonies are looked upon as a path to deliverance: the orgy is a sacred song; moreover, we are told that house of the ascetic addicted to that 'worship' interpret even the most shocking obscenities of the books of the Tantric religion in an allegorical way.

II. ANCIENT BRAHMAŅIC ASCETICISM.—The Brāhmāṇic asceticism was influenced by the established ideas on penance, but it remained foreign and hostile to faqirism. While it did not directly give birth to religious orders properly so called, it developed both the type of the Indian friar and, as far as the earlier period is concerned, the leading ideas of the religious life.

In short, the brāhmaṇachārī is the type of the Buddhist monk, śrāvaka, or the Jina, and the ascetic (bhikṣa) is the type of the bhikṣu (Kern). On the other hand, the goal aimed at by the Brāhmāṇic ascetic is the nirvāṇa, which is considered as the only way to deliverance, and the secular life is considered as a servitude and as a student in the sacred lore (hence his name brāhmaṇachārī); he beggars his food, avoids certain articles of diet, and practised continence. The last feature is important, and the very term for novitiate or studentship (brāhmaṇacharyā) comes to mean continence and, in the time of Śākyamuni, religious life.

While the speculations on rebirth and deliverance from rebirth were ripe, continence was regarded not only as the way to heaven, but as the best means of deliverance from rebirth. The idea of their debts to the gods (by sacrifice) and to the dead (by the birth of a son), abandoned secular life (sannyāsin) in order to reach holiness before dying, young men agreed to spend their whole life as brāhmaṇachārins in the house of their parents. This house was a lumbard, and there were the Harsāchardīs beautiful pictures of the quiet retreats of the gūrdās.

In contrast with the settlements of the hermits devoted to meditation together with moderate asceticism, and not averse to sacrifice, early Brāhmāṇism had 'penitent hermits' (tāpasa), the mundis or prīs of the Mahābhārata, either of priests or of kindly parentage. The mundi have abandoned sacrifice; they feed strictly on roots and fruit;
they perform severe penances (the tapas properly so called, 'heat'), but they remain dignified and free from vulgar charlatanism.

The sects assume a number of Brahmanical mendicants or wandering ascetics (yati, bhikṣu, parivrajaka), although we know only two associations of such men.

The law-books (in which is embodied the smṛti) regard this mode of life with little favour.

The sects hold a few details concerning the jātīlas, jātīlakas, or divyajñātaka, 'ascetics with matted hair', who joined the Buddhist order when Śākyamuni proved his magical efficiency to them. Their Brahmanical character is established no less as much as the sacrifice to the fire.

III. RELIGIOUS ORDERS: GENERAL REMARKS.

1. Sects and orders.—Apart from pure Brahmanism—i.e. Brahmanism freed from any tinge of Saivism or Vaiṣṇavism, as it was at the beginning and as it has remained in certain circles—religious India is sectarian. On the whole there are three (with exceptions) each sect—a fluid group of the worshippers of a certain deity, or of a certain form of deity—has its religious order, sometimes two or three religious orders. The prima visā view is that, in early times, the orders—e.g., the Buddhist brotherhood (the saṅgha, sāṅghika) in connexion with the mass of the people: a number of ascetics followed a certain discipline, both practical and doctrinal, and the good people who fed them were left to their own religious beliefs, a mixture of jāganiṃ and old inherited family, tribal, and tribal customs (Buddha included adherents who did not join the order and who formed a body of laity, a sect, whether Buddhist or Jain. In contrast with the lax associations of wandering mendicants, like the modern Aghoris, no organized monasticism could develop without being backed by a sect from the saints, especially the Master and his predecessors, the relics, the holy places, the symbols (tree, etc.), were the focus of a popular Buddhist devotion. The title of Rhy's Davids' book, Buddhist India, is somewhat misleading, for India, as a whole, has never been Buddhist, but the sects have always been the most important sects of India, and is really a Church.

If we are right on this point, we have to infer that the modern development of Indian sectarianism is really very old. There is a sect which finds its unity in the worship of a god, either a natural or mythological god (Siva, Viņu) or an euhemerist god (Buddha, Jina). The sect is divided into two sections: (1) the laity, more or less initiated into the theology of the sect (saṃpradāya, darsana, mātra), and (2) the ascetics, or vairāgis; some are hermits (vāmāprastha, dhyānapraṇī, āṇguśra); some lead a common life (savoṣha, māṭhādhāra) in a convent (vihāra, matha), in the neighbourhood of a temple or a holy place as a rule; some wander from one matha to another, from one chaitya to another, as wandering mendicants (tīrthaka, the Circumcellionis of the West).

2. Evolution of the doctrines of the orders. While emphasizing the permanent character of the Indian religious institutions—there is no great difference from a certain standpoint of the temple order, in the form of a chaitya and that in the form of a liṅga-shrine—it is necessary to avoid wild anachronism as well as pedantic chronology. The beliefs of the sects have not been completely modified; everywhere and always a certain monotheism, more or less orthodox, monism, Brahmanism, is retained, in spite of an overwhelming mythology and polytheity. It is quite unlikely that 'India fell asleep Vedic or atheist some centuries B.C. to awake devotional, Saivite or Vaiṣṇavite some centuries later.' But there has been a revolution in the leading ideas of the 'intellectuals' of the sects, i.e. of the ascetics. The institutions which we study (below, IV.) as 'ancient religious orders' are, as a rule, atheist; the Buddhist monk, like the Brahman samnyāsin of old, aims at nirvāṇa, and he does not expect any help from any god or saint. Buddhism and Jainism, if the doctrines of the brotherhood only are taken into account, are not 'religions'; they are atheistic paths of salvation,2 like Śaṅkhyā or Vedānta. With the mediæval or modern orders (below, V.) bhikṣu, an ardent devotion to a 'deity of election', goddess, or god, can be clearly noticed in the doctrine of grace (sannyāsha). The neo-Buddhism (see art. MAHĀYĀNA), contrasted with early Buddhism (see art. HITAYĀNA), illustrates the change: it aims at a rebirth in Sūkhāvatī, not at a dissolution just as the devotee of Viṣṇu aims at a rebirth in Goloka, not at a dissolution (losing oneself in the Absolute). But the idea of nirvāṇa has altogether disappeared in neo-Buddhism, although it is kept in the background; and, in the same way, the monism or semi-monism (auroveda, etc.) of the Upāṇisads, Vedānta, schools furnishes the sects of bhikṣu with an esoteric or 'superior' theology.

3. Religious vows.—Of all the Indian orders, the Buddhists seem to have understood the nature of the religious life best. The theory of the vows in the Ābhāḍharmakānda reminds us of Western theology.

A Buddhist is a man (or a woman) who has taken the vows of the religious life (saṃviveka, 'restraint, discipline'), i.e. who, after taking refuge in the Three Jewels (Buddha, dharma, ariya), has dedicated himself to live his whole life under the rule of Śākyamuni. The vows are either (1) the vows of a bhikṣu (the vows of a novice and of a nun are different in practice, but the same in kind), or (2) the vows of a layman (upāsaka) or laywoman (upāsikā): an upāsaka is not, as generally understood, a worshipper, but a 'religious'; he is actually a member of the third order, a tertiary.

The bhikṣu binds himself to avoid all occasions of sin (i.e. of desire), and practises a mortification which develops the humility and the energy necessary to salvation. The upāsaka avoids the occasion of many sins and plants roots of merit which will ripen in a future life. The difference between the two rules of life is characterized by the saṃpradāya on carnal desire; while the bhikṣu is absolutely continent and therefore remains untouched by the fire of passion, the upāsaka is either a mystic lover (bhijnī mithyādāra), either intercourse with an angaṇī (neighbour's wife, nun, etc.) or illicit intercourse with his own wife.3

3 A remark often emphasised by A. Barth.

3 See Poussin's remarks, i. e. 1. 222.

5 A bhikṣu follows the Ten Precepts (ERĒ vii. 320). An upāsaka follows the first five of these precepts—the third, continence, being understood mutatis mutandis.

6 In Puranahtāyikā, ii. (vol. i. p. 43), the saradāraśānta, 'avoiding adultery, is styled brāhmākāya, 'continence.'
A point worthy of notice is that an upasaka is expected to take the eight vows of an upasikastra every fortnight, i.e., live twenty-four hours as a monk (continue, not eating at a prohibited time, etc.). The man who has taken vows of either a bhikṣu or of an upasika is a 'disciplined one,' a 'rule-guided one'; he is not like other men, for the vows create the special sort of karman which is styled vijnapti.\(^2\)

In Mahāyāna Buddhism the old organization of the order remains, theoretically at least, as it was; but a new saṅgha—the saṅgha bhikkhus and upāsakas—has arisen whose Buddha—coining the usual term—bhikṣu bhikkhus and upāsakas have to undertake the duties of a saṅghakara, i.e., to produce the thinking of becoming of a Buddha and to practise the perfect virtues. Now, according to the dogma and the legends, a bodhisattva may be married; and it has been pointed out that a man, after taking the vows of a bhikṣu, may 'exchange' these vows for the vows of a bodhisattva and marry. The consequence was that the Buddhist order contains the saṅgha bhikkhus of the Buddha, that is, the order of bhikkhus of the Buddha who have been married.\(^2\)

V. ANCIENT RELIGIOUS ORDERS. From about the 8th to the 6th cent. B.C. a number of religious leaders gave a regular form to the wandering ascetic life. The best of them has a high moral standard and a high intellectual standpoint; they condemned in theory, even when they were forced to tolerate in practice the less honourable devices which were popular among their followers (magical performances, etc.); they preached a path to salvation, and contrived to adapt this to the kind of the ascetic and the religious practices. They were great organizers and also greatbrothers of whom, like the founders of the family to which they had established were living, robust organisms, they themselves became the gods of new religions.

Theology. — Bhakti, i.e. devotion to God — a Heavenly Father, and often, like the Vaishnava avatāras, an incarnate Saviour — gave rise to a lofty mysticism. 2

2 Asceticism has a truly religious meaning. Religious orders — especially the ascetic orders — have also in the powerful and intense sectarian worship which has been since the Bhagavat-Geôta (q.v.) the leading forces of Indian religious thought. 3

Bhakti, whether Buddhist or Hindu, has its drawbacks and its failures.

1 It was deemed the essential condition of salvation; it became the unique condition. A single act of faith, a single sincere invocation to God, cancels a life of sin. Finally, the exegesis of bhakti destroys bhakti. 4

To pronounce the name of Avalokiteśvara or of Kṛṣṇa, even by chance, even in a blasphemy, is enough. Further, the devotion due to God is due to the guru, who is often regarded as an incarnation of God Himself; Hinduism, in that direction, went almost into the same realm as Islam. 5

3 Bhakti and bhakti were also (2) to specialized forms of God and to idols; hence all forms of superstition. Again (3) devotion is often paid to the śakti, or female energy, of God; hence the 'religions' justification of the eroticism of the Śaktas (left-hand worship).

1. The role of the religious orders has been sometimes to purify bhakti from its pagan features, sometimes to emphasize those features and to organize the puṣṭimārga, or salvation by dace. They may be described either as Vaishnava or as Śivaite, according to the name that they give to God.

(a) Vaisnava. — (1) Rāmānuja (q.v.), and (2) Rāmānanda, who belonged to the school of Rāmānuja and was perhaps the immediate guru of (3) Kābrī (q.v.); (4) Anandatirtha, who originated the Mādhvas (q.v.); (5) Chaitanya (q.v.), and (6) Vallālāhāchārya (q.v. 16th cent.), with the (5th) Kārtābhājāya and the (6th) Čharan Dāsī (18th cent.), with the (5th) Radāvallābhās, the Sakhibhās, etc.

2. The religious orders and the Bhakti movement have been a means of progression for the progress of society in the direction of Hindu revivalism and the enforcement of the higher Hindu duties. The other great religious movement of the eighteenth and nineteenth centuries was the Bhakti movement, which gave rise to the development of the Śivaite and the Vaishnava orders. These orders were characterized by a strong sense of devotion to God, and they were especially popular among the lower castes and among the untouchables. The Bhakti movement was a great reforming movement, and it played an important role in the development of Hindu society.

3. The Bhakti movement was also a means of progress in the direction of Hindu revivalism and the enforcement of the higher Hindu duties. The other great religious movement of the eighteenth and nineteenth centuries was the Bhakti movement, which gave rise to the development of the Śivaite and the Vaishnava orders. These orders were characterized by a strong sense of devotion to God, and they were especially popular among the lower castes and among the untouchables. The Bhakti movement was a great reforming movement, and it played an important role in the development of Hindu society.

4. The Bhakti movement was also a means of progress in the direction of Hindu revivalism and the enforcement of the higher Hindu duties. The other great religious movement of the eighteenth and nineteenth centuries was the Bhakti movement, which gave rise to the development of the Śivaite and the Vaishnava orders. These orders were characterized by a strong sense of devotion to God, and they were especially popular among the lower castes and among the untouchables. The Bhakti movement was a great reforming movement, and it played an important role in the development of Hindu society.
entered the monastery, either for a period of years or for life-long continence. Under the care of a master they were employed in weaving and embroidery, filling the incense-braziers, and preparing bread for the priests. 1

The Totonacs had a strict order devoted to Centeotl. Its members were widowers over sixty, of irreproachable character, who lived a secluded and austere life, and in his ten years they lived on no meat. They were much respected by the people, who consulted them, and regarded their answers as oracles. 2

2. Peruvian.—In Peru the most remarkable example of a religious order was that of the ‘Virgins of the Sun,’ girls who had been dedicated to the service of the god in infancy, and at the fitting age placed under the care of matrons in convents. Here they lived in absolute seclusion, for none but the Inca and his queen could enter. Their employment was to watch over the sacred fire and to weave and embroider temple-hangings as well as the dresses for the Inca and his household. They had to live a life of strictest continence, and any one who failed to do so was buried alive, while her lover was strangled and the village or town was entirely razed. Yet from their numbers the most beautiful were selected as ‘brides’ or concubines of the Inca. The ‘houses of the virgins of the sun,’ or monasteries, were low ranges of buildings, surrounded by high walls, to exclude all observation. 3

3. Both in Mexico and in Peru there were orders of knights corresponding to the European religious orders of chivalry. The initiation to these orders was protracted and severe, testing both the bravery and the endurance of the candidates. 4

Literature.—See the works cited in the footnotes.

J. A. MAXWELL.

RELIGIOUS ORDERS (Muslim).—In this article attention is confined mainly to the N. African orders. For the religious orders in other countries reference should be made to the series on religion in MUHAMMADIANISM. See also artt. Dervish, Suffis.

I. GENERAL CHARACTERISTICS. — I. Preliminary observations.—In the East the religions orders of Islam are not numerous, but their members are subject to religions obligations of the same kind, to a most rigorous discipline alike in spiritual and in temporal things, and to a strictly defined procedure in political matters, so that they are at once initiates (in the exact sense of the term) and agents of their official head. In N. Africa, and especially in the Maghrib, on the other hand, the orders are found in large numbers, but their organization is lax. Thus, as we proceed from Morocco to the Far East, we notice that the orders gradually decrease in number and importance; while, in passing from East to West, we find an unmistakable ebb in the current of Pan-Islamism. It would seem, in fact, that the ideal of the religious order is incompatible with that of Pan-Islamism; each tends to exclude the other. In the East and the Far East the breath of Pan-Islamism has sometimes excited, or threatened to excite, the Muslim populace to revolt; while in N. Africa, where the Pan-Islamist idea is but little diffused, it is the orders that have now and again disturbed the public peace or provoked conflicts in the colonial or protected countries.

It should also be noted that in the Maghrib the fact that the Sharifs, i.e. the real or supposed descendants of Muhammad, are found in great numbers tends to diminish the importance of the orders. The Sharifs form a highly-esteemed religious class, and their descent itself forming a sufficient basis for their authority. As it is not to their interest that religions associations which may divert to their own uses some portion of the religious offerings should be making headway alongside of them, the Sharifian families are essentially hostile to the orders, excepting those which they have founded and in a sense absorbed, thus appropriating the advantages and emoluments of both the Sharifate and the order.

The orders are very numerous in N. Africa, and the majority of them have a large, some even an enormous, membership. To enumerate their adherents is altogether out of the question. In countries subject to European Powers, as Algeria, statistics have been compiled and published, but they have only a relative value. In independent Muslim countries, such as Morocco, the numerical estimates are purely fanciful. Questions put to native members of one and the same order or community will elicit the most remarkable diversity of estimates; thus, as regards a particular confraternity, one will speak of a hundred thousand members, another of several millions, while a personal investigation will perhaps reduce the total to a few dozens or even units. Still, after making all allowances, we are safe to say that the membership of the orders in N. Africa is very considerable. One fact is to the effect that in opinion that in Morocco about three-quarters of the male population belong to these communities.

Another noteworthy fact of a general character is that some orders are specially connected with particular districts or particular tribes. Thus the order of the Nāṣiriyah and that of the Mālikī would recruit their ranks almost exclusively among the inhabitants of the Wādī Dra‘a (S. Morocco); while, as an instance of a group wholly confined to a certain ethnological stratum, and affiliated with a religious order, we may refer to the Bīkhāra (plur. of Bīkhār), a descent of the old Spanish Guard instituted by the sultans of Morocco, whose privileges were ratified by an imperial decree in 1667; this negro aristocracy belongs in the main to the Islāwiyyah (below, II. 1).

Finally, in the category of religious orders properly so called we exclude certain associations possessing a religious character (all associations in Islam may be said to have a religious character—corporations, trade guilds, shooting clubs, etc.), but having nothing else in common with the orders (of which religion is the sole raison d’être, and those which have an essentially religious purpose). Thus we do not regard the acrobatic society of Sāns called the Ulād Sīdī Ḥammad u Mūṣa as a religious order; still less the Gānawa, the negro jugglers of the public grounds and market-places. Their open-air performances and their manner of taking the collection do not suggest a religious fraternity.

2. Organization.—At the head of the order (called friga, ‘way,’ or tāfiya, ‘band’) stands the shāhīk, who exercises absolute authority. Under the shāhīk is the khālid, a sort of vicegerent or deputy, and, in more remote parts, represents him and his authority. Next come the muqaddams, heads of the various groups into which the order is divided, and engaged in the work of propaganda and management; they enrol new members, hold initiation processions, and convey the instructions of the shāhīk to members within their jurisdiction; in short, they are pre-eminently the agents of the order. The members, again, are styled khāwīn, khawīn, brothers (Algeria, etc.), jaftār (plur. of jaft, ‘poor’) (Morocco), or, more rarely, darvishes, which is rather an Oriental term; one also hears
of the word eshāb, 'companions.' The several chiefs of an order are kept in touch with one another by foot-messengers (rayğāb); the naqīb is a kind of master of ceremonies; the shākih is charged with temporal affairs.

The members of an order hold regular meetings, called haddūkh, at stated times, and at these they engage in their devotional practices—prayer, singing, dancing, etc.—and hear the instructions and counsels of their muqaddams. The order has in an establishment called the zuvvīyāh. This word is rather vague in its denotation, but in a general way it signifies an abode of murābīt, or monks, and is thus often rendered 'convent,' 'monastery,' or even 'desert' (ṣiliṣtāt styled ḥabāz). The prerogative of the shākih rests upon tradition and derives its sanction from the 'chains' in which the tradition is embodied. There are two kinds of chains: (1) the chain of initiation (ṣiliṣtāt al-iḥlāṣ), or series of 'saints' from whom the founder of the order received his instruction, and (2) the chain of benediction (ṣiliṣtāt al-barakā), or series of shākihs who successively held the headship of the order, and so transmitted the divine benediction. The former goes back from the founder to Muhammad, through a complete series of real or supposed personages directly linked with one another, and then ascends, with the archangel Gabriel as intermediary, to Allah himself.

4. Mysticism in the orders.—Mysticism (ṣufism) is one of the fundamental elements of religion, if not indeed its very essence, was, in Islam, the needed, and in a sense the inevitable, recoil from the intellectualism of the Qur'ān. Mysticism is highly developed in the orders, and in some of them reaches its zenith. It takes various forms. It appears in the 'saints' chains mentioned above, connecting the founders of the orders with Muhammad, and through him with Gabriel and Allah, thus securing for them their divine authority. The significance attached to these chains rests wholly upon the mystical element. It manifests itself strikingly in the religious language—formula of initiation (wirād) and of prayer (dhikr, etc.), instructions and counsels of the shākih, speculations regarding the stages, and descriptions of the psychic states, through which the votary passes in order to attain to ecstasy and union with God—speculations and descriptions that recall in striking fashion the analogous theories and delineations of Christian mysticism and Buddhist asceticism.

5. Ritual and ceremonial.—Mysticism, though in origin and principle a reaction against the systematizing and the abuse of rites and formulae, has given rise in the orders to a ceremonialism of its own. This finds expression, first of all, in litanies—the manifold repetitions (extending to 50, 100, 1000, 10,000, and even 100,000 times) of the same religious affirmations or invocations. In some orders the members devote all their energies to the recitation of the dhikr, spending the day and sometimes the whole night in repeating the same form of prayer. Ritualism and religious formulism, one would think, could hardly go any farther.

Ritualism appears also in the strange ceremonies and practices characteristic of the social orders (see below, II. 1)—forms of ritual which secure for such orders an extraordinary influence over the mass of believers.

6. Political aspects.—The orders differ greatly from one another in their political aspects. We shall confine ourselves more to a single country, Morocco, where these communities, in contrast to the important political rôle which they formerly played, have now all but ceased to manifest any activity whatever in this respect—a fact well worthy of note. From the end of the 15th cent. till 1830—the beginning of the French conquest of Algeria—N. Africa was dominated by two rival authorities, viz. the Sharifs of Morocco and the Turks of Algiers. These two powers had sprung into being almost simultaneously as the result of a religious movement against the Christian conquest of Muslim Spain and against the active designs of Portugal and Spain upon Morocco. This twofold activity on the part of Christian Powers aroused the fanaticism of the Berbers and the Arabs, and kindled a revolution which, directed by the orders, was fitted through its pivotal position to strike the dynasties, these being replaced by sovereignties established through the influence of the orders and the murābīt. In Morocco the first of the new dynasties, that of the Saʿādīan Sharifs, was Abu ʿAbdallah al-Qārīn ibn Amrailhu, who, after an age till 1509—10. In the eyes of the people this dynasty stood for a government constituted according to the purest traditions of Islam.

To-day, the orders, though they are a cause of disorders, these orders, in spite of the anarchy prevailing in Morocco, have all but ceased to exercise any influence whatever in political affairs. In essence the causes are two: (1) the divisions and rivalries existing among the orders, these being particularly rife in Morocco; and (2) the prerogative of the Makhzen, i.e. the Moroccan government, which is now able to have the highest positions in the leading orders conferred upon its foremost representatives—ministers, the imperial family, and even the sultan himself.

7. Place in social life.—Among the various religions is a decidedly a social concern than it is among Christian peoples, the social rôle of the orders is closely connected with their religious aspect. Mysticism, which is cultivated more or less in all the orders, has a strong fascination for the African peoples, both those which an labour under the violent and arbitrary administration of native governments (Morocco) and those which have been forcibly subjected to the rule of infidel Powers, such as France and Britain; and, by enabling its votaries to become absorbed in God, or at least to engage without restriction or hindrance in religious practices to which the authorities take no objection, mysticism offers to the oppressed not only an open gateway towards heaven, but also a means of deliverance from all the trammels and miseries of earth. Now, to this powerful attraction of mysticism in the orders is added the no less inviting aspect of their social function. The religious order is a form of association peculiarly congenial to the Muslim mind. Among the Muslims of Africa in particular the spirit of combination and co-operation is remarkably well developed. Every active form of social life tends to embody itself in associations—trade guilds, shooting clubs (which are very numerous), charitable societies, etc. This intense need of
RELIGIOUS ORDERS (Muslim)

acting everywhere and in all things in conjunction and communion with one's fellows is then invested with a sacred character by religion. Thus, on the one hand, the mysticism of the orders acts as a social force in bringing individuals together under the regis of religion, while, on the other, the orders, as religious associations, form one of the most active and effective potential phases of the social entity known as Islam.

II. THE SEVERAL ORDERS. — I. 'Isawiyah. — This order, one of the most important in Africa, was founded by Muhammad b. Isâ, who was born of a family of that name in Mecca, and died (c. 523-24) and was buried. Having become a member of the Shâdhiliyyah Jazâliyyah (below, § 30), he performed the pilgrimage to Mecca, and either in Arabia or in Egypt was in touch with certain dervishes who instructed him in the observances of the Oriental orders Hâjiriyah and Sâ'diyyah. Returning to Morocco with the reputation of being thoroughly proficient in mystical theology and capable of performing the most wonderful miracles, he became so popular that the sultan himself took umbrage and gave orders that 'Isâ should be put to death.

It was during his exile that, when on one occasion his disciples were in the last straits of hunger and crying out for food, the master bade them eat what was to be found upon the road. There was nothing but stones, snakes, and scorpions; yet such was their confidence in their leader that they devoured these without hesitation, and his miraculous powers warded off any ill effects of the unnatural meal. This incident was probably the origin of those singular practices of a similar kind in which the 'Isawiyah family still engage. Legend ascribes a great number of miracles to 'Isâ, and the report of these led the sultan to recall him to Mekinez.

The chief convent of the order is in Mekinez, and the supreme council of forty members is housed in it. The order has a loose organization, and appears to lack cohesion, though in Morocco, where it is strong in numbers and influence, it is more compact and better organized. As regards doctrine the 'Isawiyah are fundamentally at one with the Shâdhiliyyah; and indeed their founder used to serve in the court of the sultan of the Sûfis, that of the Shâdhiliyyah. A Muslim savant has thus summarized their teachings:

"In religious things—continuous progress towards the deity, sobriety, fasting, absorption in God carried to such heights that bodily sufferings and physical mortifications are unable to affect the now impassible senses; in moral things—to fear nothing, to acknowledge no authority but that of God and the Saints, and to submit only to such as permit the principles of the Sacred Book to be carried into practice."

In doctrine, accordingly, the 'Isawiyah are mystics.

The remarkable ritual practices for which the 'Isawiyah are noted have often been described. The German traveller, H. von Maltzan, who had an opportunity of witnessing them at Mekinez, has given an account of an 'Isawiyah meeting, and this, being little known, we may give here, more especially because the present writer regards it as the most accurate and authentic of its kind, and because, having been present at similar functions in Morocco and Algeria, he is able to confirm the circumstantial character of its details.

The religious ceremony opens with the masl hailing of the mystics expressing the Muslim confession of faith, La Ilaha illâ ills "There is no god but God"); repeated over and over. Then the mystics are chanted in all tones to the point of satiety, yet always in measure. The mystics at one point, when the chanting and the outcry, accompanied by the regular beating of the drum, are at their height, and a certain degree of excitement. The brothers of the order rise up and begins the religious dance (tablîh). The tablîh is not in the strict sense a dance, but we have no better word by which to render the Arabic term. It consists in regular movements of the body—slow to begin with, then more and more rapid, and at length convulsive. At the close of the dance there are poetic encomiums on the upper part of the body, and deep and rapid bowing. The dancer having continued to perform these motions for some time, a sudden sense of elation then overcomes him, and the 'Isawiyah are lying with one another in vehement swaying and bending. This preliminary scene lasts for almost an hour. Each member of the fraternity, in the same attitude, kept on till he comes to the paroxysm of the tablîh. The movements become more and more rapid, the bending deeper, and the turning of the head and the body more and more violent, until at length the exhausted 'Isawiyah are seized with violent trembling, fall on their backs, and, ngooning in their sockets and roll with the shifting gaze of the insane, and the fanatical dancers fall staggering to the ground; they have gained the desired religious rapture.

The state of physical prostration signifies that the spirit of the founder of the order has gained control over the disciple, so making him capable of swallowing with impunity the most virulent poisons and all things that inure or cut. Soon the six 'Isawiyah are wallowing upon the ground in wild disorder, giving vent to frightful yells of an altogether unhuman character, and resembling now the snorting of the wild boar, now the roaring of the lion. Some of them, like wild beasts, grind their teeth, from which drips a whitish foam. In their disordered and threatening movements, it would seem as if they are about to rend and mangle their clothes in the air.

A large dish is then brought forward, and is uncovered by the mawqaddam who presides over the ceremony. It contains serpents, scorpions, and venomous creatures. Hardly has the mawqaddam removed the cover when the six frenzied mystics fall upon the food mass, and devouring things that are perilous and distasteful to men. In a moment the whole is torn in pieces and devoured. No man of Mekinez here but a reptile, with his teeth, while the blood of the serpents and the alluvial secretion of the scorpions mingle at the corners of the mouth. This revolting sight is followed by a most dangerous. A dish of broken glass, needles, and cactus leaves is brought forward, and its contents are immediately snapped up and swallowed, the glass pieces being found in the gazelle, the cactus leaves on the tongue, and the sap of the cactus leaves trickles over the cheeks; the blood of the injured mouth mingle with the juice of the plant. Finally, a receptacle is brought forward, and the mawqaddam spits three times into it. The miraculous saliva suffices to itself to endow the neophyte with the power of swallowing poisons, glass, or cactus spines, without injury to himself.

These extraordinary performances are to be explained, less as phenomena of a psychical kind—phenomena of which the ecstatic state has yielded countless examples in all ages, among all peoples, and in all religions. In 1900, at Rabat (Morocco), in the house of M. Dr., formerly French consular agent in that town, the present writer saw a most interesting collection of instruments of torture used by the 'Isawiyah in their exhibitions—huge and heavy clubs studded with large nails, flagellants' rods formed of short supple sticks strung together in a ring, etc. It would, in fact, be quite within the power of the 'Isawiyah as jugglers and tricksters. It is certainly the case that, e.g., in Algiers and elsewhere they are ready enough to exhibit their performances for money, and at Cairwan the present writer was offered—on terms—a view of their frenzies; but the allocations of a group should not throw discredit on the members generally, who (in Morocco, at least, where the present writer has studied their mode of life) are in the main honest and peaceable tradesmen and tillers of the soil.

The 'Isawiyah are very numerous in Morocco, being found in all parts of that vast country. They draw their members from all ranks of society. At Marrakesh, in 1900-01, certain exalted personages of the Shaybani court were mentioned by name to the present writer as belonging to the order; the former sultan, Malâî Hasân, was a member (cf. also the reference to the Bukharâ above, I. 1). The order is also well represented through-

¹ Drei Jahre im Nordwesten von Afrika², Leipzig, 1898, iv. 476 ff.
out Algeria, where, in 1900, they numbered at least 3,500. The most important of their zāwiyahs (of which there are about a dozen in this country) is that of 'Ali b. Muhammad in the Daur Uzara, where the panther's skin on which the founder of the order is said to have slept is preserved as a relic; a skin with the identical claim is preserved at Mekinez. The 'Isawiyyah maintain a footing likewise at four points, and are found in almost all important localities; they are met with also in Tripoli, at Benghazî (Barka), in Egypt, Syria, and the Hedjaz.

2. Hamadsah.—The Hamadsah or Hamadshayn, another Moroccan order, though far behind the 'Isawiyyah in influence and expansion, are closely akin to them in their peculiar usages, and are noted for their practices of striking the head with an axe and of throwing cannon-balls into the air and catching them on their skulls. They are often met with in company with the 'Isawiyyah. Their name comes from that of their founder, 'Ali b. Hamdush, who lived in the 16th cent., and is interred near Mekinez.

M. Quedenfeldt 1 mentions religious orders or sub-orders related to the Hamadsah, but says little in their favor. A following text states that they are more or less connected with the Hamadsah in origin or religious practice, have but a small membership.

3. Dagahuqiyin.—The patron saint of this group, Hamad Daghuqi, who was near of kin to the founder of the Hamadsah, was born near Mekinez (Jebel Zerhun). A characteristic practice of his community is that of throwing cannon-balls and clubs into the air and catching them on their heads.

4. Sādiqiyin.—Muhammad al-Sādiq, the patron saint of this order, came from S. Morocco (Tafilalet, Drâa, Tuat). The members in their dances butt their heads violently against one another.

5. Rihān.—Their patron saint is al-Amir Rihān, who belonged to Mekinez. His followers stick the points of knives or forks into the lower front of the body without drawing blood.

6. Melāliyyin.—Māli Meliāna, the founder, was a native of Mekinez; his votaries are fire-eaters, and swallow live coals.

Māliyyin are found in communities, related to the foregoing in origin and tendency, scarcely anything is known to us but their names and the fact that their membership is exceedingly small.

7. Alamin.—Founded by Qaddur al-Alami, of Mekinez.

8. Sejīn.—Founded by Hamīd Sejīn, also of Mekinez.

9. Qāsimin.—Founded by Qasīm Bū-Asia, who belonged to the neighbourhood of Mekinez.

10. Ammāriyyin.—This Algerian order, whose religious practices are like those of the 'Isawiyyin, is found in Algeria and Tunisia, and in those countries has over 6,000 members and 36 zāwiyahs. It was founded by 'Ammār Bū-Senna, born c. 1712 at Smala ben Merād in the Wādī Zenāti (Alg.), and was reorganized c. 1815 by al-Ḥijj Emārīk al-Makāni. It is still in existence. 2 Although a Moroccan who belonged to the famous negro aristocracy referred to above (I. 1), it is reported that a dissenting branch exists in the district of Guelma (Alg.) under the leadership of a certain b. Nahāl.

11. Tūhāniyyin, or Tūbahiyin.—The Moroccan order, which in Morocco differentiates the former name and in Algeria the latter, was instituted in 1678–79 by Mūli 'Abdallāh b. Ibrāhīm, a member of the Jazūliyyin (below, § 30), and the founder of the zāwiyah of Wazzān, which subsequently gained such fame. The great political rôle once played by this order was due to the noble lineage of its founder and of his successors in the hierarchy.

For the Sharifs of Wazzān—or is the title given to them—belong by blood to the house of Mūli 'Idrīs, a descendant of Mūhammad, who founded the first Moroccan dynasty in 778, and this lineage ranks in Morocco as, if not more genuine, yet purer and better established, than that of the sultans themselves.

The name Taybiyin is derived from that of Mūli 'Abdallāh, the successor of Mūli 'Abdallāh in the government of the order, and a contemporary of Sultan Mūli Ismā'il (17th cent.). The order powerfully assisted the latter in his efforts to gain the throne of Morocco, and was one of the many successor groups from that of Mūli al-Tūhāni b. Mūhammad († 1715), who won distinction by his reorganization of the order.

From the time when Mūli 'Abd al-Salām b. al-Khāji al-Arbi b. Wazzānī, a former head of the order († 1894), became a protect of France, 1 it has in a manner been at the service of that country—a circumstance to which, it seems, it owes its subsequent decadence. Its influence in Morocco is nowadays quite inconsiderable, as is evident in 1904, when M. Pernot was a captive in the hands of the Isma'ilids and the intervention of the Sharifs of Wazzān utterly failed to secure his liberation. 'Abd al-Salām had strong leanings towards European culture; he renounced his native wives in order to marry an Englishwoman; he liked to model them on the uniform of a French general of artillery. His successor in command was his eldest son, Mūli al-Arbi.

The Tūhāniyyin are found principally at Wazzān, where their parent institution is, and in N. Morocco; in the rest of that country the present headquarter lies a little in the rear in T💩iiti, where a substantial portion of the women and the girls are found. In Algeria the Taybiyin are represented mainly in Oran; in the whole country their membership has been computed at over 22,000, while they have only eight zāwiyahs—a fact that speaks well of their organization and cohesion. The order has a numerically following also in Tuat.

12. Tājāniyyin.—This Algerian order was founded by Ahmad b. Mūhammad b. al-Mukhtar al-Tājāni, who was born at 'Āin Mādī, near Laghnan (Alg.), in 1737 and died at Fez in 1815. He was the great-grandson of the renowned Tājāni, who had built the zāwiyah of 'Āin Mādī. The order has spread far and wide; in Africa the majority of its members are found in Algeria, Morocco, Tunis, Tripoli, the Sudan, the Congo, and in Adamawa, Adrar, and Tuat, with some even in Egypt, and it has zāwiyahs also in Constantinople, Beirut, Medina, Mecca, and Yambo. In Algeria, where its membership was found recently to be over 25,000, with 32 zāwiyahs, it has been split since 1875 into two branches—that of 'Āin Mādī and that of T ENABLE (Wādi Ghir). The direct descendants of the founder reside in the zāwiyah of 'Āin Mādī. The two rival divisions stand quite apart from the rest of the Algerian and foreign orders, and are crippled by their dissensions and (in the Tamasin branch) by the personal conduct of some of their chiefs. The Tājāniyyah, however, have all along supported the French ascendancy, and have rendered great service to the Government, while, as an aristocratic society of liberal outlook, they have shown themselves markedly accessible to European influence. Some cases are very different in Morocco, where the order, while certainly aristocratic, has assumed a narrow national character. Here, indeed, it is to be regarded as standing quite by itself. Its central convent is in Fez. Tājāniyyah residents in Tafilalet, Gārara, Tuat, the French Western Sahara, and Senegal are under its control, and apparently

1 On the law of protection cf. the Treaty of Madrid, art. 16.
acknowledge its spiritual authority. In Morocco it reverts its ranks from the Arab (i.e. the Andalusian-Moorish) element, which forms the best educated and most intelligent, though the most fanatical, element of the population; and it has adherents also in the higher commercial class and even in court circles. It manifests considerably more internal cohesion than the other Moroccan orders, and, in virtue of its aristocratic character and its wealth, exercises a considerable social influence. Like all other orders, it is marked by a certain amount of intolerance, and by a certain lack of tolerance for those who differ from it.

The Tijaniyyah of Adrar seem to have made notable progress, and their zaieyjah at Shingeti is said to have established branches at Walata and Kaarta, as also farther West, among the Moors of the right bank of the Senegal and in Toro. The founder of the order was a man of liberal mind. While taking his stand upon the rule of the Khalwatiyyah (below, § 34)—a ceremonial and ascetic mysticism—he drew his inspiration chiefly from the Shadhiliyyah (below, § 34). His teachings and principles are set forth in a work which he composed at Fez between 1798 and 1800, and which is commonly called Kunash, a corruption of its real title Min kalbi nashin, ‘Gathered from Everything,’ i.e. a chrestomathy. The prevailing spirit of the order is that of a spiritual system and yet, as with other orders; it counsels no asceticism, no harsh penances, no prolonged retreats, and favours a simple ritual; and it presents generally a synthesis of temporal and spiritual interests that is conducive to broad-mindedness. We quote two characteristic sayings from the work.

‘The law follows the law: all that comes from God is to be held in respect,’ i.e. the law before all things, and the believer.

‘I all that befalls man by the will of Allah, and in that love the unbeliever (kafir) has a place as well as the believer.’

13. Derqaawi. — This is a Moorish order of great importance. It was founded by Mulail i'-Arbi al-Derqaawi, who died in 1823 in his own zaieyjah of En Barli (territory of the Banu Zarwali, north of Fez, in the Jihal). The chief convent of the order is situated there. The Derqaawi, who adhere to the traditions of the Shadhiliyyah, are found in great numbers throughout Morocco. The Sekhaliyyin, a Shirali idiom at Fez, are connected with the order, which is largely represented also in other orders (al-Zarwal, i.e. the zaieyjah of Zarwa, nearly all in Oran), in Tuit, in Gura, and in the Sahara as far south as Timbuctu, while adherents are met with in Tunisia, Tripoli (cf. Madaniyyah, below, § 14), Egypt, and Arabia. The Derqaawis are a mendicant order, and are noted for their ascetic practices and for the absolute submission in which they uphold themselves to their shaikh. Of all the Muslim fraternities the Derqaawi perhaps come nearest to the monastic orders of Roman Catholicism. The founder's final counsels to his disciples are as follows:

The duties of my brothers shall consist in overcoming their passions, and, in performing these duties, they shall seek to imbibe.

Our Lord Mussa (Moses), in always travelling with a staff;

Our Lord Abi Bakr, and our Lord 'Umar b. al-Khattab, in wearing patched clothes;

Jafar b. 'Abi Talib, in celebrating God's praises by dances (tang),

Bilal Barrir (Abu Hurira), the Prophet's secretary, in wearing a rosary round the neck;

Our Lord Iza (Jesus), in living in solitude and in the desert.

They shall travel, eat, drink and sleep, associate only with holy men. They shall avoid the society of men occupying places of power. They shall keep themselves free from all financial transactions. They shall keep little, spend their nights in prayer, and give alms. They shall tell their shaikh of their more earnest requests; it is important to them to be more earnest in those more important actions as well as of the most insignificant. To their shaikh they shall tender unrestrained submission, and shall at all times be in his hands as the corpse in the hands of those who wash the dead."

1 From a text published by L. Rinn, Marabouts et Khawans.

This final exhortation has been aptly compared with Loyola's 'perinde ac cadaver.' In Algeria and Morocco the Derqaawi have on the whole remained loyal to the spirit of their founder, renouncing all earthly ambition, and maintaining an absolute detachment from the goods of this world. Still, this attitude has at times shown itself capable of developing into fanaticism, and in both Morocco and Algeria they have now and again taken an active part in revolts against governmental authority.

The outward appearance of the Derqaawi is most characteristic: a stick or rod in the hand, chaplets of huge beads round the neck, the body covered with rags, and frequently—as a mark of pre-eminent devotion—the green turban mud-washed. The tattered and offensively foul garb which they affect has in Morocco earned them the nickname of Derbaliiyyah ('wearers of rags'), and explains the sarcastic saying of the talebunah (students) of the Jihal—'The dog and the Derqaawi are one and the same.' In Morocco the order seems to have lost ground because of its divisions; it has three distinct branches there.

Its adherents are regarded as extreme devotees of monothelmism. Their founder is said to have been so conspicuous of the dogma of the divine monothelm or the unconditional duty of giving glory to God alone that he commanded his followers to repeat aloud only the first part of the creed ('No god but Allah') and to rest satisfied with a merely mental affirmation of the second ('Muhammad is His Prophet').

14. Madaniyyah. — This is a Tripolitan order which, though an off-shoot from the Derqaawi, has come to exhibit a spirit diametrically opposed to the teachings of al-'Arbi. It was instituted by a Derqaawi named Muhammad b. Hamzaath Zafir al-Madani, and began to preach c. 1820; about that time, too, he founded the zaieyjah of Mezrata, which is still the central convent of the new order. The development of Sannulism (cf. below, § 38) about the beginning of the latter half of the 19th cent. rested, in the case of the Maydaniyyah, with the Yacoubiyyah; have remained stationary but for the fact that in 1875 the turn of events brought the head of the order, Muhammad Zafir, son and successor of b. Hamzaath, in touch with Abd al-Hamid, the future sultan of Turkey. From that point the order became one of the most prosperous and one of the most hostile to European influence. With the support of Turkey, it has intermeddled on a vast scale with questions of Muslim politics. Its sphere of activity has gravitated towards the East, and it is now represented mainly in Turkey (Constantinople), Syria, and the Hejaz, while, as regards Africa, its members are found in Egypt, Tripoli, and Algeria (where it has 1700 adherents and two zaieyjahs).

The doctrine of the order, as formulated by Muhammad Zafir and his disciples, is based on two principles: its members with the ecstatic mysteries; they manifest an unusual intensity of religious exaltation. In the statement of their regulations a drawn up by Muhammad Zafir for his disciples that war upon the infidel is a no less imperative duty than the observance of religious duties.

15. Qadiriyyah. — This order is the most widely spread and most popular in all Islam; its domain extends from Morocco to Malaysia; or, to speak more precisely, the order has found its way into that part of Islam which itself has penetrated. It was founded by 'Abd al-Qadir al-Jilani (g.v., † 1166), born in Persia, and buried at Bagdad, where also is situated the central convent of the order. The Qadiriyyah are noted alike for their philanthropic principles and their mystical emanations.

1 Nîr al-Sûtâ: 'The Sparkling Light'), Constantine, 1855.
tion. 'Abd al-Qâdir practised a boundless charity; he acceded a peculiar veneration to Sidna 'Isâ (**our Lord Jesus**), and admired his measureless benevolence, though at the same time he preached and practised a doctrine of mystical ecstasy and the extinction of the human personality by absorption in God.

In Africa, except as regards Egypt, the order shows little homogeneity. In general, its members have remained faithful to the benevolent and tolerant spirit of the founder, but fanatics and irreconcilables are scattered in European civilization, and found among them. As regards the Egyptian Sûdân, the Mahdi of Khartum and his troops belonged to the Qâdiriyah, while in the immense region of the Western Sûdân the supreme head of the order there, the famous Shaikh Ma-al-'Amin-al-Shinâ'etik—a spiritual potentate of most extensive sway—who sometimes resides at Shinâ'etik in Adrâr, and sometimes to the south of Sagiat al-Jumârâ, and has at present great influence in Morocco, is a determined antagonist of French activity in those various countries. The Qâdiriyah and the Qadiriyyah in Tunisia have almost entirely united in the whole of Africa, according to a recent report, they numbered 24,000 (of whom 2600 were women), with 33 zâwiyyahs.

16. Bâ 'Alîyyah.—This Tunisian order, an offshoot of the Qâdiriyah, has its origin only in Tunis and the province of Constantine (Alg.), was instituted by Bâ 'Alî, whose tomb, as also the chief monastery of the order, is at Nefta (Tunis). The members engage in practices similar to those of the Isâwîyyah.

17. Bâkkiâyyah.—This order, belonging to the Western Sûdân, and related to the Qâdiriyah, was founded by 'Umar b. Sidi Ahmad al-Bâkkiâ, c. 1552–53. Its central monastery is in Timbucto, and it is represented also in Tuâf, in Adrâr, and among the Tuaregs.

18. Arâsiyyah, or Salâmîyyah.—This is a Tunisian order, founded by Abû l-'ABBâs Ahmad b. al-Ârâsî, who died in Tunis in 1460. The name Salâmîyyah comes from the celebrated 'Abd al-Salâm al-Asmar, who reorganized the order c. 1796, and gave it the thauâmaturgic character that it bears at present. It is connected with the Qâdiriyah, and its typical features are a highly emotional mysticism and performances similar to those of the Isâwîyyah—frantic dancing, walking through flames, swallowing fire, etc. The order is well settled in the Sûdân, but has afterwards spread, and while in Algeria it can hardly claim 100 members (all in the extreme east of Constantine); a few are found also in Mecca and Medina.

19. Sa'dîyyah.—This is an Asiatic order, founded in the 15th cent. by Sa'd ad-Dîn al-Jabâni of Damascus, and now represented both in Asia and in Africa. Its Egyptian branch was at the zenith of its prestige in the 17th cent., and at the present day that group, together with a body of adherents in the Sûdân, forms the leading rami-
fication of the order. It is found in all the countries of the Sûdân, and in the province of Oran (Alg.), where members are also met with in the Hedjaz. The Sa'dîyyah are an ecstatic order; they are allied with the Riffîyyah, which have a regular, as well as a dissident, branch in Egypt, and which sprang from the Qâdiriyah in the 16th cent., and is found also in Tripoli, in the Hejaz, and in Syria.

20. Badawiyyah Ahmadîyyah.—This Egyptian order is connected both with the Qâdiriyah and with the Riffîyyah, and was founded by Ahmad al-Badawi, who died in 1276 at Tahtah in Egypt. He was a seer of a Sharî'îan family belonging originally to the Sûdân, but afterwards resident at Fez. Ahmad had gone from Morocco to Egypt, and settled at Tahtah, where the chief convent of the order still is. The order is now split into three independent branches, found chiefly in Egypt and the Sûdân, while it has also members in the Hedjaz and in Syria. Legend ascribes to its founder the gift of working miracles, and in particular the power of making barren women bear children—hence the licentious organs which take place round the saint's tomb on his festival day.

21. Shâdhiliyyah.—This African order—or theological school, rather—was founded by Abû l-Hasan b. 'Abd al-Jâbbâr al-Shâdhi, who was born, as some report, in Morocco, or, according to others, in Tunisia. He lived in Morocco, and in the celebrated Sabîl-al-Dîn (1277–98), a Moroccan disciple of Sha'âbî Abû Mâdiân al-Andalusi, a native of Seville, who died at Tlemcen in 1197–98. This Abû Mâdiân had travelled in the East, where he had become one of the personal followers of the famous 'Abî al-Qâdir al-Jilî (cf. above, § 15). Al-Shâdhi settled at length in Egypt. At the outset he engaged in ascetic practices, but afterwards devoted himself entirely to teaching. He gained an extraordinary reputation and was highly venerated. The uni-

versity and conditions, and an ecstatic mysticism springing out of fervid love to God. This high-wrought mysticism, impelling the disciple to lose himself in the divine, was regarded by al-Shâdhi as inconsistent with all fanaticism and intolerance, and it certainly bears the stamp of a genuine spiritual charity.

At the present day the Shâdhiyyah form not so much an organized order as a school of doctrine maintained by numerous orders and taught in numerous zâwiyyahs. The most genuine representa-
tive of al-Shâdhi's teaching are now those of the religious societies in Tunisia under the name of the Tafassîli, which, by any proper constitution, make a watchword of the master's name, and it is these—indeed zâwiyyahs—which most faithfully reflect the primitive community. We find them scattered throughout the whole of N. Africa, more particularly in Algeria (where there are over 14,000 adherents), Tunis, and Tripoli; also in the Hedjaz, Syria, and Turkey—countries in which they play an important rôle.

The following twelve orders (22–33) are of Shâdhiyyah origin.

22. Habibiyyah.—This Moroccan order, mentioned by L. Rinn, was founded by Abû Mâdiân al-Hasbî al-Lamît († 1572–93), a native of Taifâlît. We have little definite information regarding it. Its members are confined to Taifâlît (in which stands the chief monastery) and the province of Oran (Alg.), is very small, and the order is said to be animated by a tolerant and unworlly spirit.

23. Wafaiyyah (Ufâiyyah).—The Wafaiyyah, an Egyptian order, was founded in the 14th cent. by the Wafâ, a Sharî'îan family belonging to the Mamluk family in Egypt; its first chief was Muhammad Wafa, and it has survived to the present day under the control of the same family.
RELIGIOUS ORDERS (Muslim)

24. Nāṣiriyah.—This Moroccan order, now of diminished importance, was founded in the 17th cent. by Muhammad b. Nāṣir al-Drāṣ († 1669), who claimed Aḥmad b. Ẓūyuf († 1524-25) as his spiritual master. The chief convent of the order and the founder’s tomb are at Tamagrut (Wādī Drāṣ), the headquarters of the brotherhood. The members are found mainly in the south of Morocco; outside that country very few are met with in Algeria and Tunis.

25. Shāhiyyah.—The Shāhiyyah, or Ulūd Sīdi al-Shāhi, belonging to the Sahāra, and holding to the doctrinal standpoint of the Shāhīyyah, are not so much a religious order as an aristocratic caste of a political and religious character. Their founder was ʿAbd al-Qādir b. Muḥammad, afterwards styled Sīdi Shāhi († 1615), a great feudal lord who had once been a muqaddam among the Shāhīyyah. He erected at al-Abīd the first of the ṣūr (citadels) now found in the Sahāra, and exercised a strong moral and religious authority in that region.

The Shāhiyyah are located principally in the south of Orān, in Tuāt, Tīdkilt, and Gūrara. In Morocco, where a few are met with at Taflālt and around Figīg, their influence is inconsiderable; they are here regarded as hostile to Europeans. In the main, feudal, family, and marabout influences prevail so largely among them that the bond of connexion between them and their associates is now very loose.

26. Karzāzīyyah.—This Saharan order, founded in S. Morocco and S. Orān, was instituted by Sharīf Aḥmad b. Nūṣa († 1608), who belonged to Karzāz, an oasis to the south-east of the Figīg, and taught the doctrines of the Shāhīyyah. The order was formed for the protection of the oasis and the zāviyyah of the founder at Karzāz is still a refuge for the poor, and, in times of adversity or oppression, for residents of the neighbouring ṣūr.

27. Ziyāniyyah.—Also a Saharan order noted for philanthropy; it was founded by Mūlā b. Bū Ziyān († 1733), who belonged to a Saharian family resident in the Wādī Drāṣ. The saint’s tomb is at Kenatsa, between Taflālt and the oasis of Figīg, and there too is situated the central convent of the order. The members are found mainly in S. Morocco, Taflālt, Figīg, Tuāt, Gūrara, and the province of Orān; in Algēria, according to a recent computation, they numbered over 3000. They adhere to the doctrines of the Shāhīyyah. They act as conductors of caravans, and in the Sahāra protect them against robbers and brigands. The order has always shown itself well-disposed towards French people and the colonial administration.

28. Hansalīyyah.—This Moroccan order was founded by b. Ẓūyuf al-Hansālī († 1702), who, as his name indicates, belonged to the Hansālī, a section of the Banī Mṭir, a tribe living in a district to the south of Fez. Formerly the order held a position of great influence in Morocco, but it is now almost extinct there; in Algēria it numbers not more than 400 members, belonging to the province of Constantine (the zāviyyah of Shettasba); and it is represented also in Tunis. Its adherents are noted for works of charity.

29. Zarrūqīyyah.—The Zarrūqīyyah, a Moroccan order, was founded by ʿAbīl-ʿAbbās Aḥmad al-Zarrūqī († 1494), who belonged to the tribe settled near Fez. In Morocco the order is dying out, but in Algēria it has about 2700 members, with a zāviyyah at Berruaghia.

30. Jazūliyyah.—This Moroccan order has almost ceased to exist as an organized community in Morocco, although the doctrines of its founder are still taught at Fez. Its founder was ʿAbī ʿAbd-allāh Muḥammad al-Jazūlī († c. 1465), a native of Jazūlī in Sūs, and the author of a famous work entitled Dārā al-firāq (The Best Argument), on which are based the teachings of the Jazūliyyah.

31. Yusufīyyah.—This is an Algerian order, founded by Aḥmad b. Ẓūyuf, a native of Morocco, but remains more truly so, as some of its members are in Orān. This celebrated visionary (muṣṭaḥfaz), to whom are ascribed numerous proverbs and epigrams, died in 1524-25 and was buried in Miliana (Algiers). There are few traces of the order in Morocco, but in Algēria there is at Tīt, in the extreme south of Orān, a zāviyyah founded by Muḥammad b. Ẓūyuf Milūd († 1877), a descendant of b. Ẓūyuf, which can still claim some 1500 members. The order has little influence in Algēria, but it has all along maintained excellent relations with the French authorities.

32. Ghāziyyah.—The Ghāziyyah, a Moroccan order, founded c. 1526 by ʿAbīl-Ḥasan al-Qāsim al-Ghāzī, is of feeble growth, has a very limited expansion in the Wādī Drāṣ, and possesses a zāviyyah at Fez.

33. Shabbīyyah.—The Shabbīyyah is a Tunisian order, founded in the 17th cent. by Aḥmad b. Makhlfūt, a descendant of Muḥammad b. Nāṣir al-Drāṣ, the founder of the Nāṣiriyah (above, § 24). This Shabbīyyah had been sent to Tunis to extend the operations of the latter order, and had settled in Sidi Šāhīn, to the east of it. At the end of the century it was under the care of its founder b. Abīl-Hatīf. It is found in Tunis, and also in Algēria (Aurēs), where it has about 1500 members.

34. Khalwātīyyah.—This Asiatic group, the name of which is ultimately derived from the term khāwāt, ‘retreat,’ ‘solitude,’ is a school rather than an order, and goes back to the philosophical school founded by the Persian thinker ʿAbīl-Qāsim al-Junaidī († 110-11), but its actual (or at least its eponymous) founder was ʿUmār al-Khalwātī (1397-98), also a Persian. At the outset the order had no graded organization, and in Asia, where its expansion was on a great scale, it soon broke up into various groups—independent and local. At the beginning of the 17th cent. they formed for a time a religious association in the true sense; but there too, though the order made less rapid progress, it soon fell apart into divergent and independent branches or groups. The teaching of the Khalwātīyyah began to take root in Egypt as early as the 16th century. At the end of the 17th a Syrian Khalwātī called Mustafa al-Baqrī, a professor in the university of al-Azhar in Cairo, endeavoured to incorporate the members of the order in Egypt, and the united body, having grown considerably in numbers, assumed the name Baqrīyyah, to distinguish them from other Khalwātīyyah. This new organization, however, did not last long, for at the death of al-Baqrī (1709) three fresh groups detached themselves from it, viz. the Khalwātīyyah, the Sharqawīyyah, and the Sāmānīyyah. Further disruptions took place, giving rise to other independent branches and zāviyyahs, so that, as indicated above, the Khalwātīyyah do not so much form an order as represent a type of doctrine. They nevertheless exercise great influence in social life, and are ascetics, mystics of a mystic fervour; they have recourse to the retreat and the austerities which it involves; they engage in iterative prayers—repetitions of formula, names of God, etc.—sometimes continued for five or six consecutive hours. This intense religious fervour has often excited the members to fanatical outbursts and, as in Egypt, the Egyptian Sūdān, etc.,
brought them into conflict with the authorities, both Muslim and Christian. Like some other orders (cf. §§ 15, 35, and 39), they admit women as members.

35. Ṭalḥānīyāh. — The Ṭalḥānīyāh is an Algerian order, founded chiefly in Constantine, and elsewhere only in Tunis. It sprang from the Khalvätāyīyah, and resembles them in doctrine, practice, and lack of cohesion. It was instituted by Mouhammad ʿUthman al-Ḥajjār, who went to the Hedjāz and died at Taʾif in 1017 (1605). He gave to the order a title of leadership, which was afterwards assumed by his son, ʿAbd al-Qurān († 1793–94), who belonged to the Kābley tribe of the Ait Samhâl; his surname, Bū Quwaīn (from the two tombs), became the legend according to which his body was divided into two parts, buried respectively in Kabylia and at Haunna near Algiers. It is a most popular and influential order in Algeria, where it played the leading part in the great insurrection of 1871; its membership here is 156,000 (including 13,000 women), with 177 zāwiyāt, and comprises several independent groups. Like all other offshoots of the Khalvätāyīyah, it is marked by a want of cohesion, of discipline, and of central control.

36. Emīrghanīyāh. — This is an Oriental order, known also as the Mīrghanīyāh or Marghanīa, founded by Muhammad ʿUthman al-Ḥajjār, who was a descendant of the Mahdi, and took the title of Bū Ṣiddīq al-Ḥajjār at Taʾif, and died at Taʾif in 1833. He joined the then brilliant school of Ahmad b. Idrīs, a native of Fez, who taught at Mecca from 1797 till 1833. At the death of the latter, in 1837, Emīrghanī was standing among the ʿIrādīyātīyāh enabled him to complete successfully his spiritual education and to assume the leadership of that body. Presently, however, he began to modify the rule of Ahmad, and then founded the order that bears his own name. When he died, dissensions and rivalries divided his followers into isolated sections and local branches. The order has a considerable expansion in Africa, throughout the basin of the Red Sea, and in the Egyptian Sudan.

By the founder himself the order was named al-Khatematīa, 'the sealing'; hence the title Serr al-Khatem, the master of the seal, given to his son Muhammad, who became the head of the confraternity. It is a mystical and ecstatic order, and from the first—even in its very origin—it assumed a political attitude hostile to the Sanūṣīyya (§ 38). It was closely involved in the Mahdist movement; it played a rôle in the establishment of the order, and is not distinctly favourable to the Anglo-Egyptian government. The French traveller Bonnel de Mézières, when on a mission to the Sudan in 1905–06, spoke of the order as entirely in the hands of the English, and this connexion has lowered its prestige both in the Sudan and in the Hedjāz. A religious order that allies itself too openly with Europeans inevitably diminishes its influence among Muslims (cf. above, §§ 11 and 12).

37. Naṣibhānīyāh. — An Oriental order, one of the best known in Islam, the Naṣibhānīyāh has the largest membership of any in Central Asia. Its characteristics are contemplative mysticism and ecstatic ritualism; and, by reason of the varied and flexible forms of the mysticism which it enunciates, the purity of life for which its members are noted, and the spiritual prestige ascribed to them, its influence is indeed great. It was founded by Bakhtrārī al-Khwājā Muhammad Bahāʾ al-Dīn1 († 1390), an eclectic reformer (combining Sunnite orthodoxy, Shīʿīsm, and Ismāʿīli teachings). Etymologically the name Naṣibhānī is a diminutive of Naṣibhān, 'a scribe', and we have the idea of a sect or school of scholars that reflected the influence of the great male Muslim writer, to which life taken by Bahāʾ al-Dīn from the philosophical theories of the Ismāʿīliyyah Bāthaniyya ('interior Ismāʿīlians', i.e. those practising internal meditation both ecstatic and contemplative). In Africa the order has only one zāwiyya, which draws its members exclusively from the Turkish element of the population.

38. Sanūṣīyyah. — The Sanūṣīyyah, an Algerian order, was founded in 1835 by Shāhḵī Shīrūnī Muhammad b. ʿAli b. Lanūsī († 1859), who belonged to the vicinity of Mostaganem, and claimed to be the Mahdi. The chief monastery was for a long time at Jarabūb (Jaghībūb) in Tripoli, but has been removed to the hills near Sbeitla in Tunisia (1849). It has a firm footing also in Egypt and especially in Arabia; but its following is very small in Algeria (under 1000 members), Morocco, and the districts to the south of these countries. The founder claimed to be a reformer of Islam, one who would restore the primitive purity of morals according to the Qurʾān; he also maintained that he formed the synthesis of all the other orders, especially in their mystical aspects. The order of the Sanūṣīyyah has nothing like the vast influence and the fanatically anti-Christian and anti-European character that have been ascribed to it. Its attitude to Europeans is friendly or hostile according to locality and circumstances; but it should be noted that although its practices are not very different from those of the other orders, it still remains a strong force, and its successor as head of the order, took up a position of direct antagonism as the Mahdi of Khartum.

39. Ḥaddāwī. — This Moroccan order was first made known to Europeans by Auguste Coppolani.1 Its founder was Śiddī Ḥaddī, who lived in the 13th cent., and was a contemporaneous and opponent of Mūḥammad ʿAlī b. Salām. M. Meslīsh, the great saint of the Jībāl; his tomb is at Ṭażīzirn, among the BeniʿĀrūs in the Jībāl, and there stands the chief monastery of the order. The district in which he settled and had a zāwiyya built is now called Uṣr (plain) Śiddī Ḥaddī, and the fish of the stream that traverses the district have since ranked as sacred. The Ḥaddāwī (pl. of Ḥaddāwī) are a mendicant order of the lowest type, and have a most repulsive appearance. They are clothed in rags and go bare-headed, with the staff that is fastened to their hand and the chaplet round their neck; they are a byword for filthiness, and are said to live in promiscuity; they admit women into their membership. They like to have animals, especially cats, about them; and they are great smokers of hashish. Though few in number, they spread over an extensive district. All our information regarding them tends to show that they form an antimonalian order.

40. Muḥbūnī. — The Muḥbūnī, a little known Moroccan order, first noted by Jules Erckmann,2 was founded by a devout man named Ḥaddūlāb ʿAlī, also called Muḥbūn (Bū Nāḥ), a native of the Wāḍī Drāʾa, in which the Mahdi was also situated. The central convent of the order is in Tahliят, and there was recently at Marrakṣa a minor convent of the same name numbering about 200. The members—they seem to be relatively few—wear as a badge a white cap of knitted wool.

LITERATURE. — Of works dealing with the subject as a whole, few are available, and those devoted to particular orders are constantly appearing. Of the former class we cite here only those that may claim to be of scientific or documentary value: L. Rünn, Marrabouts et Rhôanais; Etude sur L'islam en Algérie (with an indication of the geographical and religious importance of the orders), Algiers, 1885; O. Depot and X. Coppolani, Les Confreries religieuses marocaines (with a map showing the geographical spread of the orders—Algeria, Africa, Asia, and European Turkey), do. 1897; A. Le Chatelier, Les Confréries marocaines dans les régions désertiques de l'Atlantique algérien à l'âge de bronze (with a map showing the geographical spread of the orders), Algiers, 1900; valuable information is supplied by A. Le Chatelier, Les Confréries marocaines dans le Hédjaz, do. 1905, which gives a detailed bibliography of the subject down to 1877.

3. **Theological significance.**—Remorse assumes its acutest form and acquires religious significance when it is a sense of having violated the laws of God or of having outraged His love, thus in either case incurring His wrath. Its specific nature is then relative to the idea of God involved. Remorse with its repentance the divine law, and the element of despair is here especially prominent because the Greek mind was apt to identify the divine in the last resort with inexorable fate. In the OT Cain and Saul are two notable examples of unavailing sorrow for sin. In each case there is a sense of guilt, a burden of penalty, a consciousness of complete and final alienation from God, and a paralysis of the spiritual life (Gen 4:15, 1 S 28:19-20). A NT writer also represents Esau as ‘rejected (for he found no place of repentance) though he sought it diligently with tears’ (He 12:17); and the first evangelist represents Judas Iscariot as having ‘repented himself,’ and, when he found repentance useless, ‘he went away and hanged himself’ (Mt 27:5-6).

But in the OT and the NT sorrow for sin more usually involves no repentance (r.g.), because God is merciful and forgiving, able and willing to reconcile the sinner to Himself, to blot out his guilt, and to open before him a new door of hope. Remorse differs from repentance in that, while both are sorrow for sin, the former is without repentance, but the latter is a first step to a new life wherein the mistakes and failures of the old may be recovered. In Protestant theology remorse may be either (1) the first stage of conversion for sin, a work of the law unrelieved by the

1. As a psychological phenomenon.—Remorse is an emotion. Although predominantly a very acute feeling of pain, it is also a complex mental state that can emerge only at the conceptual and self-conscious stage of mental development.

William James propounded a theory that, if we abstract from any emotion ‘all feelings of its bodily symptoms,’ nothing would be left, which is an exaggeration of the fact that bodily states are a necessary element in all emotion, though not the whole of any emotion. Moreover, they do not enter so largely into remorse as into emotions like anger, since as James, and later others, have pointed out, because it is a calm and deep, but none the less intense, rather than a violent, emotion.

It is described as having ‘a certain positive colouring, in which organic sensations, notably in the throat and digestive tract, there is also a certain setting of the muscles of throat and brow. The “groaning” of remorse, by which it occupies consciousness and conduits, seems to arise from these sensations.

As a persistent mood it would undoubtedly change the entire tone of the visceral organs as well as the facial expression.

Remorse is to be distinguished from a general emotional mood, because it has a unique character of its own and involves some idea of the self and a judgment upon the self. It is a feeling of strife within the self, or of an irreparable breach between the ideal self that might have been and the actual self whose act has produced the conflict. But the feeling arises partly from a judgment of the difference between the two and of the inferiority of the actual self, but still more from a repression and a paralysis of the active side of consciousness. G. F. Stout traces the feeling quality in all emotions to ‘occurrences which powerfully thwart or further pre-existing conative tendencies.’ Remorse is an apt illustration of this principle, because, while it is ‘perhaps the very worst quality that can belong to suffering,’ it is the emotion that exercises the most deadening influence upon life.

In it there is a collision between what we have actually done and what we now desire that we should have done. Thus in reflection on our past self, the free course of our present idea activity is crushed and repressed by the memory of our actual behaviour.

But, as the developed self is conditioned by other selves, so are its emotions. There may be remorse for wrong done which apparently affects only ourselves, but it is more general and intense in respect of wrongs done to others, because the freedom of our selves is indirectly threatened by what another, whether God or man, is thereby restricted or stopped. Yet it always includes the utter misery and hopelessness of our own condition. Despair is always an element in it.

2. As an ethical quality.—It is obvious therefore that remorse is a form of suffering. It involves free agency and responsibility. One feels grief for misfortunes, regret for mistakes, remorse for sins, for acts which one has freely caused and ought to have prevented. It is a painful conflict between the ideal and the actual self, and it has been held to be the most acute and irreparable sense of guilt. It is the most elementary form of that which differentiates between moral and non-moral nature. It is the root and beginning of the moral faculty.

Darwin, in his account of the rise of morality, almost identifies remorse with conscience.

‘When past and present impressions are judged by the ever-enduring social instincts . . . [man] will then feel remorse, repentance, regret or shame, . . . He will consequently resolve more or less strongly to act differently for the future; and this is conscience.’

This is not a very accurate use of terms, and Darwin has omitted the peculiar, unanalyzable, moral quality which pertains both to remorse and to conscience. But our view of the ultimate nature and source of remorse, whether it be the reproach of neglected self-interest, or of injured society, or of some transcendentally moral intuition, will depend upon our theory of the moral criterion, whether it be that of future, or of social welfare, or some transcendentual ideal.

Yet it is not strictly accurate to identify remorse with conscience. It is rather the result of conscience judging and condemning. While it is irreparable from moral judgment, it is peculiarly the feeling element that accompanies the reproach of conscience. On the other hand, it cannot be reckoned among the virtues or the vices, for it is too intimately bound up with the essence of moral nature, and with that which constitutes and defines right and wrong, virtue and vice.

DPHP ii. 463 ff.

hope of the gospel, but followed at length by repentance, faith, and justification—

But the law doth rather shew sin, accuse, and terrify the conscience, that we cannot with-stand the wrath of God, and drive to desperation: 1 or (2) a legal conviction of sin associated with permanent unbelief.

Remorse for sin does certainly prove that the soul is not dead, it is a sacrifice of the heart; on the contrary, it is an exceedingly dangerous one, and the soul may die of it, as truly as the body of acute pain. It often drives men to despair, to frenzied iniquity, and thus to final hardness of heart.

Such would be the condition of one who felt that he had committed the sin against the Holy Ghost or who had fallen from grace beyond recovery (He 6:6).

Almost parallel to the difference between remorse and repentance is the better-defined distinction in Roman Catholic theology between attrition and contrition.

Attrition is not quite the same as remorse, but it seems to occupy the same position in the progress of the soul from sin to salvation as remorse may do when the fear of God and the condemnation of the law hold a man under the conviction of sin and still in its bondage for a season, though at last he may emerge into repentance and faith. But Protestant theology would not ascribe to remorse such a formal place as attrition or as a motivation as Catholic theology does to attrition. Yet it is true that circumstances in many cases lead to conversion when the revelation of the grace of God supersedes. 2

R. REES.

RENUNCIATION.—In a sense the entire history of ethics might be said to turn on the question of the nature of renunciation. Every system has been forced to admit it as an element; it is the amount admitted that varies, and this varies enormously. Some reduce it to a minimum; there are others that have made it cover the whole ground. At the one extreme we have the thoroughgoing forms of Hedonism, such as Cyrenaicm and Epicurean,-ism, which, taking the maximum of pleasure for the mere individual as the goal, are yet compelled to recognize that some pleasures must be renounced. And this because not only do desires conflict with the individual himself, but even those that are harmonious with the full in this world. At the other end we have the systems of self-denial, of which perhaps Buddhism might be taken as the type. Here renunciation seems pushed to its utmost limits, since the anni-hilation of all passion and desire is the supreme aim.

It may be a question as to whether this niretia of calm goes so far as to imply the death of all consciousness. If so, it would be in an extreme form. The question is, can it be good for man to renounce everything, since by the very terms of the renunciation there is no longer anything living to possess a good. This might perhaps be answered by holding that conscious existence is intrinsically so miserable that the only good that can be had for it is to be abolished. But this, it would appear, would be the answer of Schopenhauer and of von Hartmann, the modern preachers of asceticism based on pessimism.

Between these two extremes lie the systems of the world. Greek ethics kept always in view the conception of a fundamental harmony as at least conceivable. Socrates and Plato demanded renunciation only of those illusory pleasures which an enlightened mind could recognize as of no real value. And this, it really was. Aristotle, in admitting the possibility of utter self-sacrifice—say, death in battle without the hope of immortality—practically admits that a man may willingly give up what is most worth having from a purely individual point of view for the sake of serving others. This clash between the happiness of self and the happiness of others was to be felt more keenly as time went on. Meanwhile Aristotle was at one with Plato and Socrates in conceiving that the vast majority of our desires were reasonable, and in part at least to be satisfied, and that renunciation was not really needed. It is only in the view of Kant that there is nothing 'in the world or of it' absolutely 'good except a Good Will' (Grundlegung zur Metaphysik der Sitten, sect. 1, int.), and that moral action consists in following the Imperative of Duty without regard to personal values.

With Christianity and Christian ethics the question enters on a new phase, and becomes extremely intricate. The definite recognition of the principle of love foreshadowed in Stoicism makes it impossible ever again to dissociate entirely an individual's highest good from that of his fellows; on the other hand, the hope of belief in an ultimate heaven of individual blessedness prevents renunciation from being the final word. Merely selfish pleasures have doubtless to be surrendered, but the compensation will be abundant for them, for the further question, and one keenly debated, what these selfish pleasures include, some have banished all the pleasures of the body and many of the mind. This was undoubtedly the view of the medieval ascetics (see the writings of Bonaventure, published by the Fathers of Quaracchi, and it was to a certain extent repeated by Tolstoi in modern times, though it was the doctrine of non-resistance rather than of renunciation pure and simple that he made the keynote. All asceticism, however, seems to have a variance with the childlike spirit beloved of Christ—for no child is ever an ascetic—and indeed with the general impression which He made on His contemporaries as a man who 'came eating and drinking' (Mt 11:19).

The pressure and complexity of modern life have brought out a new stirrer of renunciation. Many a philanthropist, e.g., must give up pleasures which in themselves he admits to be high and desirable. Is this from his point of view reason-able? The difficulty of this question does not seem to have been fully realized by the older utilitarians, such as Bentham. The sense of it has led the latest exponent of the system in England, Henry Sidgwick, to suggest that a heaven where such sacrifices will be compensated supplies the only means of reconciling
the divergences between the good of the one and the good of the many, and so completely rationalizing
of ethics (see The Methods of Ethics, bl. iv. ch. 2). Of renunciation the followers of Sannyas, and
Conte and Herbert Spencer—are content to re-

RENUNCIATION (Hindu).—1. The ideal and purpose of the Hindu who adopts the life of renunciation and poverty.

To a greater degree also the Renunciation in the West this renunciation is dictated by religious motives. The mixed motives which among Western peoples lead to the renouncing more or less completely of cherished aims or convictions, often on trivial or even selfish grounds, have no place among the motives which were responsible for the renunciation to action. Theoretically his sole purpose is to secure freedom for himself so that, untrammelled by worldly ties, he may pursue the one aim of union with God. The world with its attractions and its cares is an obstacle in the way which must be cast aside (sannyasa). This duty is laid upon him by his religious faith and profession. Renun-

ciation of the world is not a matter of choice, but a religious obligation and command incumbent upon all. It would appear, however, so obviously impracticable for an entire community to render liberal obedience to an injunction of this nature that probably the author or authors of the codes of law did not conceive or intend that the rule should be universally observed.

2. Renunciation in practice.—This ideal of the renunciation life is not a life of separation, but a life of renunciation which is of very ancient date and origin in India. In the oldest literature the figure of the hermit or ascetic who has broken through the fetters that bind to this world and has adopted a solitary and contemplative life is familiar. The ideal motive for the renunciation of the ordinary life was for the most part at least predominant, and the longing for undisturbed communion with the divine; but it is perhaps more than doubtful whether so much can be claimed to-day for the great host of devotees and ascetics who have filled the monastic orders of India. A craving for notoriety and for the influence which a reputation for self-denial and the practice of the ascetic life gives in India prompts some; with many others it is sheer idle-

ness or the desire for the travel and strange life which is in part involved in self-support or the support of kindred and relatives. The hardships and sufferings, however, that are voluntarily undergone, the laborious and dangerous journeys to distant shrines, and the self-denial involved in the assignment of wealth and property to others often prove how sincerely, if mistakenly, truth and holiness are sought in a life of renunciation of all worldly ties and claims. In India such a life is and always has been facil-

itated by the generous fertility of the soil and the kindly climate, conditions under which bodily needs are few, and the simple requirements of a contemplative and unemployed mode of existence are easily met and satisfied. Moreover, the religious obligation to give alms to the wandering ascetic is never disowned by the Hindu housekeeper; and the sannyasin is always received and entertained by whatever village he may present himself in the course of his wide and varied wanderings.

The numerous descendants and offshoots of Hinduism in later times adopted the ascetic motive and ideal. Buddhism in particular enforced the duty of renunciation, and carrying its doctrine and the enthusiasm for its ideal to Egypt and Western lands, where, accord-

ing to some authorities, it was taken over into Christian usage and became a recognized feature of the Christian ecclesiastical order. If so, the genealogical descent that traces Western monastic
RENUNCIATION (Hindu)

Observance to an Eastern origin is of great interest. Too little, however, is known of the details of the history for a secure verdict to be pronounced on the extent of the indebtedness of the West to the East for teaching and example in this respect. Room must certainly be left for a not inconsiderable measure of spontaneity and initiative.

3. Conditions and obligations. — Accordingly, in theory at least, there is in the Hindu conception and practice no middle term from the unworldly renunciation and enjoyment of the things of the world and complete abstinence. Renunciation is of all or of none. Nor is the theory modified to any considerable extent in practice, as in many Christian monasteries of the Middle Ages, and as in a few instances in some Buddhist countries at the present day. Resignation of this or that pleasure or distraction, or severance of the one connexion with retention of others, has presented no attraction to the religious-minded Hindu; while, on the other hand, the ease with which a minimum of bodily wants was satisfied has always, and perhaps increasingly, drawn to the ranks of the ascetics many who were actuated by no higher motive than the craving for an indolent life free from anxiety and care. Of such there are not a few in India, of whom the lower classes Hindus themselves are ashamed.

The Indian renunciation, that is closely connected with the doctrine and obligation of the four śramaṇas (q.v.; see also art. ASCETICISM [Hindu], vol. i. p. 91 f.), the successive stages or periods of life through which, theoretically at least, however, the Hindu must pass from his early years to death. Here again the theoretical conditions and demands were greatly modified in practice; and in particular no restriction was placed upon the adoption of a life of abstinence and renunciation at any age, even the most youthful. The only person who according to the Christian theory is excluded from that of the śrādyāna closing the series as the most exalted and refined. It was not necessary, however, to have reached an advanced age before renouncing the world. At any period it was admissible at will to withdraw from worldly pursuits, abandoning the career in time or at any period previous stages, and assuming even in early youth vows of unworldliness and poverty. Instances of return to a worldly life appear always to have been rare.

On the other hand, recent history affords many examples of the ascetic or religious-minded who at the close of an honourable career have renounced the world, and, abandoning house and home, have given over their remaining years to a life of severe and self-imposed restrictions, to meditation and solitary communion with God. To a high-minded and devoted Indian gentleman of this class, Swāmī Śrī Śaṅcīdānanda-Sarasvatī, formerly prime minister of the Native State of Bhaṇṇagar, Monier-Williams makes reference in the preface to his Brahmanism and Hinduism (p. 177), as did the late Rabindra Nāth Tāgore might be cited as an example of the same gentle and self-denying spirit. Those, however, who adopt the ascetic life from mere idleness and a shrinking from responsibility and work are an undoubted loss and burden and even a hindrance to the society that, in any reasonable or changed. In theory at least it is still recognized as best that a man should abandon the world, and seek his own salvation and the satisfaction of his spiritual cravings in a life of meditation, severed from his people and the pursuits of the busy crowd. An increasing number, however, endeavour to find that satisfaction in altruistic service in the world rather than in selfish aloofness. More or less consciously they have been influenced by Christian example and propa, have by scientific and medical doctrines taught in the schools of the importance and interests of the body, by the emphasis laid upon hygiene and the obligations of social service. The example and initiations are also the means by which civil servants, doctors, and of professors in the colleges and seminaries of the world, have counted for much. For the most part it is the members of the higher classes and castes whose conceptions of duty and of life have been thus transformed. The modes of living and the ideals of good of the middle and lower classes have undergone little change, and the convictions of the great majority of the Indian peoples with regard to the duty and efficacy of entire renunciation of the world remain the same; these, however, have neither time nor inclination to put into practice what is for the most part a dimly realized obligation of their religious faith. It is among the leaders of the people, present and future, the intellectual and leisureed classes, that a new ideal has been created, and to many of them renunciation has come to mean renunciation of self and evil, that the good may be pursued not only to the world beyond but to the world within.

The motives that under these changed circumstances urge to a new renunciation and to real altruistic service are not always unmixt. In some instances at least, perhaps in many, rivalry with Christian methods and institutions, dishonor of the intentions or disinclination of Christian activities, or emulation of British achievements and success in the amelioration of the lot of the common people has aroused a spirit of antagonism which has found expression in opposition. Moreover, it is by many of the Christian converts, or for those who have avowedly submitted themselves to Christian influence that have proved thus capable of the highest forms of self-renunciation. It may be that in all instances there has been the inspiration, indirect and unacknowledged, of Christian example and practice, the example of the Brāhma Samāj, of the Arya Samāj, and of other native sects and Churches who have not confined themselves to mere doctrinal propaganda, but frequently with a self-sacrifice and devotion worthy of high praise and respect renounced the world, in order to lead a more worldy ease and emolument to serve their fellows, and that for the sake of definite religious and communist aims which were not selfish. In the future, therefore, there can be little doubt that the ancient Hindu ideal of renunciation will give place slowly to one which appears thus to be more practical and in its present and general issues more helpful and beneficial. The earlier conception, however, is far from having lost its hold upon the imagination and affection of the people in general, nor, as far as judgment and comparison are possible, with the number of Hindu conversions, the number of themselves the vows of abandonment of the world less than in former years. But the practical spirit of the age is against them; and that will ultimately prevail, even in India, not without regret at the loss of such an example and a contrasting unworldly and unutilitarian as it might be, was not seldom productive of saintly character, and at least set the example of disregard of mere worldly good.

RENUCENINT AT BAPTISM. — See ABREXUNTIO.

REPHENTANCE. — In its broadest sense repentance describes the act of the soul in breaking away from its past as a preliminary step to the work of ethical reform. In this wide significance it is not peculiar to the Jewish or the Christian religion; on the contrary, it is implied in all the higher religions of the world. The element of morality. Man’s capacity for repentance is grounded in his nature as a moral being.

1. We have a capacity," says Bishop Butler, ‘of reflecting upon actions and characters, and making them an object to our thought: and on doing this, we naturally and unavoidably approve some actions, under the peculiar view of their being virtuous and of good desert; and disapprove others, as vicious and of ill desert."

It is because man has this power of self-judgment that he is also capable of the act of repenting. All moral advance takes the form of a breach with the past. Hence Socrates, in identifying virtue and knowledge, vice and ignorance, taught that only by the removal of the former condition could one attain to knowledge. Plato held that in every man there is a potential faculty by which he can distinguish the lesser from the higher good, and renounce the former for the sake of the latter. He contended that in the soul is the turning of the eye from darkness to light. Just as the light of the sun evokes and strengthens the power of bodily vision, so spiritual truth has the power to educate man’s faculty of knowledge. This is the meaning of the famous allegory of the cave in which the soul is described as escaping from the darkness of material objects into the light of spiritual realities.

2. The idea and the term. — It is only in Judaism and in Christianity that the idea of repentance is developed, and is treated not as a merely preliminary step to the higher life but as a permanent condition of all spiritual achievement. Only within these religions, too, are the presuppositions of repentance in the deepest sense of the term made possible. Belief in a personal God, in the reality of sin, and in the freedom of the will—in the light of such principles repentance becomes a fundamental virtue and is seen to be at once ethical and religious. It has been recently stated that the idea is peculiarly Jewish, so much so that its ethical force is lost in the dogma of the atoning Christ. To this it may be replied that, as a matter of historical fact, one of the great motives to repentance has been and is a realization of the righteousness and the love of God revealed in the death of Christ. That death has proved itself to be a means of atonement by the very fact that it works repentance in him who understands its meaning and feels its power; and thus it removes the subjective hindrance to peace and forgiveness.

The noun ἐσχάθηθ (‘repentance’) occurs only in post-Biblical Hebrew, but the verbal form śāb is common in the OT. The latter word means literally ‘to turn’ or ‘to return’ in a physical sense. Running parallel with this use is the use of the word in a spiritual or ethical sense, ‘to return from sin and evil to God or to righteousness.’ In this usage the word means not merely to change the course of our life but to turn in the opposite way (cf. the refrain in Am 4:6—7: ‘yet have ye not returned unto me, saith Jehovah’; for other examples cf. Hos 6:1, Is 1:17, 55:7, Jer 3:23, 30, Ezek 18:21; the LXX translates nìkheí by repent, and nìkheín by repentance, which should be rendered ‘I will change my mind or my purpose’ rather than ‘I will repent’).

The Syr. Bible has for μετανοεῖν (Vulg. parantium agitare) in Jr 29:11 translates ἑσθαθήσουμαι, and ‘repentance’ translates μετανοεῖν, but, as will be shown below, this rendering is not adequate. The RV seeks to differentiate between μετανοεῖν, ‘to repent,’ and μετανοεύομαι, ‘to regret,’ by rendering the latter as a reflexive—e.g., ‘Judas repented himself’ (Mt 27:7), which should rather be rendered, ‘Judas was smitten with remorse.’ The RV makes an exception to this by translating μετανοεῖν by ‘regret.’ Cf. Ro 11:28, where ἀλλοτριομοσθήσάται is translated without repentance. The Amer. RV translates it ‘not repenting.’ The RV seems to have paid but little attention in a marginal note to the difference in meaning between the word ‘repentance’ as commonly used and the Greek word ἐσχάθηθ. A satisfactory version of the NT will include a new translation of a word that expresses the initial and prevailing idea of Christianity.1

2. Repentance in the OT. — Two strains of thought run throughout the OT religion, one priestly and legalistic, the other prophetic and ethical. Modern Judaism inherits the double tendency. The priestly conception of the relations between God and man is embodied in a Levitical sacrificial system which, in germ, existed from the earliest times in Israel. The priestly element in sacrificial was developed in an elaborate system, but it laboured under one serious defect—the ritualistic and the ethical were not clearly distinguished. Unintentional transgressions and various impurities of a ceremonial character, such as uncleanness and defilement, are dealt with in a narrower sense of repentance, while only those acts which were deemed to be offenses against the holiness of God—i.e., against His character as One infinitely remote from contact with the human and the physical. On the other hand, it must be allowed that the systematizers of the post-Exilic worship believed it to be ‘a very important means towards the great end of keeping the people of Israel faithful in heart and life to God.’

The prophetic preaching marks a great advance in the conception of sin with a corresponding advance in the conception of repentance. For the prophets sacrifices were secondary to normal moral life. They cared little about the details of ritual, and insisted on the paramount claims of justice, truth, and social righteousness (Jer 7:5). In a word, they were the preachers of ethical and social reform, and they proclaimed the necessity of repentance as a necessary prerequisite to a new order of things. Still further, the call to repentance was made in close connexion with the idea of judgment. One of their most passionate convictions was belief in the day of Jahweh, on which an overwhelming and inevitable judgment was to fall on the whole people (Am 5:20-27, 9:10, Is 2:2-3, 13:9). The call to repentance was addressed primarily not to the individual but to the nation as a whole. The covenant of Jahweh was with Israel conceived as a personality with a continuous moral life, and therefore the duties and judgments were made directly to the amendment. The sins charged against Israel were in the main social—crude to the poor, bribery of judges, immorality connected with idolatry and worship. On these the prophet invoked divine judgment, both public and individual, by a call to repentance, i.e., by a change of mind leading to a

1 For a valuable note on the Classical, LXX, and NT usage of these words see Hult. and Linguistic Studies, 2nd ser., Chicago, 1908.
2 A. B. Bruce, Apologytides, Edinburgh, 1852, p. 265.
change of conduct. 'Seek good, and not evil,' cries Amos, 'that ye may live: and so the Lord, the God of hosts, shall be with you, as ye say. Hate the evil, and love the good, and establish judgment in the gate: it may be that the Lord, the God of hosts, will be gracious unto the remnant of Joseph' (5:14). Hosea through a bitter domestic experience had learned the need of repentance on the part of Israel. The root sin of Israel was disloyalty to God. She had gone after other gods and had broken the marriage covenant with Jehovah. Jahveh, the prophet, was not let go to the woman that he loved, but cared for her and through sorrow redeemed her, so he felt that Jehovah, who had chosen Israel as His bride, would not give her up, but would win her back by the greatness of His grief and His compassion (25). Repentance will lead to restoration, and repentance comes through a deeper knowledge of God.

It is because Hosea's doctrine of God is so rich, so fair and so tender, that his doctrine of repentance is so full and gracious. Like the book of Amos, Amos and Hosea, Hosea's book is filled with the technical term, repentance, and, as the prophetAmos had used also the phrase with frequency; again and again he had appealed to the people to seek God and Jacobs God and make their ways right (Am 2:3, 10, 15). When Hosea thought of the Jews as a pursuing voice, a voice crying in the wilderness. Hosea lets loose behind it a heart, word, and beseech all who hear it to turn back to God, to care about them, not the voices only, but the atmosphere, of love. 'I will be as the dew unto Israel,' promises the Most High; but the Jews have turned their backs, 'why do ye deal treacherously with the God of heaven?' (Hos 6:3). Moved by a profound intuition, Jeremiah breaks through the bonds of the moral solidarity of the nation, and glimpses the truth of individualism (31:26). But the realization of this truth belongs to the future age. Ezekiel takes up the message of personal responsibility from his earlier contemporary, yet his message is addressed to the nation: 'Turn ye, turn ye from your evil ways; for why will ye die, O children of profaneness? Turn you, and live, ye children of profaneness' (Ez 18:30). This makes an advance over earlier teachings by announcing that God Himself will take the initiative and give repentance to Israel (36:25-27); but this is an idea alien to the genius of Judaism, which emphasizes the thought that in repentance man takes the initiative and God grants forgiveness because of man's changed attitude towards Him.

In Psalms and Job the feeling about sin is deepened. It is something in itself evil, breaking the bonds that bind the soul to God. Moreover, sin is now seen to be a universal experience of man. In such Psalms as the 19th and the 51st this deepened consciousness finds expression, even though we should accept the view of some critics that the primary reference is to the sin and repentance of the Church-nation. Still it is impossible to avoid the conclusion that this practice is a teaching of themselves as sharers by personal experience in the spiritual acts described.

3. Later Jewish teaching.—The idea and practice of repentance receive a rich development in later Jewish thought. Repentance now becomes the fundamental feature of the OT. The penitential prayer is frequent in the literature of the time. The high value set upon this virtue is illustrated in the Prayer of Manasseh. Even for the most wicked of Jewish kings the gateway to life is opened by penitence. Other examples of penitential prayers are found in Dn 9, To 31-34.

In the book of Wisdom, which was written under the influence of Greek philosophy, we have the thought brought out that the forbearance of God is meant to give the sinner opportunity to repent. Thus, 'If they repent, inasmuch as the days of life to which they may repent' (11:3). We get a prelude to the teaching of Paul (Ro 2:4) in another passage: 'Thou hast made thy children to be of good hope that thou givest repentance for sins' (2:4).

Throughout later Judaism the idea of repentance played an important part in developing penitential feeling. The old idea that suffering was a sign of divine displeasure still held its ground, and, the more keenly men felt suffering, the deeper was their consciousness of sin and their desire for reconciliation. Distress and pain were proofs that sin had been committed; whether it was possible or not to say what the sin actually was.

In the later rabbis the word tishahab ('repentance') has become a technical theological term. Sin, it is taught, is removed by good works, repentance, and confession. A consistent doctrine of repentance, therefore, is set forth from a purely ethical standpoint is not to be looked for in the rabbis. A deep spiritual conception is found side by side with external legalistic views. As an example of the latter may be cited the Talmudic teaching that three books are opened on New Year's Day; the righteous Book of Life, the wicked for death, while the 'intermediate' remain in suspense till the Day of Atonement. By good works and repentance they can make the swaying balance incline in their favour. Of similar character is the interpretation of the word 'repent' by the Lord while he may be found, call ye upon him while he is near' (Is 55:5), which are taken to mean 'Seek him especially between the New Year and the Day of Atonement when he dwells among you.' On the other hand, it is to the rabbis that we owe some of the most beautiful things about repentance. C. G. Montefiore has collected much material of this kind in his article 'Rabbinic Conceptions of Repentance.'

The following are quoted: God's hand is stretched out under the wings of the heavenly chariot to snatch the penitent from the grasp of justice. 'Open for me,' says God, "a gateway of repentance as big as the eye of a needle. For the eyes of the Lord search all the earth to punish those who wrong their fellow-men, and save those who have a heart that is true.' "If your sins are as high as heaven, even unto the seventh heaven and even to the throne of glory, and ye repent, I will forgive you." The main differences between the rabbinical and the modern teaching about repentance are, according to this writer: (1) the rabbinical doctrine is on the whole particularistic, while the modern teaching is pronounedly universal; (2) the rabbis are more stern towards the sinner, especially the religions sinner, the heretic, the apostate, the unbeliever; (3) whereas, according to the modern teaching, punishment after death can be only remedial and temporary, the rabbis held that for sins committed outside the Bible, there was no share whatever in the blessedness of the world to come.

4. Repentance in Christianity.—Jesus, though opposed to the prevailing tendencies of the Judaism of His time, took over and developed the deeper motives of the OT prophetic teaching. Among these was the demand for righteousness which can be satisfied only by repentance. The Baptist had already echoed the cry of an Isaiah or a Jeremiah, 'Repent ye; for the kingdom of heaven is at hand' (Mt 3:2). He was a preacher of the repentance unto the remission of sins in view of this judgment. Thus the eschatological movement, which was destined to affect powerfully the history of Christianity, was begun by the Baptist's summons to amendment of life. Because

2. P. 290, quoting Pesh. 119 a; Shir. R. on v. 2; Pesh. R., 185a.
of the approaching end of the age, which was to be signalized by the appearance of the Messiah, John called on men to renounce their worldly every-day life in order to fit themselves for entrance into the Kingdom. They were to bring forth fruits worthy of repentance. Jesus, on His first public appearance, replied to John's inquiry, "What is this, therefore, which "the heaven signifies. [Lk 3\59; 2", cf. Mk 1\27; Mt 3\29;]."

The whole ministry of Jesus may be described as a ministry of repentance. With grave irony He summed up the purpose of His life in the words: 'I did not come to call the righteous, but sinners to repentance' (Lk 5\2; cf. Mk 2\27; Mt 9\29;). What Jesus was to the Nineteens that He was to His generation—a preacher of repentance (Mt 12\1; Lk 11\23;).

More specifically it is clear that His preaching of repentance stands in closest connexion with His preaching of the Kingdom and with His healing ministry. The ethical requirements for admission to the Kingdom as expounded in the Sermon on the Mount imply the profound change in mind and life that the call to repentance was clothed with. The mission of the Twelve had for one of its main purposes that of proclaiming the duty of repentance (Mk 6\6;). The parables of the lost sheep, the lost coin, and the lost son are motived by the thought that there is joy in heaven over one sinner that repentance (Lk 15\7;). The events of contemporary life, the calamities and tragedies that befall the world, bore a spiritual message and a solemn warning: 'Except ye repent, ye shall all likewise perish' (Lk 13\1; cf. 19;).

Now, with this emphasis on the repentant attitude of mind, Jesus is in line with what we have already seen to be the prophetic doctrine. Like that of the prophets, His moral teaching is conditioned as a whole by the coming Kingdom; like them He sees that repentance is necessary as a preparation for the Judgment that in turn ushered in the Kingdom. Hence many NT students argue that the ethics of Jesus is conditional, an Interimzeit, and was proclaimed in indissoluble connexion with the eschatological expectation of a state of perfect blessedness to be supernaturally brought about. But it is clear that repentance was clothed with a terrible impressiveness and intensity, from the fact that the Kingdom was believed to be at the door, that call is permanently valid for man's life throughout all time. Instead of the idea of the Kingdom to be achieved by a cosmic cataclysm, Jesus, through His miracles, brought the ancient hope of an immortal blessedness. With a view to the realization of that hope, repentance is as much as ever a demand of the spiritual life. Not only our Lord's preaching but also His healing ministry—its evidence that the Kingdom was in a sense already present—was designed to awaken in the hearts of men desires for a better life. It was the tragedy of His life that this design was frustrated by the dullness and indifference of those who witnessed His gracious activity in lifting the burdens of disease and sorrow. As the Gospel was spread and the cities wherein most of His mighty works were done, because they repented not (Mt 11\20;). But behind His preaching and His healing activity was His personality. Wherever He went the alleviation of sin and sickness and sorrow were felt and in time began to upbraid the cities wherein most of his mighty works were done, because they repented not (Mt 11\20;). But behind His preaching and His healing activity was His personality. Wherever He went...
in repentance primary, whereas in reality it is secondary. Tertullian marks the beginning of the process. He defines repentance as an 'emotion of distress' among those issues that were finally subsumed under the rubric of 'penance.' In the course of time it became involved with questions of Church discipline and with the ecclesiastical doctrine of penance. This doctrine is that repentance is only part of the sacrament of penance; the two other elements being confession and absolution.

Luther's doctrine was that repentance consisted in sorrow for sin and faith in Christ. He maintained that the whole life should be a penitential act. The Reformation started as a protest against false or partial concepts of repentance.

1 The higher man of to-day is not worrying about his sins at all, but about the misery of his country. He is more concerned with the future of his children than with his own. 2 The higher man of to-day has repented of his sins, and has found in them an opportunity for self-sacrifice, and an opportunity for service to his country.

3 The higher man of to-day is no longer content with penance, but demands absolute justice.

4 The higher man of to-day is not content with penance, but demands absolute justice.

5 The higher man of to-day is not content with penance, but demands absolute justice.

6 The higher man of to-day is not content with penance, but demands absolute justice.

7 The higher man of to-day is not content with penance, but demands absolute justice.

8 The higher man of to-day is not content with penance, but demands absolute justice.

9 The higher man of to-day is not content with penance, but demands absolute justice.

10 The higher man of to-day is not content with penance, but demands absolute justice.

11 The higher man of to-day is not content with penance, but demands absolute justice.

12 The higher man of to-day is not content with penance, but demands absolute justice.

13 The higher man of to-day is not content with penance, but demands absolute justice.

14 The higher man of to-day is not content with penance, but demands absolute justice.

15 The higher man of to-day is not content with penance, but demands absolute justice.

16 The higher man of to-day is not content with penance, but demands absolute justice.

17 The higher man of to-day is not content with penance, but demands absolute justice.

18 The higher man of to-day is not content with penance, but demands absolute justice.

19 The higher man of to-day is not content with penance, but demands absolute justice.

20 The higher man of to-day is not content with penance, but demands absolute justice.

21 The higher man of to-day is not content with penance, but demands absolute justice.

22 The higher man of to-day is not content with penance, but demands absolute justice.

23 The higher man of to-day is not content with penance, but demands absolute justice.

24 The higher man of to-day is not content with penance, but demands absolute justice.

26 The higher man of to-day is not content with penance, but demands absolute justice.

27 The higher man of to-day is not content with penance, but demands absolute justice.

28 The higher man of to-day is not content with penance, but demands absolute justice.

29 The higher man of to-day is not content with penance, but demands absolute justice.

30 The higher man of to-day is not content with penance, but demands absolute justice.

31 The higher man of to-day is not content with penance, but demands absolute justice.
may be originated by impressions received from contact with more highly developed personalities or through a bitter experience of pain and disillusionment. A new conception of duty, a revelation may spring from the experience of others. The pain of those who have suffered through our actions, the impress of a noble spirit that rebukes our weakness and that acts as a spur to all that is not dead within us, and the vision of the love of God incarnate in the life and work of Jesus Christ, may be the factors into the stream of our experience and may set up there new causal connections involving far-reaching consequences. The law of continuity still holds good, for these factors, once they have entered into experience, bring about their results in accordance with the laws that govern the psychic world.

There is in repentance a certain quality of infinitude. With the penitent mood comes new insight, fresh illumination leading to an almost painful anxiety to make atonement to the person or persons wronged, to society, to the spiritual order which has been violated. The repentant man stands ready for any task however great, for any service however distasteful. Repentance is thus transformed into a moral dynamic. It reinforces the will with boundless energy; its eyes are ever uplifted to new visions and greater ethical achievement. Hence the marks of genuine, as distinguished from spurious, repentance are the presence of ever new and deeper insight into duty and of a passion for atonement, which is itself part of the redemptive process as well as reflected in the very nature of repentance: is at once a gift and a task, an inspiration and a deliberate movement of the will, a present possession and a future attainment.

**Saul. McComb.**

**RepenTance (Muhammadan).**—There are two words used to denote repentance in the theological sense of Islam—*tawbah* and *nadam.* The former denotes merely remorse, regret, or vexation at having done something or at having left something undone. It is used especially in the poets. The 'repentance' of the satirist Farazdaq (A.D. 639–729), after he had divorced his wife Nawâr, is proverbial.1 The word is used also in the Qur'ân. After Cain had killed his brother, and a raven had showed him how to hide his crime, he became 'of those who repent' (v. 34; so frequently, i.e. he felt remorse (tawbah)), but which would not be said of him that he showed repentance (tawbah) in the religious sense. The latter word, which etymologically means 'returning,' it is, in fact, the Heb. *těnhîbâh, Aram. tēnhîbâh—* 'returning of' is of itself is explained as synonymous with *nadam.* It is defined as 'remorse for an act of disobedience (in respect of its being an act of disobedience), accompanied by a determination not to return to it, even if one has the power;' it must be for 'an act of disobedience,' because Regret felt for doing something that is right or, at least, not wrong is not repentance. The phrase 'in respect of its being an act of disobedience' is added because regret for having drunk wine on account of weakness or self-respect is not repentance. Mention of the 'determination not to return to it' is by some regarded as superfluous, seeing that that is always an element in remorse—whence they explain the traditional saying of Muhammad, 'Remorse (nadam), is regarded as tawbah. The meaning of the most ancient authorities do not admit the condition that ability to commit the sin again must be there. They think, e.g., that the remorse of the sinner at the point of death may be repentance. In this they are in conflict with the Qur'ân.

In accordance with its etymology, *tawbah* means in the first instance turning to God. Hence the complete phrase is 'repentance unto God.' Moses regretted his request to be allowed to look upon God and said, 'I repent unto Thee' (Qur'ân, vii. 141), and frequently. In the case of those who have been brought up in idolatry or polytheism this turning to God is synonymous with 'conversion' to Islam. The convert is represented as saying, 'I repent unto Thee and am of the Muslims' (xvii. 4; cf. xli. 114, and elsewhere). In this form of the expression (nadam) is regarded as tawbah. The implication is that the three persons of the Trinity—or, as the Qur'ân puts it, saying that 'God is the third of three—'is a form of polytheism (v. 77 f.). But, as perfection is unattainable by a mortal, penitence is a mark of the pious Muslim, not only at the beginning of his religious career, but all his life long (ix. 113, lxvii. 5). Repentance is necessary and will be accepted from all Muslims who have sinned in such ways as the following: hypocrisy, i.e. strictly the hypocrisy of the citizens of Medina who pretended to acquiesce in Muhammad's authority there, whilst secretly working to undermine it (iv. 145); opposing Islam by force of arms, provided that repentance is made of free will, and not as a result of defeat in battle (v. 38); skepticism (ix. 127); idolatry (ix. 3, ii. 51); perverting or persecuting Muslims (lxxv. 10); and anything similar. It may be 'expected' (v. 13), or 'desired' (ii. 279) and other offences (vii. 117, iv. 20). The one sin after which there is no repentance (cf. Ho 6:18) is that of apostasy (iii. 83), but this verse the commentators refer to the Jews,1 and in any case the preceding verse appears to leave a loophole of escape even here. In the last chapter of the Qur'ân, composed at a time when Muhammad could afford to be lenient, a door is opened even to the apostate (ix. 73). Apostasy is, of course, allowed under persecution. But those who die in unbelief, i.e. all non-Muslims, are *kafirs.*

1 The world full of gold shall in no wise be accepted of any of them, even though he should give it for his ransom'' (Gil. 84).

Repentance must be sincere for sins committed through ignorance (v. 12), and can be procured by intercession. 'Ask forgiveness, thereafter repent' (xi. 3, 54, 64, 92). The converse order, which one would expect, is also found (v. 78). True repentance is followed by faith and good works.

2 'Those who repent and believe and do good works (six, xx. 56, xx. 54, xx. 77, xxviii. 67 repent unto God with (true) repentance (xxviii. 71).'

RepenTance has its counterpart in the forgiving nature of God. Man's repentance is always met by repentance on the part of God.

1 'Whoever repents after wrongdoing and does right, God repents over him. Truly God is forgiving and compassionate' (iv. 43, and v. 39).

Man repents unto God; God repents over man. The latter phrase is equivalent to 'is sorry for
him' (lxxiii. 14, lxiii. 20). Al-Tawwâb ('the much-repentent') is one of the ninety-nine 'beautiful names' of God (ii. 35, and frequently; cf. JI 22, etc.), though it is also used of men (II. 222). It is really explained, however, as merely denoting 'much in other words, true repentance', or 'turning man to repentance'; but it is no doubt used in the same sense in both references. If God did not feel sorry for man in this way, He would always punish him. Hence the opposite of to repent (on God's part) is to punish.

'It is no business of thine whether God repent over or punish them' (ill. 123, and so elsewhere).

Fortunately God wishes to repent over men (iv. 32), but His repentance is voluntary. He repents over whom He will (ix. 15), so that it is folly in man to count upon His repenting (iv. 109).

The chief advantage of repentance is forgiveness—not as a matter of course, but as a result of the divine repentance or sorrow (ii. 51, etc.). The angels intercede with God on behalf of those who repent (xi. 7), and the Muslims are hope less to their repenting. The whole teaching of the Koran on this matter is well summed up in the following verses:

'Repentance is incumbent upon God only towards those who do not come in ignorance and then repent without delay. Over such God repents, and God is knowing and wise. Repentance (on God's part) is not due to those who do evil until, when death comes to one of them, he says: 'Now I repent,' nor to those who die in unbelief. For such we have prepared a painful punishment' (iv. 21 f.).

It is worth noting that it is never said in the Qur'an of any one that he actually did 'repent unto God'.

The orthodox Muslim tradition takes little or no account of repentance. The more liberal Mu'tazilites and the Sufis, or mystics, have more to say about it. The Mu'tazilites distinguish three elements in repentance: (1) making restitution, (2) not returning to the offence, and (3) continuance of the feeling of remorse. The orthodox (Sunnis) do not regard these as essential. They say that repentance consists of three things: (1) leaving off disobedience in the present, (2) intending to leave it off in the future, and (3) regret at having done it in the past. That the Muslim may go on repenting and sinning, that (and in this the Sufis agree with them) he may repent of one sin and go on doing others, and that his repentance of the one will count. The Mu'tazilites would probably hold that the penitent must keep himself aloof from all deadly sins. The Muslim who does not do so is neither a believer nor an unbeliever, but simply a reprobate, and, if he does not change, he will suffer eternal punishment.

With the mystics repentance occupies an important place. It is the first 'station' on the 'mystic path'. They recognize three degrees of repentance. The first is called simply repentance (tawbah), it is an attribute of all Muslims (Salim). The second is in turning from sins actually committed. Its motive is to seek the divine forgiveness. The second degree of repentance is called inabah ('returning'). It is an attribute of the saints and those brought near to God (I. 32). Its motive is the desire for the reward. The third and greatest repentance is sara'ebah (which also means 'returning'). It is an act of love of the apostles and 'sent ones' (xxxviii. 44). Its motive is neither fear of punishment nor desire for the reward, but the love of obedience. In it, for the mystic, everything ceases to exist except God. Otherwise said, it is pure love, and entailed on him a large amount of reward, a large number of blessings.

(cenna, khâs, and khâs khâs). The mystics, however, are very loose in their use of terms.

Ibn Abî Abeerah is elsewhere defined to be 'turning the all to Him whose is the all,' or 'turning from negligence of God to its opposite and freedom from estrangement to friendship.'

In regard to the mystic, repentance is either (1) sound, when one sins, repents sincerely, and yet falls again into sin; (2) clear or sincere (mâshah), when the heart becomes estranged from sin and finds it hateful, so as to be no further attracted by it (Qur'an, lxvi. 8); and (3) corrupt, when one repents with clear words, but does not feel the change all the while the love of sin is in the mind.

Muhammad's cousin Ibn 'Abbas defined 'sincere' repentance as 'remorse in the heart, asking forgiveness with the tongue, throwing off with the body, and resolve not to do again.'

Repentance is a favourite subject of homilies and theme of religious poems, such as those of Ghazalî, Bahâ al-Dîn al-'Anâlî, Zamâkhshârî, and others. Stories in which repentance is inculcated are frequently told in connexion with Jesus. The notion of repentance bringing its reward in the present life does not seem to have occurred to the pious Muslims.

LITERATURE.—In addition to the works mentioned in the article, see Ibn 'Arabi, Futuhi al-Makkîyih, Cairo, a.h. 1329 (A.D. 1911), p. 7; see also e.g. Ibn Hâshim, Kashfi al-Makhtûb, Cairo, a.h. 1386 (A.D. 1965), pp. iv, p. 18; R. T. H. WEIR.

RESISTANCE AND NON-RESISTANCE.

1. The teaching of the NT.—The term non-resistance is applied to the refusal to use force sometimes only in war, sometimes in any circumstances. As we shall see, the two positions, though often confused, are by no means identical. The origin both of the term and of the idea is to be found in Christ's command not to resist evil, and the nature of the article will be to examine the teaching of the NT on the subject, together with the ethical principles involved.

The chief arguments in favour of the view that it is wrong to appeal to force under any circumstances are derived (a) from the recorded teaching of Christ, (b) through the general principle of the supremacy of love involved. Though in many cases, particularly in recent times, it is argued that the position does not depend so much on the interpretation of isolated texts as on the general tenor of Christ's teaching, in the NT there is no such text. His actual words have in fact been the starting point. In any case we note the reminder, which is useful in many connexions, that it is impossible to arrive at the true meaning of any passage in the Bible so long as it is taken out of isolation. The Sermon on the Mount itself is not the whole of Christianity, and it can be rightly understood only if interpreted in the light of the practice and teaching of Christ and His immediate followers, taken as a whole. A primary fault of Tolstoi and many of his followers is to confine themselves to arbitrarily selected sayings. Such a limitation is involved in more than a lack of proportion, but also a failure to understand rightly even the passages to which attention is directed.

The central passage is:

'Be not afraid of them which kill the body, but are not able to kill the soul: but rather be afraid of Him which is able to destroy both soul and body in hell.'

Matt. 10.28. (Roughly the same wording is in Rom. 12.19, though the idea is more fully developed there.)

2 Jurjânî, Thürif't, ed. G. Flügel, Leipzig, 1845, s.e. 5 p. 222; Ibn al-Farîd, Cairo, a.h. 1305 (A.D. 1887), pl. i, p. 200.

3 An interesting example of non-resistance on quite different grounds is to be found in the refusal of the Jews to fight on the Sabbath (1 Mac 232, 2 Mac 61). The logic of facts compelled the abrogation of the scriptural (1 Mac 249. 942).
thou away. Ye have heard that it was said, Thou shalt love thy neighbor, and hate thine enemy. But I say unto you, Love your enemies, and pray for them that persecute you, etc. (Mt 5:38; cf. Lk 6:27 and the Restitutions).

With this may be compared the recurring stress on forgiveness, in the Lord’s Prayer and elsewhere, even ‘unto seventy seven times seven.’ Similar teaching, though in a milder form, meets us in the sayings of Christ. (Ro 12:18; ‘Tender to no man evil for evil... Avenge not yourselves,’ etc.), Eph 4:26, 22; Col 3:13, 1 Th 5:16, 1 P 2:22-23. These passages, taken in combination with Christ’s own example of meekness and non-resistant, and the general insistence on the principles of love and brotherhood, do constitute a prima facie case against the appeal to force, and pre-eminently against war.

We should note, however, that among the passages of this type that from the Sermon on the Mount stands alone as the most extreme and uncompromising.

We ask what indications are afforded by the rest of the NT as to a different and complementary type of teaching. Too much stress need not be laid on Christ’s employment of the scourge to cleanse the Temple. It is recorded in St. John alone (John 2:15), and the NT, it seems, is apparently used only against the animals. But the whole incident shows that, when Christ found Himself confronted with an abuse, He was prepared to take active measures to remedy it. More important is His attitude towards the NT, the NT soldiers (Mt 26:35, 36; Mt 4:9). As is well known, they nearly always appear in a favourable light; there is no hint that when converted they are expected to abandon their profession, or that that profession is regarded as in itself wrong and un-Christian. Further, the attitude towards life adopted in the parables is significant as interpreting the hard sayings of the Sermon on the Mount. There is in fact no parable which turns on the virtue of non-resistance; the ordinary discipline and penalties of life are assumed throughout.

The mouthed or dishonest steward is dismissed; even forgiveness is not unlimited to the slave who cannot forgive others.

Finally, it is clear from the NT that force or coercion of some kind forms an important element in Christian teaching. The Church accepts the belief in a hopeless and never-ending ‘hell,’ penalties and discipline after death are undoubtedly contemplated for the sinner. We may believe that these will be remitted; if so, they become part of the armoury of love and forgiveness themselves. They further follow from the very gift of independence and free will. God respects man’s personality and does not compel him to do right. This implies that, when he obstinately refuses to yield to the promptings of love and higher motives, force must step in, at least for the time, in order to prevent him from using his independence indiscriminately to the injury of his fellow-man. And, if man is made in the image of God and is called to imitate His Father’s perfection (Mt 5:48), what is right and consistent with love in God must also, with due qualifications, be right for man. If God under any circumstances can use force and compulsion, so may man; when he may do it, and whether he does not appeal to it too readily and lightly, are questions which do not affect the main principle.

It is therefore clear on the evidence of the NT itself, and as an initial to any difficulties of interpretation or application, that the more extreme sayings about forgiveness and non-resistance cannot be understood quite literally as forbidding recourse to any form of force or penalty under any circumstances. We are free to ask what these sayings mean in the light of the general teaching of the NT, and are justified in applying to them those canons of interpretation which are recognized as valid in the case of other ‘hard sayings.’ Orientals are not likely to do this, of course, but it is possible to isolate one side of a truth. Christ constantly used the method of startling sayings worded in such a way as to force men to think. His teaching had not the precision of legal formalities; it was never His purpose to lay down a new code of fixed law or external rules. We recall sayings such as ‘If any man cometh unto me, and hateth not his own father, and mother, and wife... he cannot be my disciple’; ‘When thou makest a dinner or a supper, call not thy friends, nor thy brethren, nor thy kinmen’; ‘Call no man thy father upon the earth.’ None of these sayings was not, nor were they meant to be, applied literally; and the same principle holds good of the non-resistance sayings. We may note that in the quotation given above from Mt 5 the apparent absolute prohibition of force occurs in the same context as equally absolute commands to unlimited giving of goods and service which have never been consistently applied au pied de la lettre, even by those who have attempted to follow out the one saying about non-resistance quite literally.

These sayings illustrate the thought that the idea of the good even of the sphere of private relationships, which our Lord evidently had primarily in mind,1 Much more are they true of those international relationships which He did not and could not have directly before Him. Within the NT the teaching of non-resistance is taken up from a certain point of view, according to which Christ’s whole teaching and career were dominated by the belief in an immediate end of the world’s history, it is clear that He did not deliberately contemplate or provide for a long period of historical development, nor did He legislate with a view to the relationships of independent Christian or semi-Christian communities. (b) The historical conditions of the day excluded international problems and the claims of patriotism in our modern sense. The Jews had no independent existence as a nation, and the last thing that Christ or His followers desired was rebellion in order to regain it. The Gentile was a member of the Roman Empire, and war between its constituent elements did not come into question. It is idle to seek for a direct answer to the modern difficulties connected with war from a period in which the conditions were so completely different.

2. Ethical application.—We may hold, then, that, in spite of the prima facie impression made by single texts of the NT, the question of the legitimacy of the use of force, whether in war or in other forms, is really an open one, and must be decided on the general principles of Christian ethics. It will be useful to distinguish three stages:

(1) The degree to which non-resistance may rightly be carried when one’s own personal interests and safety alone are directly involved must be a matter for the individual conscience to decide according to the circumstances of each case. The moral effect of a refusal to resent a blow or to resist injustice is often very great, both in dealing with those who are actors may be the more effective if it become therefore as immediately open to the appeal of higher motives and also in dealing with the outcast or criminal, on whom the very strangeness and unexpectedness of the attitude adopted may have a startling effect. There are, however, two caveats to be borne in mind: (a) it must be clear that the meekness is really due to the higher motive of love and not to cowardice or cynical

1 That He was not, as sometimes maintained, thinking only of the relation of Christian to Christian is shown by the command to go two miles with the representative of the heathen government.
indifference; in other words, it must be in keeping with the general character; (b) it must be remembered that ultimately nothing that we do has a purely private bearing, since every action has its inevitable effect upon society as a whole. If an act of non-resistance, instead of converting, merely encourages the wrong-doer, obvious harm is done. To yield to blackmail in any form or, it may be, to refuse to prosecute a criminal will involve a mischief to society at large which will outweigh the benefit.

(2) A further set of considerations arises when the interests of others are directly involved. It may be right in this connexion that a man should require some degree of sacrifice from his wife and family, but he is not justified in carrying it to any point where their welfare or even their lives are involved. Still less can he impose such sacrifice upon others on whom his claim is more remote. What would have been the duty of the Samaritan in the parable if he had come upon the scene at the moment when the robbers were about to attack their victim? It is hard to believe that Christ intended the principle of non-resistance to be applied in such a case as this. He certainly cannot have intended that a man should not use force to save his wife or family, or women and children in general, in any case, just because the matter involves questions of property and rights, while a man may do what he will with his own, he cannot practise an unlimited generosity when he acts as a trustee for others.

(3) The case of war, where national interests are involved, follows naturally on this principle. The responsible rulers of the State are trustees, not only for the nation as a whole, but also for future generations. If, as we have argued, the use of force is sometimes legitimate, the community cannot be debarred from using it to protect its members, to secure their fair interests, and to defend weaker nations. Primarily this principle covers the operations of the police and criminal law, but it also extends to war. The fundamental difficulties with regard to war do not really lie in its connection to the community as a whole, for the facts that there is no guarantee that force will be always used to uphold the right, or that it will succeed in doing so, and that the coercion is applied not merely to the actual offenders and transgressors, but to comparatively innocent members of the nation drawn into the net of war, or that the consequences which would ensue if this were to happen. He is saving his own conscience and saving his own soul, while allowing others to take what he regards as the lower course—a course which actually protects him from the result of his own action. A distinction is drawn by the adherents of pacifism between the duty of the State and that of a pacifist individual. And in fact we note historically that the examples of anything like combined non-resistance have come from the control of worldly affairs would pass into the hands of the barbarian and Christianity would be unable to exist; it owed its peace to the Roman Empire. Such a position cannot be final or satisfactory. The Christian is also a citizen; if it is right for a State to engage in war, it is not only right but also a duty for its citizens to support it. The State in the end consists of the citizens who compose it; it is not ethnically permissible for one section to contract itself out of its obligations in obedience to a supposed higher law and at the same time to wish to control the lives of the rest who are following the ‘lower course.’ In other words, if non-resistance in war is right, it must be thought of as the attitude of the whole nation and not of a negligible minority, and the results of such an attitude must be definitely faced.

It be the annihilation of one nation or the of the world is a whole, if they would involve grave evils and sacrifices for others and for future generations, together with the triumph of injustice and the oppression of the whole, also of the language which will be among fallible men. But it must be clearly realized, in connexion with the particular problem before us, that such schemes do not adopt the principle of non-resistance in place of force. The ultimate functional and sound as a whole, the non-resistant member or outsider would still be force, whether applied by economic boycott or by war, but it would be force directed as nearly as possible by the principles of law and justice. Nations will not be applying the principles of the
RESPONSIBILITY

739

only alternative. And, if so, it should be clearly recognized that from the point of view of ethics this is not, as is often supposed, the choice of the second best. The problems of ethics consist in choosing the best course which is open under given circumstances; if it is really the best, it is in the absolute sense 'right.' To say that war, or indeed any appeal to force, would be unnecessary if all men lived up to the principles of Christianity, is true, but irrelevant; this is only to say that evil will not exist when the Kingdom of Heaven is fully come. We are concerned here and now with the right course to take in a world where evil does exist and where men do in fact do wrong. It takes only one to make an attack; if, as is the case under existing conditions, war is the only means of resisting such an attack, it becomes right in the fullest sense, however unsatisfactory it may be as a method of establishing justice. The mistake arises when the admission of this principle is held to absolve men from the duty of trying to work out some better method for the future, or when, with regard to the use of force in any form, it is regarded as the final solution of the problem. As against the evil-doer who refuses to obey the voice of reason, we need to be armed with a weapon that is not some lesser right, no less for his own sake than for that of others. But the ultimate purpose is not that he should be prevented from doing wrong, but that he should cease to desire to do so. In all cases this should be kept before us. Non-resistance, as a principle, and the conscience should not rest content till it is reached.

4. Historical examples.—For examples of attempts to apply the principles of non-resistance reference must be made to the relevant art., esp. ANABAPTIST; DOUHOKODORS; FRIENDS, SOCIETY OF; TOLSTOI. Some account of the medieval sects will be found in H. C. Lea, History of the Inquisition of the Middle Ages (London, 1888). The Wahakens held homicide to be unlawful under any conditions; though sometimes provoked by persecution to break this rule, they generally fell an easy prey to their enemies. The Bohemian Brethren were in line with the Waldenses. In the case of the Cathari such tenets were connected with theories of transmigration; they refused to take the life even of animals.

On the early Christians and their attitude to service in the army see especially Harnack, The Expansion of Christianity in the First Three Centuries. It should be noted that the refusal to serve was by no means universal, and that where it existed it was due as much to the various compliances with heathen rites and unlawful practices required of soldiers as to a belief in the unlawful-ness of war per se. Objections were felt to the holding of civil office no less than to service in the army. With regard to the whole question, which has been said above as to the historical conditions and the absence of national wars must be borne in mind.

C. W. EMMET.

RESPONSIBILITY.—Responsibility is the human sense of answerability for all acts of thought and conduct. Christian responsibility is answerable to the ideal set up by Jesus. About responsibility two things have to be decided: the relation of a person and the object to which it is answerable; and of Christian responsibility two further matters require elucidation: the extended sphere of answerability in the light of Christ's teaching, and the unique attitude of Jesus to the human conscience.

i. Responsibility and freedom of choice.—With the various theories invented to explain or account for freedom (see art. FREE WILL) the religious consciousness has little to do. Any theory which leaves free choice a real function of man is condemned. The concept or explanation which would destroy its reality is out of harmony with Christian experience. The pleas urged, the sanctions offered, and the rewards promised by Jesus have no force unless men are able to conceive or to refuse higher values; for real freedom of choice there could be no real moral responsibility; and the sense of it, if it were still felt, would have, like the sense of freedom, to be classed as an illusion (Sheddworth H. Hodgson, The Metaphysics of Experience, London, 1898, iv. 190 ff.). In his dealing with men as free agents Jesus acknowledged and endorsed the ordinary sense of responsibility.

To the religious mind this is never, however, an absolute freedom; for over, around, and within the religious state is the immanent presence of God. It is the freedom within gracious boundaries, within the full tide of Divine love and mercy. As the founder of a new religion, Jesus was conscious of the Divine power working in His favour; if men believed in Him, it was the result of the Father's will. In giving God's kingdom Jesus brought a new and higher discipline to the life of the disciple. In the discipleship of some of His followers, it is because God has given Him these sheep (16:20); and, if humble Christians credit their faith in Jesus, without peril to human responsibility, to the election of God, they are of the same mind with their Master (II Cor. 3:19). How human freedom and the kindly control of God can comport together in any philosophical theory has not concerned the religious, who have with extraordinary persistency declared both, and held them somehow reconcilable.

Jesus further acknowledged the impoverishment of personal freedom by continued moral indiffer- ence. To the Jews who boasted of Abraham as their father Jesus replied that their inability to recognize His message as a deliverance from God was due to their kinship with the devil (Jn 8:39). There is here no reference to any original difference in the natures of men, but an assertion of the obvious moral fact that minds deluded by evil motives may become insensitive to the attractions of the heavenly offer. This fatal obstacle was one which Jesus recognized, and it was not their misfortune but their fault. Moral insensibility may absolve from responsibility.

ii. The object to whom or to which responsibility is owing.—Modern teachers have described the object to whom answerability is due as either oneself, or one's neighbour, or one's God; but, as the enforcement of each of these spheres of duty lies with the conscience, the subject is really
RESPONSIBILITY

responsible to conscience as the authority which imposes commands. For the most part Jesus accepted the popular Jewish sense of responsibility, which was essentially unanswerableness to God. For every idle word men shall give account in the day of judgment (Mt 12^39); the obligation to seek perfection rests upon men because they should be as their Father in heaven (5^0); and, though our Lord lays down strict duties to our neighbour, love to enemies, almsgiving to the poor, and feasts for the hungry, these duties are substantially obligations to God, for so men will be the children of the Father which is in heaven. All duties to neighbours clothe themselves in our Lord's mind with a new and higher sense.

After the same manner He conceives obligations for which a man is responsible to himself—these are indeed duties towards God. Men owe it to themselves to accept the higher ideal when they see it. So Jesus went preaching the Kingdom of Heaven and summoning men to repent. Blessedness, the chief aim of ordinary life and the perennial cry of self-preservation, was to be sought, according to Jesus, in such states as meekness, poverty of spirit, and peace-making—all these, indeed, being called the children of God. Responsibility to self may imply the sub-ordination of every interest to that of the Kingdom of Heaven; and the reason offered is, 'Thou shalt have treasure in heaven,' i.e. with God. (Here again, where is the meekness, where is the generosity, and responsibility for self-culture is obligation to God, who provides men with opportunities rich in moral possibility.)

In one word, duty to God absorbs duty to self and to neighbours; for self is conceived as always and everywhere the child of God; and neighbours, whether good or bad, desirable or otherwise, are conceived as deserving of our benefaction because they are all the recipients of God's loving-kindness (Mt 5^6).

Extended sphere of answerableness in the light of Christ's teaching.—It is the unique distinction of Jesus to have at once enlarged the sphere of responsibility and intensified the feeling of it. Our Lord expanded the idea of one's neighbour, who is not only the man of one's own nation, but also that of all the earth. He insisted upon an opportunity of helping (Lk 10^25-37). With the dissolution of the Good Samaritan vanish all the artificial boundaries by which men have sought to confine their neighbourly obligations. Among friends, again, the Master has included the poor, whom He obliges us to ask to our feasts, though they cannot ask us in return (Lk 14^14). A new set of obligations to hospitality are thus laid upon the disciples of Jesus. Still more wide does the horizon of responsibility become when He obliges us to include in our friendship all men, friend and foe alike, those who persecute us and those who despairfully use us (Mt 5^4). No man may be treated by us otherwise than in love. The last acre of foreign territory is brought within the sphere of human obligation when Jesus, who expects to be taken as an example, declares that He came to call not the righteous, but sinners (Mt 9^1). Among those to whom we owe duties for which we are answerable to God must be included the outcast and the degraded. So extensive a field of responsibility may be the despair of a moralist, for who is the free-chosen territory of the disciples of Jesus?

Having annexed all mankind under the obligation of love, Christ proceeds to enhance the sense of responsibility. Not only the outward act, but the inner thought has to be answered for. As well as for murder, so also for the angry thought from which murder issues, a man must hold himself answerable (Mt 5^22). Not only for licentious deed, but also for unholy imagination is there responsibility (v. 28). To offer prayer is good; but, if popularly has been the motive, only punishment can follow (9^). High and insolent deeds will provoke a just reward; but high thoughts are in no better state, for humility is a duty (18^). As a matter of fact, the obligation to be moral is an obligation to preserve the heart in purity and love, 'for out of the heart are the issues of life' (15^0). The culture of morality is the culture of the heart.

Besides extending the sphere, Jesus adds a higher quality to moral responsibility. The idea of self-preservation is enhanced when the things which are worthy of our search are meekness, mercyfulness, and humility, and the obligation to self-culture is so described by Jesus as to include the lofty conception of a sacrifice of the lower nature—a sacrifice not only desirable but necessary (Mk 8^0). In the same way the obligation to forgive enemies is enhanced. An enemy is to be forgiven not only seven times, but 'until seventy times seven' (Mt 18^2). To an unstinted and uncalculating forgiveness the disciples of the Master are bound. And, with the demand for love towards all men, human duty is raised to the height of Divine duty. And if this is the case, men are to entertain towards each other and, by inference, to all men is a love such as existed between the Father and the Son (Jn 15^0). In this way Jesus has both extended and intensified moral responsibility.

The secret of this new moral content and new moral intensity must be sought in Christ's high conception of God's fatherly relation to men. It is God's loving-kindness that obliges men to seek first the Kingdom of Heaven (Mt 6^30); the same reason is given for the duty of unlimited forgiveness (18^); a similar ground provides the obligation to a cheerful acceptance of God's will (7^9); and the same tender mercy calls men to the exercise of a gracious and thoughtful love (Lk 7^5). God loves His creatures, desiring above all that they should become His children; and in that tender, holy desire lies the secret of that sense of responsibility which Jesus has at once extended and intensified.

With the sense of childhood in God's family and in enjoyment of the Divine favour, the burden of responsibility, felt by humanity under a moral system, is greatly eased. Love makes obligation light; the love of God turns duty into pleasure. In that relation the yoke of sonship becomes light, and the strictest obligation easy. Whom Jesus makes free are free indeed (Jn 8^36). By turning the hearts of men to the love of God, Jesus at once increased the sense of responsibility and relieved its burden. How easily a child of God carries this enhanced moral obligation may be gathered from St. Paul's magnificent claim of perfect freedom in Ro 8.

The unique attitude of Jesus to the sense of human responsibility.—Jesus has somehow contrived to thrust Himself in between a man and his conscience, or—for it is the same thing—between a man and his God. At the outset of His public career every hearer recognized the moral superiority of our Lord, and felt a weighty pressure in His commands (Mt 7^7). Nor was this authority denied by Jesus; on the contrary, He emphasized His right to impose new commandments. The fathers of Israel had given certain orders, but Jesus gave new ones, introducing the opposite duty with these words, 'But I say unto you' (5^2). Passing through the gamut of accepted commandments, Jesus quietly enforced new and, in some cases, opposing responsibilities. As His public career advances, Christ identifies and expands the old moral law, demanding of men an obedience such as was due only to the supreme moral Governor of the
world. Confession of His name He describes as a moral obligation, for such He will confess before God (1 Ki 12:12). Responsibility to Himself Jesus accepts as superior to any other moral obligation; indeed, His word has the right of a moral imper- tative; so children are, if need be, to renounce duty to father and mother (14:20). The right to become a conscience to every man is fully claimed by Jesus, and men are invited to take upon themselves His yoke (Mt 11:28). Indeed, Jesus may say that the only true good can be found in life by that man who yields Him such unfailing obedience as is demanded by the conscience. The study of human responsibility this is a unique claim—a claim which was not only not resented, but openly and frankly recognized by men and women who found His authority the exact equivalent of God's. In this lonely isolation Jesus stands pre-eminent in the record of morals.

The Fourth Gospel presents this extraordinary claim in a different and more winsome light. Here Christ's sonship with God is the basis of the gospel message; and the moral obligation to Jesus takes on a universality and the sweetness of brotherly affection. Jesus does not in this Gospel so much demand obedience as the representative of the moral Governor of the world as He asks for love and trust in Himself as the complete manifestation of the heavenly Father. For obedience the warmer attitude of trust or faith is demanded. The story of the Samaritan woman is evidently told to show how this love to Jesus may come to birth (ch. 4). Honour to the person of Jesus is honour done to the Father (5:22). The will of God is conceived by Jesus as fatherhood to be given out on the Father's own terms. So (6:7). Judgment was passed on the unbeliever by the very words which Jesus spoke, for He spoke the words of the Father (12:48). The final appreciation of any man's life is decided by his attitude to the Person of the Redeemer. He that believeth not is condemned already (3:18). The crown of this high claim is the assurance that a friendly knowledge of Jesus is necessary to eternal life, i.e. to the sum of human blessing: 'This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent (17:3). This claim for loving trust, and this identification of Himself with the Father God in the Fourth Gospel, are clearly the brighter and more attractive equivalents for the unhesitating obedience and the identification of Himself with the Supreme moral Ruler of the world in the Synoptics. Towards Jesus every man has a duty, and on the correct sense of responsibility to Him depends the final prize of life.

DAVID YFFE.

REST-DAYS.—See SABBATH (Primitive).

RESTITUTION.—See ESCHATOLOGY, STATE OF THE DEAD.

RESTITUTION.—The term 'restitution,' as its etymology indicates, means paying back in kind, like for like, whether benefits or injuries—though very significantly for human nature it has come to be used almost exclusively in the worse sense of returning evil for evil, blow for blow. The term often signifies 'restitution,' that is to say, makes amends in connotation to 'restitution'; it, however, rather emphasizes the more friendly aspect of reciprocity, the returning good for good, and it may even be employed to convey the notion of the return of good for good, though in 1 S 15:25 it is used in the more severe sense of retaliation. Not to be obey Jesus, at whatever cost, is to miss being His disciple, and that is, in Christ's judgment, equivalent to moral suicide. Finally, Jesus wholly identifies Himself with the moral law, for He makes fidelity to His person the supreme test of men. Describing the last judgment, always considered the dread function of God alone, Christ speaks of Himself as returning in glory to judge the world, when the sole criterion of blessing or condemnation will be, 'Ye did it unto me, or Ye did it not unto me' (Mt 25:40). This moral law, the study of human responsibility this is a unique claim—a claim which was not only not resented, but openly and frankly recognized by men and women who found His authority the exact equivalent of God's. In this lonely isolation Jesus stands pre-eminent in the record of morals.

The Fourth Gospel presents this extraordinary claim in a different and more winsome light. Here Christ's sonship with God is the basis of the gospel message; and the moral obligation to Jesus takes on a universality and the sweetness of brotherly affection. Jesus does not in this Gospel so much demand obedience as the representative of the moral Governor of the world as He asks for love and trust in Himself as the complete manifestation of the heavenly Father. For obedience the warmer attitude of trust or faith is demanded. The story of the Samaritan woman is evidently told to show how this love to Jesus may come to birth (ch. 4). Honour to the person of Jesus is honour done to the Father (5:22). The will of God is conceived by Jesus as fatherhood to be given out on the Father's own terms. So (6:7). Judgment was passed on the unbeliever by the very words which Jesus spoke, for He spoke the words of the Father (12:48). The final appreciation of any man's life is decided by his attitude to the Person of the Redeemer. He that believeth not is condemned already (3:18). The crown of this high claim is the assurance that a friendly knowledge of Jesus is necessary to eternal life, i.e. to the sum of human blessing: 'This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent (17:3). This claim for loving trust, and this identification of Himself with the Father God in the Fourth Gospel, are clearly the brighter and more attractive equivalents for the unhesitating obedience and the identification of Himself with the Supreme moral Ruler of the world in the Synoptics. Towards Jesus every man has a duty, and on the correct sense of responsibility to Him depends the final prize of life.

DAVID YFFE.
illustrations and its most significant application in the domain of international commerce. Here it is apt to arise whenever a nation sets up tariff barriers which obstruct intercourse with the adverse object of promoting certain home industries by the exclusion of foreign competition.

The direct economic result of this fiscal policy is to diminish foreign trade, to stimulate the production at home of certain kinds of goods previously imported, and to check the exportation for foreign consumption by their foreign commercial rivals.

Naturally this proceeding raises a feeling of resentment and wrong in the countries whose trade is injured, which often finds vent by calling into existence retaliatory tariffs. The retaliatory spirit is favoured by the apparently militant attitude of the protective country, and the cry is raised, 'They strike us with their tariffs; let us strike them back again.' The movement gains support from some who, while professedly believers in free trade, yet entertain doubts as to the advantage of what is described as 'one-sided' free trade. Retaliation is then adopted either for the purpose of punishment, and to gratify the feeling of resentment, or with the deliberate aim of placing the offending nation in a position of disadvantage and compelling it to reduce the objectionable tariff. In either case the real object of trading, which is the satisfaction of wants by means of imports, is lost sight of, and the attention is riveted on exporting. The tariff of A checks the exports of B to A; this is regarded by B as a hostile act, and one to be met with a retaliatory tariff, which will hit A back; perhaps it may become a basis for bargaining with A and for inducing A to lower the tariff in some degree. Both countries alike in this conflict overlook the fundamental fact that the whole object of trading is to effect the greatest satisfaction and the amount of enjoyment by obtaining commodities on the best terms; also that exchange (whether home or foreign) increases this power by adding to the productivity of labour, and eases life by enabling individuals to use their own skill and natural gifts to the fullest advantage. They further ignore the fact that their own products are the means by which alone they can purchase the products of others, and that the highest efficiency for both parties is attained by specialization of labour and the exchange of commodities for one another. The deeper analysis of the advantages of trading places the emphasis upon imports of desirable things, for the obtaining of which exports must be offered in exchange. Trading is seen to be thus a mutual benefit; the relative superfluities of each country are given in exchange for the cheaper or more desirable products of other countries; and, as the exchange is voluntary, it will not take place unless both countries find their benefit therein. Protective tariffs, by limiting this power, lower efficiency and injure the country which institutes them, and by obstructing their own products, block its own powers of consumption. Retaliation, whether as a penalty or for gaining concessions, means the adoption of the same tariff policy as is resented in the foreign country, which has had the same result. And any sense can it be attached to an illogical proceeding and a delusion. For, if tariffs are beneficial to the nations that impose them, why should they ever remove them? If they are not beneficial, but are admitted to be an economic blunder, why should other nations copy that blunder? The only reasonable answer is to put up barriers that are mischievous, merely in order to lower them under a compact with other nations to do the same? The defence is usually on political grounds, but experience has fully demonstrated two invariable results of this tariff policy: (1) that, when tariffs have once been adopted, it is extremely difficult to remove them, since interests are created that are always opposed to their removal, and (2) since tariff legislation is deemed an unfriendly proceeding on the part of those who thus exclude the goods of other countries, it creates ill-feeling, provokes resentment, and leads to retaliation and tariff wars, which destroy trade and produce conditions that may incite to other forms of strife. Notwithstanding the fact that retaliation is a double-edged weapon, recoiling upon those who use it, it has been employed very frequently, and by most civilized nations.

3. An economic fallacy. One of the most cogent arguments for the imposition of tariffs is the erroneous belief that taxes may be extracted from foreigners by means of duties on imports. Even were it the fact that the exporter paid the duty by a reduction of price (which can, however, occur only in the very exceptional circumstance that the importing country possesses a market monopoly), a system by which two nations levy taxation upon each other can be only a very expensive and clumsy system of raising revenue, and one that inevitably offends every canon of taxation.

Much of the prevalent fallacy respecting international trading rests on the mistaken supposition that trade is a species of gambling, in which the gains of one nation are invariably made at the expense of another. When it is fully realized that all trade is but exchange, entered into voluntarily on both sides because it is profitable, and further that different countries can secure a larger amount of enjoyment from their industrial efforts by devoting themselves more exclusively to those tasks in which they respectively excel, then only will the belief in retaliation as an instrument for regulating foreign trade disappear.

4. Evils of protective tariffs. It should be noticed that all tariffs of a protective character are a cause of great and unproductive expense; they involve elaborate machinery for the collection of duties that realize little as revenue; and, since they tend to call forth evasion and smuggling, they also call into existence other modes of expenditure which are necessarily incurred to check and punish those that import into the country. It is convincingly proved in connexion with protective tariffs than their demoralizing influence upon the public; they tend to become the instruments of persons unscrupulous in the pursuit of gain, who seek to employ them as means for securing monopolies.

It is admitted that retaliatory methods do often lead to the adoption of commercial treaties between nations, which by special mutual concessions reduce in some degree the mischief created by the tariffs; but, inasmuch as the operation of these treaties is limited to certain countries, they generally give offence to countries excluded from them, and thereby give rise to other retaliatory tariffs by those nations; the favoured nation system thus tends to produce different results in the two directions. Britain has long been led to believe that an antecedent to commercial treaties; most countries raise some part of their public revenue from duties upon luxuries, imported or home-produced; e.g., Britain raises revenue upon imported wines and spirits. There is scope for arrangement with nations already tariffed if such of these duties as may be found to act in a peculiarly onerous manner, without entering upon the unprofitable field of protective duties. Thus retaliation or reciprocity is possible even through the agency of revenue duties, though it is much
more difficult in application, limited in scope, and less effective, since the objects of taxation in such cases are generally either luxuries or monopoly products.

5. After-war relations. The fierce conflict in which Germany was involved by reason of her violent and unprovoked attempt at conquest has for a time destroyed all possibility of trade relations between her and those whom she has made enemies.

The question has been raised. Will trade relations be renewed after peace? Does not this war demonstrate the dangers of international trading and dependence upon other countries for products? Is it not wiser and more economic to be self-contained and independent, especially for a great nation with colonies which produce many necessaries and are capable of constituting a large market for her manufacturers? Shall we not retaliate upon Germany by refusing trade relations after peace has been proclaimed and rather develop our own resources and independence?

Anti-Free Traders have seized the opportunity to advocate this principle on the ground that it will be economic by developing our own resources, and will enrich the country by the growth of many industries for whose products we have hitherto depended upon Germany.

To discuss this project is to repeat the whole argument about how economic advantages of which have been demonstrated.

War is by its nature destructive, abnormal, wasteful; it admits of no economic justification; it is based upon hostility, and its aim is utterly uneconomic. If enmity and hostility between nations were to become the chronic relations of any, there would be no object in discussing the advantages of trade, for such trade could not exist. But a different set of conditions is created by peace. Well-being, progress, and development are then the aim. Progress demands specialization of faculty and resources, and implies exchange and mutual dependence; and it can be shown that the wider the area of economic relations the greater the economic gain. Therefore no argument against free trading can be deduced from a state of war.

The only problem now is how economic peace may be renewed after the war with a nation which has committed such gross offences against civilization and morality. It is conceivable that Britons might decline trade relations with a nation guilty of such depravity on moral grounds and from a feeling of resentment. This is a different motive from that which demands that trade with Germany should be checked in the economic interests of Great Britain. Any limitations of free exchange must be a reduction of economic advantage and a loss; but individuals and nations may be willing to suffer loss for conscience’ sake. Increase in trade is not the only aspiration of nations, or indeed the highest; its benefits stand after those of morality. Economic advantages, however, tend on the whole to peaceful relations among nations which are closely dependent on one another; therefore, the bitter feelings created by German methods of war remain, they will be an impediment to renewed trade relations, and thus may favour the views of protectionists; this does not denigrate the economic desirability of fiscal retaliation; it is possible to reconcile the bitterness and distrust created by German aims and methods. When peace is assured and time shall have modified these bitter feelings, the advantages of inter-trading will assert themselves. Free trading is based on the assumption that peace and international co-operation postulates peace and makes for peace. But men will often sacrifice profit rather than deal with those whom they distrust.

6. It is almost superfluous to add that retaliation in the rarer and nobler form of reciprocity in good works can result only in mutual benefit and esteem, whether between individuals or between nations; it tends to the creation of an entente cordiale, which is a source of confidence, goodwill, and humanely productive co-operation and material well-being to all whom it embraces.

G. ARMITAGE-SMITH.

RETEATS.—The object of a retreat is that a soul in solitude with God may learn more of His being and truth and will, and may become more pure and consecrated to Him and His service. Some effect has been given to the underlying principle in many forms of religion. There are instances both in the OT and in the NT. In the early Church and in the Middle Ages the advantages of solitude for communing with God were abundantly recognized. But the systematization of retreats and the organization of monasteries was to be a major development in the history of Christianity. Some of the chief purposes are among the religious practices which are due to the Counter-Reformation. The beginning was in the method described in the *Spiritual Exercises of St. Ignatius Loyola* (v. g.).

The plan of the *Exercises* contemplates a period of four weeks, the word ‘week’ indicating not necessarily seven days but such a time as may be needed for the course of meditations in consideration of the spiritual faculties and condition of the person making the retreat. The plan contemplates the disposal of time and rules for occupations and prayer. The meditations for the first week, after defining the end of man to be the service of God, are on sin and on the separation of salvation in the first and second week, on the incarnation and the events of our Lord’s earthly life as far as the *Annunciation* in the third week and the *Last Supper* in the fourth week are considered. The third week are on the *Lord’s Supper*, the *Agony in the Garden*, the *Arrest*, the *Trial and Condemnation*, the *Crucifixion* and death, the *Burial*. Those for the fourth week are upon the *Resurrection*, the *Appearance* after the *Resurrection*, and the *Ascension*. The series for the first week concerns the *Purgative* Way, the object of which is to increase hatred of sin and to deepen penitence. Those for the second and third weeks concern the *Illuminative Way*, and the object is to set before the soul the example of Christ and to lead it to closer imitation of Him. That for the fourth week concerns the *Unitive Way*, which has as its aim to bring the soul into closer union with Him. An important place is filled in the second week by the consideration of the two stands under which man has the choice of free will—first, the first that of Christ, the other that of the devil; and of the three classes of (1) those who are reluctant to bear the consequences of following Christ and desire to postpone the sacrifices with the expectation of receiving an equivalent of benefit, (2) those who are not of the opinion, and (3) those who are prepared at once to make all the sacrifices which the following of Him may require. The director is instructed to vary the details and the proportion in the use of the *Exercises* according to the capacities and the needs of the person using them.

In the system founded by St. Ignatius Loyola a retreat of eight days usually opens by silence and prayer with meditations on the *Exercises* was a preliminary to entrance into the Society of Jesus; a retreat of eight days similarly based on the *Exercises* became a yearly custom in the Society; and retreats were afterwards held more frequently and on a larger scale than its members. Following the example of St. Ignatius, many leaders in religious life promoted retreats for clergy and the laity, men and women. Notable among these were St. Charles Borromeo,
REUCHLIN

St. Francis de Sales, St. Vincent de Paul, Pierre de Bérulle, and Jean Jacques Olier. During the 17th cent. the use of retreats spread rapidly throughout the Roman Catholic Church. In the closing years of the 19th cent. and the early years of the 20th a great development took place, beginning in France and extending thence to Belgium, Holland, England, and elsewhere, by which retreats, from having been for the most part confined to clergy or lay people of special devotion or passing through some special crisis in life, came to be extended to large multitudes and especially to men and boys, women and girls, of the working class or leisure. These latter had hitherto been a less severe character than the earlier retreats, lasting for a shorter time, such as three days or one day, with times for conversation and recreation allowed.

Retreats of a definite character were introduced in the Church of Flanders soon after the middle of the 19th cent. In Feb. 1836 a retreat for clergy, lasting from Monday to Saturday in one week, was held at Chislehurst under the auspices of the Society of the Holy Cross. In July 1856 a retreat for clergy, lasting for the same time, was held in St. John's house, London. Some element in both these retreats was that, in addition to their devotional setting and practices, there were conferences on theological and spiritual subjects. One result of the Oxford Movement many years ago was the founding of many devout laymen and women who formed the practice of making a retreat from time to time. The general features of these retreats were taken from those customary in the Church of Rome. In many cases they have lasted for three or four days; there have been two or three or four addresses on each day; silence has been preserved throughout; the time has been devoted to prayer and communion with God. Much work in promoting such retreats was due to the Society of St. John the Evangelist at Cowley and its first superior, R. M. Benson, and to the English sisterhoods. Retreats for business men from Saturday night to Monday morning have long been a prominent part of the work of the St. Paul's Lecture Society at St. Paul's Cathedral. In the 20th cent. many retreats and devotional gatherings or conventions between religious orders to whose retreats have been organized on a wider scale.

In the last few years the meetings for spiritual help and edification which have long been customary among Nonconformists have in some cases assumed a form more like that of a retreat, though usually without the continuous silence and with discussions or conferences forming part. There have been instances of these among the Wesleyans, the Baptists, and the Congregationalists.

Experience has shown the high practical value of retreats in their influence on spiritual life. The present tendency is largely to extend their sphere and to lessen their intensity. Obviously there is need of great differences as to their length and as to the degree of completeness which is to be observed in the withdrawal from the world and its ordinary occupations which is their most distinctive feature. The severity which may be most valuable for those called to special kinds of life, and for those far advanced in the use of prayer, would only be crippling to many of those living an ordinary life. It is often found that the more complete and severe retreats should be maintained for those for whom they are suitable; and the special point of a retreat is lost unless the devotion in it is sustained and empowered by continued solitude of the soul with God.

RETribution.—See REWARDS AND PUNISHMENTS, ESCHATOLOGY.

REUCHLIN.—Joannes Reuchlin (Cappino) was a pioneer and a leader of the humanist movement in the early stages of the Renaissance, especially as regards the study of Hebrew. He was a man of varied gifts, interests, and activities—a striking and attractive personality. He was an accomplished scholar of Greek and Hebrew, and wrote important works on these subjects; he was a professional lawyer and held appointments as a judge; he was a man of affairs and acted as confidential adviser and agent of some of the leading German princes.

He was born at Pforzheim in Baden, 22nd Feb. 1455; his father was an official of the Dominican monastery there; his domestic studies included a grounding in Greek literature. For a time he was a student at the university of Ingolstadt, where he was initiated into the classics. After a brief stay at the University of Freiburg, he was appointed in 1475 companion and tutor to Eberhard, son of the Burgomaster of Baden, and accompanied his pupil to the University of Paris. Here he began Greek, was a pupil of E. Pico della Mirandola, and became a member of the order of Jesus, the *Ordre des Frères de la Grande Cité* of the *Société de la Confrérie de l'Esprit Saint*. He was ordained priest in 1478. Returning to the University of Basel, he took his B.A. in 1475 and his M.A. in 1477. He studied Greek, Latin, Hebrew, and ethics with Sebastian Brant and John Wessel, and began his career as a public teacher by lecturing on the Greek language and on Aristotle in the original. He then returned to Paris for a while, and read Greek with George Hieronymus. Next he adopted law as a profession, and studied at the University of Orleans in 1478-79, taking his LL.B. in the latter year, and maintaining himself by teaching Greek and Latin. In 1481 he was made magistrate of his native city and university by the Duke of Baden.

He now went to Tübingen, intending to become a lecturer there, but, on the invitation of Count Eberhard of Wurttemberg, he became connected with the university of Heidelberg. From this point till 1520—he till towards the close of his life—he continued in such employment and in the pursuit of the legal profession. He wrote a number of treatises, and was a doctor of laws. He remained with Eberhard at Stuttgart till the death of the latter in 1496. Reuchlin's marriage may probably be placed either in this period; he had no children, but was greatly attached to his sister's grandson, Melanchthon. In 1518 he recommended Melanchthon to a post at Wittenberg, and brought him into connexion with Luther. Later, however, Reuchlin's attitude towards Luther was unsympathetic.

The political and legal duties did not prevent Reuchlin from continuing his work as a scholar. Indeed, his journeys in the service of his patrons gave him fresh opportunities of study and brought him into contact with many of the most distinguished leaders of literature and learning. He accompanied Graf Heinrich of Wurttemberg in his tour through France and Rome, came under the influence of the brilliant scholars of the Medicus Academy and especially of Pico della Mirandola, and was invited to keep the manuscripts of the Greeks, John Argyropulos and Demetrius Chalkondyles. From about 1485 he was busy studying Hebrew; in 1492 he went on a mission to the Emperor to press the cause of Hebrew study and a patent of nobility. On this and on a later visit to the imperial court he studied Hebrew with a court physician, a learned Jew, Jacob de Mercis Loius, and utilized his newly-acquired knowledge to study the Kabbala; later, while visiting Rome in 1495, he was indebted for further instruction in Hebrew to the Jew, Obadiah of Rome.

On the death of his patron in 1496 Reuchlin lost the favour of the court of Wurttemberg. He had announced his intention of entering into the service of the Elector Philip. A revolution in 1498 brought him back to Wurttemberg, where he held an important appointment till 1513, when he resigned it, and devoted himself to scholarship for the remainder of his life, having his home in the neighbourhood of Stuttgart—except that in 1520 he was Professor of Greek and Hebrew at Ingolstadt.

LITERATURE.—P. Debuchy, *Les Retreats* and *Spiritual Exercises of Saint Ignatius*, in CE xvi. 793-797, iv. 252-259; "Capullo," as an alternative name, was Gracized from Reuchlin, after the fashion of the times; it did not, however, supersede the original, as *Melanchthon's old Schwartzed,*
under the auspices of William, Duke of Bavaria, and in the winter of 1531–2 he lectured at Tübingen. In the early summer of 1532 he died at Bad Liebenzell, whither he had gone for his health.

2. The Reuchlin controversy.—Unfortunately the last years of Reuchlin’s life, from 1509, were harassed by the famous controversy which is named after him, but in which he was involved without any fault of his own. He supported, as Johann Pfefferkorn of Cologne, auxiliaries for the conversion of his fellow-countrymen, initiated a movement to deprive the Jews of all their books except the OT. He asked Reuchlin for his support, but was refused; a little later the emperor, in consultation with the archbishop of Mainz to form a commission of scholars, including Reuchlin, to report upon the matter. Eventually the archbishop obtained written opinions from the members of the commission; most of them were favourable to Pfefferkorn, but Reuchlin was adverse, adorned with the usual personalities. The two antagonists mutually accused each other of heresy and appealed to the emperor, the pope, the universities, and other authorities. The universities condemned the endeavours of the pope and the pope sought to mediate; Reuchlin was warmly supported by the humanists in the Epistles Obscurorum Virorum (Tübingen, 1514–17) and in other writings. He had also the enthusiastic support of Luther and Karlstadt. The dispute took the shape of high controversy, with varying fortunes till 1520. Decisions were given in favour of Reuchlin at Rome in 1516 and at Frankfort in 1520; the former finding was quashed, the latter reversed by the pope. In 1517 Luther had published his Ninety-Five Theses, and thus his controversy was derevivated from Reuchlin. In the rising storm caused by Luther’s agitation, however, the minor controversy was lost sight of, and the veteran scholar was left in peace for his few remaining days.

3. Chief works.—Reuchlin’s more important works may be classified as follows:

(a) Linguistic.—A Latin dictionary, Vocabularius Brasile-
 bogus, 25 editions between 1475 and 1504; de Rudimentis Hebraicae, a Hebrew lexicon and grammar, first published in 1506.

(b) Mystic.—De Verbo Mirifico (1494), de Arte Cobalssica (1517), which aimed at the conversion of the Kabbala to Christianity and to apply it in the interest of apologetics.1 These works are more literary curiosities, and have not altogether the seriousness of the latter. It was the intention to point out that the Hebrew name of Jesus was formed of the constituents of Jehovah—Nisw with the addition of the third letter Shin—Niswhah.

(c) Controversial.—Mainly in connexion with Pfefferkorn and the Dominicans, especially Aufendiepfe (1511), which includes his report to the archbishop of Cologne on the question of the consecration of Jewish priests. Pfefferkorn had previously written Judainenpe (1507), a full and moderate discussion of the Jews, and Handspeeiid wider gegen die Juden (1511), an attack on Reuchlin.

(d) Variae.—A pamphlet, Liber Compositorum de Arte Preica, mentioned by E. C. Achelis as a pioneer work in modern printing, and two Latin comedies, Serpens and Hennoa, in the style of Terence.

4. Services to Hebrew and Greek Learning.—The chief importance of Reuchlin for the history of religion lies in the services that he rendered to the study of Hebrew and in the fact that he bore the initial blow from without against great contributions of the humanists and the observantists; these two features of his work were closely connected, but it is convenient to treat them separately.

Since the time of Jerome Hebrew learning had been rare among Western Christians, though it flourished in the East. In the early 15th century occasional, occasionally appeared Christian scholars, especially converts from Judaism, who were proficient in Hebrew.

Of. C. Jell, in Cambridge Modern History, i. 572.

The most distinguished among the immediate predecessors of Reuchlin were John Wessel (1429–90) and Pico della Mirandola (1463–94). Reuchlin owed much to their influence. But he himself was the ‘Father of Hebrew philology amongst Christians’. His History of the Jews stands forth with great clarity of judgment. He was also characterized by Melanchthon as entitled to the highest praise from the Church and from all posterity, i.e. as an epoch-making book.

But Reuchlin’s zeal for Hebrew learning had effects far broader than its immediate objects; nor was his influence confined to such studies. He did much to promote the study of Greek, even in his early days at Basel his activity provoked the hostility of observants, who objected to the language as impious and schismatic—i.e. that of the ungodly Church. The controversy involved questions that are permanently crucial for religion. Here, as often since, matters that primarily concerned the OT provided a field of battle on which larger issues were fought out. In supporting Reuchlin, those who thought as Reuchlin did thought of the work and learning against the observantist demand that nothing should be taught or published that they chose to consider at variance with traditional orthodoxy—that the ignorance of the dark ages and of the unenlightened multitude should determine how far scholarship should be tolerated. As A. Dull says, ‘Greets is not wrong when he counts his fellow Jews as largely responsible for the Reformation. He writes (Hist. of the Jews, Eng. tr., London, 1911, pp. 121–122; H. Halman, Introd. to the Literature of Europe, ed. 1872, i. ch. iii. pp. 95, 96, 97, 128, 149, p. 54: The Cambridge Modern History, i. The Renaissance, Cambridge, 1902, 573 ff., 605 ff., 637, 604, ii. The Reformation, 1517, 1529, 1642), W. H. Bennett, REVELATION.—1. What is the meaning of revelation?—The word stands either (a) for the process by which God makes known to man the truth which he requires, or (b) for the body of truth which he in his bestowal of it reveals. This latter presupposes the existence both of a living God, able and willing to bestow it, and of intelligent beings, able to receive and to make use of it. Thus, though revelation, as will presently be seen, is God’s gift to the world, to know it as revelation is man’s own work.

2. How does man’s need of revelation come to be felt?—It is felt in face of the practical problems which life presents to him. Man is essentially a religious being, but his desire for union and communion with his god is in close connexion with his practical needs. Just as he desires to make use of a power greater than his own, so he desires to make use of a knowledge greater than his own. Much that desires to know finds himself unable to discover, and he turns to his god to seek knowledge which he could not himself discover. This was in the early days of Hebrew history. Saul, seeking his father’s asses, David, uncertain as to the intentions of the men of Kihlah, Ahab, anxious as to the issue of the coming campaign, alike turned to the god who could not themselves discover (1 S 9: 23; 1 K 22: 23).

Moreover, even when the knowledge which man desires is the knowledge of the
will of his god, his purpose in seeking for it is at first equally practical. Believing that such mutual blessings are to be derived from God, harvest and victory in war are dependent upon good relations with his god, he desires to know what his god requires of him in order that those good relations may continue, if they exist, or be restored, if they have been interrupted (cf., e.g., 2 S 217). Provided this is done, God will reveal to him of truth or righteousness for the sake of righteousness; he desires both because, for practical ends, he desires the favour of his god. Now it is important to observe the practical character of the desire for revelation, because it continues almost unaltered throughout human history. Men are made to ‘seek God,’ and ‘feel after him,’ like children feeling for their parents in the night (Ac 1779), because they are made dependent upon God and unable to do without Him. As, in the long course of history, men have risen to higher things, far deeper needs than those of which the savage is conscious have come into view. Though the old selfish desire for supernatural information still remains to-day, and is ministered to by the palmist and the crystal-gazer, it is for nobler ends than that of the man and woman who feel that the truth is the mystery of the world and the contradictions of their own nature, the mysteries of sin and sorrow and pain and death. They desire to know God and His purpose, that they may understand their lives and that their whole lives may make sense of it. But even here the desire for revelation is still mainly practical. Truth for truth’s sake may be the watchword of the scholar, but truth for life’s sake is the watchword of the ordinary man. He cannot say, with Browning’s Giuseppe, ‘It is the very thing I want,’ and, like the child, the mind can discover nothing by its own activity; indeed, apart from the material given to it, there could be no activity of the mind at all. The effort of the mystic to empty his mind of all its existing content is but an effort to make room for a new content, which he looks to God directly to bestow. The pageant of nature and of history, on the other hand, objective as it is, derives all its meaning from the interpretation which the mind gives to it. Though ‘the heavens declare the glory of God’ (Ps 19), they declare it only to the mind of man; the cow in the pasture sees the same spectacle, and makes nothing of it.

3. Is such revelation possible or verifiable?—This is a question which haunts the minds of many who desire it. How can the secret of the universe—so vast in space and time—be made known to the minds of men? The eye can see only what it brings with it the power of seeing. Is it possible that any conception of God and His ways which our minds can grasp can correspond to the reality? To this difficulty there are two answers to be given. First, our knowledge of the kingdom of God is not merely to take a low view of our own nature; it is, in fact, also to take a low view of His. It is to deny to Him the power of self-revelation, and with it the power of influence which is, in fact, His. If we claim to know God perfectly; indeed, it is in the unfathomability of His nature that we find one great source of our reverence for Him. Our knowledge of God is at best a theologia viatorum, not a theologia bentorum. Our knowledge of God may none the less be true, as far as it goes, and be capable of a growth to which no limit can be set. Our instinctive longing after God is itself a prophecy of its satisfaction; God ‘creates the love to reward the love’; we can hardly believe that the instinct would have survived, had it not been in touch with reality. (b) The emperor’s new clothes will not be known must be decided, as Bacon says, not by arguing, but by trying. Religion starts with the assumption that God is to be known, science starts with the assumption that the world is to be known, both are haunted by the fruitfulness of the results of observation. Of course it is always possible to suggest that our apparent knowledge may not be real knowledge, since it is necessarily relative to the mind which claims it. But, if we reject such scepticism in the sphere of physics, and both the President and the Professor of Theology of the University of Chicago (1959), while the highest revelation which the Bible records is in the best sense natural. If it is natural for God to be revealed in human history as a whole, so is it for Him to be specially revealed in the history of the people brought nearest to Him, and, above all, in the history and experience of His Son. If it is natural that the
consciousness of all should witness to God, so is it that no more abundant witness should be borne by the consciousness of the Soul that knew no sin.

Indeed, the supposed 'natural' basis of religion is inseparable from the basis which, in distinction from it, is described as 'revealed.' The world of nature and of history is a world in which the Lord, and the heathen both before and after His coming, have been prominent actors, and human consciousness is only seen at its highest in the consciousness of the Lord. Thus it is that 'natural religion' ever maintains but a precarious existence when 'revealed' and not by any one.

When, then, did Helenus, or any one, have come to know God through their national experience long before they recognized that the heavens declared His glory, and it is ever those who have seen 'the glory of God in the face of Jesus Christ' (2 Co 4) that most easily recognize and interpret His action in nature and in history.

Are there, then, any real distinctions to be borne in mind, as we consider the subject before us? There is one of the greatest importance—the distinction between the divine revelation itself and the interpretation, the reception, of it. All revelation ultimately depends upon the will of God. But its effectiveness does not depend upon God's will alone; man has his part to play in seeking after it, in preparing himself for it, in welcoming it, yielding himself to it. It is as if the reality and interplay of these two elements that the acquisition of truth depends both for the race and for the individual. Neither can be ignored without misunderstanding the whole. Thus (a) the initiative is always God's. It belongs to the Lord to declare Himself, or in other words, how He is, and what He is. If He reveals Himself to one nation more fully than to another, and to one person more fully than to another, that belongs to God's 'management of His household' (Eph 1) ; we cannot, in view of the facts of history, ascribe it altogether to a special responsiveness in those for the time specially favoured. It was not for lack of trying that 'in the wisdom of God the world through its wisdom knew not God' (1 Co 2), nor was it as the reward of a great spiritual effort on the part of Israel. Revelation is God's act which He reveals to man. But (b) the prophets and the Lord of the prophets ever declare: 'I thank thee, O Father, Lord of heaven and earth, that thou didst hide these things from the wise and understanding, and didst reveal them unto babes: yea, Father, for so it was well-pleasing in thy sight' (Mt 11). This is not to say that God's action is arbitrary, or that we may not seek to understand it, so far as we may. It is only to say that God's action depends upon God's will, not in contrast with His wisdom (for there can be no such contrast), but in contrast with human effort and desert. But (c) to say this is in no wise to deny the importance of human effort and response. Though it is for God to bestow the light, it is for man to open his eyes and ears to that measure of revelation which by the divine good pleasure is vouchsafed to him. It is 'he that hath ears to hear' that will hear, and to him that hath more will be given (Mt 13). It is not merely that effort and attention are required for the attainment of any knowledge; there is more than this. Things must be known to be looked for. Helenus therefore 'knew not', for if he had known, he would not have been Arcanum (Jn 3). All revelation of character demands a certain power of appreciation in those to whom the revelation is made. 'The secret of the Lord is with them that fear him' (Ps 25), and 'every one that doeth all hideth the light, and cometh not to the light, lest his works should be reproved' (Jn 3). Moreover, there is another fact, which is here important. As we shall presently see, divine revelation without needs ever has to be supplemented by divine inspiration within; and, though revelation may fall, like the rain, upon the evil and the good, with inspiration it is not so. Now it is upon these two facts taken together—the good pleasure of God and the response of man—that the course of revelation has depended. God has spoken as He has seen well to speak, but also 'as men were able to hear it' (Mk 4). He has spoken 'by divers portions and in divers manners' (He 1), not only because it is His way to proceed step by step, but also because different portions and different methods of truth, though it may at first be received in isolation, is constant with each other element; and, when the fuller revelation is given, the fragments fall, each into its true place, and throw light upon one another.

Accommodation in revelation. It is precisely the fact that revelation is not always straightforward in the sense of receiving it that should give us confidence in its reality. All communication between a higher and a lower mind demands a certain accommodation. The teaching which a parent gives to a child must be expressed in the child's language, and must suit itself to the child's thought. But, a parent will not attempt to tell his child all that he knows, nor will he try at once to correct all the child's errors, or hinder the exercise of the child's independent action. But in a way he may in any way mislead the child. Its whole purpose is to convey as clearly as possible such truth as he immediately needs, without confusion but with such explanation and development as after a birth in the family, a child is told that God has sent him a new little brother, he is told both what is entirely true and exactly what he needs to know for the guidance of his own thought and conduct. No doubt the child will picture the arrival of the gift in his own way; he may even, in passing on to another what he has been told, fail to distinguish between what he has been told and the way in which he has pictured it. All this shows that it is important. It is important that the truth, and no subsequent enlargement of his knowledge will affect it; rather, it will lead the child to admire the more wisdom of God in the manner of accommodation. But we shall take it, and proceed to fuller, and something more. Now so it is with divine revelation. It is wholly accommodated to human capacity; it does not correct all errors at once, or completely version the meaning of the message. As with the parent, we shall take in any way misunderstood, which is the result of a child's reception of the message entrusted to Amos. The knowledge of God, like all knowledge, is at first confused to the few, and bestowed by methods by which only the child's thought can be corrected; and when the thought is formed, it is by degrees, by the repetition of the message, by renewal of the message, is by the repetition of the message, by renewal of the message. And, when the fuller revelation is given, then, the fragments fall, each into its true place, and throw light upon another.

5. How has revelation actually come to us?—It is actual revelation that best shows us both its meaning and its possibility. What has been done
it was possible to do, while much that may seem possible to us may not actually be so. Three points are made by the writer: (a) Revelation is primarily of God's reality, character, and purpose. All other revelation is subordinate to this, and to a large extent included within it. (b) Revelation is made in act rather than in word. God reveals Himself by what He does, and the trend of His purpose is fulfilled through the action of God. The word of God is important in its own place. Inspiration (g.r.) goes hand in hand with revelation. The word of God, spoken by the prophets, points to the facts and declares their significance. (c) Revelation culminates in Christ and the Spirit-bearer Church, who, at once, reveals in act God's reality, character, and purpose, and declare it in word. In them God's purpose is partially fulfilled and also moves forward to complete fulfillment.

(a) Revelation centres from the first in God's adding Name, or revealed character, and that Kingdom of God which it is His purpose to establish. It has not primarily consisted in the promulgation of a code of laws to be obeyed without understanding their purpose, or in the conveyance of information, guaranteed by miracles, as to the facts of future events. The primary purpose revealed has been Himself and the purpose for which He is working, though, in revealing these, He has necessarily revealed what we must be and do in order to co-operate with Him, and the future which union with Him necessarily assures to us. When St. Paul maintained that the law and the prophetic code, together, were not primarily truths to be taught and explained, but a means by which the law and the law secondary (Gal 3:15-24), he was profoundly true to the highest teaching of the OT. All that is highest in the moral appeals of law-giver and prophet witnesses to this. The children of Israel, the ruler and his people (Lv 18), and merciful because their God is merciful (Dt 10:18); the claim of God upon the obedience of His people ever rests upon the great things that He has done for them, and the great things that He still will do (Is 12:4; Hos 14:6). So it was with the confident expectation of the Resurrection and the future life of bliss arose among the people of God. It did not rest upon any detailed picture of the future drawn by an infallible hand; it rested upon the knowledge that had been acquired of the justice and faithfulness of God, and of all the love that God had shown towards them. The purpose was of God not of the dead, but of the living, and the bond that had been formed with Him was one which time and death had no power to break (Ps 40:4-6; 73:21-28; Is 25:8-9). The same characteristic of revelation appears from John's saying that the Lord and continued in the Church. The Lord by word and act is essentially the Revealer of the Father (Jn 14), the Declarer of the Name of God (17), and the Preacher of the Kingdom of God. His moral teaching is no legal code, but, like the highest teaching of the OT, rests upon the character of God and the hope of the future (Mt 5:45-48; Lk 12:32-34), while the fulfilment of the hope for the individual is bound up with union with God through the Lord Himself (Jn 9:27; 16:23).

(b) Existence and character are made known by act, so that purpose comes to be understood by the partial and promissory fulfilment of the purpose itself. To the Hebrews God was revealed in the facts of their history and experience. Though at first they may have thought of their God much as others, the special importance and prominence given to the facts convinced them that He was far other than the gods of the heathen. He had a purpose, and in the working out of His purpose there was nothing that could say Him nay. He had brought them out of Egypt with a mighty hand and a stretched-out arm; He had planted them in their own land. He had revealed His will, and showed Himself able to vindicate it when they set it aside. And all through their history this revelation of God by acts of His action went on. Chasten His people He might with awful severity, but He would never destroy them. That would be to abandon His purpose. Always 'the remnant' was left to 'take root downward, and bear fruit upward' (Is 57:17). So by the witness of facts the Hebrews could know God. The very name of Jehovah, Jahweh, a God full of compassion and gracious, slow to anger, and plenteous in mercy and truth; keeping mercy for thousands, forgiving iniquity and transgression and sin; and that will by no means clear the guilty; visiting the iniquity of the fathers upon the children, and upon the children's children, upon the third and upon the fourth generation' (Ex 34:6). So it was with the divine purpose of establishing the divine kingdom. God revealed His purpose to establish it by actually establishing it in Israel, so far as the obstinacy of His people allowed, and extending it through Israel over others, so far as Israel was ready to be the instrument of its extension both by doing and by suffering. But to say this is not to say that the facts were left to speak for themselves alone. The acts without words are misunderstood. In Israel's history revelation went hand in hand with inspiration, the act of God with the word of God. At each crisis of Israel's history the prophet was raised up and inspired to declare the Name of God and the meaning of His purpose, and to interpret His action. So in the manifestation of God's ripening purpose. To the inspired vision of the prophets the divine purpose ever shines through the darkest facts of the present. What God has done in the past gives light to what He is doing, and the very disasters which human willfulness occasions reveal what God must one day make of men, if they are to be the instruments of His unaltering purpose. Nowhere do we see this more plainly than in the promise of the Christ. It is the Kingdom of a Christ, that the prophets primarily proclaim; but, as the facts of Israel's history make clear the divine method of working through great personalities for the benefit of the community, the great personalities whom God raises up to act and to suffer for His people become the agents of the action of God. The great Actor, the great Sufferer, whom God must yet raise up.

Nor (c) is there any change in God's method when the Christ appears, lives and acts, suffers and is glorified. In one aspect the Christ is the greatest of the prophets, and in another, the Prophet, He is the Spirit-bearer body, is the abiding witness to the Name and purpose of God. But in another both the Christ and the Church are God-revealing facts. The mighty works of the Lord's earthly life are not so much external proofs of a revelation which is distinct from them as themselves the revelation. The Lord reveals the Father, because in His activity the Father is seen actually at work (Jn 14:8-12). If a Kingdom is proclaimed in which all evil is to pass away, its reality is certified by the present operation of the power of the Kingdom in the Lord and the Church (Acts 2:17-18). When the Lord's life is crowned by His death and glorification, by the gift of the Spirit and the transformation of the Church, both the Name and the Kingdom of God are revealed far more perfectly. It is through the facts whereby God Himself is seen 'in Christ reconciling the world unto himself' (2 Co 5:19). He is seen to be One who saves by taking and removing the burden of human sin, lifting men up by the communication of Himself. Sin is found to be actually removed and the Spirit given. The Kingdom is assured in the future, because in the Church it is found
already existing, and He who has begun "a good work... will perfect it until the day of Jesus Christ..." (Phil. 1:6). Among the very earliest of the books of the NT, we read that 'God is love,' the words are no mysteries. Oracle resting upon St. John's authority; they are the summary expression of all that, in the experience of the Church, God has been found to be (1 Jn 4:8). It is this revelation in fact that the gift of the Spirit of God inspires the Church in word to declare. The whole purpose of the gift of the Spirit, as the Fourth Gospel describes it, is not to make a new revelation, but to light up, and enable the Church to declare, the revelation already made in the Christ Himself and the facts of His experience. The Spirit is to take of the things of Christ, to declare the meaning of the great redeeming acts, which, when the Lord spoke, were still 'to come' (Jn 16:9), and through them all to tell men 'plainly of the Father' (10:16). That conviction of the world which the Spirit is to bring about is a conviction that will rest upon an inspired witness to revealing facts (10:11). It is here that the culmination of divine revelation lies. The revelation contained in the person and works of the Lord and the present experience of the Church is revealed through this inspiration declared to the world. 'That which was from the beginning, that which we have heard, that which we have seen with our eyes, that which we beheld, and our hands handled, concerning the Word of life; and this is the life, which is manifested in us, and we have fellowship with us: yea, and our fellowship is with the Father, and with his Son Jesus Christ' (1 Jn 1:4).

6. What is the relation of this historical revelation to and by and through the people of God to other means by which men come to a knowledge of God?—To assert the reality and perfection of the higher is in no way to deny the reality or the value of the lower. If the Greek philosopher or the Indian sage has indeed attained by his own methods to a knowledge of God fruitful in power and holiness and life, it is through this revelation that he has done so, and we doubt not, by divine inspiration also. So the wisest Christian thinkers have held from the first. To the Christian indeed it may seem that even the highest teaching of all which he can receive from man, the laying bare of a star, in the spreading dawn of life, is the mystery of God, even Christ, . . . all are the treasures of wisdom and knowledge hidden' (Col 2:3). But the teaching of other masters, whether of ancient or of modern days, is not necessarily valueless to the Christian. Not only may it give to him much that the higher revelation has not in fact given to him, though it might have done so; he has no a priori reason for denying that it may add to his knowledge. In the traditional theology of the Church there are real elements which have come to it from Greek philosophy, and not from the revelation recorded in the Bible. If to-day we desire to get rid of them, it is because we think them baseless and unfruitful, and not because of the source from which they have come. Equally guilty of an excessive appreciation of the light which modern investigation has thrown upon the past history of the world and of man, and upon the record of the revelation, which God has made to us. Physical science, historical criticism, comparison of the Bible with other ancient records, have all played their part, and have it still to play, in widening and deepening our appreciation of the 'increasing purpose' which runs through the ages, and in correcting and uplifting our thoughts of God and His ways. Here too there is revelation, and, we doubt not, inspiration also to recognize and make use of. If there has been seeming loss, there has also been real and abundant gain.

7. How does the historic revelation reach the individual to-day?—The Church comes before the world, not primarily to lecture upon revelation as a process of divine proclamation, but to reveal God, as the Lord proclaimed it, and to be like the Lord, in her life of service and sacrifice and spiritual glory won through sacrifice, her-off the revelation of God and of His power to fulfill His purpose. Divine knowledge and life are hers, that she may fail neither in the one nor in the other. Thus (a) through the presence of the Spirit the Church is in the divine intention both the witness to the truth and the interpreter of the truth. The gospel is contained in facts, interpreted as the Church is inspired to interpret them. But the interpretation, though essentially invariable, must be given in the language and forms of thought of different peoples and ages of the world; and, as new questions have arisen, and new errors have required to be excuded, the Church in the power of the Spirit has been able to draw out and interpret much that does not lie immediately upon her surface, and must continue to draw it out in the days to come. Christian theology, like the Christian gospel itself, is to be accepted because of the appeal which it makes, not only to the mind, but to the heart and will and character. The Church speaks with authority, as those always speak who know. 'Verily, verily, I say unto you.' 'We speak that which we do know, and bear witness of that which we have seen' (Jn 3:30). But this authority is not of itself, nor of any other, a sufficient basis over and above reason and conscience; it appeals to both, and is accepted because of the response which they make to it. The revelation which the Church offers to the world no more affords a substitute for thought and effort and divine inspiration than the first dawn of revelation in the days of old. Deep must answer to deep, the Spirit within us to the Spirit without us. (b) The Church, as the body of the Christ and the Temple of the Holy Spirit, is in the divine intention, sent to reveal the Name and purpose of God, not in word only, but in act also. Though the witness to His name and His purpose dwells in her, and acts through her, and so reveals His reality and character and purpose. As he that saw the Christ saw the Father, so he that saw the Church should see the Christ, and the Father also. In the life of the Church given for men, and ever renewed by being given, the revelation of God's method and purpose made once for all in the Lord's Death and Resurrection should be continually made present to the world; in the kingdom of God here should be seen the promise of the eternal kingdom.

REVELATION. (Muslim).—See INSPIRATION (Muslim), Qu'ER.
feeling of anger aroused by a hurt or injury inflicted. But the anger aroused may be, as has been pointed out by Bishop Butler and many moralists, from two kinds of anger: avenging, and settled or deliberate retribution. The first prompts a man to defend himself when hurt or attacked; the second continues and often grows more intense when the immediate attack is over and the smart of the hurt is no longer felt. The first is prompted by, and grows into, the second; so it is often hard to fix the exact point where the one ends and the other begins. A hurt which gives occasion to, and is warded off by, an outbreak of sudden anger does not necessarily lead to, nor is it always followed by, a fit of settled resentment, still less of revenge. After a fight, though one of the two combatants must have been the aggressor, we constantly see men make it up and shake hands; it is when resentment, once aroused, is nursed and cherished that it is sure in most natures to give rise to revenge. Butler further maintains that the settled anger or resentment which gives rise to revenge has for its proper object injury or intentional harm, as distinguished from mere hurt which, at any rate in reasonable men, may cause momentary anger, but should not, and ordinarily does not, grow into settled revenge. The set-in is never by means always true. There are many natures so wrathful and resentful that a hurt inflicted, though quite innocently and even unintentionally, does give rise to settled anger, and sets going plans for the infliction of revenge; this is apt to be especially the case when the hurt inflicted is of a kind that seems to indicate contempt on the part of the injurer, or when it wounds in some marked way the self-esteem of the injured party.

This feeling of settled resentment and consequent love of revenge is a feeling deep-rooted in human nature and, as we shall see, hard to eradicate. It is found to some extent in some of the higher animals, which have been known to devise and execute apparently carefully thought out plans of revenge; yet revenge is not very common, least of all, in animals. It seems to be an outgrowth from a most sustained course of reflection than most of them are able to carry out, and also a clearer apprehension of the distinction between intended and unintentional wrong than most of them can attain. What generally seems to happen among animals is that the injured animal becomes resentful; it may attack the injuring animal, and, if it can, it may make a further attack on its person, and in some cases even upon what it considers its rights, and does its best to defend itself against such attack; but, if the animal which is the aggressor proves itself too strong, the defeated animal takes refuge in flight; and, if the future, fear takes the place of vengeance; an animal once thoroughly worsted avoids a renewal of the fight rather than seeks to avenge itself upon its more powerful foe.

But with man this is by no means equally the case. Wasted in one direction, man constantly seeks revenge in another; he may indeed cower before his adversary and seek safety in flight, as the animal does; but more often, though knowing himself physically the weaker, he seeks methods of avenging himself on his enemy by superior cunning or in some other way, revenge being among early races of men becomes in consequence very prevalent. The natural satisfaction of resentment and revenge is to repay tit for tat, to restore a balance of rights or position that has been upset. This security of such a balance furnishes a primitive conception of justice:

"facile, non ira, sed cura, legem k' india gynoro,

saya Aristotle, quoting, perhaps, a line of Herodotus."

1. Legislative and political. — From the point of view and method of procedure, the private revenge is one of the great legal anomalies of which the whole growth of criminal law is due to the desire of society to free itself from the disturbing force of private revenge and to substitute for this public retribution and the appeal to public law.

In this change consists the great development in the direction of the weak against the strong and vice versa. As long as revenge is left in private hands, the strong are apt to escape with impunity because the injured person will often be debared by fear from taking revenge upon the aggressor; and, if the weak does take revenge himself, his revenge is apt to be unequal and unavenged. So, the whole spirit and essence of the law that all should be equal before it.

In the beginning, as is proved by many of the formulæ and practices of ancient law, the interference of the State is a mere substitute for the private revenge or punishment which would be inflicted by the injured individual, but soon this stage is left behind, and the punishment inflicted by the State becomes the expression of the disposition to accord the penalty to the community at large towards the offence which has been committed. No doubt individuals are slow to accommodate themselves to the change, and private revenge often lingers on long after a system of criminal law has been established. But, directly such a system has come into force, an act of revenge for a wrong committed becomes itself a criminal act, and is visited by the penalty of the law against it. As same kind, not prompted by revenge, would be visited; and the craving for revenge, except in communities in which, as in Corsica, public sentiment approves of private revenge, is greatly checked. It may be, indeed, that, even when a system of the law has been long in force, the feeling of resentment entertained by the injured man against the wrong-doer finds in the legally inflicted punishment a certain satisfaction; and, if the punishment

1. Eph. iv. 314.

For (Mt In)' for and the improvement of society itself and, in every progressive community the security of society becomes more and more the object held in view in the infliction of punishment, and the measure according to which punishment is regulated. Moreover, in time a new motive as modifying the theory of punishment comes into prominence, which still further limits the importance of revenge as an element in it, viz. the moral improvement and care of the offender. While no State can with safety make this its only object in the infliction of punishment, or the only rule by which its amount is to be determined, yet that it can be taken at all into account, and that it becomes in the more highly civilized nations an increasingly important element in determining its direction and the kind of penalty to be inflicted, is a point that is indisputably true, and is a departure from the primitive cause in which it originated; and, if an element of revenge still enters, as it sometimes does, into the appeal to the law against the offender, the harm of it is greatly lessened, in that the private feeling is necessarily merged in, and largely moralized by, the wider concern for the community as a whole which has taken its place. The bringing about of this change forms one of the greatest triumphs of the prevalence of the law and of advancing civilization.

2. Moral.—Looked at from a moral point of view, revenge has in more enlightened times almost universally been regarded as an evil passion and been condemned. If the effort of the legislator has been directed towards substituting for the act and temper of revenge a less objectionable form of act and temper, as is more social temper, the object of the moral philosopher has been to eradicate the temper altogether. Yet it must be confessed that it is a hard task that he has set himself; for the revengeful temper is very deep-rooted and wide-spread in human nature, and is apt to break forth again, when all shall be supposed to have been effaced. The moral philosophy has tried to point out a better way. Still philosophers of every sort and every age have done their best to deprecate it and ban it. Confucius, Plato, Cicero, Seneca, Muhammad, Thomas Aquinas, and Butler have all had their say against it; each has reprograded it or denounced it in turn; but each also has had to confess that it is a temper which is widely prevalent, an evil which it needed all their force to combat. But why, we may ask ourselves, is it so reprehensible? In what does the evil of it consist?

(1) Revenge is an anti-social quality; it aims not at promoting human happiness, but at increasing human misery. To inflict pain upon our enemy, to diminish his happiness or virtue, are objects to which revenge directly and necessarily attends. This alone makes the prevalence of revenge a temper to be deprecated.

(2) As Butler points out with great force, the revengeful temper is almost necessarily an unjust temper. We constitute ourselves judges in our own cause; we imagine an exaggerated estimate of the injuries which are inflicted upon us. We are apt, as already remarked, to neglect the all-important distinction between intentional and unintentional wrong; and, the more we nurse our revenge, the more prejudiced do we become, the less we are capable of listening to the dictates of fair play and reason. Every one will have noticed this in one of whom a spirit of revenge has taken possession. He is a man dominated by one idea.

(3) No temper acts more injuriously on the character of him who indulges in it than the spirit of revenge. This is a spirit that is in every case one of basest desire. It keeps and reasons with ourselves, our own grievances, our own wrongs; in the concentration on them and the exaltation of objects a man becomes callous to the interests and happiness of others, so that the revengeful temper does not infrequently into the misanthrope.

(4) This is the more readily the case because the revengeful spirit makes us incapable of exercising the noblest and best of all spirits, a charitable and forgiving temper. To such a temper the spirit of revenge is, of course, the exact opposite; its presence makes the other impossible. But a character in which such a temper is entirely absent cannot but be a selfish, a maimed, and a distorted character, one far removed from the nobler heights to which the human character is capable of being elevated.

3. Religious.—But, seeing that the laying aside of revenge and the desire for it altogether is a virtue hard to attain and comparatively seldom reached, it is at this point that religion, if the struggle against revenge is to be effective, is to be called in. While other religions have indeed not been altogether silent on the subject, Judaism partially, Christianity entirely, have alone succeeded in exterminating it. In the OT generally vengeance is deprecated as interfering with the mercerative of God. "Vengeance is mine, saith the Lord, I will recompense." (Dt 32:35) Thon God, to whom vengeance belongeth, shew thyself! (Ps 94), are verses which illustrate how completely the Jews regarded vengeance as properly belonging not to man but to God; and St. Paul quotes the first of these to enforce his teaching of forgiveness on his Roman converts (Ro 12:19). In Sir 25:1-8 a higher line is taken: He that taketh vengeance shall find vengeance from the Lord; and he will surely make firm his sins. Forgive thy neighbour the hurt that he hath done thee; and then he shall have forgiveness. Man cherisheth anger against man; and doth he seek healing from the Lord? He being himself flesh nourisheth wrath; who shall make atonement for his sins? The principle here laid down clearly is that, if we cherish a revengeful temper, it is impossible for us really to pray for, still less to expect, forgiveness for our own sins. To do so is almost like a contradiction in terms.

This principle is of course enunciated fresh and carried further in the teaching and in the example of our Lord. Instead of the doctrine of retaliation inculcated in at least one passage of the Mosaic Law, our Lord says: Resist not him that is evil: but whosoever smite thee on thy right cheek, turn to him the other also (Mt 5:39). This is to be conquered, at any rate, in our own case, by merely repeating it many times, with patience and prayer, and thereby changing our spirit of revenge into a spirit of submission. He teaches us to pray: Forgive us our trespasses as we forgive them that trespass against us (Mt 6:14). He tells us that, if our brother trespass against us and repent, we are to forgive him not less than seven times seven (Lk 17:4, Mt 18:21). His example went even farther than this. No more unprompted wrong could be imagined than was done to Him. Yet He speaks no word and entertains no thought of vengeance against His enemies. 'Father,' He prays them; for they know not what they do (Lk 23:34).
Vengeance, then, as a personal principle is set altogether aside in Christian ethics. There is no place for it. As St. Peter says, "If, when ye do well, and suffer for it, ye shall take it patiently, this is accepted of God: for hereunto are ye called, because Christ also suffered for you, leaving you an example, that ye should follow his steps" (1 Pet. 2:21). It would be absurd to maintain that all Christians attain to this height of virtue; but because the right way towards it; the best reach near to it. In any case the teaching and example of Christ have done much to alleviate and supplant by a higher feeling and motive the thirst for vengeance which has been so common and so destructive in the world.

The question of blood revenge see art. BLOOD-FEUD.

W. A. Spooner.

REVERENCE.—Without attempting a formal and exhaustive definition, it is true to say with J. Martineau that reverence is at bottom our recognition of 'transcendent goodness.' It is the impression that we owe to character rather than to any physical forms of greatness, and in the highest instance it 'proves to be identical with devotion.'

1. REVERENCE AND RELIGION.—Some theorists, in tracing the beginnings of religion, have accepted the view of Statis, 'Primus in orbe deos lecit timere habuit,' but this explanation misconceives the character of religion, from which reverence is inseparable. 'It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kindship, that religion in the only true sense of the word begins.'

The Hebrew expression 'the fear of the Lord,' as the equivalent of religion, indicated that reverence was based, not on servility, but on a foundation of fellowship and trust. In the course of development religious reverence has not kept clear of error and exaggeration. The custom of the Jews in not pronouncing or reading aloud the sacred Name in their Scriptures was the sign of excessive and superstitious zeal. Their later tendency to dwell on the transcendence of God and to fill up the gulf by the introduction of angels, as afterwards Roman Catholics filled it up by the invocation of saints, was due to abstract ideas of the divine honour which find no place in Christianity. Jeanne in calling God 'Father' corrected Jewish modes of circumlocution, and made the natural symbol of worship and homage (Mt 6).

2. THE ETHICAL VALUE OF REVERENCE: ITS AUTHORITY IN THE GREEK MIND.—In early times, when war was the chief school of virtue, and might was in danger of overwhelming reverence appeared as the guardian of civilization and was the organ of the social conscience or of public opinion as then formed. Homer's term for reverence (abde) has many shades of meaning.

It is essentially the virtue of a wild and ill-governed society, where there is not much effective regulation of men's action by the law.

One or two illustrations from the Homeric world will suffice. In the opening scene of the Iliad the Greeks demand reverence for the aged priest Chryses, who had been insulted by Agamemnon, as even an ancient custom and an obligation of reverence. It is suggested that, in early Greek poetry, the classes thought worthy of consideration were not kings and others of high station, but those dispossessed and injured, the helpless and the dead, and special sanctity belonged to strangers, suppliants, and the poor. "If you are the keeper of reverence, or respect for man and military honour, the fighters in the ranks are urged to show spirit and valor." When Achilles burnt the body of Eteon without stripping him of his armour, he exemplified the virtue in a form prized by antiquity, but afterwards the dragging of Hector behind his chariot betrayed a lack of ruth and compassion, which reverence for a dead and helpless enemy should have inspired. True to this early Greek ideal of reverence, Ulysses restrained the old family nurse from shouting aloud in the hour of triumph—'for it is an unholy thing to boast over slaughtered men.' Reverence is also named as the highest religious duty—'Revere the gods, Achilles,' and in the scene where the cup is first handed to Athene, in token of her age, the line occurs—'All men stand before the gods, the things that isis thought the most beautiful verse in Homer. It was the sign of a later degenerate age when Hesiod feared that reverence, one of the white-robed angels, had fled from the earth.

3. REVERENCE AS A PRINCIPLE IN EDUCATION.—In the Hebrew moral code, which had the necessity of implanting this virtue, respect for parents, rulers, and elders was enjoined. Indeed, according to the Talmud, parents occupied the place of God's earthly representatives, and were to be given corresponding honor. Where an elaborate social machinery did not exist, this training was invaluable for a people's order and well-being, as is seen also in the strict family life of China and its long-established ancestral worship. Among thinkers, Plato showed his practical insight by fixing on virtue as the supreme, estimable, and as it were the only good. He also indicated the necessity of the soul's reverence for its nature and for the life it leads. And, after all, reverence should be stamped on the mind of the learner and freed from the admixture of unworthy teaching, so that the future guardians of the State might grow up as god-like and god-fearing as possible. Plato trusted to reverence, as a plant of native growth, to check the rise of lust and of desire for the young—for there are two wackers that will effectually interpose, namely, fear and shame.

In modern times Goethe introduced in his sketch of an ideal education his famous illustration of reverence (Ehrfurcht), expressed in three forms and with appropriate gestures—reverence for God and what is above us, for the earth and what is beneath us (the ground of the Christian religion), and towards our equals in society, with whom we should stand and act in combination. Goethe's work shows that reverence is not a thing that can be taught; the one thing which no child brings into the world with him, viatated his plan of education in the judgment of Ruskin, who held strongly that this facility is inherent in every well-born human creature.

In his educational sketch, as in his moral career, Goethe recommended reverence as a virtue with too much detachment. Like Voltaire, he cultivated his intellect at the expense of deeper qualities.

REVERENCE is not a higher form of reverence. It is not a higher form of reverence. It is not a higher form of reverence.

REVIVALS OF RELIGION

Egoism, or the all-round development of our powers,

1 for no man can venerate himself.

A Growth and decline of reverence.—The thesis

maintained by Macaulay, in his essay on Milton, that,

that, as civilization advances, poetry almost neces-

sarily declines, 2 may be thought applicable to this

virtue. We should not, however, identify rever-

cence with the spirit of superstition and subservi-

ence; but still, by a characteristic of a time when

ideas and institutions were not called in question,

and when habits of deference prevailed.

In the ferment of modern conditions, and as the

result of the revolutionary, democratic, and levelling

spirit that has intruded everywhere, old forms of

reverence inevitably disappear. A type of goodness

once so simple and attractive seems left behind.

Its most beautiful displays are not in nations like

the Americas or the modern French, who have thrown

themselves most fully into the tendencess of our age,

but rather in secluded regions like Syria or the Tyrol. 3

Recent observers have noticed the increasing part

played by religion in the growth of the social

organism.

A preponderating element in the type of character

which the evolutionary forces at work in human

society are slowly developing, would appear to be

the sense of reverence. 4

Science may thus take the place of superstition in

upholding the true. How far the example set in

Europe has destroyed this faculty in the very

classes that need it most is a serious question.

Thoughtful Americans have said, that, amid all the

material greatness of their country—and it is suf-
sufficiently astonishing—their greatest anxiety for

her future is caused by the absence of reverence

among all classes of her people. 6

This danger is not confined to one country. The

distress of democracy, according to Lord Morley,

has been found to work among its rulers, to

produce a want of reverence.

Reverence in some of its relationships.—Some

types of excellence, like certain flowers, are

intolerant of others in their neighbourhood, but

this virtue fosters the best qualities.

(a) Reverence and truth.—It is the penalty of

greatness that it must outlive its substance:

that gilding and trappings should remain when

that which they were meant to deck and clothe

has departed. 7 True reverence should cease using

empty ceremonies and sounding titles, when they

are out of touch with reality. Kant, in heralding

the decay of the medieval conception of the divine

subjects, including religion and laws, could not

claim respect unless they stood the test of free and

thorough examination. The Arian theologians, in

their contest with Athanasius, made reverence a

pretext for adhering to their views of the divine

unity and immutability. We should not trade

upon this virtue in carrying on controversy.

After all the greatest reverence is due to truth. 8

(b) Reverence and love.—Newman, whose eccle-

siastical instinct may have exaggerated the impor-

tance of the feelings and objects of awe and rever-

ence, says truly: 'No one really loves another,

who does not feel a certain reverence towards him.' 9

Dante saw in Beatrice not only a figure that

excited his senses but also an idea that drew forth

his intellectual faculties. Hence his resolve to wait

and write something worthy of her, and his re-

cognition of the law that 'love intends the welfare

unnily of the thing it loves.' 10 To veil some things

is to ennable them, and in literature and life we

must discern both faith and love by too familiar

handling of them.

(c) Reverence and character.—The worth of re-

verence is to be weighed by the worth of those

whom we think deserving of it. It is a sure index

of the moral value of any society. The rule, 'Honour

all men' (1 P 27), is to be followed, but with

discrimination. Our appreciation will vary with

varying forms of excellence.

Nathaniel Hawthorne's picture of Puritan New

England reveals admirable qualities in his settle-

ment. He saw that the faculty and necessity of rever-
nence were strong in him, bestowed it on the white

hair and venerable brow of age; on long-tried

integrity; on solid wisdom and sad-featured experi-

ence; on endowments of that grave and weighty order

which gives the idea of permanence, and comes under

the general definition of respectability. 11

A society in which the ruling types are of this

sort is healthy and progressive. Character thrives

best in an atmosphere of appreciation, and while,

as Dr. Johnson said, we cannot pay 'civilities to a

monocnety, it always does a man good to show him

respect.

REVIVALS OF RELIGION.—1. Periodicity in religious life.—It does not require much ob-

servance to be assured that the course of religion, in

either the individual or the community, is not

uniform, but with rises and downs, its seasons

of greater and less intensity. To what these varia-

tions are due may be a deep question; but that

they occur is a fact lying on the surface. There

are times of flood-tide in the soul, which are accom-

panied with great happiness and leave a deep

impression on the life of the momentary, and

a promise of the life of the Church when there are

given from on high what the Scripture calls 'shower of

blessing.' The psychology of the human spirit may

have its own reckoning to render for such pheno-

mena; but in the last resort they are to be traced

to the Spirit of God, knowing where it listeth.

One cause of revival is to be found in personali-

ties of original religious genius. Such were, in the

OT, Moses, Samuel, Hezekiah, Ezra, and the like,

with each of whom a rise in the tide is connected.

But there were few provision made with 'the deep

consequence' of that period for bringing crowds together, with

their minds bent on religious exercises, at the

annual feasts. The Feast of Tabernacles especi-

ally, with its booths of green branches, must have

resembled a camp-meeting. In the NT the public

ministry of the Lord Jesus and the Pauline

proclamation made 'the deep consequence of

his reverence and godly fear.' Tennyson, In

Memoriam; M. Arnold, Rugby Chapel.

was followed by the depression of the subsequent period; the intellectual and spiritual greatness of the age of Martin Schleiermacher and the principal Churches and Societies formed the contrast to the dark age which followed, though the latter was illuminated also by the work of the great missionaries; of the age of the Crusades and the fairs was one of greatness in many directions, but it was followed by two centuries of disintegration.

2. The Puritan awakening.—In writing the history of Protestantism, Dorner divides the centuries into three revivals—that of the Reformation, that of Pietism, and that of Evangelicalism. Puritanism (q.v.) might be described as a season of revival in England, and twó bodies representative of its operation could be named than Richard Baxter, who, in *The Reformed Pastor* (1656) and his autobiography (*Reliquiae Baxterianae*, 1696), has left an incomparable record of the methods by which he made the field of labour in which he was settled to rejoice and blossom as the rose. When he went to Kidderminster, only two or three families in each street had domestic worship, but, before his work was finished, not more than two or three in a street were without it. He and his contemporaries of the Abstracts of methods used rather, invented something better—by getting his people to visit him, family by family, at the manse, and confide to him the secrets of their spiritual condition, so that he could apply the best advice to every case. As he was zealous in recommending his method to other ministers, his example created wide-spread imitation.

One of the men of the Second Reformation in Scotland, John Livingstone, was privileged to witness such an awakening under his ministry as had never been known in native history. Beyond St. Andrews he kept alive a spirit of expectancy in preachers of the gospel. When assisting at a communion service at the Kirk of Shotts, he preached at an extemporized gathering on the Monday after, and was the means of the conversion of about 500 persons, whose names he quickly made them read in the neighbourhood to which they belonged. About the same time another divine of great learning and fine character, David Dickson, was the principal instrument in a movement in the west of Scotland to which was given by opponents the nickname of *the Scottish Calvinism*. His method was to certain physical phenomena accompanying the spiritual impressions, of which Dickson himself, however, made nothing, being doubtful whether they might not be the work of the enemy, to discredit the movement.

The effects of Puritanism were not confined to England, and Holland especially participated in the blessing through the presence of exiled Puritans in its pulpits and university chairs. A quickening of spiritual life ensued, especially in the universities, one of the features of which was the holding of prayer-meetings among the students. The same feature appeared in the revival, bearing the name of Pietism (q.v.), which occurred soon after in Germany in connexion with the labours of such men as Spener, Francke, and Bengel. Spener gave the name of *collegium pietatis* to the meeting at which laymen were encouraged to speak and partake in prayer, and these exercises he regarded as manifestations of the spiritual priesthood of all believers, which Luther had proclaimed but the Lutheran Church had laid aside. A great movement of revivalism in several ways unique was due to the activity of Count Zinzendorf, the founder of the Moravian Church (see art. MORAVIANS). In origin, however, it was closely connected with the movement under Spener, and it had a direct and determining influence on the origin of Methodism (q.v.); for not only John Wesley himself, but his brother Charles and his friend George Whitefield, were converted under Moravian influences.

3. The Evangelical revival.—What Puritanism gave to the Continent in the movements just described, Wesley and his friends gave to England, and a movement of Methodism, of which the primary spring is to be sought in the thorough conversion of its leaders. These men felt themselves to be the depositories of a truth so divine and blessed that they could not keep it to themselves or confine their hope to a small circle. In the movement of Methodism it is the spirit of Him who said that they that are whole have no need of a physician, but they that are sick, they flung themselves on the most wicked and degraded portions of the population, and, when churches were refused to them or proved too small to hold the crowds, they went to the open air. Recognizing the obligation of all to whom the joyful sound had come with power to transmit the deposit to others, they employed a ministry beyond that of the regularly educated and ordained, and, while their methods and influences were of the same nature as the Scriptural gospel of life, of all to whom the secret of the Lord had been revealed. This is the most fruitful of all the ideas of the revival; nothing has so delayed the evangelization of the world as the notion that the work belongs only to an official class; and there is no reason to hope that the world will ever be won to Christianity on these terms. It is through the operation of the true view that legions of Sabbath School teachers have been won for the service of the Church.

The Evangelical revival came to Wales through the ministry of Whitefield himself and the simultaneous but independent efforts of such natives as Howell Harris and Daniel Rowlands, and it found in the Welsh temperament a congenial soil. It entered Scotland through a thorough change taking place in the soul of Thomas Chalmers (q.v.), in whose big brain and heart it obtained the assurance of diffusion through the country. His associates in the ecclesiastical struggle which led to the Disruption were keenly interested in revival work. While Robert Murray M'Cheyne, *e.g.*, was absent from Scotland, his name was known as the Jewish mission about to be founded by the Church of Scotland, a revival broke out in his congregation at Dundee under the ministry of his local minster, William Burns, subsequently the famous China missionary, and it continued to the end of M'Cheyne's lifetime. Horatius Bonar, subsequently noted as a lyman-writer, republished in 1845 a work on survivals originally issued in 1754 by John Gillies of Glasgow, under the title of *Historical Collections relating to Remarkable Periods of the Success of the Gospel*, and brought it down to date, inserting not a few letters from friends of his own about hopeful movements in their parishes at the time. Another member of the M'Cheyne circle, A. N. Somerville of Glasgow, developed in later life into a modern apostle, going around the world as an evangelical missionary, succeeding in delivering his testimony even in such unlikely quarters as Berlin and Petrograd. The anticipations of revival mentioned in the work of Bonar had become more general, as time went on; and it was in answer to widespread inquiries that, in the years 1845-1860, times of blessing were experienced in many different parts of the three kingdoms. Ireland was the first part visited; and a classical record of this movement will be found in the work of an Irishman, William Gibson's *The Era of Grace* (Edinburgh, 1859).

4. Work of D. L. Moody.—Still more extensive was the work of the American evangelist, D. L.
Moody, in 1873-75, 1881-83, 1891-92. He was thirty-six years of age, a layman, without university education, professionally unknown, when he appeared in Edinburgh in the end of 1873; only a few ministers interested in such work had been informed of his successful efforts in the north of England, and, having gone there to see and hear him, returned to Edinburgh to extol him and bring him to Edinburgh. But it was not long before Scotland became aware that it had found an evangelist whom it could take to its heart, and, before the year ended, the whole country was full of the rumour of what was going on in the capital. He had united to him a conductor, Ira D. Sankey, who 'sang the gospel' to his own accompaniment on an American organ, these being novelties at the time and forming an element of attractiveness. But it was soon manifest that the centre of power was the evangelist himself. He was of stout and heavy build, yet full of activity and business capacity. He had the shrewdest perception of character, and knew how to utilize all available forces. He held three meetings a day—one at noon for prayer, testimony, and praise; a Bible-reading hour, with prayers, for young workers; an evangelist meeting at night. From the first these were well attended, and soon every meeting was crowded, wherever he went. His doctrine had a wide range, not omitting the sternest aspects of truth, but culminating in the love of God. There was not much eloquence, but unfailling freshness, the most remarkable feature being abundance of illustrations, drawn not from nature or art or literature, but from his own experience in dealing with human beings. He had the power of attracting young men and inspiring hero-worship, that as a result it happened to be a theological college next door to the place where most of the meetings were held, the students not only assisted in the inquiry meetings but carried the news of what was going on to all parts of the country, and so prepared the way for the visits of the evangelist to other places. Moody angled for decisions at the close of his addresses with remarkable tenderness and skill, but he did not put undue pressure on any to make known their anxiety. There were no physical manifestations of any kind. There were no prophecies, present or foretold. There was not a little humour in restraining attempts at extravagance. He was singularly free from the weaknesses sometimes imputed to men of his class, such as personal vanity and love of money. He seemed to be always sensitive to some one who said, 'Now you have opportunity to the labours of the regular ministry before him in the field, as well as that the perpetuity of his work would depend on the sympathy and fidelity of the same labourers in the field after he had left. Though ultimately a Paolotus for him and his colleague began to flow. In the sale of hymn-books, his unsellishness had been fully established before he became aware of this, and he made an unselfish use of the riches flowing from this source, devoting large sums to the equipment of colleges for young men and women which he opened in his native place and to much of the wealth thus obtained had given a great impetus to the women's work in Scandinavia. Moody became the most conspicuous figure in the Revival in the period 1873-75, and his influence continued to be felt during the whole period of his active work. It was his purpose to bring the unconverted to the Saviour, and the power of a revivalist lies in the summons to them to bring their conduct into harmony with their convictions. The remark is often quoted of one who said that Moody was the biggest 'human' he had ever met, and this is an estimate which would commend itself to those who were acquainted with him. But it was an afterthought; at the time the prevailing impression was the sense of a movement directed from above, in which all the human agencies concerned were swallowed up and forgotten.

Among the students of the New College who assisted Moody in Edinburgh, one who proved most useful was Henry Drummond, who for years accompanied the American evangelists from one great city to another, devoting himself especially to meetings for young men, in the management of which he unfolded qualities of rare distinction. When settled subsequently as professor of Natural Science in Glasgow, he became an evangelist to the universities of Scotland, working chiefly in Edinburgh, where his labours were facilitated and seconded by Principal Sir William Muir, Sir Alexander Simpson, and other members of the faculties. He succeeded in winning for religion a new place in the universities of his native land, the change being embodied in the Christian Unions established within their walls. His evangelistic labours on behalf of young men, and especially in connection with his college, were of such a nature that time found a remarkable entrance for the evangelistic message among the upper classes of London society. Between him and Moody there subsisted a beautiful and lifelong friendship; and, when the younger man was charged with heretical practices, the elder threw the whole weight of his influence behind. Moody listened to his friend far oftener than had his accusers, but had never heard from him anything with which he did not agree.

5. Welsh revival of 1904—06.—In 1904 a revival of great intensity occurred in Wales and lasted for about two years. It seemed almost to rise out of the ground, so little was it the result of definite teaching and so primitive were the forms in which emotion exhibited itself; yet it had wide-spread practical effects of the most definite kind, such as the diminution of drunkenness, the abandonment of feuds, and the restitution of property. It subsided, however, as unaccountably as it arose, and for its promoters there was not a little disillusionment. A French student of religious psychology, Henri Bois of Montauban, was so affected by the phenomena and wrote a book, in which he visited the series of revival, thoroughly investigating everything, including certain occult physical manifestations, and the results were embodied in a large work entitled Le Réveil au Pays de Galles (Paris, 1906), as well as a subsequent volume entitled Quelques Réflexions sur la psychologie des revêils (id. 1908). In the latter much use is made of the crowd-psychology of his countryman, Gabriel Tarde; and it would be a singular fact if the best literary monument of the Welsh revival should in future have to be sought in a foreign language.

6. American revivals.—America is the land of revivals. Nowhere else have there been so frequent as in the United States; nowhere else have the Churches owed to them so much of their increase and prosperity; and nowhere else have they seen such intensity. Much has been said in the theological discussion. It is to the atmosphere of revival in which they live and move that American thinkers owe the position of pre-eminence in religious psychology conceded to them even by the English. The minds of the American preachers and churchmen have been swayed by the American Revival. James's Varieties of Religious Experience (London and New York, 1902). What is known as the Great Awakening began in 1734, and broke out again in 1740 at Northampton, Mass., under the preaching of Jonathan
Edwards (q.v.), pastor in the Congregational Church of the place, and it extended through the greater part of New England, George Whitefield, from England, reviving the country at various stages. It began with Edwards preaching a series of sermons in which attention was concentrated on sin, with the purpose of awakening the conscience; and the power of producing deep conviction of personal guilt remained one of the leading and recruiting features of the phenomenon. A high character and philosophical grasp, to whom his countrymen fondly look back as their deepest thinker in theology. He was the author of numerous works, most of which were connected with the revival, and one of them is a classic, *A Treatise concerning Religious Affections* (1746), being written to show which features of the prevalent excitement were healthy and ought to be encouraged, and which were morbid and needed to be restrained. He fell out with his people over the question of debarring the unworthy from the Lord’s Table and had to quit the place; but he finished his course in honour as president of Princeton College.

Times unfavourable to religion followed in connexion with the War of Independence; but, about the turn of the century, chiefly through the preaching of Edwards and others, and by the name of McGee, a remarkable awakening passed through the Cumberland country in Kentucky and Tennessee—a region which had long been notorious for irreligion and violence. Taking place in such a population, assembled in huge camp-meetings, it was attended with physical manifestations in a remarkable order, which, under the name of ‘bodily exercises,’ are fully described in a curious but obviously well-informed article in the *Princeton Theological Essays* (1st ser., New York, 1846, Edwards, 1856), under the title of ‘Bodily Effects of Religious Excitement.’ To these the leaders of the movement do not appear to have attached undue importance, but such experiences must have produced among the masses of the people an overpowering sense of supernatural agency. Similar phenomena have often since appeared, but they tend to diminish before the advance of education.

When Timothy Dwight, in 1795, became president of Yale College, religion among the professors and students was at a very low ebb; but, under his powerful preaching from the pulpit of the college chapel, and more especially among the students; and, it is said, no fewer than seventeen such visitations could be counted in the course of a century. Ever since, such movements in colleges have been a prominent feature of the revivalism of the country; and E. D. Starbuck, in his *Psychology of Religion* (London, 1839), has thereby been led to connect conversion with the physiological changes of puberty. Certainly there are affinities between religion and the awakening of the youthful mind to such sentiments as patriotism and altruism; but in some at least of the American revivals, such as that conducted by C. G. Finney, the average age of the converts was much more mature. The Young Men’s Christian Association has obtained in American universities a position of great importance, its building being generally pressed for as the centre of the place; and this has afforded opportunities of a unique description for the diffusion of religious sentiments among the student body.

The Irish revival of 1859, above referred to, was an importation from the United States, where it had been going on for many years; of course Moody had learned his methods in his own country before coming to the British Isles. But his success in the old country gave him a standing in his own land such as no evangelist before him had enjoyed, and he was going up and down the States evangelizing till his death. Nearly all the evangelists who have since come into prominence, such as G. F. Pontecost, B. F. Mills, R. A. Torrey, J. H. Goss, and others, have been trained in it. Moody himself may be looked upon as his disciples and imitators, though some of them have developed novel methods in certain directions, such as awakening interest before their arrival, uniting the religious forces of the place in a general effort, securing the public testimony of the converts, and ensuring the results which have been harvested well preserved after their departure. While Moody was attended only by a single conductor, the more successful of these recent men move from place to place with a following of something like a dozen, ready for every kind of assistance such as secretarial work, singing, advertising, and the rest.

7. Horace Bushnell’s protest.—This triumphant progress of revivalism in the United States did not take place without challenge. Certain denunciations have been made, especially the Episcopalians, although the ‘missions’ carried on in recent times not only among Episcopalians but even among Roman Catholics may be regarded as a concession to the popularity and utility of methods which these bodies have been slow to acknowledge. Almost every section of the body, however, has been attacked by Jonathan Edwards’ classical work mentioned above there was published by another minister of the same denomination, Horace Bushnell (q.e.), a book, *Christian Nurture* (Hartford, U.S.A., 1847), which traversed the prevailing practice in thoroughgoing fashion; and, judgment being thus indicated, the great works of American theology. Bushnell was not opposed to revivals as such; indeed, he had taken part in them and had, at a not very tender age, passed through a marked conversion himself. But he was irritated by the disposition in multitudes to assume that nothing could be happening in religion unless a revival were going on, by the exaggerated importance ascribed to conversion, as if it were the only religious experience, and by the invasion of the sacredness of personality in certain practices of the revivalists; and he charged revivalism with exaggerated individualism, comprehension being displayed for the functions of the Church, the family, and the State, or for the significance of baptism among the experiences of life. He strung at the very heart of the system by maintaining that the revivals he had the advantage of Christian culture in the home should grow up Christians, without requiring such a change as is insisted on in revivals. Bushnell’s strong point was never the evidence from Scripture, and he did not do full justice to the teaching of our Lord Himself on the new birth, on taking up the cross, and on making confession before men. When it is to experience that the appeal is made, opinions may differ widely as to the proportion of those receiving a Christian training who subsequently appear as undeniably Christians; but it would be a fatal mistake not to recognize that multitudes of those who have enjoyed the best of nurture grow up alienated from God and with their heart in the world; and these are the proper subjects of a revival. To regard as true Christians those who may be in the world, who make baptism and confirmation to be content with a nominal and Pharisaic type of Christianity. The communication of religion from the outside through tradition and instruction is not enough without a reaction from within by the personality itself and a grasping hold by the will of the inner life. Bushnell’s protest, however, enabled those to breathe who had no story of their own conversion to tell; and these have included even prominent revivalists like Zinzendorf and Drummond. The test for every one is not whether at some past
moment he passed through a spiritual crisis, capable of being related as a testimony, but whether at this present moment he is prepared to receive the Saviour of the world, and accept his service. There will always be minds to which catastrophic experiences in religion are congenial and others to which the methods of nurture are more acceptable; there is plenty of room within the Kingdom of God for work inspired by both of these ideals; and with the progress of time each side may be trusted to understand the other better.

REVOLUTION.—See REBELLION.

REWARDS AND PUNISHMENTS.—I. Preliminary.—In considering the attitude of the ethical or religious man, as such, towards rewards and punishments, we are met at the outset with certain questions involving the central nature of law. Those thinkers, e.g., (nowadays few than formerly), who treat law in the Austrian fashion as an authoritarian command, claiming a more or less unreasoning obedience, will naturally reduce to a minimum its ethical influence upon it of religion and ethics. In the famous phrase of Samuel Horsley, we shall have nothing to do with the laws but to submit to them; and the punishments and rewards assigned by them must accept with at least an external show of accommodation. On the other hand, the ideal of the lawyer, a lawyer often met, and has indeed been maintained by some, that the infliction of punishment is not permissible to man, and least of all to the State. Those who hold this opinion point out, with much appearance of reason, that falible humanity is incapable of exactly measuring the guilt of a criminal or of tracing the causes and effects of the crime beyond its narrowst surroundings. For many, perhaps for all, offences society itself, or the unreachable past, may well be far more responsible than the so-called criminal; and it is not to add that, in the words of Angela in Measure for Measure, the law of man in the sworn twelve have a thief or two guiltier than them try. For these and other reasons men of the various religious views have deemed it necessary to take punishment altogether out of the hands of erring human tribunals. Some base their conclusions on an interpretation of certain words of Jesus; of this class are Tolstoi and his followers. Others, like Kropotkin, taking their stand on the possibilities of the world, adapt their conception of punishment to their general idea of the illegitimacy of all ordered government. Some bid us leave penalty to the divine court that cannot err; others, rejecting all idea of the divine, see no reason on that account for subjecting the individual to the judgment of his fellows.

In the opinion of the present writer these arguments admit of no direct answer; they can only be met on the principle of solvitur ambulando. The common sense in the Aristotelian acceptance of the phrase as the general maxim of sanctions (men holds, and will apparently continue to hold, that one way to decrease crime is to punish it; and it is only a small minority which holds that the sole legitimate way to decrease crime is either to ignore it or to meet it by active benevolence or non-resistance. We are far from denying that the elimination of punishment may be considered a desirable ideal; but a philosophy that is to have any practical value must take account of actually existing conditions; and it is with these that the present writer is concerned, leaving maxims of the kind described to play their part exclusively in the inward life.

On the other hand, the Austrian theory seems to fail chiefly through not taking account of the fact that law, as an expression of one side of humanity, is a product of evolution, and cannot be understood without a consideration of its origin and growth in and through past ages. Therefore, although this historical aspect is fully dealt with in the art. CRIMES AND PUNISHMENTS, we shall treat it only here (throughout this article; for law, regarded as a growth, is at once seen to fall under the effective criticism of a constantly growing moral and religious feeling in the community.

2. Basal elements of punishment.—Law is the product of society, and, at least partially, of society is its result.

‘Those ways of action,’ says Durkheim, 1 to which society is strongly enough attached to impose them upon its members, are, by that very fact, marked with a distinctive sign probatively of respect.

Authority springs from social opinion: indeed, ‘it might even be asked whether all authority is not the daughter of opinion.’ But society soon finds that mere opinion will not excite sufficient authority to influence all its members; and the very earliest customary laws make familiar use of sanctions and rewards. 2 Punishment, whatever shape it may assume, is clearly seen to be an evil. In the sense of penalty inflicted under the sanction of law, it has at least one of its roots in the primitive instinct of revenge, precisely as reward is partly based upon the primitive instinct of gratitude. ‘Revenge,’ said Bacon, ‘is a kind of wild justice; and conversely justice, in one of its most important aspects, is but a tamed and civilized revenge. Now revenge (q.e.) superficially viewed, is a pure evil; it seems to be nothing but the impulse to return blow for blow. Because you or your friend are injured, anger prompts you to ensure that whatever has injured you shall suffer in the same way and to the same extent. But it is not long before you discover a thousand circumstances that may complicate the subject of vengeance. In your anger you may easily deal a heavier blow than the one received. You may often wish to avenge the wrong, not of yourself, but of another. You may

1 The Elementary Forms of the Religious Life, p. 207.
2 ib. p. 290.
3 By some the word ‘sanction’ is made to include rewards; by others, such as Avenarius, it is used of penalty only.
4 Bentham, Works., i. 390.
REWARDS AND PUNISHMENTS

... have to call in external aid in order to accomplish your revenge. You may be unable to reach your enemy, and you may desire to attack some one else in his stead. Or, again, your injurer may retort to your reply, and an indefinite series of retaliations may be thus started up. Then it is by no means certain that the original aggressor will in the long run get the worst of it. Revenge is thus perceived to have a very awkward tendency to defeat its own end. Yet, despite all this, the claim that he who injures another should receive at least an equivalent injury in retaliation is by no means negligible. It is indeed arguable that the straight hit from the shoulder is ethically more justifiable than the cold-blooded infliction of a judicial sentence. Again, the frequent necessity of calling in outside aid tends to enlarge personal revenge into that wider emotion which, in its later developments, becomes patriotism. The family, the tribe, the nation desire to inflict on a whole community a punishment for an injury done to a single member of their community; and this is one explanation of the long history of this ultimate basis of ethics. Revenge, therefore, must by no means be treated as non-moral or even as non-religious. So soon as the mere application of the lex talionis is perceived to be impossible; so soon as the idea of vicarious action and of vicarious substitution of the injured person is not accepted and values (such, e.g., as honour or reputation), which cannot be assessed at a definite price, are taken into account; so soon does the apparently non-moral principle of revenge take upon itself an ethical character. Without entering into detail into historical or anthropological questions, we may safely assert that this primal instinct of human nature demands, in society as it is, non-suppression or extinction, but regulation and limitation.

We see in revenge the working of two impulses, anger and fear. Primarily, the return blow involves (a) an automatic reflex-action, (b) an attempt to clear danger out of the way. In both we have the germ of a moral feeling. In (a) we see resentment, in (b) that demand for a free unfettered existence which is the condition of a moral life. Hence neither by the world can the act be judged rational, nor by some of the most religious-minded of philosophers has the element of revenge been altogether ruled out. Thus of resentment Martineau observes that it is justified if 'it retains its primary form of legitimate instinct, without added taint of artificial malignity' 1 and, while Sidgwick and John Grose 2 wish the desire to inflict pain to be diminished, thinkers so opposed as Stephen 3 and Rickaby 4 see in that desire a perfectly legitimate emotion. Rickaby, indeed, representing a Roman Catholic point of view, is particularly strong on the point.

1 Vengeance undoubtedly prompts to many crimes, but so does the passion of love. Both are natural impulses. It would scarcely be an exaggeration to set down one third of human transgressions to love, and another third to revenge; yet it is the abuse in each case, not the use, that leads to sin.
2 Quoting Auguste Comte.

is the basis of that public opinion which is the automatic reward or punishment appropriate to the moral law. 1 In fact, as this automation is developed, it emerges into that lofty ethical conception in which the sin committed is itself the sin of punishment adumbrated by Origen, 2 and admirably exhibited by Martensen 3 and others; and one which lies at the base of the Divine Commedy.

Nor is the other aspect of revenge, that of fear, obliterated in the ethical side. For this instinct of self-protection is inseparably linked with the group-instinct.

Pure anarchy or self-redress is qualified first by the sense of solidarity within the primary social unit. Fear leads to the search for help; and without this sense of solidarity no truly ethical emotion can arise. It leads, first, to preferential group-treatment, the typical instance of which is the blood-feud. Of this examples still remain in the Cossian vendetta and in the so-called punitive expeditions against 'inferior' races, the object of which is always this, or that, or other in the same sense as that for one or two of the 'superior' race. This example is by itself sufficient to show that preferential group-treatment may act to depress as well as to heighten the moral standard. It makes, on the one hand, for an enlarged and enormously powerful solidarity, and, on the other, for a sense of obligation beyond oneself; it makes alike for privilege and for brotherhood. It is, of course, the root-principle of 'civilization'; but it has not always meant moral advance.

K.G., 'at lower levels of savage society, punishment has some proportion to the offense; it is at higher levels, in barbaric and despotic societies, that punishment is most cruel and disproportionate.' Increasing severity has been a characteristic of European civilization up to quite modern times.

The treatment of the slave as a chattel, again, is largely due to the solidarity of the free population. And, as 'civilization' advances, certain crimes develop which were unknown to earlier stages of the world.

Yet, on the other hand, these drawbacks are seen to exhibit the power of morality in a clearer light. It was the realization that a slave had no rights that led to the movement for his emancipation; and, as Maine points out, 1 the colossal frauds of modern times merely show how the bad faith of a few is best justified by the loyalty and respect deserved by the many. Ancient Roman law recognized only one form of dishonesty, namely, theft. English law punishes defaulting trustees. But it would be a great mistake to conclude that the ancient Romans practised a higher morality than ourselves: indeed, the principle of discrimination which leads to these evils leads also to immense good. The bounds of the group or clan, e.g., cannot remain rigid. For all sorts of reasons they are constantly altering. Outlaws from other groups are admitted; whole clans unite for convenience or for protection. Judah admits into its ranks the Calebite or the Jerahmeelite; Rome confers its citizenship on the Gaul and the Spaniard. When once, for any reason, you have ceased to belong to your group, it is always open to you to draw an outsider within the sacred fence; and he then receives the privileges from which he was excluded. Indeed, the very fact that a group has been formed involves to some

extent the breakdown of the solely self-regarding emotions; the group may, it is true, have been formed through hate or fear of another group, but it necessarily induces self-sacrifice on the part of those who join it; and self-sacrifice, once set in motion, has a tendency to enlarge itself. From the conception of love of a neighbour and helper, the step is possible, and even likely, to love of a stranger. Opportunities of such a step constantly arise: old enmities may be forgotten under the stress of circumstances, and, once forgotten, they are not always remembered again. Normans and English, e.g., were fused into one by the French war.

This fluidity in the boundary of the group leads not only to a constantly-changing conception of political duty generally, but specially to an infinite complexity and variety in the ideas of punishment and retribution. Fear and anger, subject to constant modifications under the influence of affection or love; and a new line of ethical growth is seen emerging under that influence. To take a simple example: when it is perceived that it is on the whole advantageous to the community to pay tribute to an enemy who has been seen to threaten the community, to work for a reward, the community is on the way towards a recognition of the slave’s rights, and we are not surprised to find a class of manumitted slaves appearing in its midst. Similar examples might be multiplied. It is the mood of anger he is thought of merely as an object to be hurt or destroyed; but, when it is realized that he too may have his utilities—that in fact it may be undesirable utterly to cast him out—then we find all sorts of precautions taken to prevent his hasty destruction. The use of retributive trials by ordeal, sanctuaries, advocates, thre’s the King’s Mercy,’ until ultimately we reach the whole apparatus devised by a Beccaria and worked by a Howard for the elimination of any suffering over and above what is necessary for the public safety. Love has begun to work; the criminal is recognized as a member, if an erring member, of the group; and, indeed, the principle entered fairly early into the social order. For a long time past some tribes, and almost all organized States, have had on the table the idea of the chief magistrate, the purpose of which is to cast the ygs of protection over the criminal himself, as one who, despite his lapse, may yet be of service to the community. This gradual enlargement of the social group to include within it those who were formerly shut out in part of a general movement on the part of the group to assume responsibility over a wider and wider area; and there seems to be no limit to the growth of this tendency. Already we see the State throwing its shield over children, imbeciles, and the lower animals; it has long protected the alien; and where it will stop none can say. In the 20th century movement for penal reform the scientific and the humanitarian lines are seen to converge; and the tendency is to transform mere punishment into a converting discipline, beneficial alike to State and to individual.

To the two elements of anger and fear, then, that are involved in the primary conception of punishment we must now add a third, which tends ever to become the dominant one—that of affection or love.

3. Manifestation of these elements in modern theories of punishment. —Inheriting the tradition of these three emotions of anger, fear, and affection, the modern State, more or less consciously, applies them in its system of punishment. It is true that the ethical element is not always prominent in the application of law to practice; but the three aims of punishment as so far understood (retributive, deterrent, and reformatory) nevertheless underlie our criminal law, and the tendency is for the ethical aspect gradually to assume a dominant position.

As social order,’ says Hobhouse, ‘evolves an independent organ for the adjustment of disputes and the prevention of violence, the ethical becomes a dominant element from the conflicting passions which are its earlier husk.‘1

The judge has before him, at least theoretically, the accusation, the community, and the accused, each of them preferring a claim. These claims (though not always in practice separable) may be roughly defined as (a) the indignation of the accuser, (b) the fear of the community, (c) the appeal of the accused to consideration as a member of a group united by solidarity of interest and a good will. These correspond alike to the three primary emotions and to the three aims of punishment. But the fact that the three claimants are not left to themselves to settle the dispute brings to light a fourth element. For, although it might at first glance appear that the judge is merely the representative of the community as against accuser and accused, yet this is not really so: he is the representative, not of one party, but of all the three; and his task is to apportion the relative values of the three claims. Thus, with the calling in of an outsider as arbitrator, he becomes a new factor in the consideration of the case, (despite strong arguments that might be brought forward on the other side) seems on the whole to make an ethical advance. In the first place, to adjust the demands of the emotions reason is called in as umpire; and reason, in the mind of Milton, is the law of law itself. Again, the presence of this umpire assures finality; the cause is brought to some sort of conclusion. And, thirdly, a power is brought into play of the highest ethical importance—the power of leadership in things of the spirit. It is the law, by judging Israel under her palm-tree, acquired that capacity and influence which enabled her to rescue her country from the oppressor. In a well-known passage Maine describes how, in the early days of Rome, a civis pius et gratus cannot but grow with exercise.2

Yet, as we have hinted, some ethical weaknesses lurk in the procedure as now carried out. The arbitration is now compulsory, at least to one of the disputants; and the arbiter is no longer a kindly spectator, but a professional. The ‘sum of money’ has become a penal infliction; and the infliction is made by proxy. We have, in fact, not merely restitution, but penalty. As to the evils of professionalism, they are obvious to all. A profession is essentially a body, and a body has its weight. Lord Lindsell, ‘Lawyers are against legal reform: it is an interested professional opposition.’3 Nor is the effect, upon the class that awards or inflicts punishment, by any means always beneficial. In actual fact, perhaps, an a jury’s decision may escape the judge’s censure; but it would be difficult to find a harder-hearted class than the set of lawyers, clerks, and appraisers who surround him. It is here that public opinion must always be awake; and here too lies one of the chief merits of an unprofessional jury-system.4 The judge is liable as he lives, not; but that guidance and that tradition is. This tradition acts both towards width and towards limitation. The judge’s principle must always

5 P. 16.
tend to push him beyond his boundary; his tools keep him within it. In place of haphazard control exerted as a punishment, there is now a standardized tool; but that standard is always subject to modification. Spontaneous modification largely ceases with the introduction of a code; but deliberate change, due to the conscious desire for improvement, never ceases. It was thus, e.g., that Manfield, by ingenious interpretations of the law, saved Roman Catholics from the penalties of the Test Act, which, again, was actually repealed fifty years later. We become aware, then, of another power behind the judge, corresponding to the impalpable power behind his predecessor, the primitive king. Tradition (and also the unassailable spirit of the age) compels the judge to a perpetual re-adjustment of the scales of justice. The old simple idea of equality inevitably gives way, with the growth of knowledge and imagina-
tion, to the more complicated notion of proportion. Behind strict law and also behind tradition we detect the regulating presence of equity—a conception so rooted in human nature that it appears in the most primitive of fairy-tales. By obscure stages law herself begins to subsume equity, and until a kind of standardized formal alliance between the two; and who can doubt that this alliance springs from the desire that law shall not be too visibly divorced from the developing ethical standard of the times? In a similar fashion, the old legal theology has gradual-
ily adapted itself to the ethical requirements of an ethically advancing society.

"Nothing," says Maine, "is more distasteful to men ... than the admission of their moral progress as a substantive reality. Hence the old doctrine that Equity has gained from the king's conscience—the improvement which had in fact taken place in the moral standard of the community being thus referred to an innately divine origin."

But this very fiction of the king's conscience marks the existence in the mind of the community of a type or pattern to which the constitution is seen to conform only partially; and this pattern may in many minds be regarded as a divine order, which uses human society as its means of expression. Other minds may exclude the divine, yet all alike conceive this pattern as an ethical ideal.

We may now add to the emotions of anger, fear, and love, as producers of social punishment, the following elements: the conception of an umpire, who brings reason to regulate the emotions; the code of conduct for human behavior, limiting the action of the judge; the conception of equity, or of a set of principles which must adjust the rulings of tradition; and the conception of an ideal, whether regarded as divine or viewed as human, to which communities of men have a tendency to conform. Of these may observe that all involve an ethical element; that they must all be present in a righteous decision; and that they are closely bound up with the progress of mankind, admitting indeed, to a certain extent, of being arranged in historical sequence.

"Purumim est et in onmis luce civili, et in pontificum libris, et in XII tabulis, antiquitatis effigies." 7

4. Religious aspect.—When this conception of a type or pattern takes the form of a belief in a divine order of things for man, then the subject of punishments and rewards becomes distinct from religions. Religious, of course, in some sense it has almost always been. Even before the sense of "order" was evolved, when religion was scarcely to be distinguished from magic, the disorder was conceived as a divine disorder: the god was cap-
ricious, but men endeavoured nevertheless to understand his caprices and to propitiate his strange anger. Step by step the god is conceived as punishing as a divine god of rewards as an intelligent system; and here we see the gradual emergence of the pattern.

"We are told," says Bryce, "that the sun and the wind killed Laogeira, because she spoke him the word of Munster." Here, the god is seen acting as a punishing god, but punishing an offense that weakens the social bond. A step in advance is taken when spiritual agencies arise who take an interest in certain moral acts as such—when, in fact, a certain stability is seen in the divine judgments. Zeus, invariably punishing a wrong done: Other the god or supplant, is already a religious conception; and from that point we can trace the growth of the idea of a righteous God into its modern stages. A man who has attained this view of a righteous God must, when faced with the fact of punishment, as still less is there part of the social order, ask himself the question, Is it in accord-
ance with the will of God that man should punish his fellow-man? He may seek enlighten-
ment from revelation; and in this case his answer will be that the social order which he gives to the sacred traditions. Or he may inquire of philosophy (supposed here to be more or less theistic); and in this case the answer will vary according to the form of philosophy which appeals to him. Should the answer be in the negative, we are already pointed out that this article will be of little utility. If, on the other hand, it be in the affirmative, the seeker will at once be led to discuss the right relation of human justice to divine. (1) Shall it consciously en-
deavour to follow the principles on which, so far as can be seen, the world is held together? (2) Shall we, men, while duly reverencing the divine law as a norm for the individual, refuse to regard it as a model for regulations dealing with the social order? Shall the State, in other words, be theocratic or secular? There is no lack of communities of either kind; but less is there that of communities with something of both. Of systems that have worked on theocratic lines, perhaps the most familiar and striking example is the Jewish; but many Eastern States have conformed more or less fully to the type, and the chief of these is the Middle Ages. The problem here is a determined effort to realize the ideal. Many theorists also have held this view in varying degrees. Arnold, e.g., and Gladstone in his Church and State propounded doctrines of this kind, while Martensen speaks of 'the divine authority which manifests itself in the law, and is postulate and background for all earthly human authority.' To him religion is 'the inmost nerve of obligation, which knits us to responsibility.' The ideal has in fact attracted saintly minds since the Akkadian psalmist, seventeen centuries before Christ, addressed his godless as her 'whom wills makes contracts and justice to exist, establishing obligations among men.' But the verdict of experience is fatal to it. As a matter of historical fact, the deadest, the most repres-
sive, and the least enlightened of all forms of government, has been the theocratic. 2 Laird, e.g., declares plainly that law is religion and religion law—with the result that the law of Islam is a mass of enactments, unalterable because dictated by God or His mouthpiece, instead of a living and growing body of principles. The history of our own land provides us with instances full of warning. Barebone's Parliament, endeavouring

REWARDS AND PUNISHMENTS

... to rule England in accordance with the Law of Moses, is not an edifying spectacle. The identification of religion and law, indeed, has been hateful to both; religion has become frigid and ceremonial; law has been treated as inoffiable, and has therefore been unprogressive. True, such a system is often successful in securing obedience (or at least an external conformity), but at a terrible cost by being synonymous with a system of punishment. 

He says we are not surprised to find that the majority of the noblest publicists, even among men of deep religious feeling, have utterly refused to permit religion, in this sense, to intrude into the domain of punishment. The illustrious Beccaria—to take but one great name—knew too well the dangers of this dangerous evil. Religion, towards the contrary, his religion tends to make him the best of servants to the State. Accustomed to look upon the improvement of character as the highest of aims, he refuses, in his role of citizen, to accept as a satisfactory form of punishment one that does not further that aim. Religious men, it is true, differ widely in their views. Some hold that the retributive element should be upheld; others, looking upon punishment as a necessary evil, to be tolerated solely for the safety of society, will have none of that element, and turn their energies towards furthering the good of the criminal. But their differences are, after all, but matters of varying emphasis.

5. Attitude of the religious man to law. —No question is at once more important and more difficult than that of the due subsidence of religion and morality towards punishment.

"All theories on the subject of punishment," says Maine, "have more or less broken down; and we are at sea as to first principles. No theory that has presented itself to the mind of the human race, no theory of various forms of penalties should be accorded for crime is still an unsolved one," says Lord Russell of Killowen; and Sir Robert Anderson, a man of great understanding in criminal investigation, maintains that our whole system of punishing crime is false in principle and unachievable in practice. 2

Malts has plain both that reform is necessary and that it is very difficult. The wise reformer will walk warily. Yet we are not without some fairly certain principles which may form the basis of our views as to the proper forms and methods of punishment. Putting aside all sophistical argumentation, we must recognize the necessity of a proper proportion between penalty and offence, and also between penalty and offender. Exact measurement of crime is of course impossible; but a healthy ethic revolt against a Draconian severity. Heaviness of fine for the theft of five shillings wills not have; and first offenders must be treated leniently. 3

Most of us would also uphold the principle of the indeterminate sentence. Again, a true morality will not be satisfied to discuss punishment on the grounds of mere social convenience. There is something more, e.g. for a plentiful misuse of the notion of punishment of death. A nuisance is easily got rid of, and with the least possible expenditure of public money; the dead criminal cannot repeat his crimes, and (though experience does not say so) it is arguable that others, by the sight of so terrible a retribution, may be deterred from imitation. But religion and ethics will be moved by no such considerations. By death the criminal (who is by no means to be treated as wholly unmercifully) is deprived of the power of further service; and to this religion, here reinforced by science, will no more agree than will the economist now agree to make no use of the so-called 'waste-products' of the coal-fields. If the Browning's poem, be compelled to admit the advisability of death as a punishment in certain exceptional cases, but not on the grounds above mentioned; and it is possible that it may come to reject the death-penalty altogether.

Malts, in common, a former times, tends to lose its meaning as the world tends to become one; but in any case it is a confession of weakness and an evasion of responsibility which religion is both to make. Imprisonment and the social boycott, to some extent, take its place; but in the application of these two means is probably by the punishment of the criminal as a potentially valuable citizen. The imprisonment must not be such as to degrade him yet more; and, on his release, he must not be shunned like a pariah, but given a fair chance; Beccaria indeed goes almost farther than this.

"The degree of the punishment," he says, "and the consequences of the crime, ought to be so contrived as to have the greatest possible effect on others, with the least possible pain to the delinquent." 4

Law being useless without a sanction, and sanction being an evil, the religious man will desire to diminish the number of laws and the number of local crimes. But the man of affairs and the moralist will say that such a substitution of public opinion for a system of punishment is impossible. For, if experience shows anything clearly, it proves that a healthy public opinion does more in a year to prevent crime than the severest penalties in a century. Dwelling, e.g., has ceased in Britain, not by being treated as murder, but by being proclaimed as immoral, or even by being ridiculed as absurd; and, were the laws against it to be dropped, it would none the less remain in abeyance. Adultery, again, has not flourished least in those countries where it has been punished by the law.

This attitude does not imply any insensitiveness to the evil of crime. Religion does not regard sin as a mere disease, nor does it relieve the criminal of responsibility. 5

One system (the Philaelephian) had approached the problem from the moral side, aiming to give it by making men think right. The other (the Auburn) approached the problem from the physical side, aiming to solve it by making men act right. Both failed; for the problem of crime is a moral one. No man can be reformed except his conscience be quickened. 6

Some methods employed at present in the detection or prevention of crime the religious man will probably regard as pernicious and to be renounced. The agent provocateur, e.g., cannot be used but at the cost of moral deterioration to himself and to the Government that employs him. He may diminish one form of villainy, but he adds to another that is probably worse. The ordinary spy is little better; and the offering of rewards to criminals who will betray an accomplice can only increase, in the society as a whole, the most loathsome of vices, that of treachery. 7

Improvements of the kind here hinted at, and many not here noticed, by the political and religious man, acting quietly as a citizen of ordinary influence. There are, however, occasions when it may be his duty to set himself in direct opposition to what he regards as a bad law. Of these cases the classical example is Antigone; the

REWARDS AND PUNISHMENTS

Biblical, Peter and John preaching the gospel in Jerusalem. Quite recent times, of course, supply famous examples. Here, by the nature of the case, no precise and undoubted distinction rebel (or, as Westenmack calls him, the 'moral dissenter') must seek all the enlightenment at his disposal, and then, after carefully balancing against his scruples the claims of the State and the evils involved in disobedience, act accordingly. For, whereas the traditional theory of rewards seeking desire the punishment to be as light as possible; for conscience is not so common that even a mistaken conscience can be suppressed except at a heavy loss to the community. Nor is the dissenter ever acting, in a strict sense, alone. He feels, says Westenmack, that his punishment is so rare at least by an ideal society; in the words of Pollock, he regards his own opinion 'not as peculiar to himself, but as what public opinion ought to be.' Nevertheless, an ethical judgment of such men will further take into account the fact that the great reformers of the past have in their time been moral dissenters of precisely this kind.

Finally, the religious man is, almost ipso facto, an optimist. He believes in the inherent power of good and in its ultimate triumph; and he looks forward to the day when the predominant that punishment will be unnecessary, the attractions of goodness will be by themselves sufficient to ensure just action on the part of societies and their members. But meanwhile the moral or religious man will give his support to all agencies for the eradication of crime, measuring that support by the degree in which those agencies involve more of the reformatory element and less of the retributive.

A word here seems desirable as to punishments in the next world. Here the religious man's views can only be coloured by his views as to earthly punishment. He may, it is true, be compelled by his belief in revelation to admit the existence of certain forms of future penalty which may, per se, seem purely retributive; and he may be compelled to answer to objections by the simple argument, 'Man cannot judge God.' Nevertheless, we trace a growing tendency to reject the merely retributive penalty as unworthy of the Deity. Men dare, like Abraham, to ask, 'Shall not the Judge of all the earth do right?' and they teach that 'righteousness shall not perish from the earth.' The Roman Catholic Church, as we know, has long had his Purgatory; the liberal theologian believes in a universal restoration; the orthodox Protestant no longer preaches the deterrent judgment sermons of a hundred years ago; and he is tending to view his system of eternal punishment by manifold accommodations. The flame is not a literal fire; or the sinner, even between the saddle and the ground, may have sought and received mercy.

6. Rewards and PUNISHMENTS and rewards divide between them the whole field of legislation. But the division is very unequal; for, though the field of reward is far the larger, being in fact co-extensive with the whole field of service, it naturally demands far less attention from the lawyer. As punishment he is proud of so reward may be defined as 'a portion of the matter of good, which, in consideration of some service supposed or expected to be done, is bestowed on some one, in the intent that he may be benefited thereby.' By 'benefit,' as might be expected, Bentham means 'pleasure,' but he well points out, favor cannot ensure pleasure; it is meant, however, to enlarge the opportunities of pleasure at the disposal of its recipient. If we prefer the word, we may substitute 'happiness' for Bentham's phrase.

As we approach the modern age, we find a much broader scope for the exertion, by religion and ethics, of influence over its distribution. It is hard, perhaps, to improve on Bentham's division, according to which it may assume one (or more) of four forms: (1) wealth, (2) honour, (3) power, (4) exemptions. Some of these, however, are not difficult to define. The humanitarian, in general the most suitable: Thus successful warriors have often been directly rewarded by gifts of money or estate; and in modern communities the whole course of legislation has been generally conducted with a view to providing wealth as a reward for service, and to securing it, when once acquired, against violence or fraud. But 'honours,' at least as direct gifts of the State, are equally common; and in some countries civil servants of a certain rank are entitled to a pension on retiring from office. We are all familiar with titles as a gratification for at least theoretical services. Exemptions, again, are common, whether in the form of exemption from civil burdens or in that of exemption from punishment. Thus, under the Ancien Regime, the nobles had privileges for clergy: and in countries where State services were, freed from most kinds of taxation. 'Previous good conduct' is almost everywhere admitted as a plea in mitigation of punishment. Sometimes, indeed, the exemptions have been even anticipatory: a Roman citizen, knew, beforehand that he was free from capital punishment, a Russian deputy from corporal. 'Benefit of clergy' secured 'clerks' from certain penalties; and in former times English noblemen were exempt from penalties for even atrocious crimes. But it is with regard to power that religion and ethics have most to say; for there can be no doubt that all rewards power ought to be the commonest; and it is in the direction of increasing the range of power as a reward that reform should certainly proceed. Both on religious and utilitarian view, 'is in general the most suitable. Thus successful warriors have often been directly rewarded by gifts of money or estate; and in modern communities the whole course of legislation has been generally conducted with a view to providing wealth as a reward for service, and to securing it, when once acquired, against violence or fraud. social life; but the working of reward is far more automatic than that of punishment, and is connected with a far less wasteful expenditure of machinery. We do indeed find many a Galba, or a Nero, industrious, upright, conscientious, but we do indeed find men, with none of Galba’s claims, promoted to high positions; yet, with all these unfortunate exceptions, the capable man tends, by the mere virtue of his capacity, to come to the top—granted that, in present circumstances, vastly too unimportant to be much heed to, is the merest shake of the needle. With the abolition of the retributive penalty and the establishment of enlarged service as the appropriate reward, religion and morals will be in the way to achieve their highest ends. But all things excellent are as difficult as they are rare.

E. E. KELLETT

REYNARD THE FOX.—In the Middle Ages beast-fables and apologies were largely used by preachers—beasts symbolizing men or particular qualities or failings, and their words and actions being intended to teach a lesson. These fables were partly drawn from Eastern sources, and Buddhist literature abounds in them, though they are also used there to express the doctrine of reincarnation, and they describe the acts of Buddha in previous lives. Some of the Eastern versions contain specimens of them, and some are still told among the peasants. But all were not invented for the purpose of pointing a moral. They existed already as Marchen, and the moral was a later addition. All savage collections of folk-tales alike point to this fact. In the Far East, for example, it would take little alteration to turn into genuine beast-fables. Animal folk-tales, in which animals act and speak like men, descend from an age when it was actually believed that they could do so, and in which also men had already noted the characteristic traits of different kinds of animals—traits which had human parallels. Such savage stories are of the Brer Rabbit class, and tell how this or that animal successfully tricked the others. As a rule each people has its favourite rogue-animal which is raised to the dignity of a god, and this is a Marchen on a large scale in which a large number of animals are the dramatis personae, and many incidents are brought together into a more or less complete whole. Undoubtedly its roots are in the popular tales rather than in the moral apologies current in the cities. See also art. FAITHE, PARABLE (Ethics).

1. Variants of the Reynard story.—Apart from apologies and fables, the first known literary versions of the Reynard story are found in Latin poems of monastic origin, in which the greater bawdiness than was possible in a fable is given to the incidents recounted. One of these, which presupposes a popular original, is the Ecobius cynus-dain captius, the principal subject of which is the healing of the lion by the fox, found in the later versions. It contains over 1200 verses and was written by a monk of the abbey of St. Evre a Toul in the 10th century. Another short Latin poem is the 11th. Secordus et Lupus, corresponding to the twelfth branch of the French Renart. A third is the Luparia—the wolf as monk, an Apocalypse, in which the wolf is from the late 11th or early 12th century. Better known than these is the Fabella Lupina or Iren-igrinus or Reinardus Vulpes (c. 1150), a poem of over 6000 lines, divided into four books, with a certain unity and sequence of episodes, in which for the first time the animals appear with the

4 E. Grimm, Reinbaut Fuchs, Berlin, 1834, 4to; E. Voigt, Kleine lateinische Denkmaler der Thiergese aus dem XII bis XIV Jahrhundert, Strasbourg, 1875.
characteristic names of the Reynard epics. Of this poem there is a short abridgment, the *Iesengrimus*, containing the incidents of the lion’s sickness and his healing by the advice of Reynard, and the pilgrimage of Bertiliana the goat. The *Frontispice* is likewise only abridged, but from French originals or traditions, and its authorship is attributed to Magister Nivardus in a 14th cent. MS of the poem. It is a pious monk, who nevertheless satirizes the pope, priests, and religious orders, and is bitterly opposed to St. Bernard. Its subject is the adventures of Isengrimus and Reinardus, the lion’s sickness and healing by Reinardus, and the outwitting and death of Isengrimus through the craft of Reinardus. The poem is charged with irony and is full of human as well as moral allusions.

The earliest (Middle) High German version is the *Reinart Fuchs* of Heinrich der Glicascheare (c. 1180). This work forms a complete whole without inclusions or lack of order and connexion in the parts of the narrative, and with every evidence of being carefully before the 13th cent., and even before the 12th cent.

The fox is here brought into many adventures with several inferior animals, then with the wolf, until the last, disguised with Reynard’s successes over him, seeks justice against the other animals. From Reynard he learns and narrowly escapes from the tables on his accusers. His healing potion, however, is a poison to O.F. His story is told, and in the end the fox is vanquished.

Possibly Glicascheare misunderstood the word, unless this treatment of the episode of the healing is his own conception. Unlikely, but the cause of the later version’s vix, revenge on the part of the king of the ants when these have been destroyed by King Lion because they would not acknowledge their supremacy.

It can be proved that Glicascheare’s work is due to French originals, and he himself alludes to French poems on the subject. Of his twenty-one adventures, five only are not paralleled in the French *Roman de Renart*. The Roman, however, has nothing of the completeness or unity which is a chief characteristic of Glicascheare’s version, and a French poem of similar scope and harmony, now lost, has been postulated as his source, or a MS containing various ‘branches’ in the order of his episodes, or, more probably, a traditional arrangement of separate narratives. Such a grouping is already found in the *Reinardus Vulpes* (c. 1190).

Meanwhile in Flanders a poet, Willem van Utenhove, or Willem die Matoe, basing his work probably on a French poem in which the scene of the judgment of Reynard at the court of the lion had been added, composed a work in Flemish, *Reinart de Vos*, some time in the 13th century. A continuation, *Reinart’s Historie*, by a later unknown writer, supplied large additions and an element of satire, and the whole was now regarded as one complete work.4 Willem’s expanded work is the source of the many translations and prose versions which have been so popular in various lands since the invention of printing. A popular prose version appeared in print at Gouda, by Gherart Leeuw, in 1745, *D’Hystoric de Reinardus de Vos*, and this edition was the basis of Willem’s poem to be forgotten.

In 1481 Caxton’s English rendering of this version with omissions and abridgments was published at Westminster. But the story of Reynard must have been known already in England, as is shown by references in Chaucer’s *Nouns Prestes Tale* and in earlier Anglo-Norman poets, and by the existence of actual stories of the Reynard group in Latin and English verses of the 13th-14th centuries.

A Saxon version of *Reinart*, written in verse, appeared in 1498, and has been variously attributed to Heinrich van Alkmar or to Nicolaus Baumann. This work, called *Reynke de Vos*, was the source of the High German versions of *Reinene Fuchs*, the first of which was published at Frankfort in 1545, and also of Danish, Swedish, and other translations. Goethe’s well-known poem, based on J. C. Gottsched’s version (1752), appeared in 1794.

The surviving French versions of the Reynard story are the poems of the Roman *de Renart*. These date back to the 13th cent., and are the work of different trouvères, though undoubtedly based on existing compositions or traditional versions. The separate poems, or ‘branches’, of the Roman consist of numerous episodes which do not form a complete whole and have often little connexion with one another; each branch follows another without transition—so much so that the number of the ‘branches’, their order, and their contents vary in different MSS. In spite of the lack of order, it is fairly evident that the basis of the episodes of the Roman was the story laid before King Noble (the lion) against Reynard by Isengrim, the wolf, regarding the fox’s villainies, and especially his violence to Hersent, Isengrim’s wife. The fox is always the chief actor. The authors of some of these *Renart* poems were the early 13th cent. *trouvères*, Pierre de St.-Guion, Richard de Lison, and an unnamed ‘*Prestre de la Croix en Eri*.’ Of the other authors the MSS say nothing, but the provenance of the poems seems to have been Normandy, Champagne, Picardy, and Flanders.5 The complexity of the Roman is in striking contrast with the unity of the poem of Heinrich der Glicascheare, who nevertheless worked upon French sources. The Roman contains some 30,000 verses, and undoubtedly several ‘branches’ have been lost.

While the bulk of the ‘branches’ make the animals act and speak in character, others are full of the manners of the age of chivalry, and the animals act and speak as knights, with little regard to their animal characteristics.

Another Roman romance is the independent *Le Couronnement de Renart*, dating from the second half of the 13th cent., which departs further from the Reynard tradition, and which has been attributed to Marie de France, though this is a matter of considerable doubt. To the same romance cycle belongs the *Renart le Nouvel* by Jacobmart (Gielée de Lille, 1283.) Its subject is the strife of Reynard against King Noble, represented as a strife of evil against good. The work shows traces of scholastic learning and classical knowledge; its tendency is allegory, and it satirizes the clergy as does also *Le Couronnement*, for their corruption, while its author strives to exhort to a purer faith.

Still another poem is the long *Renart le Contrefait*, an imitation or reproduction of the older tales.

3 Published in Moon, vol. iv., and analyzed in Rothe, p. 302 ff.

by a clerk of Troyes, writing in the 14th cent., which satirizes the monastic and chivalric orders and displays a vast encyclopedic knowledge of the learning of the age.¹

2. Characteristics of the Reynard cycle.—While the different versions of the Reynard story differ in literary worth, and while some have an obviously modern or authors working directly upon existing fables, the telling of a story, the desire of literary expression, was probably the first purpose of the authors, and the humorous element—"broad rustic mirth," to quote Carlyle—coarse, brutal, and cynical as it often is, pervades the whole work. The fox is the clever villain all through, astute, evil, both as an animal and as a representative of man, yet he tends to be sympathetically regarded by the reader, like many of Dickens's villains. The other animals usually act in keeping with their nature, and are more than man disguised. While styled a romance, the poem and, later, the prose version have little of the romantic element, although fancy plays round all the episodes, coarse, hard, and cynical as they often are. The element of parody enters into the whole cycle, parody even of the most sacred things, and Carlyle truly calls it a "wild parody of human life."¹

3. Sources.—Grimm and others believed that the Reynard story was of German origin, based on an old German animal epic. But no trace of this exists, and it is certain that the existing German versions are based on French originals. The Reynard cycle of the epic is probably the regions of France and Flanders bordering on Germany, or the region between the Seine and the Rhine—a supposition which would account for the Germanic form of such names as Ragenhard (Reynard), Isangrim, Richild, etc., of which Grimm makes certain. The Reynard has been for four centuries one of the most popular heroes in Germany, the soil in which during the 12th-13th cent. the romance flourished most was undoubtedly France, and especially its northern part. The oldest text is a Latin one; then follow the older French branches of the Reynart. These are followed again by the version of Heinrich der Gleichzähler, a Middle High German version translated from or based on French originals, and that again by the Flemish and Low German versions. The sources of the Reynard cycle are probably much less the apologues so much beloved in the Middle Ages than oral and folk tradition. Sudre has devoted a work of great research to an investigation of the sources, and has made this conclusion practically certain. In spite of certain resemblances of some "bran tellemys" to the "riddle" and its various versions to the apologues, beast-fables, and the stories of the long popular Physiologus, all of which had a great vogue in the cloisters and schools, the affinities between them are rare, distant, and indirect. The allegorical, symbolical, and didactic aspects of the apologue are lacking in the Reynart, and the circumstances of the age were such that these would hardly have been omitted by the authors working directly upon existing fables. The Reynard stories have been mainly derived from the folk, and only indirectly from literary sources. Thus they stand parallel to the Jātakas, the Panchatantra, the fables of Aesop and Phaedrus, and some of them were used in current folk-tales in their respective ages and places of origin. The link with apologue and fable is slight; the link with the vast edifice of folk-tales of animals, intended to amuse rather than instruct, is strong. From both, but mainly from the latter, the authors of the Reynart stories with great art produced a work which in its different forms has had an extraordinary popularity.

LITERATURE.—The various editions, of the stories of the Reynard cycle and various works dealing with it have been sufficiently indicated in the text. See also Aesop, Aesop in Chaucer, Aesop et le roman de Renart, Groningen, 1893; E. Martin, Études sur le roman de Renart, Groningen, 1893; E. Martin, Études sur le roman de Renart, Basel, 1872. E. Arber's Popular Tales from the French, London, 1887. Scott's Caxton's Version, London, 1899, is a useful ed. of the tale (English Scholar's Library of Old and Modern Works).

J. A. MACCULLOCH.

RIDDLE.—1. Definition.—"Riddle" is a comprehensive term for a puzzling question or an ambiguous proposition which is intended to be solved by conjecture. Obscure terms are employed to conceal the meaning, and thereby to stimulate the intellect and instruction of the reader or listener. Rhettorically the riddle is closely related to the metaphor, and in fact it may be defined as a metaphor or a group of metaphors which have not passed into common usage and whose significance is not evident. Aristotle insists on the close connexion between the riddle and the metaphor, maintaining that, when the metaphor is employed continuously in the discourse, a riddle is the result. This conception of the riddle closely associates it with the allegory and fable, and was the Greek view; for the word ἀριστοτέλους, from which αἰσθανάμαι (‘riddle’) is derived, was applied to Aesop’s fables. As a symbolical mode of expression, in which the real sense is obscured, it becomes an important instrument for the cultivation not only of wit, but also of man’s intellectual capacities. From one point of view the riddle is a product of humour, from another it is the result of man’s ability to perceive analogies in nature; its capacity to puzzle is due very largely to analogies which are unconsciously stored up in the metaphorical speech. While a genuine riddle possesses the quality of obscurity—the more obscure the better—and at the same time it must be a perfectly true description. Every term ought to be as accurate and exact as in a logical definition, but put in a form to puzzle and surprise. All these characteristics of a genuine enigma are well exemplified in the riddle of the Sphinx, which is worthy of being quoted, not only as a normal example, but because of the large part which it played in Greek legend and literature:

What walks on four legs in the morning, on two at noon, and on three in the evening?²

In this question the Sphinx takes the day metaphorically for the span of human life. The power of a riddle to arrest the attention and make truth expressive is largely due to an element

¹ Ibid. ² Poet. 22.
RIDDLE

of incongruity which is usually present, the irreconcilable and incompatible being associated together. Aristotle has brought this feature out in one of his statements in regard to riddles:

'out of the eater came forth meat,
and out of the strong came forth sweetness' (Jg 14:19).

2. Types.—The general term 'riddle' covers several different types of enigmatical questions and sayings.

(a) Logogram.—The difficulty may be concentrated in a single word, when the puzzle lies in the double sense which the word bears. For this kind of riddle the French employ the term calendaires, the Germans Wahrheitsrätsel; a favourite designation for it is 'logogram.' A modern example may be cited:

When Victor Hugo was elected to membership in the French Academy, Salvaire his donkey remarked to the distinguished author: 'Monseigneur, vous avez introduit en France l'art technique (Farces).'

The Greeks also employed this type of riddle, and a well-known instance of it is found in the Works of Aristophanes, where the word ἀγάμος occurs in the double sense of 'shield' and 'asp.'

This type of riddle may be spontaneous and natural, or, with the development of the literary art, it may be worked out artificially until the logogram proper is developed. Strictly speaking, the logogram covers a class of riddles in which the puzzle is based upon the addition, subtraction, or transposition of letters. A more familiar term for the case when the letters are transposed is 'anagram.' An example of a Latin logogram is:

'To read, smile, eat. One temptates habsis.'—Puer: Uer (J. C. Scaliger).

A simple one in English runs:

'There is a word in the English language the first two letters of which signify a man, the first three a female, the first four a great man, the whole a great woman.'—Her-o-ine.

The ancient Hebrews, in disguising a word or name by substituting the last letter of the alphabet for the first, the next last for the second, and so forth, formed what may not inaptly be termed an alphabetical method and stands for גנ (Jer 25:9), and זג for זג for גנ (25). With these may be grouped the famous handwriting on the wall (Dan 5:7).

(b) Enigma.—Less mechanical and more important is the enigma proper. Aristotle's ἀγαθά, in which all the letters of the word run through an entire passage, sometimes of considerable length. This type of riddle is very closely allied to both the allegory and the parable. The Greeks would have regarded Nathan's famous parable (2 S 12) and Isaiah's song of the vineyard (Is 5) as riddles. The prophet Ezekiel (ch. 17) works out an allegory in which the monarchs of Babylon and Egypt are described as eagles. The prophet himself designates his allegory a riddle as well as a parable, and the art revealed in his working out of the imagery indicates that Hebrew writers were masters of the symbolic riddle. The conversation of Jesus

with Nicodemus is an example of an enigmatic discourse employed for the purpose of making profound religious truth impressive (Jn 3).

(c) Rebus.—The rebus is a third type. Originally it was a riddle put in the form of a picture of things in words or syllables.

According to Plutarch, Alexander the Great, during the siege of Tyre, saw in a dream a satyr (Ζάρωπος) who could be caught only with difficulty. The wise men interpreted the dream for him: 'Raisins in wine.'

Another type of the rebus was put in the form of an object-lesson. Let us note an example of it in the political sphere:

The Emperor Marcus Aurelius finds that his revenues are steadily decreasing. He sends messengers to Judah, the pedant, for counsel. Instead of giving a verbal reply, the latter takes the imperial emmissaries out to his garden, where he points the head and roots of the plants and refers them to the royal ambassadors. "What shall we tell the king?" they ask. "Tell him that your royal ambassadors return without any message, but report the strange actions of the rabbi to their royal master, who fully comprehends the symbolism of the act and follows the advice given to him in this strange manner.

A notable rebus in the historical sphere revolves about the person of Cyrus.

The Scythians, attacked by Cyrus, sent the Persian monarch a messenger with arrows, a rat, and a frog. By these gifts they meant to tell Cyrus that, unless he could hide in a hole like a rat, or like a frog in water, he could not escape their arrows.

(d) Charade.—The charade is a later development of riddle-making, a product of literary activity rather than of primitive efforts at poetry or rhetoric, and thus is essentially artificial. The charade usually turns upon words or syllables composing a word, sometimes on words composing a phrase. It has not inaptly been termed a 'syllable-riddle' ('Silbevöllersfelde'). Examples will indicate its character better than a formal definition.

Here is one taken from Greek sources:

σωσία, ἡμετέρα, σωσία, ἡμετέρα, οὐκ ἂν ἔμεθη, τὸ χείλεσθαι, 'the whole an island, the lowering of an ox, and the voice of an assurer.' The interpretation is καθάλ. ἡμέραν, ἡ ἡμέραν, ἡ σφαίρα, ἡ σφάιρα, ἡ ἑλέα, ἡ θηλή, 'the day every day, the ash.'

We owe a beautiful ancient Latin charade to Anius Gellius:

'Semel minusane, an bis minus, non rat solo.
At utrumque eorum, ut quondam audari dei,
Iovi ipsi regi noluit concedere.'

Its solution lies in the equation: Semel minus bis minus = ter minus = god Terminus, whose symbol, a boundary-stone, is a column in the temple of Jupiter erected by Tarquinus Superbus.

A famous charade on 'cod,' which, according to most authorities, has been incorrectly ascribed to Macaulay, runs as follows:

'Cut off my head, and singular I act;
Cut off my tail and plural I appear;
Cut off my head and tail, and, wondrous fact,
Although my middle is left, there's nothing there.
What is my head?
A sounding sea;
What is my tail?
A bower;
What am I?
Mid ocean's depths I fearless stray,
Parent of softest sounds, yet mute forever.'

A. Führer has called attention to the existence of charades in Sanskrit poetry; and, singularly enough, many of these have a religious significance.

(e) Epigram.—According to the Greek view, the epigram, in its original sense of a poetical inscription on votive offerings or grave-stones, was closely related to the riddle. In many instances the resemblance would have been complete if the epigram had suggested a challenge to solution.  

1 'Charade' is a word of French origin. In his Dict. de la littérature (1770) Sébastien gives the following definition: 'Ce mot vient des Grecs, et signifie en grec 'charade', et en lat. 'charadon', un discours propre à tenir le temps; on dit en Languedoc: allons faire des charades, pour allons passer l'après-soupé, ou autres velléités. Le mot est venu en France, parce qu'en ce pays les assemblées de l'après-soupé, le peuple de cette province s'amuse à dire des histoires pour passer le temps; on dit : Leurquoi (quod est, que signifie).'
2 Quoted from Ouhert, Rabat und Gesellschaftsspiele der alten Griechen, p. 107.
3 See ZDMG xx. 385 (1885) 909.
4 Ouhert, p. 385: 'Zahlreiche Epigramme könnte als Rätsel gelten, wenn man ihnen die Ueberschrift nimmt; zahlreiche üproden als Epigramme gelesen, die aber die eigentliche Lösung zu ihrer Hand entgehen.' This statement is made especially of the Greek field.
RIDDLE

illustration taken from a grave-stone is interesting:

&oumta oia wte daa an, v. & a. daa v. (o. ouart, de, tpe. tene.)

"My name is theta rho alpha sigma u. nu alpha chi u. sigma; Changed was my native land; to be wise is art."

This Thrasymachus was a sophist mentioned by Plato.

(f) Arithmetical riddle.—The arithmetical or numerical riddle is next to be noted. Many of these are very trivial and are based upon the form of the numeral.

E.g., "I have twenty remain when one is subtracted from nineteen". The solution depends upon the form of the Roman numerals XIX and XX.

A serious form of arithmetical riddle was developed especially by the Jews, through the numerical value of the letters of the alphabet. Many Jewish commentators made ὑπάρξ ( = 'serpent') one of the names of the Messiah because the numerical value of the letters is the equivalent of ὑπάρξ. In Gn 14 the reader is supposed to find the name of Abraham's steward because the numerical value of the Hebrew consonants making up the word Eliezer equals 318, the number of the patriarch's attendants.

Jewish writers developed this method of writing and interpretation into a system and the name Gematria. Instead of the intended word, its numerical value was produced by permutation of the letters; in course of time this developed into the kabbalistic method of interpreting OT Scripture. One numerical riddle appears in the pages of the NT; it is the number of the beast, 666 (Rev 13:18). The custom of taking the letters of a word in a numerical sense was a part of every Gnostic system. As a prominent example we may take the word ἀρτονόμος, used by the Gnostics as an amulet because the numerical value of the Greek letters totalled 663, the number of days in a year.

Another form of the arithmetical riddle is found in the OT, and was much cultivated by the Jews of post-Biblical days and terned by them the middath (752). A typical example occurs in Pr 30:15:

"There are three things that are never satisfied, Yea, seven that are never filled, Enough."

These two lines contain the riddle proper; the answer is given in the following verse:

"Shoot; and the hungry shall have their fill;"

The numerical riddle in this form is the favourite type among the Arabs, and instances of it have also been found in Sanskrit literature. It was also much affected by the Jews of Talmudic times. The Jewish scholar A. Wünsche has published a collection of the middath, type of numerical riddles under the title, 'Die Zahlensprüche in Talmud und Midrasch.'

3. Origin and development.—The riddle originated in the infancy of the human race. J. G. Herder, in his Von Geist der hebräischen Poesie,

"marks that 'all peoples in the first stages of culture are lovers of riddles.' The same spirit which gave birth to the folk-song and folk-proverb likewise produced the riddle. A genuine folk-

riddle is a spontaneous expression, coming from the depths of the soul of a people or race, not from the mind of an individual, and consequently is anonymous (cf. art. PROVERBS). Riddles are therefore in a real sense the true poetic forms of primitive thought. Many riddles of primitive man, who also frequently used the same literary device in his description of an occasional accidental occurrence, when it constituted a mystery for him. That Greek with the idea of a riddle which was supposed to be a riddle between ἄρτος and γόρα, two common designations for riddles, and the two terms μύδος and ἡγος is a clear indication that Greek enigmas touched the domain of mythology. These two spheres would of necessity come together when the mysteries current in a nation had furnished the puzzle for the riddle-maker. Mythological speculation actually forms a part of the riddle-hymn of the Rigveda (see below).

A sharp distinction ought to be made between the original folk-riddle and those more artificial ones which have come to us through the channels of literature. Rolland lays stress upon this distinction by dividing riddles into two classes: (1) l’énigme vraiment populaire; (2) l’énigme savante ou littéraire. It is, however, difficult to define many of the riddles of antiquity. Many have come down to us in their original form. We possess them, if at all, in the polished (and in a sense artificial) form resulting from the labours of literary men. The writings of the great literary geniuses of Greece are liberally sprinkled with such riddles; many involving subtle metaphysical discussions are found in the Rigveda. Modern investigators have made collections of riddles current among people of primitive culture. In a recent edition of Rolland the editor has added an appendix giving an account of riddles found in the Woleis of Senegambia, and similar collections are to be found in the journals of learned societies and missionary periodicals.

Chronologically the riddle may be followed to a remote antiquity. A very ancient Semitic riddle is preserved in a Phoenician tablet:

1. Who becomes pregnant without conceiving?
2. Who becomes fat without eating?

The answer is 'Clouds.'

The collection of Greek riddle is associated with Minos, king of Crete. When his son, Glaukos, disappeared, the monarch consulted an oracle; the reply was in the form of an enigma which was solved by the seer, Polydorus. There are many allusions to this riddle in Greek literature, especially in the great tragedians.

Pre-eminent among enigmes littéraires are the riddles of the Vedic writings. The spontaneity and naïveté of the folk type have entirely disappeared, and instead of these characteristics they distinctly reflect metaphysical speculations and an abstruse type of Hindu thought. The same qualities characterize the enigmas with which the Greek philosophers were accustomed to enliven their banquets. At certain periods of literary activity there have been revivals of the art of riddle-making; writers distinguished for their efforts at enigmatic literature have amused themselves by producing riddles usually trivial in subject-matter, yet frequently beautiful in form. Riddle-making was an affectation with the Greeks of the Byzan-
tine period, and their production of imitators and theatrical rules for riddles lost its grace. Olberrt mentions three poets of the 11th cent.—Psellus, Basilius Megalono-

4 Apollodorus, ii. ill. 1.
Anglo-Latin poets of the 6th cent. and their Anglo-Saxon successors collected and wrote riddles extensively. In France of the 17th cent. men like Boileau delighted in penning riddles—Boileau's riddle on the flea is famous—while Voltaire and Rousseau did not disdain to try their skill in making them. Fénon tests the sagacity of Talamaque by propounding riddles to him. The popularity of this form of literary expression in France, during the period covered by the name just mentioned, may be judged by the publication of the Recueil des énigmes de ce temps, under the editorship of the Ménestrel de France. This volume was a vehicle for the publication of riddles, and Duchesne edited a Magasin énigmatique.

In England riddles were much affected by literary men in the age of Swift, who produced many of them. The trivial subject-matter of Swift's riddles—'On Ink,' 'On a Pen,' 'On a Fan'—indicates that they were merely the by-products of literary activity and employed for the purpose of whiling away idle hours. But it was left to Schiller, after going back to the age of the Sibyls and learning the art of making riddles from them, to develop the riddle into a beautiful poem, a work of literary art. One may be quoted to show that, while the subject-matter is trivial, the verse bears all the marks of the genius of the German poet.

Triviality as to subject-matter is the outstanding characteristic of modern literary riddles, and in this particular they are wholly unlike those of antiquity. With the ancients, as is noticed below (§ 6), riddles touched the serious issues of life. Life and death were involved in untravelling them; weighty policies of State depended on their solution; and even the sacred rites of religion were enlivened by the proposing and guessing of riddles.

4. Form.—Riddles are usually expressed in rhyme or verse. Goethe sets forth this characteristic:

'So legt der Dichter ein Rätsel,
Künstlich mit Worten verschränkt, oft der Veranschmachtung ins Gewebe seines Gedichts ein schöner Anfang.'

Samson's enigma, the only popular riddle preserved in the OT, bears all the marks of ancient Hebrew poetry (Jg 14:9). The Greek riddles scattered through the works of the poets and philosophers in imitation of the Hebrew prophecies and weighty policies of State depended on their solution; and even the sacred rites of religion were enlivened by the proposing and guessing of riddles. The Anglo-Latin poets of the Middle Ages put their enigmas into hexameter verse, and the riddles of the Anglo-Saxon period are in metrical form. Many Jewish Hebrew poets of the Middle Ages exercised their muse by putting riddles into poetic form. The length and character of these may be judged by a production of the poet al-Harizi (13th cent.), in which he takes 46 lines to describe the ant in enigmatical form. It was a favourite custom of the native Arabic grammarians to put their rules in poetical riddles. Many examples of these have been collected by G. Theodor. Schiller's riddle quoted above shows how this poet invested it with the peculiar charm of rhytmical expression. It is the poetical form in which it is couched that lends the riddle much of its impressiveness and stimulates the intellect to solution.

5. Occurrence.—As riddles are rooted in metaphysics, it is not surprising to find that they are of universal occurrence. They have been discovered among the peoples of primitive culture the world over. Abbé Bollet, in writing of the Wolofs of Senegambia, says that these savages at the evening time in the hutDefault document text
Riddle contest between the two famous seers, Calchas and Mopsus. According to one tradition, the former is victorious; according to another, the latter; but in either case the variatio be his life. The authority of Plutarch supports the legend of a struggle of this type between Theognis and Homer, in which the latter is worsted and dies of mortification. In the Theban legend the Sphinx destroys those who fail to solve her riddle, and, when Oedipus is successful, the monster devours himself over a precipice. There are modern Greek legends in which the failure to solve a riddle costs a man his life. A monster living in a castle propounds a riddle and gives forty days for its solution. Unfortunately is the person who fails, for the monster devours him. The resemblance to the story of the Sphinx is evident. In the Mahābhārata the legend takes another form: the hero Yudhishthira frees two brothers from the fetters of a monster by the solution of a riddle. Teutonic legends are of similar import: in the so-called Wartburg-Krieg there is a deadly riddle contest between Odin and the giant Walthrudin, and another instance has been immortalized by Schiller. In certain parts of Germany the boy who fails to solve a riddle is greeted with such expressions as: 'Er ist des Hahns Kind, Ich habe ihm mein Henker scheeren,' 'Kommt in die Hölle,' 'Ist tot.' These expressions may be relics from the times when the unsuccessful competitor actually lost his life.

In other legends the winning of a bride is made to depend on the solution of a riddle by the suitor. This custom was known in the India of Vedic times, and also appears in the Norse legend which represents Thor as promising his daughter to the dwarf Alvis on condition that the latter answers a riddle correctly; a species of such use preserved in literature; Samson's Greek compere Hercules, although uninvited, go's to the wedding of Keyx and joins the rhapsodists in the solution of riddles.

Plato is responsible for the statement that riddle-making was a favourite pastime with lads in his day; when the Romans came under Greek influence, the boys were instructed in the forming of enigmas. In the best days of their history the banquets of the Greeks were something more than drinking-bouts; intellectual pleasures were cultivated, and prominent among these was the riddle, which was the delight not only of poets and philosophers, but also of the masses. The banquet was under the control of a symposiarch, whose direction the riddle passed from person to person. The successful guesser won a prize, who failed paid a penalty. Usually the prize was the laurel-wreath, and the penalty consisted in drinking unmixed wine or wine mingled with water. Aulus Gellius describes an Athenian dinner-party of his day (A.D. 2nd cent.); the host propounds a riddle to each of his guests; the winner receives the laurel-wreath or the cup of a

VOL. X.—49
8. Riddles in religious ceremonies. — The
strangest use of riddles to the modern mind is
in connexion with religious rites and ceremonies.
Among peoples of primitive culture enigmas are
asked even at the primitiveable counterpart of
harvest time. Among the Bolang Mongono (Celebes)
riddles are never asked except when there
is a corpse in the village. In the Aru archipelago, while a corpse is unclothed, watchers
propound riddles to each other or think of things
which others are to do. This practice is evi-
dently rooted in animism, and enigmatical lan-
guage may be used to puzzle the spirit of the
departed. A reminiscence of this custom seems
to linger in Brittany, where old men are accustomed
to seat themselves on grave-stones and ask each
other riddles after the friends of the deceased
and the mourners have gone home. Among the
Akamba of British E. Africa boys and girls at
the time of circumcision interpret pictographs which
are termed riddles. At harvest time the riddle
is looked for in the corn which is reaped to
make the crops. The Alflores of the Central Celebes
engage in riddle-guessing during the season when
the crops are tilled and are growing. On
the solution of a riddle they exclaim: 'Make our rice to
grow, make fat ears to grow both in the valley and
on the heights! An animistic conceptions probably
underlie this custom, and the prayer is to be
regarded as addressed to the spirits of the ancestors.

(a) Oracles.—The answers of the Greek oracles
were usually couched in a riddle or enigmatical
statement. In this connexion it is exceedingly
suggestive that Aristotle1 terms the answers of oracles ἐρωτόστυλα, a word commonly used for
riddles. The oldest Greek riddle is the answer of
the oracle to Minos, king of Crete. As oracles
were consulted before important political under-
takings and military campaigns, the significance
of the enigma in Greek life cannot be over-
estimated.

E.g., immediately before entering upon the disastrous
Sicilian expedition, the Athenians consulted the Delphic oracle;
as a result the Pythians advised the Athenians to bring
the priestess of Athene from Erythaea. This enigmatical reply
turns about the name of the priestess Ἵνασά (' Rest').

This is also a riddle especially adapted for riddles because
it was puzzling and consequently impressive, and at the same time concealed ignorance of the
future.

(b) At festivals.—Riddles formed a part of the ritual
at the festival of Agrionia, sacred to
Dionysus. In the rites of this festival women first
sought for the god as if he had been lost. When
they had ceased their quest, they exclaimed:
'Dionysus has betaken himself to the Muses.'
Then there followed a sacred meal at which these
worshippers propounded and answered riddles
giving hints to the meaning of the island
name, to a similar custom prevailed at other religious festi-
vals; at least an allusion has been discovered to it
in a fragment of the poet Diphilus. A riddle
contest between three maidens in connexion with a feast,
Atalanta and the island of Tharthar, re-
ferred to in his comedy entitled Thersites. The Loves
of Meno enunciated riddles that were to be asked at the
bráddka feasts. One of the enactments may be quoted:

1 Whatever may please the Brahmanas, let him give without
grudging it; let him give riddles from the Vedas, for that is
agreeable to the masses.²

(c) In Vedic hymns.—Vedic literature reveals a
unique use of riddles in religious ceremonies and
in metaphysical speculation. It is most suggestive
that the title of the hymns of the Bráhma, or Brahmanas,
is a designation for a poetic religious riddle, as well
as a term descriptive of speculative discussion.
ETymologically the word denotes 'analysis of the
Brahma.' In one of the Vedic hymns the description
of Agni is put in the form of a riddle:

What is the calf that has by itself given birth to its mothers? The germ of many
(mothers), the great seer, moving by his own strength, comes
forth from the lap of the active ones. (The mothers are
waters.)

The famous riddle hymn of Dirghatamas is a part of
the Rigveda. It contains 52 verses of which
all except one are riddles. This hymn of which
is theosophy and theosophical speculation which
revolves about cosmic phenomena, mythology, and
human organs. The hymn may be characterized
as a poetical expression of primitive Hindu philo-
sophy in enigmatical language.

It was intended to be used by priests as they offered sacrifices. The
priestsstripped of poetic riddles 'enliven the mechanical and technical progress of
sacrifice by impressive intellectual pyrotechnics,'
was in connexion with the famous horse-sacrifice,
or avamédha. This part of the ritual was con-
ducted by two priests, one asking the riddle
and the other answering it. For the answer
there are so unique in the history of religion that they are
worthy of special notice.

At the horse-sacrifice one priest asks: 'Who, verily, moveth
quickness alone; who, verily, is born again and again; what
forsooth, is the remedy for cold; and what is the great
(greatest) píle.'

The other priest, however, asks the priest called adhrtyáp,
'What, forsooth, is the sun-like light; what sea is there
like unto the ocean; what, verily, is higher than the earth;
what is the thing whose name is not known.'

The answer is: 'Brahma is the sun-like light; heaven is the
sea like unto the ocean (the god) Indra is higher than
the earth; the measure of the cow is (quite) unknown.'

Again, the following questions and answers: 'I ask thee for
the highest being. What is the highest being within the
universe; I ask thee for the seed of the lusty beast; I ask thee
for the highest heaven of speech.'

This lays claim to the highest amount of the earth; this
sacrifice is the navel of the universe; this soma (the intoxicating
sacrificial drink) is the seed of the lusty beast (god Indra); this
Brahman priest is the highest heaven (i.e. the highest exponent
of speech.²

Ridicule.—See Abuse.

Rights.—T. E. Holland, as a preliminary to his
account of rights in the legal sense of the term,
has defined a right generally as one man's
possession including all means to the end, and as
means, not of his own strength, but of opinion or
the force of society.²

The definition is useful as bringing out the complex character of the idea of

1. Jewish Life in the Middle Ages, p. 132.

RIGHTS

It implies, as he goes on with excellent lucidity to indicate, the fourfold relation between (1) the subject or person who has the right; (2) the person to whom the right is addressed; (3) the object over which the right is exercised; and (4) the act of forbearance which is exacted. The definition further emphasizes the important fact that jurisdiction has, in all right, the meaning of recognition necessary, and it properly distinguishes between those rights which rest merely on the approval of public opinion (subsequently by an unfortunate choice called moral rights) and those which are protected by legal enforcement. This is distinct from other theories which have pointed out if it is intended to exclude reference to the rights of nations. And this criticism leads to another. The definition contains an implicit denial not only that, besides the rights actually recognized by society, there exist one another rights, in accordance with which there are founded on the requirements of human nature itself—things that are rights simply because they are right—but also that there is any essential relation at all between the adjectival and the substantival meaning of the word. A science like jurisprudence has the right to define its terms in the way most convenient for its own special purpose. But that is a different thing from claiming that its use expresses only the legitimate or the most fundamental use of the term. In opposition to this, it may be claimed that any definition of right generally must be defective which fails to indicate what this relation is. In the present article, written from the point of view of ethics and religion, the main object will be to supply this omission. In the attempt to do so it will be convenient to preface the main subject with a short statement (1) of the origin and development of the idea of individual rights, and (2) of the chief theories that have been held as the ground of rights, with the view of leading up to (3) a more inclusive definition, and suggesting some definite objections to the present concept of the rights of individuals and nations which may serve as a verification of its conclusions.

1. Development of the Idea of Individual Rights.—It is by this time a commonplace of sociology that in early forms of society, so far from finding a stage at which individual thought and action are free from the pressure of the social environment, we have one in which the mind and will of individuals are dominated by the collective mind as expressed in the customs of the group. This subordination is nowhere better illustrated than in the history of the idea of right. If we turn to the early use of δικαίος in Greek literature, we find it in Homer simply in the sense of possessing rules or customs, and as in this sense the meaning of civilized life, in contrast to the conditions of the Cyclops. Between this and the use in Thucydides and Xenophon in such phrases as δικαίος πατριώτ and δικαία ἐκτάσει there is a wide gap. In these a moral reference to things that not only is it the rule to do, but that may be claimed by the individual as by right, has emerged, and we might think (particularly in the latter phrase) the more explicit recognition of the idea of the right which the individual in turn possess. But the student of Greek ethics knows that in its classical exponents there is as yet no word corresponding to either rights or duties in the modern sense. We have to wait another generation before, in the Stoic ἀδικήσεως, we have the definite specification of things that are right to be done as definitely belonging to the individual. Even here we are still far from the idea of these as implying corresponding right. In early Roman law itself, which did so much to develop the idea of personality, the idea of duty, as Maine has pointed out, is far more prominent than that of rights. What Roman law effected was to translate the Stoic idea of personality and the law of nature, which personality embodied, into terms of the particular law of the rocker of a universal justice or right of the nations, to pave the way for the recognition of the further idea of rights that belonged to an individual independently of his membership in a particular society. Hence we see that the law of nature, which as two ideas, the legal and the moral, proceeds pari passu, seeing that the idea of the individual as a personality with rights as against society is at once the creation of the recognition of him as endowed with rights in society and an important factor in the development of the claim for his recognition itself. The story of the spectral analysis of the law of nature into the prismatic colours of the natural rights is a long one. The initial influence was undoubtedly the Christian religion, appealing on the one hand to a primitive state of freedom and equality on the other hand to a relation of man to God which was essentially a personal one. But these seeds of the idea of the rights of man had to await a social congenial to them, which was first found when English tradition and temperament led to a revolt against social and political despotism in the time of Wyclif. By the middle of the 17th cent., and still more by the 18th, the claims of rights, in both this and New England, were already deeply tinged with individualistic theory as to the nature of government, in which we see that the Frenchman that Milton declared that all men were naturally born free born to command and not to obey; 1 that a century later Blackstone wrote:

'The principal aim of society is to protect individuals in the enjoyment of those absolute rights which were vested in them by the immutable laws of nature; 2 and that even Burke, in the midst of his violent protest against the doctrine of absolute rights, formulates a doctrine of society laying stress on the idea of rights as something innate.

Civil Society is an institution of benevolence, and law itself is only benevolence acting by a rule. Men have a right to justice; they have a right to the fruits of their industry, and to the means of maintaining that industry fruitful. They have a right to the acquisitions of their parents; to the nourishment and improvement of their offspring; to instruction in life and consolation in death. Whatever each man can separately do without

1 Holland, who quotes this view, refers to the interesting illustration of the uncertainty in the terminology of the word for 'right' until the suggestive phrase power-interest was coined by a Japanese writer on Western public law in 1898. It is important to realize that the word 'right' is the right common to all nations, not international right.

2 Liddell and Scott, s.v.

4 Quoted in W. Wallace, Lectures and Essays on Natural Theology and Ethics, p. 215.

5 Quoted 18.
trespasing upon others, he has a right to do for himself; and he has a right to all with all his combinations of skill and force can do in his favour. 1

These passages are sufficient to show the close connexion between the development of the idea of right in its later phases and the development of the theory. But, before turning to this, we may notice how the circumstances which made religion the main influence in the development of the idea of rights in the middle period explain also (what otherwise might seem an inversion of the natural order) why, looked at from the side of the question, the rights of spiritual rights should have preceded the claim to political rights and the claim to economic rights should have lagged behind both. While it may appear that the movement here is from the more inward to the more outward and material, in reality it was in the first place from condition to the conditioned, and in the second from the more formal and abstract to the more substantial and concrete. Doubtless the instinctive sense of human capacities in the individual, as dependent for their development on the active agency of society in the removal of all removable obstructions, 2 was operative from the first. But it was only through freedom of thought and speech and some measure of political power that this sense could make itself articulate and the way could be prepared for the establishment of the concrete ideas of rights, the problem of once more the influence exercised upon the development of men's ideas as to their rights by powerful forms of abstract theory as to the ground of rights in general and as to the sphere of law, and it is not difficult to understand why, from the side of the individual, a fuller idea of the rights of the individual, and of his claim to the active assistance of society in the recovery of the 'lost title-deeds of humanity' in the sphere of material well-being, has been so late in developing.

III. THEORIES OF THE GROUND OF RIGHTS. - I. Theory of the Social Compact. — If what has been said as to the history of the idea of rights is sound, we may expect to find that, while ancient theories of the nature of justice as we find them from the time of the Sophists downwards are susceptible of translation into the language of rights, the problem of the ground of rights in explicit form is essentially a modern one. It was not till the question of the rights of the subject was definitely raised in 16th cent. England that theories as to their origin and ground came to be central in political thought. It must be sufficient here to select the more typical. From the outset responsible thinkers have worked under a profound sense of the moral or inward reference contained in the conception of rights. It was in this spirit that modern theory at its outset sought for the source of legal rights, not primarily in the will of another, but in the will of the members of society themselves expressed in a compact.

'The theory of rights as founded on compact has taken two forms according to the view of human nature expressed in the compact.

(a) 'Might is right.' — Starting from the conception of a state of nature (as in Hobbes's well-known account of it) as a war of all against all, not only law and government but society itself is conceived of as resting on a compact whereby individuals agree to resign their natural but barren right to all things in order to secure a limited portion guaranteed by the overruling might of the sovereign. The ground of a man's rights on this view may be said to be his own will to peace and security; but, as he has renounced all right to control of the actual condition of peace, it is only by a fiction that he can be said to will the rights that are actually assigned to him. These depend on the will of another. But, as on the side both of sovereign and of subject there exists no other reason for loyalty to the contract but fear, the logical outcome would seem to be that rights resolve themselves into might. This was concealed from Hobbes by his own misgivings; and Spinoza prepared the ambiguity and, by purging the theory of this inconsistency, claimed to have preserved natural right safe and sound in the civil state — robbed it, in other words, of its saving grace.

The view that right rests on no other basis than might, however contrary to men's instinctive judgments, once suggested, has much to support it in the violent origin of many forms of society and in the imposition of conditions of life that depend on the will of the stronger; and, under the influence of some modem ideas of the meaning of the struggle for existence, it has recently assumed a new importance as applied to the rights of nations. It must be sufficient here to notice the objection to it that is at once the most obvious and the most fatal.

If we look at society as it actually is at any stage of its development, instead of a community of crouching slaves it presents the appearance of a willing and orderly interchange of services involving mutual rights and duties, however little consciously recognized in this the freest and most perfect of all states. It does not lay claim to the idea of the rights of individuals which were merely that rational, free, and independent society would hold together for a day. Custom in society, like habit in the individual, which has been called 'the great fly-wheel of life,' may reconcile to isolated inconveniences, but customs as a whole (as sociologists are now agreed) represent ways of thought that have been more or less consciously selected as the best adapted to secure, under the circumstances and beliefs of the time in which they arise, the satisfaction of fundamental instincts and to further common interests. Impotent to mould customs, the will of the individual may be broken by them or broken by them if it measures itself against them, and it remains true that the system of rights and duties under which men live is supported in the last resort not by might but by the general sense that it is in harmony with their ideas of the kind of life which they desire to live.

(b) Natural rights. — It was the perception of this fact that led to the second form of the social contract theory as it was held by Locke and profoundly influenced political thought for a century and a half after him. According to this theory, society is natural. Law and government are instituted, not to hold it together, but to guarantee certain fundamental rights which are endangered by the weakness of the social element in its members — chiefly those of life, liberty, and property. The contract here is not of the citizens but of the citizens with the state or government. The mutual conditions are clearly stated: between the citizens as a body and the sovereign for the time. The substance of it is that law and government shall concern themselves with the maintenance of the conditions which may preserve these rights to the individual. A theory which would appear to involve a purely utilitarian idea of the basis of the rights which society recognizes, but the idea of a law of nature which had fixed these fundamental rights as some-

1 Ep. I. For the clearer statement of his view see the posthumous Tractatus Politicus, ch. ii. There are of course other elements in Spinoza's philosophy which lead to a totally different conclusion.

1 Quoted in Wallace, p. 212.
thing absolute and imprescriptible in the individual was by this time too strong and was for the present sufficient to overpower the appeal to general happiness, which in England was more congenial to the temper of the succeeding age.

On this view an antithesis is set up between the quite definite standard of social enactment and the quite indefinite idea of rights imitable from the individual. It was vain to try to define these rights. Utilitarianism, like virtually all other systems of law, is not the science of morality but the science of law, and the names of the objects both the names of things entirely indefinite in meaning and scope until we know what is the kind of life, what use is to be made of liberty, wherein the 'right' to property precisely consists. In the result the claim to natural rights was merely the removal from the meaning of right of any reference to a standard other than what Isernon had long ago called 'that wild and vast notion of what in every man's conception is just or unjust.' Any attempt to translate such a view into practice could only end in despotism under government—Cromwellian or Napoleonic, as the case might be. When pressed in theory, it was no less bound to issue in reaction in favour of the claim of the State to assign the limits of individual right on its own principles and so lead back by another route to might as the one so justly condemned.

2. Utilitarian theory.—The way to this reaction was prepared by the appeal to utility in such writers as Jeremy Bentham, who could see nothing in the doctrine of natural rights but 'anarchical fallacy.' It was metaphysics, and that worst form of metaphysics, metaphysics upon stilts. 'Rights are the fruits of the law, and of the law alone. There are no rights without law—no rights contrary to the law—no rights anterior to the law.'

Law doubtless is the declaration of a will on the part of individuals to whom other individuals are generally disposed to rejoin obediently. But this disposition to obedience is the result, not of any harmony of the law with natural rights, but chiefly of habit supported by a sense or calculation which each individual makes for himself as to what he stands to gain or lose by breaking away from the current.

The theory thus stated has the advantage over natural right in perceiving that rights must be relative on the one hand to actual concrete interests, and on the other to the good of society. But, in conceiving of the one concrete interest as consisting in the sum of satisfactions or displeasures which is, qualitatively identical, and of the control of society as concerned merely with the arrangements that will give each individual the maximum of freedom in the pursuit of such satisfactions with a minimum of inconvenience which any interference involves, this advantage is counterbalanced by the disappearance of all distinction between interest and right. From the side of ethics, this means that duty becomes an empty word; from the side of politics, that there can be no appeal to a 'right' in such a world as this. The true and useful convenience is that of society. But this convenience is merely what is required to produce an average of satisfaction among the individuals and is without claim on any one of these except in so far as it coincides with his own. It is not to be wondered at that such a view should be apt to justify alternately the purest anarchy, as in the once popular doctrine of laissez-faire (q.v.), and the purest tyranny, as in the exaltation of the State as the creator of all right. Utilitarianism does not require the necessity of adhering to what is an 'ought' or a 'to be' as opposed to what is.

There is to be 'the greatest happiness of the greatest number'; with a view to it, 'everybody is to count as one, nobody as more than one.' But for whom is this? It is, 'as it appears to him, who has the advantage of being a judge of the public fancy.' Not for the legal conscience of the society. The development of what was desired of a better name may be called the idealistic theory of rights is the history of the attempt to do justice to the partial truths which these one-sided theories represent. We know from Plato's dialogues how far current theory had gone in the assertion of the doctrine that might is right, and of the contractual theory which we have seen is required to supplement it. His own theory of justice he develops as a direct answer to it. But his treatment of justice as a general feature of the good life rather than a particular phase of it obscures its application to the question of rights. What emerges is that the aim of civic society is to do the fullest justice to the capacities of individuals by assigning each his place in an organized system of social purposes. Aristotle's treatment of the same subject in this same spirit is not to face more directly the issue raised by the Sophists as to the existence of a natural or, as it would be better expressed, an essential right. His conclusion amounts to the denial of any hard and fast line between the natural and the conventional, and thus is partly natural, partly conventional. Some laws there is an element that is universal and one that is particular to the circumstances: they all, e.g., condemn theft, but the penalty will be different. In the same spirit a distinction is made elsewhere between an universal, or common, law and the theories of the particular countries. Some have seen in this an anticipation of the 'law of nature' as understood by 18th cent. writers. Aristotle's treatment of law and government elsewhere, as having for its aim the realization of what is best in man, has exonerated him from all responsibility for what D. G. Ritchie has called the 'turgid river of rhetoric' on this subject that has flowed through modern politics.

While the Epicureans reverted to the Sophistic theory of right as founded on convention, the Stoics rooted it, almost literally, in the eternal unchangeable reason, an imperfect embodiment of a law of nature identical with the Divine Reason. We have already seen how this conception was more fertile on the negative than on the positive side—in the condemnation of artificial distinctions between races and castes than in the assertion of the rights of individuals as souls of infinite possibilities. To the Roman lawyers the appeal to a ius naturale meant merely the appeal, as in Gaius, to laws that were common to all nations.

In Aquinas the law of nature appears, not only side by side with civil law, but as the foundation of it. As something deeper than human law and institution, forming a pattern on which they should be modelled, it thus receives new authority. From a mere statement of what is common to nations it becomes a 'law in the soul,' from which the life is preserved, to marry, educate children to know the truth about God and live in society.

6 Particularly Pol. i.

7 Ulpian extended the ius naturale to all living things. This enabled him to assert that, while slavery existed, 'pure gentiles,' 'by the law of nature all men at the first were born free.' We have here a transition point from the idea of natural law as merely a fact and natural law as providing an ideal of human life. If we take the codification of law by Justinian as the last act of the ancient world, we may call this idea the sacred legacy of the dying civilization.

8 Sommer, i. 2, qu. xiv, art. 2.
In other respects he leaves the doctrine very much as he inherited it from Aristotle.

If not, as he has been called, the discoverer of natural rights, Grotius (q.e.) was the first clearly to assign a ground in nature to the origin of civil society. This, much more particularly to apply them to the life of nations. In opposition to Ulpian, Grotius maintained that law and right apply in the proper sense only to human beings: "no one is properly capable of right which does not by nature understand a right." And he conceived in the wide sense that there is a right and a wrong attitude of mind towards them, but not in the sense that they can share in a common purpose involving correlative rights and duties. The natural law on which natural rights are based is defined as 'the dictate of right reason indicating that any act from its agreement or disagreement with the rational and social nature of man has in it a moral turpitude or a moral necessity, and consequently that such an act is forbidden or commanded by the law of God.' From this and from his further definition of human nature, here referred to as the nature that was 'created at the beginning and restored first after the Flood, then by Christ,' he makes it abundantly clear that he has in mind an ideal right, after the pattern of which the actual but not the ideal right is formed by God Himself must conform its will.  

However true Rousseau's criticism 2 of him may be respecting the details of his great work, it is wide of the mark as to the principle from which he starts. His weakness rather is one that is shared by Rousseau himself—his inability to free himself from the current ideas of a state of nature and of the State as 'an artificial body' founded on a 'treaty of subjection' which modifies natural rights. To this we must add a certain ambiguity in his treatment of society itself, which, conceived of as a continuous and incomplete life of its own 'like a waterfall,' at other times as a mere aggregate of individual wills. What was of enduring value in his work was the first clear assertion in modern philosophy of social good as the basis of all law and justice, and the indication of this principle in the life of nations at a time when Europe was aghast at the horrors of the Thirty Years' War. As Plato asks us to look at justice writ large in the State before looking at it in the individual, Grotius writes his claim for natural or essential rights in the large letterings of international law which Hobbes and Locke and the later writers (including these writers) as belonging to another order than actual political society and unrealizable in it, but as the very spirit and substance of the existing order. From this point of view, right presents two aspects. It may be defined, on the one hand, as 'that which is really necessary to the maintenance of the material conditions essential to the existence and perfection of human personality'; on the other, as 'the universal condition of action through which the ethical whole as a differentiated structure is enabled to preserve and develop itself.' But these two definitions are only different ways of expressing the same thing, seeing that the personality to which all rights are relative is not something merely individual, but is actualizable only in the medium and through the opportunities that the particular social and historical order affords. On the other hand, this whole, as an 'ethical' one, can attain its full differentiation and perfection through the fullest development of the personality of its members.

The theory thus shortly stated has the advantage of combining the essential elements of truth which the more one-sided theories contain. With the theory of right it recognizes on behalf of the State that there must always be a reserve of force to guarantee rights in general against the invasion of force, on behalf of individuals and classes within the State that under particular circumstances the use of force may be necessary in order to procure the recognition of moral rights not otherwise procurable. It insists, however, that the use of force requires justification and that the justification can be derived only from the nature of the ends for which force is used. It recognizes that all rights are the expression of a will. But it adds that this cannot clothe them with any moral significance if it is only the 'scattered will' of individuals bent on their own ends with no really common or general interest. It is from this that the civil society makes possible. What gives actual rights moral significance is that they are the conditions which each, when he understands the meaning of his own life, must will for the full realization of what he seeks to. Similarly the element of true representation that is recognized in so far as the validity of any claim of right is denied which is not founded on some concrete requirement of a social well-being. Where

This theory parts company with it in rejecting the conception of social well-being as consisting merely in the possession by the members of equal security in the pursuit of ends essentially individual. The idea which it substitutes will best be illustrated if we proceed to notice some corollaries which follow from the above statement.

The principles underlying the conception of rights are those that the rights in the full sense of the word are relative to human personality as it may be at its best; (2) that personality expresses itself in activities that are in essence social. From these it follows (1) that there is no "level rate" of rights. Rights vary according to the power of performing social functions and to the character of the function that is performed. The rights of the child differ from the rights of the adult as possibility differs from actuality; the rights of a doctor from the rights of a layman; of a member of Parliament from those of an ordinary citizen, and so on. From this point of view, we can see that rights imply duties in a deeper than the legal sense. They are correlative not only to the duties of another, but to the duties of the subject of the right itself. What holds for the occupants of different stations in society holds for the individual in so far as he performs different functions in the different relations in which he stands to his fellow-citizens in different spheres of activity. His rights as a parent differ from his rights as a citizen; his rights as a trade unionist from his rights as a member of the State; his rights as a citizen from his rights as a member of the brotherhood of humanity. (iii.) From this again it follows that conflict of rights arises not so much (as in the older view) between an abstraction known as the individual on the one hand and an abstraction called society on the other, as between the rights and duties that attach to an individual in virtue of his membership of different social groups. This, it may be claimed, corresponds to what has actually taken place in modern times when the chief problems arise from the adjustment of conflicting claims of organized societies rather than of individuals with the State. But it may also be said that, by interpreting all rights as alike concerned with the conditions of human perfection, the conflict between the new problems peculiar to itself which call for particular treatment in an article like the present.

1. The rights of conscience.—The principle is that the ground of all rights is the opportunity that they afford for the betterment of human life. So regarded, they are seen to constitute a system or hierarchy corresponding to the system of interests which constitute the contents of human life and stand to one another in the relation of importance according to their comprehensiveness. It is this that justifies a man in sacrificing his duty to his right to support his family by the labour of his hands to his duty and rights as a trade unionist in a strike, or, again, his rights as a trade unionist to the State. The latter has priority over the former as the more peculiar. The principle here seems clear, however difficult the application of this principle may on occasions be. But a difficulty remains which seems to be one of principle rather than of application in the case of rights that appear to fall outside of the hierarchy of social functions. This concern in objects—truth, beauty, and goodness—that may be called supra-social. On any one of the other theories it is possible to cut the knot, whether by the frank subjection of the individual to the State, or of the State to the individual, or by a distinction between the temporal and the spiritual, or in a new form of ultimate goods such as science and religion, the temporal to civil law. But on a theory like the present, which sees in all rights, civic or other, the conditions of a spiritual perfection, no such resource is available. Such a solution must end either in irreconcilable antagonism or in a mere form of subjection of conscience and religion to the State founded on some arbitrary or speculative consideration of superior right. For the fuller discussion of the rights of conscience and the age-long controversy between Church and State see the next article, "MAXIMILIAN, CHURCH. But two points here call for mention. (1) further implied in the conclusions of this one. (1) With regard to the rights of conscience, we must be prepared to insist that no solution is possible which fails to recognize from the point of view of the individual the claim of the modern State to be the trustee, not only of law and order in the ordinary sense, but also of all that man has already willed of the good within its own borders and therewith of the conditions under which both individuals and Churches can realize their aims. On the other hand, the modern State to realize its own profound interest in the improvement of the system of rights already established so as to make it a fuller expression of the personality of its members, and particularly the interest in the highest extension of a liberty of thought and speech and action as the primary condition of the development of the best in its members.

1 "What policy," asks Spinoza, "more self-destructive can any nation follow than to regard as public enemies men who have committed no crime or wickedness save that of freely exercising their intelligence?" 2

(2) From the side of particularity of religion and the sphere wherein, we have noted that only here the liberty of the spirit as a legal condition of life has the same status as the liberty of the mind in the realm of thought. We have noted in the history of the Church and the state of religious liberty in modern times that this has been the case. We have noted that if there is no truth in the claim that the Church and the state of religious liberty in modern times that this has been the case. We have noted that if there is no truth in the claim of the modern State to be the trustee, not only of law and order in the ordinary sense, but also of all that man has already willed of the good within its own borders and therewith of the conditions under which both individuals and Churches can realize their aims. On the other hand, the modern State to realize its own profound interest in the improvement of the system of rights already established so as to make it a fuller expression of the personality of its members, and particularly the interest in the highest extension of a liberty of thought and speech and action as the primary condition of the development of the best in its members.

1 Since the general and the particular will are identical, right and duty coincide. By virtue of the ethical fabric man has rights so far as he has duties as far as he has rights (Hegel, Philosophy of Right, § 155).
The rights of nations.—We have already seen how the idea of the ‘right of nations’ was launched by Grotius with his legendary treatise, under the barbary of the Thirty Years’ War. In the centuries which followed its widespread acceptance may be said to have been the greatest triumph of civilization since the establishment of the general idea of law in the Roman world. But the term itself, and especially the far more subtle ‘nationality law,’ invented by Bentham, was in reality a misnomer, not only in the sense already noticed (that it was a mistranslation of the Roman natis gentium), but in the sense that it referred primarily to societies as political units and not to nations, the modern sense of the word. So interpreted, idealistic theory, with its conception of the body politic as the trustee of the conditions under which individuals and subordinate societies are free to exercise their capacities of contributing to the fulfillment of human destiny, has had no difficulty in accepting it, and, in spite of apparent exaggerations of State right, may be said to have only set its seal to this advance. But the question does not end there. Since the rise in the second part of the 19th century of the idea of nationality, in the strict sense of the word, and especially the conflict with itself, has ever since, and in recent years has become acute. Granted that States are personalities in the sense explained and share the rights of personality, many of them may be said to be multiple personalities, inasmuch as they include a variety of groups whose members are united by the deeper ties of community of blood, language, and literature, religion and historical tradition. When these suppressed personalities rise to consciousness of themselves, does not the claim, it may be asked, to be the guardian of a particular form of civilization to be common to that political independence which alone enables them to realize their own particular destiny?

1 What form of human life," asks J. O. Bluntschli,‘could have a better natural right to existence than the common spirit of a nation?"

What guarantee, we may add, of purposeful existence can there be short of a self-chosen political constitution corresponding to its peculiar genius? Other things being equal, it would seem that a nation-State will be stronger and happier, not only, as Lawrence puts it, than a State which is not a nation, but than a nation which is not a State. And, if for strength and happiness we substitute, in accordance with our principle, the test of human goodness, it would seem that political independence which alone enables them to realize their own particular destiny, is far more likely to result in a new form of political union, which shall at once protect them against aggression from other nationalities and open out means of contact with them to the realization of the organic unity of mankind.1

From this standpoint there is no more inherent difficulty in recognizing the political majority of nations than in recognizing the civil majority of individuals. True, there can be no conventional limit to the minority of nations and it will always be difficult to determine one's place in it. But it has too often been left to be decided by the judgment of God—in other words, by war. But modern precedents have made us familiar with all degrees of personality in communities,2 and it may be hoped that, with the development of international law and the diminishing risk of experiments in self-government, other tests than that of the sword may be discoverable. Here, too, it should be noted that, apart from disputable theory, there is no reason to deny the possibility of circumstances arising under which the claim of nationality may have to give way to the general interests of humanity, on which it is itself in the last instance founded. In such a case the readiness of a nation to recognize this limit and to exercise the required degree of patience and self-control would itself be the surest proof that it was a new and not an independent State. Thus, these circumstances change.

Under the same supposition, finally, the fear of danger to the parent State from the grant of independence would largely disappear. Even as things are, we pay far too little regard to the number of ties other than force, and the additional affections between peoples likely to be born of a franker confidence in one another's loyalty to the elementary con

2 See Lawrence, p. 57, 'The kinds of fully sovereign international persons,' and the following sections.
ditions of human good, to guarantee the desire for the maintenance of some form of political order. It is considerations such as these that provide a solid basis for the hope that, just as the horrors of the Thirty Years' War prepared the way for the general acceptance of Grotius's idea of International right in the old sense of the word, so the horrors of the Great War may result in the general recognition of it in the new sense. Given such a recognition, it will be impossible to stop short of the attempt to provide the necessary sanctions to the new order, and so, in the words of a great statesman of the time, 'to translate the idea of public right from abstract into concrete terms' by substituting 'for force, for the clash of conflicting ambitions, for groupings and alliances and a precarious equipoise, a real European partnership based on the recognition of equal rights established and enforced by a common will.'

St. Paul's teaching (J. DENNEY), p. 786.

**RIGHTlessness (Babylonian).—**In a new study, such as that of Assyriology, in which the meanings of the words have to be determined, there is naturally a certain amount of doubt as to their precise force; and it may even be that words which the Assyro-Babylonians would have regarded as of the utmost importance remain unrecorded in our lexicons, because they have not been found in the inscriptions, do not occur often enough, or have been mistranscribed.

1. The words generally rendered 'righteousness.'—These are kērtu (kēt̓tu) and mišärā (mēsharrā), 'righteousness' and 'justice,' which are, in a measure, interchangeable terms, the former being from kēsrāw, 'to be firm, fixed,' and the latter from kēštā, 'to be straight right,' the Heb. yashar, the root of such names as Jasher (2 S 10), Jeshar (1 Ch 28), 'uprightness,' etc. Both kērtu and mišērā are common attributes of gods and men, the deities more especially connected with the idea being Samaš, the sun-god (whom as his light penetrates everywhere, was regarded as knowing best all that took place on the earth, and who became the impartial judge of men), and Rammān (Rimmon) or Adad, in Assyrian Adad (Hadad), the storm-god, whose air, pervading all things, had the same property, and perhaps to a more satisfactory degree.

2. What the Babylonians understood by righteousness.—One of the most interesting, though probably not one of the most important, inscriptions dealing with this question is that formerly called 'Warnings to Kings against Injustice.' This inscription, which is published in WAI IV, 2 pl. 45 (53), shows what righteousness on the part of the ruler was expected to be. He was to favour justice and to be well-disposed towards his people, his princes, and the intelligent classes of his subjects.

1 Henry Ashiqu, Speech in the House of Commons, 29th Dec. 1617.
the Jewish and Christian background of Western ethics and religion that a mere comparison of terms could do little to elucidate the significance of righteousness in the Buddhist system. The term 'righteousness' (dhamma), as descriptive of conduct in human relations, coincides with morality. For this purely ethical sense see art. Ethics (Buddhist). The term is generally used, however, in a religious or ethical application. In Christian thought, it is the notion, not of ideal human inter-relations, but of the conformity of the individual to a divine standard. God as absolute moral perfection is the ideal of righteousness.

5. Righteous kings. — One of the earliest kings renowned for his righteousness seems to have been Sargon (Sarru-kēn, 'the righteous king'), of which the ancient Hebrew, and which is the proper name which may be connected with the legend that he passed the summer months of his year on earth with his spouse Ilâqki and the remainder in the under world with Ēērsē-gal (Persephone), righteous in the fulfilment of what the Šemites of old must have regarded as irksome, and which is perhaps best translated hero 'Truth' and 'Righteousness.' Another form of the sun-god was Tammuzzu, the Sumerian Dumu-zīd, 'the righteous son,' or the legend-name which may be connected with the legend that he passed the summer months of his year on earth with his spouse Istar and the remainder in the under world, which, though to the Aramaic, as Sarru-kēn, Gilgulīti, 'the righteous king, the righteous,' or the like (the Babylonians did not recognize the name of the Arab god 'Ammī in the element ammī). In Assyrology one of the kings claiming the virtue of righteousness was Sennacherib, and his grandson, Assur-bani-apli, 'the great and noble Assapphire,' it is interesting to note that himself bar sarubti, rain kētti, 'the king of righteousness,' 'the lover of uprightness,' or the like.

6. Other references showing the estimation in which righteousness was held. — Among these are the final words of the record of Bel-nadin-apli: Limmūttu zēr-mus kēttā rasam, 'Hate evil and love right (or righteousness)'; such names as Nabū-kēttā · nṣur, 'Nebo, protect righteousness (or justice)'; Ištī · šalu n kēnī kasap-tu ullaqqi, 'He will receive his money from the honourable and the righteous.'1 The star of justice and righteousness (zakakāb kēttā u niṣīr) seems to have been the slow-moving planet Saturn ("Sag-isd"), identified, seemingly, with the sun, and, called in Sumerian, mul Gi-gi (for Gin-gin)—a reduplication capable, apparently, of being translated by kēnē and he under God. Whatever they may be embedded are so fundamentally distinct from

1 H. V. Hilprecht, Assyriaca, Boston, 1894, p. 183, 1, 14.
2 P. Haupt, Akkad. und sumer. Kalletchriften, Leipzig, 1892, p. 60, lii, 24-25, tr. from the Sumerian.

MORALITY (Buddhist). — There are several words in the Buddhist writings which coincide more or less completely with the idea of righteousness; but the principles in which they are embedded are so fundamentally different from

1 G. B. Stevens, in HDB (iv, 2649, e.v. 'Righteousness in NT.')
2 C. A. F. Rhys Davids, Buddhism, p. 115.
dhamma—the principles of morals that he professed to follow.1 He is also called dharmikā, 'righteous,' in the same sense. Similar terms are dhammāthā, ‘virtuous rule,' dharmadāna, ‘charity,' and charāṇa, ‘righteousness,' also translated more exactly as 'conduct.' The blessings of the virtuous man are that he becomes wealthy, famous, has self-confidence in any assembly, dies without bewilderment, and is reborn in heaven.2 All this part of the popular teaching to the laity, to those who have not grasped the first truth of Buddhism. But, except in the highest ethical level of the teaching due to the founder, there is nothing distinctly Buddhist in it.3

The ideal of righteousness is the ideal aimed at by the monk, the man who has realized at least the first Truth, the existence of pain. To realize the other three Truths involves a course of training, whereby he attains to the perfect state of the saint. He aims no longer at meritorious actions, but at developing in his character the qualities that lead to salvation and abandoning those that hinder it. The latter are seen most clearly in the list of the ten fetters (samyojana).4 Not merely must vicious acts be avoided, but sensuality itself (kama), ill-will (paṭigha), pride (ācchādani), hypocrisy (mahāpadāna) must also be uprooted. And so among the positive qualities to be acquired we find friendliness, compassion, sympathy, equanimity. Here is a process which, if carried out, would lead to righteousness in the sense of the elimination of moral perdition, but it is not the final goal. These qualities are important because they lead to it—i.e., to absolute cutting off from existence and craving for existence in the world of birth and death. Besides the desire for existence here or in the sensual heavens there are other desires the desire that is forever free for all supersensual existence (ānāpāṇa, anāpāṇāra), belief in the efficacy of good works and ceremonies, as well as the intellectual errors, belief in a permanent self, doubt, and, last of all, as the ultimate fetter, ignorance. So, too, the chief positive quality to be attained by his character knowledge, not of an ideally pure being, but of the true nature of compound things, that they are painful, impermanent, and soulless; and the truth of their soullessness (anattāta) is the Buddhist way of asserting that there is no higher reality behind these.

Earlier than these schematized lists of the fetters, or bonds (nīvaraṇa, āvāraṇa), is the picture of the monk given in the Sutta Nipāta. Intent on the extinction of craving, he wanders alone like a rhinoceros (35), free from affection for wife and children, without even a companion, unless he finds one who keeps the Dhamma (40). He practises absolute continence (brakmachārya), avoids all theories and disputations (750), abandons doubt and heresies, aims at purity (vinudda)—not at mere moral purity, but, as the other terms show, at being independent (anāpāṇa, anissāya) and undefiled (anāpālāta) by contact with mundane things—and he is purified by knowledge or wisdom (paññā, 184).

1. Mahāyāna developments.—The chief ethical change in Mahāyāna was due to the growth of the view that it is possible to attain, besides the knowledge of the Path, also the omniscience of a Buddha. Every one is potentially a Buddha, and by the thought of enlightenment (chittotpāda) he may begin to pass successively through the numerous less existences in which his aim is not merely to become a Buddha in order to teach, but also to acquire merit, which may be transferred to others. He is then a bodhisattva (q.v.), and is thus described:

He has the numberless vows practised the good conduct of well done kamma, aims, morality, patience, fortitude, meditation, wisdom, resource, learning, conduct, vows, and penance; he is an endower of great friendliness, compassion, and sympatgy; in his mind has arisen equanimity, and he strives for the seal and happiness of all beings.5

This, although it reintroduces the doctrine of karma, and, as it were, calls up the practice of self-control, is a much fuller and loftier conception than that which makes the practice of friendliness and compassion merely a means to one's own release. But the practical result was not to make this the ideal for all. It opened at the same time an attractive way for the ordinary man to obtain happiness, not by effort of his own, but in reliance on the bodhisattvas, who have accumulated merit for his benefit. Rebirth in Sukhāvatī ('the Happy Land,' the heaven of the Buddha Amitābha) is the reward of those who call on the name of Avalokiteśvara (see art. BLEST, ABODE OF THE [Buddhist]).

The prayer of a bodhisattva in the Bodhicaryāvatāra,6 x., is:

‘May all those in every quarter, who are afflicted with pain of body and mind, who labour through doubts, be happy and happy. Throughout worldly existence may loss of happiness never be their. . . In whatever hells there are in the world of asuras and elsewhere, there be not certain beings, those who suffer in the cold hells obtaining heat, and those paired with heat becoming cold.’

This is the ideal of self-sacrifice aimed at by a bodhisattva, but the centre of the teaching comes to be devotion to such savours of men. They become more and more raised above the level of common human beings, till they are even identified with the immortal gods of Hinduism, and are worshipped with gratitude and adoration as great beings, through whose merits all may reach Sukhāvatī.

Those beings become happy in the world who keep in their minds the name of Avalokiteśvara. They become released from old age, death, sickness, sorrow, lamentation, pain, dejection. They suffer not the extreme pain of sāmasa. Robed in pure white, like a bird flying with the need of the wind, they go to the region of Sukhāvatī to bear face to face the Doctrine of the Buddha Amitābha. And having heard the Doctrine, the desire of salvation no longer torments their bodies; nor does old age and death with lust, hate, and delusion, nor the pain of hunger and thirst torment them any more. But as long as the firm promise of Avalokiteśvara is not fulfilled to release all beings from all pains, as long as they are not so happy that the purest enlightenment.

The latent antinomianism goes on increasing. In the larger Sukhāvatīyāsika rebirth in Sukhāvatī is ensured by ten times repeating the name of that country, but those who have committed the five sins that bring retribution in this life, or who have obstructed or abused the Good Doctrine, are excluded. In the smaller Sukhāvatīyāsika, however, we are told:

‘Beings are not born in that Buddha country of the Tathāgata Amitāyus as a reward and result of good works performed in this life, but shall attain it thereto, in the dwelling of the blessed Amitāyus, the Tathāgata, and having heard it, shall keep it in mind, and with thoughts undisturbed shall keep it in mind for one, two, three, four, five, six, or seven nights.’

The ideal of the arhat, though it suffered from the abuses common to all organized forms of asceticism, did maintain for long a noble ethical standard. In the legends of the Buddha given by thecommentators on the Dharmapala and the long series of commentaries to the Pāli, we find a series of examples, which, if they are without historical basis, are all the more important in

showing how the Buddhist church interpreted the ideal of its founder. There is the story of the monk abandoned by his fellows because of his love of cleanliness. He walked along a path by the side of a heated water, washed and dressed him, in order that by caring for his body he might fit his mind for instruction; of the weaver's daughter for whose sake the Master made a journey of thirty leagues, so that she should not die without enlightenment of the poor monk would not go to heaven until Buddha accepted before the hospitality of the whole city.

The Mahâyâna developments were not an outright contradiction of the Hinâyâna teaching. The arhat ideal was recognized, but dispensed as being only a stage to be succeeded by the ideal of becoming a Buddha, the perfect enlightenment of whom, indeed, includes the enlightenment of the arhat. But the change destroyed the older ideal, so far as it opened a way to happiness through the merits of others. The conception of merit is also unethical. The bodhisattva does not give aid to becoming good, but confer upon others the enjoyment of the results of goodness. Merit is an external source of good, the accumulation of the benevolent result of so much self-denial, that the recipient of the benefit is one who has not, and are not required to have, the moral ability to perform it themselves.

EDWARD J. THOMAS.

2. Terms.—The technical term for 'righteousness,' ḫetsâh, or fem. ḫetsâh, is connected with the Arabic ḫidh, 'truth,' 'sincerity,' 'farness,' and denotes generally what is true, right, fitting, or conducive to the end in view. The corresponding adj. ḫâr, ḫaddî, righteous, is applied only to persons, except in Dt 4:9, where the active voice of the god, ḫaddîdîn. The denom. vb. ḫâd is used mainly in the forensic sense of being 'in the right,' the Hiphil ḫât, 'justify,' conveying the several ideas of declaring the just man in the right, Dt 25:1, 2 S 15:7 etc., helping to vindicate his cause (Is 50:8), and bringing the sinner into right relations with God (Is 53:10, Dn 12:9). In AV ḫâ, yāšāh, 'straight,' 'upright,' (Jer 1:5, 'be even or smooth'), is frequently translated 'righteous,' RV following this looser practice only in Nu 23:21. Nearly related terms are ḫârî, mishpâṭ, originally in the sense of 'custom,' afterwards specifically of judgment or justice; ḫâṣî, tâmîn, 'spotless' (in the ceremonial sense), hence also 'perfect' (from the moral point of view); ḫâ, nāḏî, 'innocent'; ḫâ, nāẖōḥî, 'straight,' 'honest,' 'righteous'; ḫâ, kêsî, 'firm,' 'true.'

2. The connotative conception of righteousness.—As among other ancient nations, in Israel righteousness is primarily interpreted in terms of social usage. The righteous man is he who adheres loyally to the moral and religious customs of his people, while the 'wicked' sets them at naught. The concept is both moral and legal, in a scrupulous regard for Jahweh and His commands (Gn 12:16), combined with signal manifestations of that lavish generosity towards one's kindred (15:28) and hospitality to passing strangers (19:18) which have always been reckoned among our most sacred duties. The word was a common man. David also identifies 'righteousness' with the magnanimity which he has shown towards Saul, in refusing to 'stretch forth his hand against the Lord's anointed,' even when the Lord has made him to hear to do so (1 Sam 24:14). In both cases righteousness is perfectly consistent with prevation or deceit (Gn 13:11) and deeds of fiendish cruelty (2 S 13:10) towards the foreigner. On the other hand, the wicked do violence to the just prerogatives of God and their fellows (Gn 9:6, working 'folly' [i.e. godlessness] in Israel) (Gn 34, Jos 7:13, Jg 20:6-10, 2 S 13:8), and staining their hands by deeds such as have neither been 'done nor seen from the day that the children of Israel came out of the land of Egypt unto this day' (Jg 10:12).

3. The prophetic ideal of righteousness.—The 8th cent. B.C. saw a violent breaking down of the old landmarks. Through the increase of wealth and luxury which followed in the wake of military successes, religious and moral wrong was widened by widening guilt. Forgetful of the Covenant, rich men used their wealth to 'trample the face of the poor, refusing him an honest wage, eating him from field and home, and for the debt even of a pair of shoes selling him into slavery (Is 3:24, 5:21, Am 2:8, Mic 2:2, 5:26). The merchants in the market-place robbed him equally of the just return of his wages, 'making the ephah small, and the shekel great, and forging scales of deceit' (Am 8:5). Against such oppression in high places there was neither security nor redress. The judges at the gates, openly accepted bribes and perverted justice (Is 1:30, Am 6:5, Mic 3:1), while religion itself was made a cloak to cover wrong-doing and cruelty (Is 1:28, Am 2:13).

In the moral chaos that ensued Amos raised a stern call to righteousness. Jahweh had no desire for sacrifice or offerings. To Him the very profusion of their gifts was but multiplied transgression (Am 4:7). Away then with the din of their songs and the strumming of viols! But let justice (mispâṭ) roll down as waters, and righteousness (ḥâr) as a mighty stream. It is interesting to observe that the more sensitive conceptions of the Elohist writer regards Abraham's act of deceit, as one of those deeds 'that ought not to be done,' bringing 'great sin' upon Abimelech and his innocent people (Gn 20:8).

1 ḫâ, 'more in the right than I,' the only instance where either vb. or adj. is found in the fem., a woman not being considered a 'person' in the eyes of the law.
ness (δόλαθ) as an overflowing stream (125). In this great statement of principle Amos has advanced the idea that the presence of justice and righteousness is not just a matter of avoiding evil but of fulfilling righteousness (9), the ripening fruit of righteousness (102). In Isaiah’s keynote of holiness also justice is blended with mercy. The man holy in God’s sight must ‘put away the evil of his doings’ from before His eyes, ‘cease to do evil: learn to do well’ (Isa 1). If a judge lover of money, he keeps his eye on the interests of his nasal tribes—which lead men to ‘justify the wicked,’ and deprive the innocent of their right standing in court (52)—and not merely seek to judge honestly, but take an active, energetic part in furthering the cause of the widow and fatherless. Justice is a virtue that is enjoined on all who live in Israel. It was the keynote of the prophet’s influence. For ‘Zion’ is that of a city of righteousness, whose king and princes exalt justice as the lodestar of government, and whose people dwell together in mutual confidence and security (120. 91152. 16252). Micah holds before the rulers and judges of Israel and his people the same pure standard of judgment (Mic 3), and inculcates on all men respect for the threefold principle of a righteous life—to do justice, and to delight in love, and to walk humbly with thy God (69). These notes are repeated in Jeremiah and later prophets. The good man is he who ‘doeth justly, and seeketh truth’ (Jer 5), who ‘thoroughly executeth judgment between a man and his neighbour, oppresseth not the stranger, the fatherless, and the widow, and sheddeth not innocent blood’ (76), who ‘delivereth the spoiled out of the hand of the oppressor; and企th not truth with his neighbour, executeth wholesome judgment in the gates, deviseth no evil in his heart against his neighbour, and loveth no false oath’ (Zec 8), who ‘walketh with God in honesty and integrity, and turneth many away from iniquity’ (Zec 13). ‘For the Lord loveth judgment, and his_counts the righteousness of the humble, and seeth the prayer of the lowly’ (Ps 142).

2 This positive conception of judicial righteousness, which throws the stress on the vindication of the innocent but defenceless poor, acquires an increasing importance in the later literature. Cf. Dt 2117, 2779, Jer 582, 5910, Ps 10457, etc.

3 This verse of this Isaiah uses ‘judgment (nishpa),’ the virtual equivalent of religion in its practical aspect (Is 4214). In Ezekiel’s more astonomical conception of righteousness there is a characteristic recurrence of the ritual element; but the prophet has a true spiritual justice in the act of humanity as the test of righteousness with God. The righteous man, who ‘doeth judgment and righteousness,’ has not merely kept himself free from idolatry and uncleanness, but ‘hath restored to the debtor his pledge, hath spoiled none by violence, and hath not oppressed his neighbour, hath covered the naked with a garment; hath not given forth [ie, his money] upon usury, neither hath taken any increase, hath withdrawn his hand from iniquity, hath executed true judgment between a man and his brother, and hath kept my judgments, to do truly . . . saith Jahweh’ (18-9). And on the princes, who are to uphold the banner of righteousness in the better Jerusalem that is to come, the injunction is laid: ‘Put away violence and spoil, and execute judgment and righteousness; lift off your exactions from my people, saith Jahweh. Ye shall have just scales, and a just ephah, and a just bath. The ephah and the bath shall be of one measure,’ etc. (45). 4. Righteousness by the Law.—With Ezekiel we find prophecy passing into legalism. But the definite step in this direction had already been taken when Deuteronomy was accepted as the canon of faith and morals (621 B.C.). The book itself is steeped in the spirit of the greater prophets. Unlike them the characterization of Israel was not that of a people, less in the image of sin, humanity, and love—especially towards the widow, the fatherless, and the stranger—as the vital expression of religion, which is identified with love to Jahweh (69). But, in exalting the duties of humanity into commandments, statutes, and judgments, which Jahweh your God commanded to teach you (6010122, etc.), it shifts the emphasis from willing, cheerful pursuit of moral goodness to the pains-taking effort to obey an external Law as the only ground of acceptation with God. The tendency towards legalism is found in the more cursory and less intense paragraphs of the Law. The more powerful impetus from the Law of Holiness (Lv 19-26) and the full-blown Priestly legislation (P), in spite of the former code’s sympathy with the poor and needy, and its summing up of the whole Law in the phrase, ‘You shall love thy neighbour as thyself’ (Lv 1918-24). Life now became a rule, a yoke of obedience, which pressed even more heavily on burdened consciences. The pathway to righteousness lay in the keeping of all these commandments (Dt 6022429). To this end the study of the Law, prayer, and alms-giving were enjoined (Ps 71), success in life (Jes 11). Kings were judged good or evil according to the measure in which they kept ‘the statutes and judgments’ of the Law (1 K 111832, 2 Ch 7175, etc.). And men claimed ‘good’ at God’s hand for the ‘good deeds’ which they had done in observing the Law themselves, and imposing it on others (Neh 5191314-22, 21).

This nomistic ideal of righteousness more and more pervades the literature of the age. The piety of the Psalms is, no doubt, strongly influenced by the preaching of the prophets. The perfect man of the Psalms ‘walketh uprightly, and worketh righteousness, and speaketh truth in his heart’ (Ps 15), ‘hath clean hands, and a pure heart; hath not lifted up his soul unto vanity, and hath not sworn deceitfully (24),’ keepeth his tongue from evil, and his lips from speaking guile; departeth from evil, and doeth good; seeketh peace, and pursueth it (34),’ ‘is gracious, and giveth (37),’ ‘disperseth, and giveth to the poor (112).’ Even so the thought is near at hand that only by such conduct can one become a guest in Jahweh’s tent, and dwell in His holy hill (157), secure the Divine blessing of ‘righteousness,’ i.e. the right standing before Jahweh (24), win many days of good (34), even ‘inherit the earth’ (379, 112), and have his righteousness ‘endure for ever’ (119). The nomistic ideal finds still clearer expression in Ps 1, 19, 119, where the Law is celebrated as the subject of the man who meditates by day and night, his joy and crown, the fountain of light and purity, peace, freedom, and defence against evil, and the standard of judgment in the end. To this mind of Israel, whose heart is set upon the ‘feareth God, and escheweth evil’ (11-9), and rests his claim to appear before God, and be justified, on the ground that he has refrained from all vanity, deceit, and idolatry, and been the constant adherent of the Law (cf. Ezekiel’s demand for just scales and measures cf. Lv 1914-16, De 2535-46, Ps 11116129,20).
friend and upholder of the stranger, the fatherless, and the widow (31:2). The same idea prevails in Proverbs, though more ethical conceptions and forms are primary, as 'wisdom' is primarily intellectual, 'to know wisdom and instruction; to discern the words of understanding; to receive instruction in wise dealing (conduct), in justice, probity, and equity' (1:4).

The beginning of such knowledge is 'the fear of the Lord, with integrity of heart' (Prov. 15:33), and through obedience to the revelation of Wisdom, the foster-child and deputy of God (7:1-26), who rewards all those who love her with riches and honour, 'yea, durable riches and righteousness' (here equivalent to prosperity, or good fortune, the result of a right standing before God), but the wicked with calamity, which sweeps over them like a whirlwind (1:33-3:8).

In books like the above righteousness is not identical with sinlessness. Even the best men are guilty in God's sight. If He were quick to forgive injuries, no one could stand in His presence; but with Him there is forgiveness, that He may be feared (Ps 130:4). Thus Job can maintain his 'righteousness' (6:23, 10:13 etc.) in spite of the fact that 'a mortal man cannot be in the right before God' (Job 9:20), and that 'righteousness is used in the sense of general rectitude. The righteous man is he who fears God and follows truth and uprightness, even though some measure of sinfulness may cling to him, while the wicked man despises both God and wisdom. Ecclesiastes, on the other hand, would bring the whole life into and make everything of righteousness with the perfect keeping of the Law, though he warns his readers against being 'righteous overmuch,' lest the spring of life be lost in the endeavour, for 'there is not a righteous man upon earth, that doeth good, and sinneth not' (1:7). This separation of righteousness and welfare of mankind is founded on the concept of divine existence of either side (2:24-3:2, 7:21-27). The editor of the book, however, insists on the full nomistic rule of life: 'Fear God, and keep his commandments; for this is the whole duty of man upon earth, to keep himself free from sin' (12:13).

5. The righteousness of God.—Primitive morality is never merely human. Society includes gods as well as men, and the gods are conceived as the divinities of the righteous. Therefore, the righteous conception of public justice. Thus righteousness rests fundamentally on the Divine character and will. This idea runs through the whole OT. Jahweh is the fountain-head alike of the rightful customs of His people and of the later statutes and judgments imposed by the authority of judges and lawgivers. In interpreting these customs and statutes, the judge is His mouthpiece (Ex 18:14, [E], Dt 17:19). The moral codes likewise are His 'words,' which reflect His character and express His will (Ex 20:1, Lv 19:2, Dt 6:17 etc.). The prophetic expositions of righteousness are equally the oracles of Jahweh and spring from the righteousness which is His by nature. Jahweh demands 'justice and righteousness' because He is faithful and righteous (Is 5, Am 5, Zeph 3) and later His righteousness is seasoned with love (Hos 2:4, 11:4-12:4), tenderness and compassion because the devouring fire of His holiness is a spirit of redeeming grace as well as judgment (Is 1:27, 43:2-6). The plaintiff by which Jahweh is to redress injustice is a plaintiff of righteousness (1:27, 28), and the line of peace and abiding prosperity for her and all the world is the line of 'judgment and righteousness' (11:2, 32:31-32:34). But nowhere is righteousness divorced from love and mercy. Jahweh will be gracious unto His people and will have mercy upon them; 'for Jahweh is a God of judgment' (30:8). He is a God that 'exerciseth love, justice, and righteousness in the earth' (Jer 9:8) and cor- erteth His judicial authority over the people in anger (10:24). Love and justice are, as it were, the two poles of the Divine character, each essential to the full harmony of His nature. In various passages of the Psalms they appear in poetic parallelism, as though love were the twin-sister of justice (Ps 33:6, 26:11).

With the prevalence of the forensic conception of righteousness, Jahweh came to be regarded as the Supreme Judge of men and nations. And it was felt from the first that the Judge of all the earth must do right (Heb. 1:13 according to med. pseu.) in distinguishing sharply between the righteous and the wicked (Gen 18:24). This thought of an impartial Judge, putting the just man in the right and condemning the wicked, appears in many different contexts. Thus He wipes out the sinful world, but saves 'righteous' Noah (6:8). He over-whelms Sodom and Gomorrah, but saves Lot (19:24). He smites Pharaoh and the Egyptians with all manner of wonders, but lets His afflicted people go free (Ex 10:23). He blesses them so long as they keep the Covenant, but takes vengeance on them with cooks and plagues to the extent of driving them from the land which He has given them to inherit (Dt 7:11 etc.).

He is a jealous God, who visits the iniquity of the fathers upon the children unto the third and fourth generation of such as hate Him and despise His commandments (Ex 20:5, 97ff., Nu 14:18, Dt 7:19). He judges between David and Saul, requiring David for his 'righteousness and faithfulness;' but bringing the kingdom of Saul to an end (1 Sam 20:42, 2 Sam 16:5). He is judge of the elders and princes of his people, because they have 'devoured the vineyard,' and 'grind the faces of the poor' (Is 5:5). He visiteth His people for their deceit and treachery (Jer 9:12). He executeth judgment in their midst for the abominations they had done before Him (Ezk 5:9, 11 etc.). On the wicked He raineth down coals of fire, making their portion 'brimstone and burning wind,' while the 'upright beheld his face' (Ps 11:10). He even makes Himself good [godly] to the good [godly], perfect to the pure, righteous unto the pure (18:24-26 etc.). In the punishment which He thus metes out for unrighteousness the guilty themselves must admit that He is 'in the right' (Ex 9:30, Ps 51:11). But, as the good judge showed his righteousness in actively promoting the cause of the defenceless, so Jahweh puts forth His righteous arm to help the poor and down-trodden (Dt 10:18, Mic 7:4, Ps 35:3-7 etc.). As Israel itself is the supreme type of the 'righteous' oppressed by its enemies, his righteousness is manifested chiefly in its vindication. The 'righteous acts of Jahweh,' which the joy-makers celebrate 'around the water-troughs' in the days of Deborah (Jg 5:11, 1), are His saving acts on the battle-field of Megiddo. So also in Samuel's farewell address (1 S 12) the 'righteous acts of Jahweh' are His acts of deliverance from the day when He brought forth His people out of Egypt. Thus 'righteousness' is frequently equated with 'salvation' (Is 56:1, Jer 51:19, Dn 9:4, Ps 4:7, 35:11 etc.). The 'sun of righteousness' (Mal 4:2) is a striking figure for Jahweh's saving grace soon to shine forth over the people of the earth, not in a little (Jahweh Sidd'an, 'Jahweh is our righteousness' (Jer 23:7), is to be interpreted in the same sense. The sprouting of the righteous Branch is the

1 Of course, we must not identify righteousness with salvation. . . . Salvation is, so to speak, the clothing, the manifestation of Jehovah's righteousness' (A. B. Davidson, Theology of the OT, p. 906).
RIGHTEOUSNESS (in the Old Testament)

spring-like promise of Israel's redemption (ib.). In like manner the judgment in the valley of Jehoshaphat, 'Jehovah's judgeth' (41 39), means salvation for Israel.

This connotation of the term, however, is peculiarly associated with the great prophecy of restoration in Isa 40-55, where Jahweh's whole dealings with Israel shall be viewed in the light of His 'righteousness.' The people, Israel have sinned and paid the penalty of their sin. The verdict of history has proved them absolutely in the wrong. Nevertheless, they feel that they have a 'case' (mishpāḥāt), which cannot for ever be 'passed over' by their God (Is 40 10). Israel is Jahweh's people, bound to Him by the everlasting Covenant—His Servant, chosen by Him to 'send forth judgment to the nations' (42 6). Though too often 'far from righteousness' (the conduct which belittles Jahweh's people), and blind and deaf to its high calling as His Servant, Israel is yet more completely in the right than the peoples that have 'robbed and spoiled' it. From the ideal point of view, the Israelites may even be regarded as the innocent victims of oppression, who may therefore readily be justified on the recognition of their rights, from we (50 9-10). In answer to the claim, Jahweh is pleased for 'his righteousness' sake'—His loyalty to the covenant of grace—to bring them deliverance, and so to 'manify the revelation' of His righteousness through them. Throughout, it has been righteous (true to His word) in all that He has promised to do (41 25 45 9); and His righteous word will not fail Him now (45 5). Already He has raised up Cyrus, 'whom righteousness [here in the sense of victory]1 followeth at every step' (41 5); and He will continue to multiply His righteousness and its deeds until the temple and its temple have been rebuilt, and the waste places of Judah raised up (44 28-29). For He is 'a just God and a saviour' (45 6)—a righteous God, whose righteousness is made manifest in salvation (40 12 51 16 52 11). With salvation will come 'righteousness' [the power that makes for victory] and strength' (54 6), peace [prosperity] flowing 'as a river' (48 8), and abounding joy and gladness (55 13) welling up from hearts that know and follow after righteousness [in the prophetic sense of right-doing].

The word of Jahweh is like the dew, and his word is a fountain of springs (51 36). Thus is the redemptive righteousness of Jahweh the fulness of its purpose in the conversion of the world to Him. 6. Divine Righteousness.

Righteousness. In the heyday of national prosperity it was easy to believe in Divine righteousness. But amid the general disorder which accompanied the downfall of the nation keen questions arose. If the Judge of all the earth 'doth right,' why must the righteous suffer, while the wicked enjoy long and prosperous days? These questions first become vocal in Jeremiah, whose ministry for righteousness was one continuous martyrdom. 'Too righteous [too completely in the right] art thou, O Lord,' that I should contend with thee [ac. at the bar of justice], yet would I lay my case before thee: Why doth the way of the wicked prosper? What are they all at ease that deal very treacherously? (12). When Jahweh answers only with the promise of yet graver trials, the prophet breaks into bitter expositions, even charging Jahweh with doing all this. 'He that is of God is my son, my first-born, and the noblest of the children of mankind; and my wound incurable.'—'Truly thou hast been to me a deceitful brook, as waters that are not sure' (15). 'Thou hast fooled me, O Lord, and I let myself be fooled; thou art stronger than I, and hast prevailed. I am turned to a laughing-stock; they mock me, every one doth mock me' (40 30). The same poignant cry bursts from the lips of Habakkuk in the agony of the Chaldean oppression: 'Thou that art too pure of eyes to look upon evil, who canst not behold iniquity, why dost thou look on the work of wrong-doers, why be silent when the wicked man [the Chaldeans] swalloweth up the righteous [Israel]?' (1). From prophets the challenge is caught up and re-echoed by the people under the bondage of exile and in the barren days that succeeded the restoration: 'My way is hid from mine eyes: I perish and die, though I 'trust' in the Lord and 'hold fast to my oath by my God' (Is 40 23); 'Every one that doeth evil is gone [acceptable] in the eyes of Jahweh, and he delighteth in them. Where then is the God of judgment?' (Mal 2 17); 'It is vain to serve God: and what profit is it that we have kept his ordinances and walked hitherto?' (Mal 3 13). But behold now the arrogant are blessed (happy), and the doers of wickedness are built up: yea, they tempt God, yet escape' (34).

To these heart-breaking appeals of earnest souls there came no direct answer, but only the exhortation to 'trust' in God (40 9-24), to 'behold' and 'serve' the Lord (40 3-4), or wait with patience till the 'vision' should reach its appointed end (Hab 2 3), and the son of righteousness should 'rise with healing in its wings,' when the righteous should 'skip as calves of the stall, and the lion shall lie down with the ox, and the child shall play on the highway' (Mal 4 4). But bolder spirits fought out the fight and lifted the problem to a region where the troubles of the righteous melted away in the eternal sunshine of God's face.

The most heroic of these conflicts is reflected in the book of Job. In the pattern of righteousness, Job is suddenly plunged into overwhelming suffering and misery. Trained in the ancient dogma that suffering is the penalty of sin, yet firmly convinced that he has done nothing to merit these calamities, and gazed to despair by the orthodox 'consolations' of his friends, he boldly arraigns God's rule. 'I am innocent, but it is all one. God destroyeth the innocent and the wicked alike.' There is no justice in His reign. 'The earth is given over to the power of the wicked; and God blindeth the eyes of its judges,' so that they can no longer distinguish between right and wrong. And God cannot deny the charge. 'If it be not he, who then is it?' (59 13-14). The poet reaches no intellectual solution of the problem thus raised. Salvation is found only in a dazzling vision of God's majestic majesty, in a vision of God in nature, before which Job and all his sorrows are swallowed up (42 1-10). He does, however, rise to the thought that, after he is dead, God will appear upon his dust, as Goel, or Champion, to bear witness to his innocence, and that he will arise from the dust of Sheol, 'from the mountain of destruction,' and 'behold the vindication of his cause (19 25-27). The door which he has thus unlocked behind the veil is pushed wide open by later psalmists, apocalypticsts, and sages. By the time of Jesus immortality had become an assured hope of Judaism. And the problem of Divine
righteousness was solved in a view of God's government which embraced both this age (25ff., 'δόλαν; αλογον, 'ξοντον') and that which was to follow. [V. 13. 14.]

There is the idea of the Gerechtigkeit, ver-

züglich im AT; JDD T v. (1800) 173 ff.; E. Kautsky, Ubers die Derivate des Stammes πτως im AT Sprachgebrauch, Tübingen, 1893; G. Dahmen, Der Geist der martliche Einführung der Anfänge, and A. D. Kay, The Prophets of Israel, do. 1895, pp. 71 ff.; J. Schultz, OT Theology, Eng. tr., Edinburgh, 1895, ii. 241 ff.; A. Dillmann, Handbuch zum AT, vii. 3 ff. All these writers, among others, have called attention to the fact that there is a condition of entry into the kingdom. It is (b) brought into connexion with the Law (and the Prophets). Then we have to consider the cases of the scribes and Pharisees, which shall not enter into the kingdom of heaven. It is the condition of entry. There is this 'righteousness.' It is therefore (c) condition of entry into the kingdom. It is (b) brought into connexion with the Law (and the Prophets). And the contrast implied seems to be this: the scribes have what they call 'righteousness,' which is dependent upon observance of the Law, they suppose; whereas the Pharisees represent the form of the Law which I give you goes deeper than does theirs, your 'righteousness' will necessarily be in some sense more abundant than theirs. [V. 25-45 give a twofold series of three illustrations of the way in which Christ 'fulfilled' (i.e., gave a deeper meaning to the Law).

1. (a) 21-25—The law, 'Do not murder,' implies, 'Do not have angry thoughts.' Therefore, if your brother has a matter against you, go and be reconciled to him. This seems to imply that righteousness is a right condition of the heart, caused by a deeper appreciation of the Law and born out of the Law conduct.

2. 26-30—The law—Do not commit adultery,' implies, 'Do not have impure thoughts.' Therefore exercise moral discipline. This also seems to imply that righteousness is a right condition of the heart, caused by a deeper appreciation of the Law and born out of the Law conduct.

3. 31. 32.—The Law sanctioned divorce, but limits this to cases of fornication. Therefore it is imperative to impose the Law, thus instituting upon supposed legal rights which are not consistent with the highest morality.

4. (a) 32. 33—The Law said, 'Do not swear falsely,' but carry this farther, 'Do not swear at all.' This seems to imply that righteousness will sometimes fulfil the Law by extending its sense.

5. (b) 33. 34—The Law commanded retaliation. Turn this into a retaliation of love.

6. (c) 34. 35—The Law said, 'Hate your enemy,' but do the contrary—love him. This, again, seems to imply that righteousness will sometimes reverse the literal sense of the Law.

These illustrations are very different in kind. In 1. (a) and 2. (b) they imply an excess of the Law which penetrates beneath the letter and seeks to find and carry into effect the spiritual principle which is logically involved. Murder presupposes anger; therefore avoid anger as well as murder. Adultery implies lust; therefore, resist lust. We might suppose that the 'greater righteousness' of the disciples is either the moral principle or the cause of action, rather than the literal Law interpreted or the moral acts in which this morality of the heart expressed itself, viz., reconciliation to the brother, moral discipline, or both together. That is to say, anything given to the sanction of divorce is quite arbitrary; i.e., whilst the disciples might take the illustrations 1. (a) and 6. (c) as examples of a method of interpreting the Law, L. (c) would give them no principle of exegesis by which they could deal with any other law. Righteousness here therefore must be understood as a conduct based upon a deeper interpretation of the Law, and perhaps be regarded as illustrative of a method of interpreting the Law by arguing from the particular to the general. If false swearing is wrong, so must any kind of swearing be. If love to one's neighbour is commanded, this must be held to imply love of all men. But L. (b) is again a quite arbitrary cancelling of a law, by substituting for it the exact opposite. Here righteousness is certainly not moral condition created by obedience to the Law. It may be right moral condition which revolts against the Law and substitutes for it something different, or right conduct due to such reversal.

These facts would lead us to suppose that the idea of righteousness implied in these illustrations was that of conduct rather than of the moral condition which gives rise to conduct; that is to say, Christ is dealing with 'righteousness' as a term with a definite meaning (= 'right conduct') which He presupposes. The right conduct which is requisite is to take an opposite consideration than that of the scribes and Pharisees, just because the methods of interpreting the Law which He taught them would enable them to widen out almost every single command to cover a far greater area of conduct than did the Pharisaic exegesis.

But, whatever the idea of the 'greater righteousness' which these illustrations are intended to convey, it is noticeable that the term 'righteous-
RIGHTEOUSNESS (in Christ's teaching)

It is not usually used to describe righteousness. This is probably due to the fact that, according to a well-known teaching, righteousness is a term used for describing the heart when it is in agreement with the will of God. It is therefore probably due to the fact that, according to a well-known teaching, righteousness is a term used for describing the heart when it is in agreement with the will of God.

The illustration of the interpretation of the Law seems to support this, by way of contrast with the Pharisaic righteousness, true righteousness is a right condition of the heart, caused by a right understanding of the spiritual Tenor of the Law, which issues in right conduct. But this is never called 'righteousness.'

Thus, in the Sermon on the Mount, Christ seems to be employing the term as a known conception, using it therefore, as it were, in inverted commas. The Jews sought for righteousness by the method of obedience to the Law taking effect in religious acts. All who resisted it, from the bottom of their hearts would ultimately be dissatisfied, however guided by the method by which they sought for it (57). The righteousness of Christ's disciples (i.e. their religious conduct) was not to be less than that of the scribes (57). Obedience to the Law, almsgiving, prayer, fasting—all these were obligatory upon them (58-18). But they were to be practised in a different spirit, based on a better understanding of the Law, and void of the ostentation which marred the Pharisaic devotion.

These results are not unimportant. All through the Sermon on the Mount, Christ is teaching about conduct as related to the Law, and this conduct is termed 'righteousness' just because that was a current usage. It is a technical term used by Him in its technical meaning. All that He is concerned with here is the relation of His disciples to righteousness in comparison with the relation to it of the Pharisees. In both cases it is to be based on the Law, but in the case of His disciples it will assume a more far-reaching character due to the better method of dealing with the Law which He gave to them.

In other words, we have no real clue here as to Christ's own doctrine of righteousness, no new definition of it, no attempt to give its content and scope and range. We may, if we please, select from His words such ideas as love and purity, and say that these constitute the content of this doctrine. But they are not actually so termed, and His silence suggests rather the view that He would not willingly have predicated righteousness of men at all.

It will be seen that in the Sermon 'righteousness' seems to be used with reference to a meaning which it had in contemporary Judaism, that of the righteousness based on observance of the Law which good men exhibited in such exercises of religion as almsgiving, fasting, repentance, and prayer. Whatever Christ is reported to have taught about it did not change the entire content of the word, but spiritualized and deepened it. If His disciples rightly understood the Law, they would not neglect such ordinances as almsgiving, fasting, and prayer, but would exercise them in a spirit which would make them to be real righteousness, which God would reward. In this conception of the 'reward of righteousness' we are still in the circle of current Jewish conceptions. So far as this Gospel is concerned, Christ does not sweep away the conception of reward, but purifies it. The unostentation and the value of human works which we should receive a reward from God, who sees the unseen.
which deal with the relation of Christians to the older Judaism. He regards the new community as the true Judaism, and is at pains to record such teaching of Christ as showing how the righteousness of God had displaced their religion, and how the Messiah had re-interpreted for His disciples the true meaning of the Law and the ordinances. When recording, therefore, the teaching of Christ on righteousness, he has not used mind chiefly such sayings as brought into contrast Christ's teaching and the most current and popular conception of the Law, but has gathered together all which he found in the New Testament to 'the exercises of religious acts.' These still retained their objects, but characteristic of the spirit of true righteousness, and characterized them as practiced by the Pharisees. To find in all the qualities commended in the Sermon on the Mount 'the characterizing' of the Pharisees, and truly of true righteousness, is to find the writer of the art. 'Righteousness in NT' in HDB, is to miss the whole point of the First Gospel. These many qualities may perhaps constitute 'righteousness,' if that word was used in a sense which permits it, but they are never called 'righteousness' in the First Gospel, and indeed are carefully distinguished from it. Only one or two of the righteousness which is to characterize the disciples, but, when next we come to the word, it is in, and in the rest of that chapter, righteousness is illustrated as consisting in such religious devotions as almsgiving, prayer, and fasting, i.e. in concrete, not internal, righteousness.

It will perhaps be said that 2318 shows how the righteousness of the disciples is to exceed that of the Pharisees, and must therefore bear the burdens of the Law. This shows an exegesis of the Law is to be deeper, directed more to the spiritual content than to the surface meaning of its precepts. In the New Testament is the Law no longer used as it was in Judaism, though it might be so termed by any one who cared to use the word, but in the New Testament it is rather the meaning of the Law, the meaning of the word is not the same from which a moral concept of righteousness, in the sense of the word as used by the editor of the Gospel, can spring.

Righteousness therefore in Christ's teaching, as moral, as imperial, means conduct, in respect of religious ordinances, and the moral relation to others, which is the outcome of a right understanding of the OT. In what relation does it stand to Christ's personality? In this, that the Messiah had given a new method of interpreting the Law.

This, of course, is not the whole of Christian teaching on righteousness, but it is all that is the First Gospel has given to us. That is only an additional proof that this Gospel springs from a Jewish Christian society which only partially understood Christ's teaching and His person. For them He was the Messiah, who was soon to inaugurate His kingdom. He was also the true interpreter of the Law. Those who followed His teaching would hold fast to the Law and to the ordinances of religion. They would then become the righteous protecting the kingdom.

How closely the conception of righteousness in the First Gospel follows the Jewish conception of it may be seen from a study of the cognate adjective (bimnos). This means, generally speaking, a 'pious,' 'religious,' Jew. In the Gospels Jesus is a 'righteous man,' and this quality would have led Him to put away his betrothed wife, when she was found to be with child (19). Jesus Himself is called a 'righteous' man by Pilate and his wife (2779, 91). The Pharisees appear to men to be 'righteous' (2987). I.e. they are supposed to have kept all the regulations of a particular class, whether the thought is of the pious heroes of the past (‘adorn the tombs of the righteous,’ 2390; cf. ‘Able the righteous’ 2399), or of the righteous’ who will enter the Messianic kingdom (1845, 2357).

Of course there is the same vagueness here as there is about the use of the word in Jewish literature. But one prevailing characteristic of 'the righteous' in Jewish literature is piety based upon conformity to the Law, which takes effect in outward and active religious acts, such as almsgiving, prayer, and fasting. To the editor of the First Gospel 'the righteous' were those who would be admitted into the kingdom. But who were 'righteous'? Not all Jews (38 86), nor the scribes and Pharisees with their hard and literal interpretation of the Law, but there was one man who fulfilled the Law, who received the clue to its meaning given to them by the Messiah. For them the Law was not in one jot or tittle abolished (59). Rather it was permanently valid. But they had a clue to its meaning which would make their righteousness by that return to be of the scribes and Pharisees in so far as it had a deeper soil into which to strike its roots.

Neither St. Mark nor St. Luke has recorded any saying of Christ containing the term 'righteousness.' The adjective occurs in Mk 29, whence Mt 99 has borrowed it. Mt places the adjective in the mouth of Christ in the following saying: 2992 = Mt 99 = 1414 = the resurrection of the righteous (here it is used, as in Mt 1334, 257, 46, of the inferences of ultimate blessedness); 1518 and 260 (in the same sense as in Mt 99); 286 (applied to the NT teaching about the resurrection). We learn therefore nothing fresh from these Gospels as to the teaching of Christ on the subject of righteousness.

In the Fourth Gospel the term occurs in one connexion only. That is in 1624. The Holy Spirit is to be the guide of righteousness ‘because I go to the Father.’ The meaning may be that righteousness in the widest sense of the term had been completely manifested in the life of the incarnate Son of God. When He returned to His Father, this manifestation was completed, by that return it was proved to have been a real manifestation. And that manifestation would henceforth be the standard by which all other conceptions of righteousness would be tried and proved to be faulty. The adjective is used three times in the Gospels—once of Christ’s ‘judgment’ (23), once of human ‘judgment’ (72), and once of God the Father (1725).

Of course, it is not possible to discuss the bearings of Jn 1624 on the whole concept of Christ as to righteousness. For that would lead us into a re-statement of the whole Johannine theology. If Christ taught that He was the incarnate righteousness of God, the question is at once raised, How does this affect men? That leads to the doctrine of the relation between Christ and men in all its many bearings, including the doctrine of sin and of its removal, and of the mystical union between Christ and the believer. All that we can do is to note the fact that, whilst the First Gospel deals with righteousness from the human standpoint and regards it as closely connected with a right view of the Law, the Fourth Gospel, in the one passage concerned, deals with it from the standpoint of the divine righteousness perfectly manifested in the eternal Son of God.

RIGHTEOUSNESS (in St. Paul’s teaching).

1. Importance of the term.—Righteousness, as a popular term in universal use, is of course sometimes employed by St. Paul in its current and popular sense. Thus, when he asks, What partnership

1 Similarly in the Apocalypse literature 'the righteous' are those who are to inherit the kingdom (cf. Volz, p. 216).
have righteousness and lawlessness with one another (2 Co 6:14), or speaks of himself as equipped with the weapons of righteousness on the right hand and on the left (2 Co 6:7), or says that the kingdom of God is not near, and drink, but righteousness and peace and joy in the Holy Spirit (Ro 14:17), it is most natural to suppose that he uses the word in the large and somewhat indefinite sense which every one understands. We may regard it as a standard for conduct—a standard determined not by the nature of the person who is to exhibit the character or quality of righteousness, but by his relation to other persons or things—and that the requirements of this standard have been met. But two things demand special consideration of the term in St. Paul. One is the extreme frequency with which δικαιοσύνης and the cognate terms (δίκαιος, δικαιοῦν, δικαίωμα, δικαίωσις) occur in his writings. If we discount the Pastoral, the examples of these words amount to 101. This alone would show their peculiar importance for him. Besides this, there is the undoubted fact that he uses some of them in a technical or quasi-technical sense, with the correct understanding of which is bound up the correct understanding of the gospel. Thus δικαιοσύνης θεός is rightly spoken of by Holstenius as a ‘technical Abbreviation, or for St. Paul’s conception of Christianity; in the mathematical sense it is a ‘symbolic’ expression of his gospel.

2. The righteousness of God.—The formal presentation of δικαιοσύνης θεός as the sum and substance of the Christian message is made in the Epistle to the Romans. St. Paul is not ashamed of the gospel, for it is the power of God to salvation for all who believe (Ro 1:16). All the explanation of this being that in it there is revealed righteousness and δικαιοσύνης θεός. The genitive case can be used to express various relations; and, so far as grammar goes, δικαιοσύνης θεός might mean the righteousness which belongs to God (i.e. which is His character as a righteous one), or righteousness which is required of men, and will acknowledge as answering to His requirements; or, again, a righteousness of which God is the source or author. Obviously also some if all not of these ideas might be combined; and, if in any sense technical or symbolic, it has probably combined or a designation of itself shades of meaning which would originally have taken different grammatical forms.

In modern times there have been three main lines of interpretation. In the first the genitive, θεός, is taken as a simple possessive, and the righteousness which is revealed is God’s own character. The gospel shows men what God is. They may have imagined that they knew Him before, and even that they knew what He was, but by His righteousness. But they misconceived the attribute which they called by this name. To them it was merely a retributive or distributive virtue—the attribute in virtue of which God renders to every man according to his work. As such it is a greater mystery than they had thought, and it hardly could be conceived as the content of a gospel. But, when God’s righteousness was actually revealed in the gospel, it turned out to be quite different from this. It was not retributive or distributive, but self-imparting or communicative. It streamed out ceaselessly from God, and overflowed upon men and into them, becoming their righteousness also. That is why the news of it is gospel. It is glad tidings to the sinful that it is the very nature of God, in spite of their sin, in entire indifference to the sin, conceivably even on account of their sin, to best against their sinful nature with His searching self-communicating righteousness till sin is overcome and God’s own righteousness fills the once sinful nature of man. That sinners are saved by God imparting His own character to them is true, but it does not follow that this is what St. Paul means when he uses the expression δικαιοσύνης θεός. The problem which the gospel had to solve was for him a moral problem, but here the δικαιοσύνης θεός is conceived simply on the analogy of physical force. It flows out unconditionally from God towards all men as water flows from a spring, or as heat radiates from the sun. But moral problems cannot be stated, let alone solved, by merely physical categories; and, when St. Paul wrestles, intellectually, with the problem in Romans 3, he uses quite another character. Further, while an attempt may be made, in consistency with this view of the δικαιοσύνης θεός, to make room for Christ in the gospel—to point to Him as a conspicuous proof that divine righteousness has the self-imparting quality here claimed for it in Romans 3—it is not easy to get the place that He has in St. Paul. For the apostle He is not a conspicuous illustration of the nature of divine righteousness; except in Him and in His Cross there is no revelation or knowledge of the character of righteousness. He is the place where the righteousness of God is made manifest to those who believe, but He is not described as an instance of divine righteousness.

3. OT usage.—A more impressive and suggestive interpretation of δικαιοσύνης θεός is that which, while still treating the genitive as possessive, finds the key to the meaning in those OT passages in which God’s righteousness is spoken of, not as distributive or as self-imparting, but as doing right or justice by His people. In the OT generally the functions of ruling and judging are closely connected; and, when the king judges, he is conceived as helping his people to their rights rather than as administering statutes. In books like the Hebrews, and the Old Testament in general, God is generally represented as wronged and oppressed by a wicked world, and God manifests His righteousness when He vindicates them and delivers them from their enemies. Hence God’s righteousness as righteousness which requires repayment of what they trust, and to it they appeal; by the manifestation and exercise of it they are justified and saved. In a real sense, it is one with His grace and faithfulness. It puts His wronged people in the right in the eyes of all intelligent people. The Lord fulfills the righteousness of His people for their vindication, their salvation, as against all who condemn and oppress them or put them in the wrong.

Passages like Ps 35:20-21, 51:14, 71:5, 110:24, or like Is 1:19, 52:7, 56, illustrate this. In most of these the subject spoken of is the nation, and it is
easier, of course, for a nation than for an individual to feel that it is in the right, and that, if God's righteousness were manifested, the result would be its justification and salvation. A comparison of vv. 1-24 in Ps 143 shows how this national revelation, on God's righteousness, which would vindicate the people can be combined with an individual sense of sin which cannot face the judgment of God. The just (but wronged) nation can be saved by the manifestation of God's righteousness; its justification is an "analytical" proposition, which can only be regarded as a metaphor into the position which is its due; but, if the sinful individual, who cannot face God's judgment, is to be justified, the process must be different. His justification cannot be the declaration of what he is—the demonstration of the righteousness of the righteoua; it must be a synthetic proposition, which not only declares something about the sinner, but also does something for him, securing for him a new relation to God. It is worth noticing that those who attach to these OT passages about the nation, or the faith community, the heart of it, the explanation of St. Paul's δικαιωσφ αυτῶν—Ritschl, e.g.—also connect justification in the NT sense with the Church rather than the individual. The writer can only confess himself baffled with this. When St. Paul preaches his gospel of δικαιωσφ τεος, it is the gracious person, the person of God, whatever their shortcomings, are still in the right as against their pagan oppressors, and who can depend on God's righteousness to put them in the right—i.e. by one and the same divine act to justify and save them; or he preaches to individual sinners, Jew and Gentile alike, who are in no community but that of guilt, and of whom it must be said, if they are eventually justified, not that God has justified His injured people and vindicated their righteous cause, but that He has justified the ungodly. This would be itself enough to show that δικαιωσφ αυτῶν, as embodying the sum and substance of St. Paul's gospel, is not equivalent to God's faithfulness to His covenant obligations, or to His action regarded as the consistent carrying out of His purpose to bless and save His people, but something more original and startling—more congruous with the idea of a new revelation—than this.

4. St. Paul's meaning:—But there are other reasons which forbid us to attach St. Paul's δικαιωσφ αυτῶν to such OT passages as are referred to above. For one, St. Paul himself refers to none of these passages in expounding the δικαιωσφ τεος. He declares it to be witnessed to by the Law and the Prophets, and his favourite references are Gn 15 and Hab 2. There is not an allusion even to Ps 98. Further, as W. Boussset has pointed out,1 this conception of the righteousness of God fell, in later Judaism, wholly or almost wholly into abeyance.

1 In place of the merciful righteousness of God (the righteousness of God sympathetically interested in his wronged people), we find the predominant the distributive, forensic, disinterested righteousness.

The last epithets not only describe the change, but convey an unsympathetic judgment of it; but the fact referred to is indubitable. St. Paul had to face, as he would not like to face. Therefore, to popularize the idea, and to show that we who could lose the sense of their own demerit in the sense of membership in a community which could appeal to God as having a righteous cause, but to people who had to meet the living God standing alone, or only in a community in guilt with little or no relationship. The idea exhibited in Is 54:17 or Ps 93:2 would mean nothing for such people. If it were not unintelligible, it would be irrelevant; and, in spite of the powerful pleads that have been made for it by many scholars, it cannot be regarded as the key to St. Paul's mind.

This key may be found only if we concentrate our attention on the passage in which God's righteousness not only mentions but expounds the δικαιωσφ τεος, and if we observe the place that it holds in the connexion of his thoughts. This passage is Ro 3:21-32. The δικαιωσφ τεος is preached to a world which is ὑπεκύκλου τω υιω, liable to God's judgment—a world, as such, to feel the need of righteousness to vindicate them, but of condemned and unsaved men, who need a righteousness of God because they have none of their own. It is a righteousness bound up with and inseparable from the righteous Christ. His character as διαθησθαι. It is not something that we can seize and understand, apart from Christ, and inside of which we can then, consistently, make room for Christ. It is not enough to say with W. Sanday and A. C. Headlam:

1 There is one signal manifestation of righteousness, the nature of which it is difficult for us wholly to grasp, in the Death of Christ.1

The death of Christ is not 'a signal manifestation of righteousness'; in the sense in which St. Paul uses the term; that is to say, this death of Christ is the whole and sole revelation of the δικαιωσφ τεος as the hope of sinful men. Apart from it there is no manifestation of a δικαιωσφ τεος at all. And it is so because God has set forth Christ in His blood as διαθησθαι—i.e. either as a propitiatory sacrifice or in propitiatory power. There is a cautious way of declining to think out passages like this, illustrated, e.g., by J. B. Lightfoot in his Notes on Epistles of St. Paul (London, 1895, p. 272), and an impressionist or emotional way, illustrated conspicuously by G. A. Deissmann, in ch. 6 of his Paulus. Eine kultur- und religionsgeschichtl. Skizzes, Tübingen, 1911; but nothing is more certain than that St. Paul in Ro 3:21-26 was exerting his whole intellectual force, consciously and deliberately, and with a daring which drew back at nothing, in an effort to comprehend and explain the way of salvation for sinners abridged as δικαιωσφ τεος. This δικαιωσφ τεος and the ἡστηρσια are correlative terms. There would be no δικαιωσφ τεος for sinners but for the διαθησθαι. The διαθησθαι has two characters. It deals with sin for its remission; that is, it deals with that side which answers to God's will to forgive and save sinners. But it deals with sin as it is—as that terrible thing which, in St. Paul's conviction and in God's judgment, is one with death. When Christ died for sin—when God set Him forth, in His blood, a propitiatory power or sacrifice—then, and not till then (ἐν τω τοι τινα καρπω, Ro 3:25), was the διαθησθαι revealed to men. The way of salvation, as a way in which God gets sinful men right with Himself, and at the same time deals with sin as nothing less than the awful reality it is, now lies open for the world. From God's side the δικαιωσφ τεος covers the double truth that God is δικαιοσ (i.e. not indifferent to the sinfulness of sin) and διαθησθαι τω ἐπεισεδραν Ἡστηρσια (i.e. a gracious sin-forgiving God).2

We may perhaps best express this otherwise by saying that what is manifested at the Cross as the ultimate truth in the universe—the divinest thing in the divine—is love bearing sin. To whom does this appeal? It appeals to sinners, not to those who trust in themselves that they are righteous. For what does it mean? 1 Commentary on the Epistle to the Romans, 100, 1905, p. 35. 2 There is clearly visible here, what has played so large a part in doctrines of atonement, the idea of a harmonization of the divine attributes of justice (holiness) and mercy in the work of Christ. The δικαιωσφ τεος includes both.
appeal? It appeals for faith. When a sinner is confronted with the divine love in Christ bearing in on him, he is bound to be interested, to be curious as to what he is invited to do? What is the right thing for him to do? The only right thing for him to do is to trust that love unreceievedly, to cast himself upon it, to abandon himself to it, to stake and invest his whole being in it as the final reality in the universe. He is not to quibble about the morality of it, neglect the God of his own conscience, which was so much less wonderful might not meet the requirements on both sides. He is not to make himself worthy of such love before he trusts it. He is not to offer guarantees that, unhealthy as he will, he will prove worthy in the long run. He has simply, immediately, unconditionally to trust it: that is the one right thing for him to do. When he does so, then, in spite of all his sins, it brings him right with God. What he is, as a believer in Jesus, annuls what he was, as a sinner under God's condemnation. His faith in Christ the propitiation is reckoned to him for righteousness; and, in so reckoning it, God's judgment of the believing sinner is according to truth. There is no legal fiction when God justifies any more than when He condems; for, when the propitiation has evoked faith, the sinner is justified by faith/justly thought of in the propitiation He puts forth a power, or makes an appeal to the ungodly, which makes his true description henceforth 'him that believeth in Jesus.' And we must not minimize faith by arbitrary definition. Faith in St. Paul's writings is what faith was in his life—not a mere assent, not the attitude of a moment, but something in virtue of which his whole being was permanently absorbed in Christ who died. It includes entering into the mind of Christ with relation to sin, accepting the divine sentence on sin as it is brought home to the conscience in this way; and it is in this character that it is the basis of God's verdict. As believers in Jesus we are δικαιούμενοι, "righteousness" in δικαιοσύνη, which is that which regards it as the genitive of the author or origin. God provides the θεός which deals righteously with sin for its removal, and so appeals to men that they are brought into the right relation to Himself. This is the kingdom of God. Jerusalem and the temple— δικαιοσύνη—which the righteousness revealed in the gospel—is contrasted with any righteousness of our own, which we might have achieved out of our own resources. Twice St. Paul formally emphasizes this contrast. In one text he says of the Jews as wanting to establish 'their own' righteousness—

—to come to God, so to speak, invested in a goodness which they had achieved by statutory obedience (δικαιοσύνη τῆς ἑκάστου, Ro 10:6), and which rather made God their debtor than rested on a fundamental debt to God; and he formally opposes to this the δικαιοσύνη of his gospel. So also with special reference to his own case in Ph 3:19. Once he, like his countrymen in general, had sought to establish a righteousness of his own, and by human standards had been strikingly successful (ἐρήμωσιν ἡ ἑκάστου, 6:14); but there is always a profound delusion in the idea that we can be good without God. For a sinful man to think so is indeed the sin of sins as well as the most fatal of errors. But St. Paul had become a believer in the truth, and now found himself believing Christian his one desire was to win Christ and be found in Him, renouncing every other hope—"not having a righteousness of my own," viz. that which comes of the Law (τῆς ἑκάστου), but having that which is through faith in Christ, the righteousness which is from God (δικαιοσύνης ἀπὸ τοῦ θεοῦ) on the basis of faith. Righteousness is a gift, not an achievement; not as though it were a material thing, which could be handed over or transferred to one, but because it is the love of God which has made us Christ the propitiation part of our world, and through Him has made the appeal to sinners in yielding to which they enter into the right relation to God. Apart from the faith which yields to this appeal, sinners are not only condemned at God's bar; but on the basis of it they are accepted by God as δικαίους; the δικαιοσύνη has taken effect for them. It cannot be said too strongly that this is the whole of St. Paul's gospel. With Christ the propitiation on one side, and faith in Christ on the other, we have a situation which cannot and need not be supplemented. All the interests of 'righteousness,' in whatever sense the term may be taken, are covered by the δικαιοσύνη, which becomes ours through faith in Christ. Faith in the Pauline sense makes the tree good; and, when the tree is good, there need be no anxiety about its fruits. Protestant theology has undoubtedly erred in making so much of the distinction between justification and sanctification. The connexion is never more striking than in the one adequate inspiration for a holy life—the love of God is shed abroad in his heart through the Holy Spirit given to him. Experimentally or psychologically, indeed, there is no difference between these two things. To have an overpowering assurance of the love of God as it is revealed in Christ the propitiation and to be filled with the Holy Spirit are the same thing; and in that one thing lie the promise and potency of all forms of Christian goodness. Such goodness is never imposed; it is always inspired. It is never a matter of statutory obedience, but always of spontaneous inner impulse. It is a mistake, in speaking of it, to contrast faith and the Spirit, as if men were 'justified' by faith and 'sanctified' by the Spirit, according to a common construction of Ro 3-5 and 6-8. In St. Paul faith and the Spirit are one and the same; they are, in fact, two names for one thing. They are, indeed, the same thing contemplated in its human and its divine relations. Every Christian experience is at one and the same time an experience of faith and an experience in the Spirit. Keeping the commandments—yet we can always say of it 'I believe.' It is this experience that has the power and virtue of all Christianity—or, if we choose to say so, of all righteousness—in it. The only contrast in St. Paul is not one between faith which justifies and the Spirit which sanctifies; still less one between faith which justifies and the sacrament of baptism which regenerates; it is the contrast between coming under obligation to God from the very beginning for all that is called righteousness (whether justification or sanctification)—an obligation which is acknowledged from the very beginning of the Christian life. The Holy Spirit—and refusing to come under initial obligation to God, aiming rather, by the method of statutory obedience ('works of law'), at winning a righteousness of our own, for which we may make the world as much as we please, and carry on as if He were, under obligation to us. This is what St. Paul fought to the death in his own time as Pharisianism, and in essence it survives. It may survive even as a mode of religion—a moderate moralistic religion, emphasizing the importance of faith for sinful man it is a hopeless road. Chalmers spoke of it as 'that
independent natural religion which disowned Christ. For St. Paul to disown the propitiation, to lose its inspiration, to stand boastfully on one's own feet, was (for a sinner) the negation of every possibility of becoming δίκαιος παρὰ τὸ θεόν. If righteousness came into the way, Christ died for nothing (Gal 2:21). Christ Himself—Christ who fulfilled the Law, who kept the commandments of God and His fellowmen, let in the body of’ righteousness into the earth—(Gal 3:18); and it is because men are quickened through faith in Him that the just demand of God's law is fulfilled in them (Ro 8:35). To say fulfilled is them, not by them, is to speak from the religiously, as contrasted with the ethical, point of view; but the end attained is at once religious and ethical. God's justification is always justification characterized by life (Ro 5:1).

6. Difficulties of interpretation.—'Righteousness' may be considered as an actual or only as a possible experience of justice, as an aiming of the present or the future, as realized or contingent, and then certain questions arise in the interpretation of St. Paul which are at least formally difficult. Ordinarily the apostle speaks of the blissful state of those who enjoy it in the present. Men believe in Christ the propitiation, and doing so they become right with God. Justification—God's acceptance of believers as righteous—is spoken of in the past, and exhortations are based on it. Having therefore been justified by faith (Gal 2:20), and being justified, and being sanctified in Christ Jesus (Ro 5:19), they are, as it were, forever justified. This is a statement which goes to the very root of the apostle's thoughts; he thinks of Christians as having yet to stand at the judgment-seat of God or Christ, and of their open acknowledgment or acquittal— in the past. He speaks of the state of the world, and the believer is still in suspense. There is no more characteristic sentence in his writings than Gal 5:3: ἐκ πίστεως ἀπόκτενετε τὴν δικαιοσύνην ἀπεκδεχόμεθα. The emphasis ἐκ πίστεως has us who are Christians, as opposed to the Pharisaic Jews. This is our religion, and the only true one. Ἀπόκτενετε ἐκ πίστεως, 'in the spirit,' and ἐκ πίστεως, 'in virtue of faith,' indicate respectively the divine and the human basis of the standing Christian experience, each implying the other. In ἄμα δικαιοσύνην we see that ἄμα δικαιοσύνην, implying the whole plane of life which is the Christian life, is the result of faith, and the Christian believer, is the care of Christianity; and in ἀμα δικαιοσύνην we see that, in spite of the priceless- ness of the experiences of those who live by the Spirit and in faith, there is still a supreme blessing which keeps the soul eagerly expectant. That blessing too is God's final verdict in our favour. Perhaps there is no formal solution of the difficulty that we are justified by faith, and that our ultimate justification is in suspense—that we cannot be too sure of the pardoning love of God now, and yet that our final benefit from it is involved in unknown contingencies. It is an aggravation of the difficulty that the very apostle who is so insistent that righteousness is of faith apart from works of law is equally emphatic that men are judged at last according to their works (Ro 2:12-14); 1 Co 3:13.

So that he has sufficiently evokes the difficulty by such arguments as we find in Ro 5:6, and that the 'works' by which we are to be judged are not 'works of law'—acts of statutory obedience—but simply the moral fruits of our life. This is true, but does not entirely meet the case. The in case that the heaven is inv. same moment the close of the Christian life on earth, just like the propitiation at the beginning of it, is a way of making it indubitator that this religion is trans-acted in the world of moral reality from beginning to end. There is a sense in which religion transcends morality. Christ is the end of the Law; believers are not under law, but under grace; their righteousness is possible of becoming δίκαιος παρὰ τὸ θεόν. The Law is evoked and inspired. But, if any one thinks on these grounds that in Christianity he comes into a non-moral region, or one in which morality can in any way be discounted, the Cross and the Judge- ment-Seat are there to correct him. The whole system lies within the internal order, and the Law is not only (formally) annulled; it is (really) established. We have the same problem to face in the teaching of our Lord. In the reception of the Prodigal Son we see an illustration of justification by faith with a man who had broken (the 2nd) the Law; to man put right with his father simply by trusting in his father's love, and yielding to its inspiration. In the builders on the rock and the sand we see men judged according to their works, and we know that both parables are true. The difficulty is to realize that the Law is still all important, but this is the supreme lesson of Christ and His Apostle. It is involved in everything that St. Paul has to say of the δικαιοσύνην θεοῦ, alike as related to the δικαιοσύνην and to the βίαν τοῦ Ἱησοῦ.

1. Term and definition.—The concept of righteousness holds a conspicuous place in Christian literature, and, though it varies in content according to the nature of the subject spoken of, the central part of the concept is generally in sight. It frequently stands for virtue generally as implied in 'conformity to its law, or the divine or moral law.' In English we have the advantage of a separate term for that part of the concept which belongs to the sphere of law, but 'justice' is often practically a synonym for 'righteousness' in the wider sense, as may be seen in various instances in the English Bible.

The distinction between the narrower and the wider sense of the term is discussed by Aristotle. In the former aspect he regards it as the highest of the ethical virtues, being 'virtue towards another,' and therefore the opposite of 'vice towards another' (virtus). This is the principle which regulates the relationships of men to each other within a community or the State, it is both 'distributive' and 'corrective.' This is the restricted sense which the term usually bears in the language of juridically constituted community, it is not 'individual' on his own.' This sense of the word is frequent also

1 Ethik, bk. v.
in theology, especially when the relation of man to God and the moral order of the world is in question.

2. Righteousness in the history of Christian thought.—As to the conception of it in the course of Christian thought, it is, perhaps, a surprise to find that the line followed does not begin at the point reached in the Gospels and by St. Paul. The starting-point is rather to be found in the Apocryphal books of the Bible than in the New Testament, and it may be seen in Cicero and among the Stoics. Christianity, though continuing to give full proof of its power as a life to renew the world, undoubtedly fell to a lower level when the manifold gifts and activities of the first age had passed away. The lofty conception which had been purified and exalted by the new relation to God and the sense of divine onship which Christianity had established now became obscured, and a general drift towards a legalistic moralism set in. The tendency to regard Christianity as a new law had powerful support in many influences, both Jewish and heathen, but most of all in the common view of religion, which regards the relation to God as determined externally by the observance or non-observance of religious duties—a view which is probably the average one of religious thought generally. But righteousness falls to be so measured by external standards. Thus down to the Reformation the prevailing conceptions that come to light now and then wear the complexion of the Church system, which stood before the conscience as the authority of religion.

Two aspects of the subject have been much discussed which it is important to keep in view (the connexion between them was not apparent for a while, yet it is of the closest kind and has come to the front of late): (1) the place or function of righteousness in God; for an attribute of the Divine nature, and (2) righteousness as a quality required of man in the scheme of salvation. The course of thought on each of these points has been guided largely by previous assumptions in regard to God and man, partly ethical or philosophical. This will best be seen if we proceed as follows:

(a) Righteousness in the ethics of the ancient Church.—The general tendency to regard righteousness from the standpoint of law and moral or religious observance was in the ascendant all over the world in the second century. This drift is evident in the Jewish Christianity from the first; and it grew more and more predominant as the Church system was developed and claimed regulative authority over faith and conduct. The fall from the level of apostolic days is very perceptible in the early literature. Apocryphal and apocalyptic books which were widely read, the growth of the ascetic ideal, and other influences of the time led to an excessive emphasis on traditional ideals. We are safe in assuming that in the mind of the people righteousness was identified with the highest excellence according to current ideals. This had long been the common way of regarding it, and it continued to be so regarded even after philosophy set about defining the idea. The speculation of the schools had led to little positive result. The principle of a twofold conception of the soul and world is deduced by Aristotle in his classification of the virtues as intellectual and ethical, and which was taken up by the Stoics in their virtues of the wise man and those of the masses, has hindered the unity of the moral ideal. The complication was increased step by step, and now we find that the order of righteousness, and the nature of this justice, but definite ground was not reached till Aquinas.

The influence of Cicero and the ancient way of thinking is apparent in Ambrose, who adopts the four cardinal virtues of the ancients, and maintains that the Christian fulfils the ideal of the just and good man and his work is also an act of the order of the monastic vow. In Aquinas the varying elements of the moral ideal which floated before the ancient Church are reduced to apparent system, and in which the cardinal virtues of Aristotle he adds the three theological virtues of faith, hope, and love. Adopting the four cardinal virtues, he assigns to justice the duties of religion and neighbourly love. We have thus the ascending tendency of the three degrees, in which the highest is to be reached only by way of 'poverty, chastity, and obedience.'

While, however, we look in vain for any definite scientific conception in the ancient Church, there is no difficulty in ascertaining how it was commonly viewed. The two extremes, self-interest and natural that the practice of charity, so conspicuous among the Christian communities, and so great a power in winning the heathen, should be regarded as a means to, if not as righteousness itself, the result of the whole tendency of the Church, the giving of alms, and praises the giving of alms as an effectual intercession against a multitude of sins. This view is as old as Daniel (47). It is a commonplace in most of the early literature, Jewish and Christian. It appears as a variant on Mt 61, where some editors accept μετρητά έργα for μετρήτα ώργα.

It is in Lactantius, who has been called the Christian Cicero, that we find the fullest expression of the common view. Bk. v. of the Divine Institutes is devoted to 'justice':

'Although justice embraces all the virtues together, yet there are two, the chief of all, which cannot be torn asunder and separated from it—piety and equity. . . . But piety and equity are, as it were, the two horns of the bull of justice... All the righteous are not great against a suppliant, but to be bountiful, beneficent, and liberal.'

The influence of Cicero and the ancient way of thinking is apparent in Ambrose, who adopts the four cardinal virtues of the ancients, and maintains that the Christian fulfils the ideal of the just and good man and his work is also an act of...
death of the Son of God, who for this purpose became incarnate. The position is thus reached that all divine action must be subject to the law of righteousness, which is the supreme ethical principle in the theodicy. This doctrine has the greatest significance in the progress of theology, but it did not receive adequate recognition till the Reformation. In the confusion characteristic of the older ethics the true ethical ideal both for God and man, for the former not alone, but also for the latter, has been lost. It has been seen that power, will, and love in God are subject to an eternal law of justice which guards the order of the universe, a principle was found, fruitful in the best results, which casts a significant light upon the righteousness required of man. So long as the theory of a double morality held the field, moral obligation rested on external authority, on the will of superiors, and as a consequence the moral ideal lacked unity and coherence. This is seen in the Roman Catholic view of an ‘original righteousness’ given to primitive man and in the doctrine of an ‘infused righteousness’ assumed as the ground of justification. Both points were long the subject of keen debate, and they came ultimately to mark the dividing-line between Roman Catholics and Protestants. The chief point in the controversy was the question of whether the conception of righteousness is reduced to what is after all its essential elements, as that by which man is accepted and justified before God—the central problem of St. Paul’s theology. This is the main conception which figures in all subsequent theology. The Catholics affirmed that man is justified in virtue of a righteous disposition produced in his heart through prevenient grace, the Protestants maintaining that justification is grounded solely in the righteousness of Christ imputed to faith, and is not procured by merit in man. We thus arrive at the point where the NT leaves the problem and discover that the righteousness required of man is after all the righteousness of God.

(c) Righteousness in Reformation creeds. — In general outline the Reformation doctrine has held the field in all Protestant churches, and has been the present. The modifications which have come in, in the course of thought, belong mostly to the harsher forms in which it has sometimes been maintained. Opinion has varied considerably about ‘imputation,’ about the legal and forensic aspects involved by the ‘double righteousness’ of Modern and especially recent theology shows a notable advance upon the systems of the 17th and 18th centuries. Theory has come to follow more closely the lines of a living faith and experience. It is seen that Christianity secures not merely forgiveness and reconciliation, but righteous character and life.

3. Modern developments. — (a) The Grotian view. — The Grotian and Arminian view has significance as a protest against the harsher aspects of the Reformation view of righteousness. But the principle that law in God may be relaxed or set aside as His wisdom may determine, and that the Atonement is not a satisfaction to justice but a relaxing of penalty, fails to explain the necessity implied in the death of Christ. Grotius maintained that so far as churches down the ages might have forgiven men without atonement, it would have been unsafe to do so in the interest of creation—a view advocated in some modern theories of atonement.

(b) The Socinian view. — The Socinian view of the Atonement is that justice is a necessary attribute of God, and maintains that forgiveness is open to all on repentance and obedience.

(c) Schleiermacher. — Schleiermacher’s view is suggestive as opening lines which recent thinking has followed. With him justice belongs exclusively to the ‘connexion between sin and evil’. It is known to us through the consciousness of sin, and covers the whole sphere of human experience, and thus far it is involved in the order of man’s world, but the function of justice is diminished or displaced through the redemptive agencies which radiate from Christ.

(d) Ritschl. — With Ritschlian retributiveness and punitive justice has no place in the material and religious sphere. The righteousness of God is ‘simply the consistency with which His love provides for the good of men.’ This view subordinates justice to love to such an extent that the former cannot have a separate function in the moral order of the world. Yet, if it is maintained that the love of God in creation and redemption always reaches wise, holy, and righteous ends, righteousness must be implied in all manifestations of love. Thus all the data of the problem, if fully considered, favour the contention that justice is an immutable quality in God and the world. See, further, art. RITSCHLIANISM.

For the juristic conception of righteousness specially useful are: K. Hildenbrand, Gesch. und Syst. der Rechts- und Staatsphilosophie, Leipzig, 1890; A. Trendelenburg, Naturrecht, do. 1865; J. Lorimer, Institutes of Law, Edinburgh, 1890; H. Spencer, Justice, London, 1891.

In recent theology may be noted books on atonement where aspects of righteousness are given, especially those of R. W. Dale, The Atonement, London, 1878; J. Mead Campbell, Nature of the Atonement, do. 1878, and C. R. Moberly, Atonement and Personality, do. 1907; also T. Erskine, Atonement, 2 vols., Edinburgh, 1907; H. T. Paton, The New Man, Edinburgh, 1877, and W. Sanday and A. C. Headlam, The Epistle to the Romans (ICC), do. 1902, where the ‘exegetical tradition’ on St. Paul’s doctrine is discussed.

A. F. SIMPSON.
ROUGHTINESS (Egyptian)

Accordingly, the Elouent Peasant, addressing the seemingly unjust Reni, ironically asks:

'It is not wrong, I suppose, a balance that is away, a tongue of a balance that is falsely, a righteous man that has sworve from the right path?'

An official describes himself as:

'A man of truth (or righteousness) before the Two Lands, irritable and violent like Thoth, even more accurate than the plummets, the likeness of the balance.'

A frequent boast of the high official of the Old Kingdom is:

'Never did I judge two brothers in such a way that a man was deprived of his father's property.'

An Old Kingdom noble asserts that he was straightforward in the royal presence and free from falsehood.

'Speak the truth which the god loves every day. The scribe Ta/hotep renounces one to act in accordance with might, free from falsehood. A well-known XVIIIth dynasty official claims to have been free from iniquity, accurate of mind, with no lie in him.

'Speak the truth (méset), do right (méset) for it is great, it is mighty, it is enduring,' an utterance ascribed to the sun-god Re himself.

'I have not spoken lies knowingly,' says the deceased to Osiris.

'I have not spoken lies' is one of the statements in the Assertion of Sinlessness.'

(3) Justice.

The viziers, nomarchs, and high officials are depicted as often acting in an unrighteous manner. The officials were expected to exhibit a high standard of justice. We are informed that 'men expect the exercise of justice in the procedure of the vizier.' The vizier must not be wroth with a man wrongfully; he should be wroth only with what one ought to be wrath with. He must deal with petitioners in accordance with the law and equity and help them to their rights. The petitioner must not be able to say when the verdict is pronounced: 'My right has not been given me.' Again, the vizier must not be a respecter of persons or show partiality, for he is the god among men. He must not, however, go to the other extreme and act like the vizier Akhthoi, who discriminated against some of his own kin in favour of strangers, in fear lest it should be wrongly said of him that he favoured his kin dishonestly; 'that,' we are informed, 'is more than justice.' The ideal judge must be 'a father of the lovely (noub), a husband of the widow, a brother of the forsaken, the garment of the motherless ... who comes forth at the voice of him who calleth.' If such an one veils his face against the violent, who shall repress the heart of the oppressed? A judge must be as unerring and impartial as the balance.

RIGHTEOUSNESS (Egyptian)

Book of the Dead, both in the 'Introduction' and in that part of it which is sometimes called the 'Negative Confession,' but happily often, and wrongly, the 'Negative Confession.' Among the sins there denied are murder, incitement to murder, robbery, theft, oppression, impiety, lying, slander, dishonesty, avarice, haughty temper, pride, licentiousness, eavesdropping, impurity (adultery and unmixed purity), and a number of ceremonial transgressions. A more detailed picture of a righteous man according to Egyptian standards can be obtained from the funerary accounts of the dead inscribed upon their tombstones and upon the walls of their tomb-chapels, and also from the stelae scattered about the literary compositions of the Middle and New Kingdoms. The good qualities most usually claimed by or assigned to the dead, or commended by the sages and men of letters, apart from those already fully discussed, are: (1) generosity and beneficence, (2) avoidance of slander, (3) honesty and fair dealing, (4) faithfulness to superiors, (5) hospitality, (6) piety towards the dead, (7) sexual morality, (8) regard for old age, (9) regard for parents, wife, and near relatives, (10) good temper, (11) avoidance of robbery, (12) fear of the dead, (13) love and avoidance of pride, (14) discretion and avoidance of loquacity, (15) avoidance of crimes of violence. (1) Generosity and beneficence.—These qualities were admired in no less than in modern Egypt. Aspiration for the following formulas frequently occur in inscriptions of the funerary and subsequent period: 'I gave bread to the hungry, clothing to the naked, I ferried him who I found without a boat.' Sometimes in addition the deceased claims to have 'given sandals to him who was naked, a cloak to him who was without a cloak of oxen, and corn to him who asked for it.' A high official of the Middle Kingdom tells us that he gave corn to the whole land and so rescued his city from hunger. 'No other,' says he, 'has done what I did.'

The nomarchs of the feudal age constantly boast of their beneficence. One of them thus describes his rule:

'I gave bread to the every hungry person of the Cerastes-Region. I sold this land either with the corn thereon or paid for it. Moreover, I filled its shores with large cattle, and its weary meadows (7) with well-fed cattle. I never deprived a man of his property so that he complained of it to the god of his city. . . . Never did a man fear because of one stronger than he, so that he could command more than he was able.'

Another nomarch, after making similar claims to beneficence, assures that he gave to the widow as to her who possessed a husband, and that he did not favour the great above the little in all that he gave. A great official in the reign of Thutmosis III, deplores his rule as follows:

'Father of the poor; judge of the orphan; protector of the weak; avenger of him who has been deprived of his possessions by one who is stronger than he; husband of the widow; shelter of the orphan; place of repose for the weeper; . . . praised because of his character; one whom respectable persons thank because of his merit; one for whom health and life are besought by all people.'

(2) Avoidance of slander.—Harkhuf, nomarch of Elephantine, says of himself:

'Never speak I anything evil unto a powerful person against any people, for I desired that it might be well with me in the presence of the king.' But happily often, and wrongly, the 'Negative Confession.' Among the sins there denied are murder, incitement to murder, robbery, theft, oppression, impiety, lying, slander, dishonesty, avarice, haughty temper, pride, licentiousness, eavesdropping, impurity (adultery and unmixed purity), and a number of ceremonial transgressions. A more detailed picture of a righteous man according to Egyptian standards can be obtained from the funerary accounts of the dead inscribed upon their tombstones and upon the walls of their tomb-chapels, and also from the stelae scattered about the literary compositions of the Middle and New Kingdoms. The good qualities most usually claimed by or assigned to the dead, or commended by the sages and men of letters, apart from those already fully discussed, are: (1) generosity and beneficence, (2) avoidance of slander, (3) honesty and fair dealing, (4) faithfulness to superiors, (5) hospitality, (6) piety towards the dead, (7) sexual morality, (8) regard for old age, (9) regard for parents, wife, and near relatives, (10) good temper, (11) avoidance of robbery, (12) fear of the dead, (13) love and avoidance of pride, (14) discretion and avoidance of loquacity, (15) avoidance of crimes of violence. (1) Generosity and beneficence.—These qualities were admired in no less than in modern Egypt. Aspiration for the following formulas frequently occur in inscriptions of the funerary and subsequent period: 'I gave bread to the hungry, clothing to the naked, I ferried him who I found without a boat.' Sometimes in addition the deceased claims to have 'given sandals to him who was naked, a cloak to him who was without a cloak of oxen, and corn to him who asked for it.' A high official of the Middle Kingdom tells us that he gave corn to the whole land and so rescued his city from hunger. 'No other,' says he, 'has done what I did.'

'Never speak I anything evil unto a powerful person against any people, for I desired that it might be well with me in the presence of the king.'
RIGHTENESS (Egyptian)

moralists warn the young against prostitutes. A 12th Dynasty monarch of Cuse maintains that he 'never passed a night of shame.' Another Old Kingdom monarch asserts that he never, since he was born, caused any man to pass a night of shame, i.e. never committed sodomy.1 A person named Akhthoi, who lived during the Late Kingdom, 'did not lust after the wife of a man nor covet the hand of one whom he had loved.'2 Verily,' he adds, 'a man of good birth who does this—he father deserts him in the law-court.'4

(8) For the remaining qualities see art. ETHICS AND MORALITY (Egyptian), § 13.

4. The Pharaoh as the upholder of righteoussness.—The Pyramid Texts, the most ancient religious writings that we possess, the so-called Pyramid Texts, the chief qualification for the Pharaoh to the realm of the sun-god was physical purity.3 Magic also played a great part in furthering the welfare of the dead, the Pyramid Texts themselves being for the most part a collection of powerful spells which enabled him for whom or by whom they were received to rule the celestial kingdom. But even in these very ancient texts more than mere physical cleanliness or magical power is sometimes demanded; the deceased must also be righteous. Thus we find that the ceremonial washing of the dead king by the four gods who preside over the Pool of Kenset, or by the Worshipers of Horus, is a most important ceremonial act. It has also an ethical significance. During or following the ablutions a spell asserting the righteousness of the deceased is recited.5 The ghostly ferryman who conveys the dead over to the Field of Eau is thus addressed:

'O thou who stirrest over the righteous who hath no boat, ferryman of the Field of Eau, this N. is righteous before the sky, before the earth, this N. is righteous before this island of the land whither he hath swum and whither he hath arrived.'

The claim of the deceased to be righteous had of course to be tested, and in the imagination of the Egyptians, with their innate love of litigation, the test naturally took to the legal process. There are already in the Pyramid Texts allusions to the posthumous trial;6 but many of the inscriptions on tomb-stones and tomb-chapel walls of officials and private persons from the 12th dynasty onwards are explicit on this subject. On the one hand, the deceased had to advert to the facts of the legal process. On the other hand, the deceased himself claims to have been virtuous, 'because I desired that it might be well with me in the presence of the great god,'7 or 'in order that I might offer righteousness to the great god, the lord of heaven.'8 For the rewards of the righteous after death and the punishment of the unrighteous see below, § 9 (1) (f.)—(v).

6. The sun-god and righteousness.—(1) The sun-god as the creator and champion of righteousness.—Breasted has clearly shown that 'the great god' of the above-quoted texts, the divinity who first came to be regarded as the champion of righteousness and the judge of the dead, was not Osiris, but the Heliopolitan sun-god Re-Aotum;9 indeed the sun-god is said to be 'who fashioned (ms) righteousness.'10 Accordingly we read in a Middle Kingdom Coptic Text:

'1 am Re who came forth from Nun... My detestation is wickedness, I behold it not... I am he who made righteousness.'11

(2) The sun-god lives on righteousness.—The sun-god not merely created righteousness, but is said to ‘live’ (i.e. feel) on it, just as the Nile-god, Hapi, is said to live on fish. 1 In a hymn to the sun-god we find that:

'I have come unto thee, lord of gods, Atum-Re'Harakhete, that I may present unto thee righteousness, for I know that thou art best thereon. It was the business of certain gods to present, or lift up, righteousness to the sun-god (i.e. keep him supplied with his mystic anustance). The sun-god ascends each day to commune with the gods who offer righteousness to Re'. 2 We also hear of ‘these four apes who sit in the forepart of the boat of Re', who lift up righteousness unto the entrance of All. 3 The goddess Sakokmak-Uastat is said to ‘stand in the prow of the boat of the Father (the sun-god), overthrowing his enemies and placing righteousness to the sun-god as he passeth.”

(3) The sun-god loves righteousness.—The sun-god, we are told, loves righteousness and truth, 4 and what he abominates is wickedness. 5 ‘More acceptable’ in his eyes is ‘the nature of one just of heart’. ‘He that doeth right is acceptable’ is understood by him. 6

(4) The sun-god and the balance.—The Middle Kingdom Coffin Texts and the Book of the Dead depict the sun-god, in his capacity of judge of the dead, as weighing righteousness in a balance, i.e. testing the righteousness of the dead. 7 In the Osiris myth he is required to render, before the council of divinities, the true version of the judgment. The balance occupies a very prominent place. 8

(5) ‘The place in which judgment is had’.—The texts of the early feudal age which speak of ‘the place in which judgment [by the sun-god] is had’ do not inform us where that place is, and the Pyramid Texts are equally unenlightening. According to a Middle Kingdom Coffin Text, 9 the posthumous trial took place in the cabin of the sun-god’s celestial ship. It is possible that this idea that the two ships of the sun-god were named the Two Rights in the Pyramid Texts. 10 Cf. also the statement: ‘The tongue of this Pfo of is as that of the Right.’ (Middle Kingdom Book of the Dead.) 11

(6) The sun-god as the ideally righteous king.—The sun-god, according to the myths, was the first king of Egypt. Owing to his close association with righteousness and with the kingship, he came to be regarded as the prototype of the Egyptian sovereign. The pattern for all would-be just and righteous Pharaohs. 12

Thus Amenemhet I is described as coming ‘that he might abolish iniquity, gloriously appearing as the sun-god (Atum) him’ (cf. Ps. 80:4 and 85:10).

In a literary composition of the feudal period a sage is represented as contrasting the disastrous reign of a weak Pharaoh with that golden age when the sun-god, the ideal king, ruled over Egypt. He is declared as ‘the shepherd (lit. “herdsman’) of all men, with no evil in his heart.’ ‘Where is he to-day?’ he asks. ‘Does he sleep perchance? Behold his might is not seen.’ 13 Judging from these words, the sage is looking forward to the reign of the sun-god to reign once more on earth, or to the advent of a king whose rule will be like that of his divine prototype. 14

7. Osiris and righteousness.—(1) Osiris originally the type of all dead kings. —In the earliest religious literature Osiris appears most usually 1 in the role of the living, or of the righteous king and sovereign in any excellence, 2 the ethical nature and judicial functions of the sun-god not being accredited to him till the period after the Vth dynasty, when we find that, owing to the growing popularity of his cult, he has passed from the position of dead king to that of living, or of the righteous king and sovereign. 3

(2) Osiris as king and judge of the dead.—The Pyramid Texts sometimes depict the dead Pharao as administering justice, 4 and Osiris, as a dead king, would have acted in a similar capacity. His promotion to the kingship of the dead was naturally accompanied by a corresponding advancement of his judicial status, which also would have been further facilitated by the myth that depicts him as the prototype of all who have emerged triumphant from their posthumous trial (see below, § 5).

(3) The influence of the Osiris myth on Egyptian ethics.—It cannot be doubted that the Osiris myth, with its account of the god’s murder, of the unjust accusation brought against him, and of his final triumph before the judicial council at Heliopolis, has had a far-reaching influence on the ideas about righteousness and justice, not unrighteousness and injustice, must ultimately prevail. The myth, therefore, must have played a great part in the development of those highly ethical ideas which find frequent expression, as we have already seen, in the inscriptions and literary compositions of the feudal and subsequent periods. 5 Thus Ptahhotep could say with confidence:

Great is righteousness, lasting, and prevailing; it has not been disturbed since the time of Osiris. 6

(4) Osiris as the god of righteousness.—Osiris, having assumed the judicial office of the sun-god, acquired likewise his ethical character. He is therefore called ‘the great god, the lord of righteousness, who lives thereon’; 7 or the sole god, who lives on righteousness. 8 I present righteousness before thy face, saith the deceased Honoer, ‘for I know that thou livest thereon.’ 9 Osiris is described as ‘satisfied with righteousness . . . thou whose abomination is lies.’

A Middle Kingdom official named Akhiatho says: ‘I received him who made petition to me. It is what the god (i.e. Osiris) spared apart from the crime that he has minted during the magnum of the same period, informs us that he ‘gladdened the god (Osiris) with righteousness.’ 10

Finally Osiris appears like Re' as the creator of righteousness, for a Middle Kingdom Coffin Text represents him as saying:

‘I am he who created Re', my abomination is iniquity . . . I am Osiris, the god who made righteousness, I live thereon.’ 11

8. The solar quality of righteousness ascribed to other deities than Re' and Osiris.—(1) Like earthly judges, 1 the judge of the dead, in the person whether of Re' or of Osiris, had a body of

1 In Ppy. 1529b, b. Osiris is called the ‘lord of righteousness’ (see also Breasted, Religion and Thought, p. 173).

advisers to assist him—the judge, or judicial council over which he presided. Probably the judgment seat was elevated, so that he might weigh with the balance of the day of reckoning, refers to that body. The same ethical qualities and judicial functions were attributed to these assistant councilors as to the presiding judge.

(2). The 'scribe of the gods,' and vizier of the sun-god, who acted as recorder to the solar and Osirian tribunal, describes himself thus: 'Pate of hands, lord of purity, who drives away evil; the son of the sun-god is belaboured, who is lord of the lords... the lord of righteousness; who makes triumphant the weak, who protects the oppressed.'

(3) 'The four aces in the host of Re, in which, according to one account, the posthumous trial took place, are thus described:

Who judge between the oppressed and the oppressor, who live on righteousness, who swallow righteousness, who are dead of bug, whose abominations is inequity.'

(4) The celestial ferryman 'Turn-face' loves righteousness and hates inequity.

(5) The assessors of Osiris in the Broad Hall of the Two Truths are those in whose bodies there is no one who lives on righteousness in Heliopolis. The same gods are addressed as 'lords of righteousness, free from evil.'

(6) The crocodile-gods, who wound the sinners that are behind Hetedpeskus, are also entitled 'lords of righteousness.'

(7) The appellation 'righteous ones' is given to the inhabitants of the Osirian kingdom.

(8) The local gods, who for political reasons, were identified with the sun-god, naturally acquired his ethical qualities, in process of time nameless, and to any divinity.

All this would have created, a general feeling that the gods were on the side of righteousness and opposed to evil.

A deceased person, e.g., speaks of his city god as a 'lord of righteousness,' and accordingly one who was oppressed would appeal to his city god to right his wrong. 'Pharaoh of Memphis is commonly entitled 'lord of righteousness.' It is said of him that 'he will not ignore the deed of any man,' and he is represented as righteously chastising sinners, smiting with blindness him who swears falsely. The Thoth Amun, who is said to be 'contended with righteousness,' likewise punishes the sinner. He assigns him that sin against him to the fire, the flock to the West. Of the 'righteous man,' it is said that 'he acts according to righteousness.' The Peak of the West, we read, 'smiles with the smiting of a savage lion; he pursues him that is without measure and without aid. 'Simples of Elephantine, it should be noted, states, 'the god who is opposed to the antithesis of the righteous deeds, that he did what all my gods love,' and the deceased in the Book of the Dead and Osiris and his assessors claims to 'have done that wherewith the gods are pleased.'

9. Incentives to righteousness.—(1) The posthumous judgment.—Breasted rightly points out how great a temptation in the interests of virtue was the belief in a judgment after death. 'I desired that it might be well with me in the Great God's presence,' says Harkhuf, a 51th dynasty monarch of Elephantine, when recounting his righteous acts. (2) The judge of the dead, in the person whether of Re or of Osiris, loves righteousness and hates evil.

Dehthotep, when stating that he has not injured anybody, informs us that 'the god loves righteousness.' Senenmut 'spake the truth to the god who is loveliness, he who loves good and hates evil. What the god loves is the doing of righteousness,' says Ini of Dehaahibah. Says Khentenu- er: 'I have not committed evil; I have gladdened the god with righteousness.' Intef, son of Sont, 'wrought not evil against men, it was the god who gave it.' A certain Ahiut, 'received him who made petition... (For) it is what the god loveth upon earth.'

(ii.) Dulls after death was for those who have done 'what their gods praise,' 'what men command and what the gods are pleased with.' When the deceased entered the judgment-hall of Osiris, he must be able to offer righteousness before the face of the god; his heart must be righteous, without iniquity.

'Requiescet' to the Ellegant Poet, 'is for eternity: it descends with him who does it into the necropolis, when he is wrapped and laid in the ground. His name is not effaced on earth, he is not blotted out because of the good. That is the summing-up of the god's word.'

(iii.) The following remarkable passage gives us considerable insight into the ideas about future accountability entertained by the religiously disposed during the historical period:

'As for the godly Council that judges oppressors (trypy), thou knowest that they are not lenient on that day of judging the wretched one, at the hour of performing (their) functions. Unhappy is he who is arrayed as one cousin of (sin) and not thy heart with length of years. They regard a life as an hour. A man remains over after death; his sins are laid beside him and his wrongs are before the face of the judge. He is a fool who has made light of it. As for him who has reached it without doing unrighteousness, he shall abide forever like a god; stepping forward boldly like the lords of Eternity.'

No less highly ethical conceptions about rewards and punishments after death are to be found in the so-called Stela of Khamrau, a composition of the Graeco-Roman age:

Setne (Khamrau) saw two temples—that of a rich man, who, furnished with a magnificent mortuary equipment, was being given to his deities in the necropolis, and that of a poor man, who was wrapped in a mat and had none to walk after him. Setne then exclaimed: 'Pharaoh, the good god, the better it shall be in Amen for great men, for whom they make glory with the voice of singing, than for that poor man whom they take to the desert necropolis without glory of funeral!' However, Setne's son Si-Osiris took his father down into Amen in order that he might see what really did happen to these two men in the hereafter. 'And Setne saw (there, i.e. in the seventh hall of the Tei) a great man clothed in raiment of byzantium, near the place in which Osiris was, he being of exceeding high position (i.e. bishop) and Si-Osiris said to him, 'My father Setne, dost thou not see this great man who is clothed in raiment of royal linen, standing near the place in which Osiris is? He is that poor man whom thou sawest being carried out of Memphis, with his followers following after him, with a banner brought to the Tei and his evil deeds were weighed against his good deeds that he did upon earth, and it was found that his good works were more than his evil, and he was called before the Tei and was judged as righteous before Osiris and was brought before Osiris and his assessors before the Tei and was judged as righteous before Osiris, then was he the burial outfit of that rich man, whom thou sawest carried forth from Memphis with great

Righteousness (Egyptian)

An XVIIIth dynasty magnate thus admonishes visitors to his tomb-chapel: ‘I have given to my character the qualities which it shall be profitable unto you. Your life shall be long upon earth, ye being in health; ye shall pass your years in happiness.’

1 Of course the Old Kingdom inscriptions call for forthright justice to the righteous for the sake of long life upon earth. 2 His father’s advice to King Merenre: ‘Do right, for thou mayest live long in the land,’ has already been quoted in §. 3 ‘Long lived is the man whose rule is righteous,’ says the sage Ptaahhotep. 4 The scholars say that the word ‘righteous’ is a set phrase, a formula, the only meaning of which is that there is no house for the cove. 5 ‘Wrong-doing,’ says Ptaahhotep, ‘makes his far from away with riches. He has wronged Amenti, and his name will not be written in the book of the dead.’

4 As a further indication to be virtuous, this eminent practical teacher advises that the righteous man will, when he sits in judgment, have before him the image of the king, and that his tongue will be bitter to him. 6 ‘That righteous man will be made to sit in judgment over it (the rule),’ he says. 7 As a further inducement to be virtuous, this eminent practical teacher tells us that the righteous man is to make a will, ‘of us, do we express it, the will is not a living house. 8 Amen. 9 The words of the Thoth, son of Aten: ‘The right of right is breath for the nose.’

10 The reward of righteousness was also meant to endure out the life on earth, at the hands of the gods who will not ignore the deed of any person. 11 They bring misfortune upon the sinner, cause him to fall a victim to a crocodile in the water or to a snake on land, or smite him with disease. 12 However, they show mercy to him that repents and restore him to health. 13 (4) Other rewards—(i) The righteous man was said to be rewarded with a ‘goodly burial.’ 14 King Akhthoi says to Merikere: ‘Make stately thy castle in the West, adorn the palace in the Necropolis as one who is just, as one who doth righteousness.’

15 Those who have regard to the character of Ineni and follow his good example will rest in their seats of eternity. 16 For the importance attached by the Egyptians to a properly conducted funeral see the oft-repeated request in the funerary formulae that the deceased may be buried well or granted a ‘goodly burial.’ 17 (ii) The heir or heirs of the righteous man succeed to his possessions and offices, 18 and his house abides for ever. 19 ‘Make righteousness to flourish and thy children shall live, Ptaahhotep says. 20 (iii) The righteous man’s name endures in the mouth of men; 21 it is not effaced on earth, and he is remembered because of the good. 22 Doubt prays, ‘May the memory of me abide upon earth,’ and Ineni, who did ‘what his city god loves,’ tells us that he who possesses perseverance and worships the gods in due order is good in the mouth of the living, the remembrance of him for ever: ‘All that is expedient,’ he says, ‘is that we use the name and the character of his character, in accordance with what he has done on earth.’

5 (5) The desire to stand well with the Pharaoh—The source of all promotion and honor was the Pharaoh. As representative of the sun-god on earth, he was the ‘lord of righteousness.’ 23 Men must therefore work righteousness to win his favour.

'I did righteousness for the Lord of Righteousness,' says an XVIIIth dynasty official, 'for I knew that he pleased with it.'

Nothing in Osiris' biography tells us that he was beloved by his lord (the king) because of his excellence. 2 A XIXth dynasty gentleman did the right thing that the king loved; 3 and of a XIXth dynasty official it is related that 'she expended her royal property with the estate with the king because of her righteousness.' 4

One of the results of winning the royal favour was the much coveted 'goodly burial.' 5

Djehut says: 'My heart was excellent for my lord (the king), that I might rest in the high land of the noble ones who are in the necropolis.' 6

(6) The desire to stand well with the community.

The Egyptian was intensely anxious, not only to stand well with the king, but also to have the esteem of his fellows. This was another powerful motive, displaying at least outward rectitude. 'I am one who spake good and who repeated what is loved,' 7 and similar assertions, occur over and over again in inscriptions of the feudal period.

E.g., 'I said what the great love and what the commonalty praised.' 8 'I am one who was beloved of all the people. I am one who did that which men praise.' 9 'I never did what all men hate.' 10 'There was not found one who hated me in the presence of the gods.' 11 The praise of one's father or one's mother, honoured by his companions, dear to his brethren, whose servants loved, 12 was one of the reasons, after mentioning his virtues, declares that men when speaking of him exclaimed: 'Would that the earth were full of people like him!' 13 An official of the Middle Kingdom opined that 'he was beloved in a year of scarcity.' 14 'Order that my name might be good.' 15 'I was a shepherd (lit. 'herdsman') of the sort;' he adds, 'in order that my name might be good in the mouth of the [the sfera] city.' 16 Khemeredi says: 'I gave provision unto him who begged it, herbs to him who was sick, food to him who was hungry, and I knew, that my name might be good in the mouth of those who are upon earth.' 17

Public esteem not merely gratified a man's pride while he was yet alive, but it was of practical value to him after death. If his name was good in the mouth of his contemporaries, it added to the renown of his eternal, because of his virtues, visitors to his burial-place would more readily present him with those offerings upon which his welfare after death was imagined so largely to depend, or, in lieu of material gifts, would at any rate repeat for his benefit certain prescribed formularies. Accordingly we find:

'Ye who live and exist . . . ye love life and hate death, ye shall offer to me that which is in your hands; if there be nothing ye shall speak a thousand words, a thousand of bread and beer, etc.' 18 'May my name be good unto men who come in after years,' says Djehut, 'may they give me praise for the favour of the gods.' 19

The desire to secure these advantages was undoubtedly one of the chief reasons for inscribing upon his tombstone, or upon the façade of his tomb-chapel, the enumeration of the deceased's virtues and the account of the esteem in which he was held by his fellow-men.

(7) Conscience.—On the conscience as a stimulus to virtuous living see art. ETHICS AND MORALITY (Egyptian); see also Breasted, Religion and Thought, pp. 297 f., 354.

10. Justification of the dead. — (1) Osiris the praiser of the justified dead. — The epitaph 'justified' (my k 3 r = lit. 'righteous of voice') is a legal term, 20 and was applied to Osiris when, thanks to the skilful pleading of Thoth, he had won case against Seth before the tribunal of gods at Heliopolis. 1 After the IVth dynasty all dead persons were identified with Osiris and from that period onwards had the Osirian epithet 'justified' appended to their names. 2

(2) Methods of obtaining justification. — All manner of means were adopted by the Egyptians to obtain justification at the posthumous trial, most of them utterly inconsistent, from our standpoint, with the ethical theory of the hereafter; and yet, in view of the prevailing magico-religious ideas, a natural consequence of that theory having been accepted.

The deceased, who was identified with Osiris, would inevitably have come to be regarded as righteous, though without any special claim of his own to sinlessness—his personality and acts would have tended to become merged in those of the god.

(i.) The pilgrimage to Abydos. — Probably with a view to ensuring this identification after death and securing the benefits resulting therefrom it was considered advisable to associate oneself with Osiris during life. Hence the pilgrimages to Abydos and to the supposed burial-place. 3 We are definitely informed in one instance that the object of the pilgrimage was the 'fetching of the justification.' 4 After the legal formality might be undertaken after death with the same desirable results.

(ii.) The mysteries. — Similar advantages accrued to him who had participated in the Osiran mysteries. 5

(ii.) Parishes. — People could also be made righteous, so as to obtain the necessary influence, by paying the ceremonial ablations. A person could perform them for himself during his life-time in special secret places; or, in the event of his death, after burial, they were prescribed for him after death by divinities, human beings impersonating divinities, 6 or even by himself. According to the Book of Breathings, the deceased, before he entered the Furnace of Eternity, is cleansed from all evil, from every abomination, by the goddesses Uto and Nekhbet, and receives the name 'stone of Righteousness.' 7

(iv.) Magical formulae, etc. — Spells were considered to be specially efficacious in obtaining justification for the deceased. One famous example is the voice of the Book of The Dead, as the complexion and opening words of the 'Introduction' show, was a spell that enabled the deceased to appear blameless in the eyes of Osiris and his assessors.

Similar spells are the claims of the deceased to have participated in the Osiran mysteries, 8 to have undergone purgatory ceremonies, 9 or the assertion that he is this or that god and therefore righteous. 10 Again, he would be justified if, to his accompaniment, the prescribed formula, his head was crowned with the 'wreath of justification.' 11 Cf. also the so-called 'heart-scarab' with the inscription inscribed upon it, 12 the powerful words of the formula, however presented in them, however untrue they might be, became actualities. 13

II. The triumph of evil over good. — This aspect of the problem of good and evil is treated in art. ETHICS AND MORALITY (Egyptian), and very fully dealt with by Breasted, Religion and Thought, p. 188 ff.

RIGHTEOUSNESS (Greek and Roman)

show that one of the reasons why the author of this 'pessimistic' poem desired death was that he looked to have his wrongs righted in the hereafter. This point has been passed over by Garstang, The Priesthood (Egyptian), pp. 314-316.

12. Administration of justice.—(1) During the Old Kingdom.—There was no clearly defined class of professional judges, all judicial functions being performed by the administrative officials, who were supposed to be learned in the law. Certain of the Upper Egyptian provincial governors probably held the title of 'magistrate of the ten of Upper Egypt,' as if they were members of a special council of ten. The officials who acted as judges in the provinces were formed into six courts of justice, the so-called 'six great houses.' At the head of the courts, indeed, of the whole judicial administration, was the vizier in the capacity of the chief justice. Many of the judges bore the predicate 'mouth of Nekhen.' Disputes about the ownership of land seem to have been a frequent cause of litigation. It seems that, even at this early period, all cases had to be submitted to the court in writing. Special cases of a private nature were heard by the chief justice and a 'mouth of Nekhen.' When the queen of Pilo, was accused of treason, she was tried by a specially constituted court, consisting of 'five men of Nekhen,' without the chief justice. Under certain circumstances a litigant could appeal directly to the king.

(2) During the Middle Kingdom.—As in the previous age, the administrative officials acted as judges, while the vizier still held the position of chief justice, although he no longer bore the title of justice at the capital of every nome, presided over by the local prince. We learn that the 'six great houses,' with the vizier at their head, sat in 1st Towe. There existed at this period officials with the sole title of 'justice.' These were called 'judges,' and their functions were held within a restricted local jurisdiction. There were now more than one 'ten of Upper Egypt,' and 'magistrates of the tens of Upper Egypt' were entrusted with various executive and administrative commissions by the king; we do not know with any certainty what was their connexion with the judicial administration.

The Story of the Eloquent Peasant shows us how a high official dispensed justice during the feudal age. He was assisted by a 'court' to whose charge he handed over the great man paid little heed. This council, be it noted, is depicted as being thoroughly in sympathy with the defendant, the truth being, probably, because he was a member, though quite a subordinate one, of the 'official' class.

(3) Under the New Empire.—As during the Old Kingdom, there was no class of judges with exclusively legal duties, justice was still dispensed by the administrative officials. The vizier was, as before, the chief justice. He held a daily sitting in his audience hall, the great council. The first step in all legal proceedings was the claimant to lay his case in writing before the vizier in this court, where also the vizier tried all crimes committed in the capital. The 'magistrates of the tens of Upper Egypt' had lost their old importance, and now formed merely an attendant council, retaining, apparently, little or no advisory functions. The 'six great houses' were replaced by the ancient title 'chief of the six great houses' being retained only as a traditional title of the vizier. In addition to the vizier's hall, the great council, there were local courts composed of the 'notables' of the town—the administrative officials in each district. One finds that the great council and the local court investigated a case together. When the great council required detailed information about a case that only a local court could supply, it sent out a commissioner, who, together with the members of the local court, held a joint inquiry, during the absence of both parties. The number of the local courts is uncertain. The members of the board of judges composing the local court were largely priests, and at Thebes they seem to have varied from day to day. In cases where a member of the royal house was concerned the composition of the board was enlarged by the heir-apparent of the vizier. In a case of high treason the appointments to it were made by the king himself. There seems to present to be no means of determining what was the exact relation of the local courts to the great council. We know of a case where a petitioner existed, in the vizier's great council, but obtained satisfaction afterwards at a local court.

We probably have the latest existing reference to the great council at Thebes in a Demotic papyrus of the XXIth dynasty.

13. Personification of Môêt.—For full particulars about the goddess Môêt, her priests, and as to whether she possessed an organized cult or not, see att. ETHICS AND MORALITY (Egyptian), §§ II, and PERSONIFICATION (Egyptian), §§ 4, 7, 9 (c) (2).

LITERATURE.—See the works quoted in the footnotes.

RIGHTEOUSNESS (Greek and Roman).—'Righteousness' is the translation of δικαιοσύνη in the NT and in the LXX, where it corresponds to the Hebrew ṣadqaq. The word thus gets associations that denote it in Greek from the idea of justice, which is derived from δικαίωμα by way of Greek philosophy and Roman law.

The justice or righteousness of God in the Bible is sometimes His loving-kindness to the just and the unjust. 'Righteousness' is an apt rendering of δικαιοσύνη in a number of other passages in the LXX where the Hebrew עָבְדִּי is translated by 'servant of God.'

It is not once used in Well- don's translation of the fifth book of Aristotle's Ethics, 'On Justice.' Aristotle first explicitly distinguished the special meaning of justice as one of the cardinal virtues from its vaguer use as a synonym of all virtue or righteousness. He first established the quasi-legal meaning which until recently has found general acceptance. He conceived justice as the recognition of a definable equality or proportion in respect of rights assumed to be ascertained or ascertainable. It was not the limitation of such rights as 'equity,' nor their renunciation by generosity, nor their equalization in the interests of a social ideal. Some of these concepts—

23 In this connexion it might be pointed out that Nesp-yhp-n, one of these Pharaonic names, was usually used by two viziers, one for Upper, and one for Lower, Egypt. There were then two great courts, that of the Upper Egyptian vizier sitting at Thebes, and that of the Lower Egyptian vizier at Heliopolis (Gardiner, The Inscription of Mes, Leipzig, 1905, p. 33 f.).
tions are latent in the Stoic and Christian χρήστος, and recently philosophy has used them to transcend or confound the Aristotelian distinction. This is only in appearance a paradox, for much more spiritual treatment of 'justice' in Plato's Republic.

Platonic justice, it is true, is not confined to Aristotelian or ethical formulas, and it is in a sense 'social'. But Plato does not lose himself in the abstract, for injustice is a term which he relates to the broader and more spiritual treatment of 'justice' in Plato's Republic.

He recognizes in anticipation the legal and Aristotelian rules of justice, and tests his own broader definition by them. But for edification and the portrayal of his ideal he prefers to define justice in terms of 'Do this' rather than 'Do this.' Objectively, justice is, he means, but he emphasizes the equality of service in the voluntary acceptance of natural inequalities, not the equalization of rights and rewards.

With these clues we shall not lose our way in the labyrinth of the historical evolution, which for sober students begins with the larger House of Greece, does not use the abstract δικαιοσύνη. But we cannot infer that he lacks the idea. For he has the abstract ἔνοικαι, and in Ἑυρισκόμενος and Sophocles also the metrical more convenient δίκη stands for δικαιοσύνη. When Homer uses δῖκη both of the administration of justice and of ethical justice. In Od. ii. 215 it is bracketed with θευματα, 'dooms', in the concrete sense of judgments. In II. xxi. 542 the entire context of its use suggests the 'later' meaning of strict right, which does not occur in the pronouncements of omen or prophecy in the Odyssey. The word also means 'way', 'manner', 'custom'—this is the way of the gods, the way of mortals, the way of kings. The survival of this sense in fixed prepositional phrases—dog-wise, etc.—leads plausibly to the assumption that the word, that is for Homer or pre-Homer the just way was the customary way known to the elders. The systematic exaggeration of this by the followers of Henry Maine provokes rival systems. Rudolf Hitzel maintains that the legal meaning is the earlier, and that δἰκαίος is by etymology the casting down or stretching out of the judge's staff to part the contest and proclaim his decision. His collections are helpful, but his interpretations of the texts will not bear scrutiny. Jane E. Harrison is equally correct. She assumes that the word meant a thing of nature and that in Euripides' Medea, 411, it is 'the circular course of the whole cosmos.' Dismissing these fancies, we find in Homer δἰκαίος and the derivatives δἰκαιος and δἰκαιοσύνη already used of a simple primitive administration of justice by a king or a council of elders. The adjective δἰκαίος occurs fifteen times or more as a broad term of ethical approval. We might try to define a context by noting its synonyms or associates—'sensible', 'reasonable', etc.—and its antonyms—'insolent', 'savage', 'harsh.' But this would be an uncrucial pressing of the text.

'Just' and 'good-fearing' are comprehensive categories of all virtue or righteousness for the Homerice Odysseus, as they are for the writer of Ae 108. 'He that feareth him, and worketh righteousness (δικαιοσύνη), is accepted with him.' (vii. 333.)

In Hesiod's Theogony, 901 f., Dike appears with the Seasons, Peace, and Ennomia ('good order') as daughter of Zeus and Themis. This seems conscious allegory. And later Greek poets freely adapt to their purposes the parentage, the kin, and the functions of Dike. The frequency of the word in the first 300 lines of the Works and Days arises from the constant reference to the crooked doings of the brie-devouring judges in the lawsuit between Hesiod and his brothers, which is the text of the poet's moralizing and admonitions about justice in general. As in Homer, Dike is the anti-

order to inanimate objects it requires the nicest discrimination to distinguish between ‘survivals,’ naïveté, and the conscious spiritual allegory of Sophocles, of Platonism, and of Wordsworth. 'You don’t preserve the stars from wrong.' The rivers flow into the sea, but the sea doesn’t overflow, for it isn’t just that it should, says the speaker in Aristophanes, Clouds, 1202. 'All things that are born must die,' said Anaximander, 'paying the penalty for seeking, of itself, the best individual existence?'. 'All things are just in the sight of God,' said Heracitus, 'but men conceive some things to be unjust and some just.' And again: 'The sun will not pass his bounds, else will the Erynnies, the helpers of Δίκη, find him out.' Wise men says Socrates 'that it is love and order and sobriety and justice (δικαιοσύνη) that hold together gods and men and the whole world, which is therefore a cosmos—an order, not a licentious disorder.' And the kindly earth in Virgil is justissima tellus, perhaps because, like the just man in Plato, she returns a deposit. These are suggestive passages. But until literary and linguistic psychology has defined their precise intentions in their context, they cannot be combined in the support of pseudo-scientific theories about the evolution of a moral code. The abstract δικαιοσύνη seems to occur for the first time in a line of Phocylides, 'In justice is comprehended all virtue,' which Theognis repeats with the added pentameter, 'Every man is good who is just.' A theme of endless comment was Theognis’ dictum, 'The natural expression of justice is health, the most delightful, to win what one loves.' The conception of the beauty of justice was developed out of the ambiguity of the Greek σάδες. Its culminating expression is Aristotle’s 'Neither the evening star nor the morning star is so admirable.'

Pindar, the student of Herod and conservative, associates Dike with Eunomia and Eirene, conservators of States, and benign Tranquillity, her daughter. The prepositional phrase, 'in δίκῃ, occurs in the vision of judgment to come, though not in the legal and Euphronic sense 'correct.' Pindar emphasizes the idea of justice in his praise of commercial cities—Corinth and his beloved Alexandria, that deals fairly with the stranger. Ruskin’s 'Tortoise of Αἰγίνα' brings this out fantastically, but not so much as the famous line from the justice of the 'superman' in New. ix. 15, 'The stronger man puts down the former right.' and frag. 169 (151), 'Custom (law) lord of all things makes just the most violent deed.'

We can only glance at other writers before Plato. In Æschylus Dike, the daughter of Zeus, the embodiment and the accomplishment of the moral law, is frequently personified with bold metaphor. The Prometheus raises the theological problem of the justice of Zeus who keeps justice in his own hands. The locus classicus for the old

supposition that God confounds the righteous with the guilty is Sept. 598 ff. The Agamenon trilogy emphasizes the awfulness of sin, the certainty of retribution, the irredeemable, and spiritualized, the law that the doer must suffer. The Furies, the ministers of the older law, claim to be strictly and straightly just (εὐδίκαιοι). But already in the Agamenon we hear of another law, that wisdom comes through suffering; and in the final symbolon, the all-including by the unriveting beauty of the gracious goddesses, and the letter of the old law of an eye for an eye is superseded by a law of grace and atonement.

In Sophocles Dike is the avenger, the ally of the right, the assessor of the throne of Zeus by laws of civil order. Plato’s eye is as the all-seening eye of God; her high throne is a stumbling-block to the bold transgressor. Antigone, in a famous passage, appeals to the unwritten law and the Justice who dwells with the gods below against Creon’s unrighteous decree. This cannot be pressed, with Hirzel and Miss Harrison, to prove any special connexion of Dike with the lower world. The interpretation that Dike equals 'custom' in frag. 247 is a characteristic error of modern ethnological philosophy.

Neither Sophocles was apparently affected by the Sophistic 'enlightenment.' The Sophists presumably discussed the origin, nature, and validity of the idea of justice, as of other ideas. There is no evidence that any of them worked out a serious scientific theory of ethics and justice, as is sometimes affirmed by the critical writers against Plato. But the unsettlement of traditional moral faith, in conjunction with the cynical and Machiavellian politics of the Peloponnesian War, presented to Plato his main problem—the finding of a reasoned 'sanctification' for ethics, for justice and righteousness. Their point of view Theocritus and Euripides are an indispensable introduction to the study of Plato. In addition to his dramatic or personal exposition of this ethical nihilism, or the 'superman' philosophy of justice, Euripides’ scattered sentences in a poetic justice could be quoted as illustration of merely eviling or cynical Greek commonplace, and in anticipation of many points made by Aristotle and the Stoics.

Plato.—We have already touched on the Platonic conception of justice and referred to his later applications in this work. A more detailed exposition would involve the Platonic philosophy as a whole, and its first prerequisite would be the removal of the misconception that Plato commits fallacies in elementary logic, and is presumably unaware of any Aristotelian distinction which it does not suit his immediate literary purpose to labour with painful explicitness. The artistic design of the Republic required him to regard justice in its subjective aspect as entire righteousness, the harmony, unity, and right functioning in division, and in harmony of all the ‘parts’ or ‘faculties’ of the soul. But he did not seek purely and with due recognition of other popular or possible meanings of the word. And there are few valuable or

valid ideas about legal, ethical, or social justice to be found in Aristotle or in later Greek-Roman literature that adequately indicated somewhere in the Laws or the Republic. One continuation of this, for which space is lacking here, would be furnished by the still unappreciated extent of Cicero's dependence on Platonic ideas of justice in his de Officiis, as well as in his de Legibus. The references are few. If any, sentences in de Officiis, i. 7 ff., to which the most refined ethical thought of to-day could take exception.

Plato, like the writers of the Bible, Cicero, and the English ethical philosophers of the 19th cent., was immensely interested in the ultimate "sanction" of righteousness or justice. This problem is the framework of the main discussion in the Gorgias and the Republic.

Aristotle was indifferent or sceptical. As Gomperz puts it,45 he does not trouble himself about any aneudomastic foundation. Why Gomperz should deem this indifference to what Leslie Stephen calls "the problem which is at the root of all ethical discussion" an advance beyond Plato's "artificial reasoning" is as hard to understand as his claim to the first time in Aristotle's recognition without circumlocution that justice is not directed to the good of the agent but to another. This is merely the formula of Thrasymachus canvassed in the first book of the Republic. The phraseology of his attempt to extend the mathematical analogy to the equalities and proportions of economic exchange—a speculation as obscure and presumably as fallacious as similar modern endeavours. The Pythagorean or Rhadamantine justice of retribution or requital for wrongs, as the meaning "punishment," Greek literature as a whole does not support the pretentions generalization that justice and punishment are nothing but revenge.4 Gomperz approves Herbert Spencer's not very intelligent ridicule of Aristotle's idea of justice because, he says, the other virtues, is in some sense a mean. But Aristotle admits that his formula applies only in the sense that justice (i.e. especially the administration of justice) tries to hit the mean. And his endeavours to show that the "equality" of justice is also a mean strain language no more than any Procrustean system does.

In pure theory the post-Aristotelian systems added little to the ideas of Plato and Aristotle. The Epicurean ethics bases itself on the art of measuring pleasures set forth in the Protagoros and the theory of a social contract expounded by Glanocn in the Republic.4 Animals, being incapable of the social contract, were ipso facto excluded from justice. Man has no obligation to them. The educated Epicureans took these ideas for granted, and did not waste time on Platonic idealism or Aristotelian refinements.

*Atum ipsa utilitas, justi prope mater et aequi. ... 9 Jura inventa metu injusti fatere necesse est.*

2 342 C; cf. 392 B. Pearson rightly rejects the interpretations that find it in Emp. Hcria. 1-8.
4 Eth. Nic. v.
6 A good, this kind of justice aims by award of damages, fine, or punishment to reestablish the violated equality of rights, 'between man and man,' as we should phrase it. The emphasis on obligations ex delicto leads Aristotle to designate this kind of justice as 'corrective,' and the extension of this term to the whole domain of contractual as opposed to distributive justice has vitiated some ethical writers. 'Aristotle's central idea is sound and simple. Modern difficulties are due mainly to insufficient scholarship, or to the still persisting superstition of Aristotle's infallibility. As a matter of fact, though the idea is sound, nor technical, he thinks, in not taking, nor the endeavour to fit it into the schematic definition of virtue as a mean will endure analysis. The term 'distributive,' e. g., seems to refer to the distribution of spoils or grain to the citizens—where, whatever the military or Homeric practice, Greek democracy would have demanded arithmetical equality with few exceptions. But Aristotle also illustrates it by the distribution of profits in a partnership of unequal capitals, which is really a kind of contractual relationship. Further confusion arises from the reference of distributive justice to claims of difference in the case of predominance of political power in the organic constitution of the State. This conception of the problem of justice Aristotle derived from Plato's ἀδίκημα τοῦ δίκαιου. 5 But we cannot enter into this in detail. Let us try to interpret Aristotle's attempt to extend the mathematical analogy to the equalities and proportions of economic exchange—a speculation as obscure and presumably as fallacious as similar modern endeavours. The Pythagorean or Rhadamantine justice of retribution or requital for wrongs, as the meaning 'punishment,' Greek literature as a whole does not support the pretensions generalization that justice and punishment are nothing but revenge. 6 Gomperz approves Herbert Spencer's not very intelligent ridicule of Aristotle's idea of justice because, he says, the other virtues, is in some sense a mean. But Aristotle admits that his formula applies only in the sense that justice (i.e. especially the administration of justice) tries to hit the mean. And his endeavours to show that the 'equality' of justice is also a mean strain language no more than any Procrustean system does.
It was easier to reaffirm this simple dogma than to study Plato's refutation of it.

The famous third book of Chrysippus, 'On Justice', was written on Plato's day, 'to be found everywhere'.\(^2\) The fragments of the older Stoics add little to the Platonic and Aristotelian theory. Justice, the Stoics taught, is a cardinal and 'social' virtue. It is the virtue of due distribution.\(^3\) It pertains neither to the accuser nor to the defendant alone; and, if among its subordinate species are kindliness (χρηστότης), democratic sociability (εὐνοομία), and square dealing, or the quality of being easy to deal with (εὐνοομαλία).\(^4\) Much of Chrysippus's discussion was captiously critical of his predecessors. He repeated Aristotle's cautious censure of the im-

plcit Platonic rhetorical about injustice to one's self.\(^5\) He relented Plato for appealing to the
tological sanction in the closing myth of the

Republic,\(^6\) but maintained against Epicurus that justice becomes an act of piety or pleasure is the good.\(^7\) He rejected the Aristotelian qualification of justice by equity for reasons that would have appealed to Selden,\(^8\) and which were anticipated by Aristotle himself. But he reinstated equity as a form of kindliness or good
goodwill, and hence a virtue of the early Stoic, philosophy upon Roman law has often been pointed out, but cannot be studied here.

The very first sentence of Justinian's Institutes, 'Justitia est constans et perpetua voluntas insum cuique tribunis, reads like a sentence of Plato.

Ptolemy's is no less than — to the judge.\(^9\) Among its second edition (g.v. Aristotelian, its subordinate species are kindliness (χρηστότης), democratic sociability (εὐνοομία), and square dealing, or the quality of being easy to deal with (εὐνοομαλία). Much of Chrysippus's discussion was captiously critical of his predecessors.

In later Graeco-Roman literature the somewhat pedantic sage of the Stoics became, under the influence of Platonism and the old Roman virtue, an impressive ideal of righteousness—the just man made perfect—serving humanity (as Homer had done), and the tyrant or the mob (as Socrates),\(^3\) unsubdurable in soul (as Cato).

The subtleties of Neo-Platonism of Neo-Platonism (g.v.) distinguishing the cathartic and the paradigmatic, the ideas we do not concern us. Plotinus repeats the definitions of the fourth book of the Republic.\(^4\) Justice is the making his own business by every faculty of the soul—the willing subordination of lower to higher.

Instead of thus associating righteousness with the theory of justice, we might have studied more broadly in ancient literature and life the approaches that the philosophers—Plato, the philosopher, Plutarch, the historical man, the καλά κατάθεα, the sage, the kinder or more just man.\(^5\) 'Vir bonus est quis?' asks the citizen in Horace,\(^6\) 'Qui consulta patrum, quia leges iuraque servavit'.—that is one idea. 'What a kind good helpful man to take pity on us in this crowd!' exclaims the Syracusan ladies in Theocritus' realistic idyl.\(^3\) It is a singular coincidence that Justin Martyr\(^4\) brings together the same two words from Lk 6.34, to commend the religion of service and charity to the philosophic emperor: θεωρείτης δὲ χρηστότητα καὶ δικαιοσύνην ἐπιτάσσειν εἰς ἀληθίνον. A history of the words χρηστότης and χρηστότης in popular and later Stoic usage, strangely neglected by Hirzel, would show that this is more than a coincidence. We are in presence of a different ideal of the good or approved man from

sumption. Hence, the word 'righteousness,' came to mean largesse or alms, and that it is often also a general synonym of virtue or of the qualities that find acceptance with God and so justify a man's in His sight—the fulfillment of the law both moral and ceremonial. But it is also become a term of special meaning, being used to denote the specific meaning of legal justice between man and man. There are even texts which warn against the perversion of legal justice by pity or sympathy for the poor (Ex 23:2; cf. Lv 19:15, Dt 17:15). This idea is foreign to the spirit of the Gospels, and some of the chief parables are directly pointed against it. St. Paul returns to the justice of the law only to show its impracticability. It is impossible to fulfill the entire law, ceremonial or moral. In the course of justice none of us would see salvation. Only the freely bestowed grace of God through Jesus Christ can save or justify man. It does not belong to this study to examine Matthew Arnold's contention in St. Paul and Protestantism (London, 1870) that St. Paul's essential meanings throughout are ethical, spiritual, and symbolic. We may quote the only passage which nears St. John's idea, 'justification,' presumably came to him from the LXX, which is peculiarly rich in abstracts in -μα loosely and rhetorically used in vagner meanings than those given to them by the classic poets and philosophers of Greece. Coinced apparently in the sense of the Stoics, a convenient symbol for the awkward τὸ δίκαια e. g. gen., meant at first a claim of right and only incidentally a plea of justification.\(^1\) Plato and Aristotle sometimes use it more precisely for the result of just action. It is the result of just action, the LXX employs the word sores of times, often in lists of synonyms, such as my commandments, judgments, and δικαιον. The meaning 'plea of justification' occurs, but not frequently or with much technical emphasis. Deismans often contrast the law with the rule, so that the word in St. Paul means simply 'acquittal.' This appears no philological necessity for holding St. Paul to a much more definite or consistent use of the word than we find in the LXX. It would seem, then, that the more technical meaning of 'justification' must have been communicated by the LXX, the idea of St. Paul's theology as a whole. However this may be, the entire development of post-classical ethical feeling and of early Christian thought made against the strict legal conception of justice worked out in Greek philosophy and Roman law, and latent in the OT ideal of rigid fulfillment of the law. The development of modern law and the renewed study of the Roman law and the theology of Calvinism in part counteracted these tendencies. But to-day the literature of widest appeal is anti-legalistic in sentiment. And by invocation of the phrase 'natural righteousness' is the LXX employed the word 'wine' to abolish the distinction between justice and beneficence, or justice and equity, and indeed to suppress the idea of justice or righteousness altogether, except as edifying synonym for the entire word or word group. As far as justice is concerned, return to the spirit of Jesus or a temporary confusion of thought the future historian of philosophy may decide.

RIGHTEOUSNESS (Hindu). 1. Vedic.—

The conception of righteousness in the Rigveda finds its expression in the term rta, the equivalent of the slayer of crimes, or the one who secures cosmic order, and then the order of the moral law, on the one hand, and of the performance of the sacrifice, on the other. The conception of moral order is doubtless Indo-Iranian, and it is a fair conclusion from the occurrence of Arta as the first element in the supposed key to the word that the El-Arman correspondence that the conception cannot be more recent than the 15th cent. b.c., and that the Vedaycts entered India. Despite the predominantly sacerdotal character of the Rigveda, it reveals abundant evidence of the importance of the conception: the gods themselves are not merely born of the rta—a conception in which physical origin may be chiefly denoted—but they follow the rta (rtaeva); they are practisers of the rta (rta
dv) and knowers of it (rta
dv). The special guardian of the rta is Varuna, the great guardian of righteousness, who moves about discerning the truth and the unrighteousness of mankind (svay
tv
tv jum
tv); and in a curious phrase Agni is declared to become Varuna when he strives for the rta. Accordance with rta, and renunciation of all that is contrary to rta, is required of the sacrificer: the priest assures Agni that he invokes the gods without witchcraft, and offers his devotion with righteousness. Especially characteristic is the famous dialogue 4 in which Yami seeks to persuade her brother Yama to commit inecit with her in order to propagate the human race. Yamaraja, appalled to her pleadings is in effect that her claims of advancing the right would merely lead them into unrighteousness of action; to her assertion that their father Tvastf
d had formed them in the womb to be husband and wife he replies by an assertion of ignorance of the purpose of creation, but an assurance of the existence of the law of Mitra and Varuna, and of the current view that inecit is evil. Righteousness is thus accordance with general opinion, and with this agrees its constant association with truth (svay
tv
tv) and correspondence with reality. This opinion demands the virtues of a simple sect—consideration in domestic relations, political loyalty, truth in friendship, abstention from crimes such as theft and murder, and from women faithfulness in wedlock. Justice not unnaturally in hymns closely associated with the sacrifice much more stress is laid on the merits of liberality than on such manly virtues as courage in war. In Iran speculation on the cognate idea of asc
d led to the deepening of the moral force of the conception and the evolution of Zoroastrianism, but in India the period of the later Sankh
d
d and the Br
d
dnases reveals not an advance, but a retrogression in moral outlook. Insistence on the ordering of the sacrifice has elevated the ritual into a substitute for morality; the priest who in the Rigveda, of necessity, primarily invokes the gods as a supplicant has become possessed, through a knowledge of the details of the sacrifice, of the power to compel the gods. At the same time he is exempted from the moral duty, which is recognized freely in the Rigveda, of performing the moral duty of the sacrificer. It was, indeed, still contended by some that the priest was under an obligation to aim only at securing the desires of the sacrificer by whom he was employed, but the Astaryya Br
d
dh
d finds, as it appears, in the sacrifice its own accompaniment of the bestowal of enormous largesse on the priestly performers. 1 Truth still remains the attribute of the gods, but truth is no longer simple: the gods are par excellence lovers of what is obscure, and for man more than for gods. But the truth is recognized as impossible and equivalent to enjoining silence.

The Br
d
dnases, textbooks of a priesthood which by total absorption in meditation on the ritual had lost touch with the realities of life, do not present fairly the development of the conception of duty among the people generally. This is given to us far more clearly in the Ghyta- and Dharma-s
ds, manuals of rules for religious and civil life, which reveal in full detail the elaborate structure of Indian life as it evolved from simpler conditions of the Rigvedic period. Not only are the respective rights and duties of the four great classes—priests, rulers and warriors, peasants, and serfs—clearly laid down, though with such variation in detail as is inevitable in works of varying date and different composition, but in the classes the plan of the different stages of life is mapped out. Among many rules of no moral value these treatises inculcate the observance of all the moral laws of simple morality—truth, abstention from injury to the person or property of others, charity, hospitality, courage, and devotion to duty—and threaten those who disregard them with pains and penalties in the future life. This more normal outlook on morality is shared by the Upan
d
d
d. The voice of Pra
d
dpati in the thunder-speaking Asvapati, which seeks to lead men to be self-restrained, charitable, and merciful; 2 as the fee in the great sacrifice of life are enumerated in the Ch
d
d
dga Upan
dnd 3 asceticism, liberalism, right dealing, abstention from injury (ahin
d
d), and the speaking of truth. The Taittiriya Upan
dnd 4 has the list of virtues divided into six—truth, asceticism, tranquillity, truthfulness and right dealing, hospitality, courtesy, and duties to wives, children, and grandchildren. The prince Asvapati Ka
d
daya claims 5 that in his realm there is no thief, niggard, drunkard, adulterer, or courtesan. Not only, however, does the Upan
d
d
d not recognize and adopt current conceptions of morality, but they provide for the first time a reasoned basis for moral action by the doctrine that a man's place in life is determined by his former deeds—a principle which at the same time serves as a rationale of the rigid class-divisions of Indian society. In its purest form, associated with the name of Ya
d
dvak
dya, 6 the doctrine is rigidly one of rebirth on earth after death in a station depending exactly on a man's previous deeds, but already in the Upan
dnd 7 this idea is blended with the doctrine of reward in heaven or punishment elsewhere; and in this form, with variations in detail, the conception becomes part of the general Hindu belief. But no criterion of righteousness is suggested, though among those condemned to an evil fate in the Ch
d
dga Upan
dnd is the murderer of a Br
dhra, the defiler of the teacher's wife, the drinker of spirits, the thief of gold, and the man who associates with such sinners. The reason for the omission of any inquiry into morality may be found in the context, but the moral, of the Upan
dnd, which are concerned beyond everything else with the determination of the nature of existence, and

regard as the highest aim the merger of the individual soul in the absolute spirit (brahman), which is to be brought about by an act of intellectual insight. The possession of moral qualities is not inconsistent with the attainment of such insight, and the later Upaniṣads make a determined effort to reconcile the claims of ordinary life with those of philosophy by the development of the ideal of the four dāsraya, or stages of life through which a member of the three higher castes is communally required, in their turn, to pass—4 a youth of learning as a brahmachārin, a middle age of performance of social obligations as a householder (grhaśraya), a period of asceticism as a dweller in the forest (śāntraprastha), and a final resort to the life of a wandering beggar (sanyāśayā) who has resigned all connexion with worldly things. This scheme, however, is clearly a compromise; the necessity of passing through the first two stages, and the distinction which it is sought to draw between the second two in such texts as the Tālākta and the 4 Aśrama Upaniṣads, are not laid down in the older texts, in which there is apparent a tendency to contrast the search for the true knowledge with all earthly interests and to regard the attitude of the seeker as essentially one of renunciation of all terrestrial concerns. In the Kauṭilya Upaniṣad it is not inconsistent with the attainment of such knowledge of Indra, who is declared to be true, prevents retribution for parricide, matricide, the slaying even of an embryo, or theft; but this doctrine is isolated in the Upaniṣads.

2 Post-Vedic. — Though later in its records than the Vedic period, Jainism reveals to us a form of belief which was evidently widely spread in the period of the early Upaniṣads, though these texts do not adopt it as completely satisfactory. The doctrine of Mahāvīra in effect appears to have been little understood by the people. The notion of anything given, and sexual enjoyment—all rules for which Brāhmānical parallels and prototypes are present; and even in the fifth, the forbidding of any attachment to any worldly object, though Mahāvīra may have adopted it in opposition to the duty of liberality preached by the Brāhmans, there is nothing but a consistent carrying out of the principle involved in the first four rules. The rationale of the command is clearly the doctrine that the soul is defined by all contact with the things of the world, and that the ideal is to free it from such contagion. In essence the doctrine is purely egoistic; in practice, however, it has been found possible to convert the Jain tenets into a basis for active philanthropy, which can be reconciled with the doctrine of Mahāvīra, intellectual acceptance of that renunciation, and is the most sure method to secure for the soul that freedom from misery which it is its essential aim to achieve.

In Brāhmānism itself a more successful effort is found in the Bhagavad-Gītā to find a positive basis for the practice of the universal law of Mahābhārata in its popular philosophy leans decidedly to the school of renunciation, and inculcates that indifference to the things of the world which enables King Janaka to contemplate with ease the possibility of the non-existence of capital Mithilā. But the Gītā, amid all the confusions of its semi-pantheism and its semi-thesism, remains true to the doctrine that it is essentially man's duty to carry out without desire of reward the obligations of his station in life, which is enunciated by Krṣṇa when he sees Arjuna unwilling to commence the attack on the host of the Kuravas at Kuruksetra. A positive basis for the performance of duty of a non-egoistic character is provided by the doctrine of the unity of the universe in the Iṣvara; he who sees the Iṣvara as pervading all things cannot be guilty of injury to them, for having his own activity and injury to himself as identical with the Iṣvara, which is not open to Jainism, in which there is no bond of unity between one soul and another. The good which one does to another, on the doctrine of the Gītā, is done directly to oneself through this community of existence, while Jainism cannot recognize such action as valuable without serious modification of the essential basis of its renunciation of activity.

Neither the more formal philosophy nor the doctrine of faith succeeds in providing a more satisfactory doctrine of righteousness than the Gītā. To Sāṅkara the ordinary world, and its virtues and vices alike, are unreal, and release from transmigration is attained not by virtue, but by insight into the fundamental unity of the soul and the brahman. Works cannot produce this insight, which is for Sāṅkara the only true knowledge of the Iṣvara, but which in reality cannot be ascribed to any cause whatever, as it lies beyond all causal conceptions. While, however, Sāṅkara makes it clear that works are not the cause, nor the necessary preliminary, of enlightenment, he readily finds a place for them as serving normally, though not essentially, to counteract hindrances which might otherwise impede the appearance of the saving knowledge; and in like manner the observance of the rule of the dāsraya is a normal rule for the seeker after truth. The essential indifference of morality, however, appears in the position of him who has attained in this life the consciousness of release (jīvānānukṛta); no acts of his after this attainment have any concern for him, for the doctrine of the fruition of action (karman) is a mere fiction, he is so enlightened. The logical consequence, that evil deeds may with impunity be performed by the enlightened man, is expressly recognized by the Vedānta-sūtra of Sāṅkara, which even contemplates the possibility of the jīvānānukṛta resorting to the use of such unclean food as a dog might eat. Even in the essential indifference of morality, however, appears in the position of him who has attained in this life the consciousness of release (jīvānānukṛta); no acts of his after this attainment have any concern for him, for the doctrine of the fruition of action (karman) is a mere fiction, he is so enlightened. The logical consequence, that evil deeds may with impunity be performed by the enlightened man, is expressly recognized by the Vedānta-sūtra of Sāṅkara, which even contemplates the possibility of the jīvānānukṛta resorting to the use of such unclean food as a dog might eat. Even in the essential indifference of morality, however, appears in the position of him who has attained in this life the consciousness of release (jīvānānukṛta); no acts of his after this attainment have any concern for him, for the doctrine of the fruition of action (karman) is a mere fiction, he is so enlightened. The logical consequence, that evil deeds may with impunity be performed by the enlightened man, is expressly recognized by the Vedānta-sūtra of Sāṅkara, which even contemplates the possibility of the jīvānānukṛta resorting to the use of such unclean food as a dog might eat.
in which, in conscious opposition to the normal standard of morality, the use of meat, involving the violation of the rule of akhinas, the drinking of liquor, and promiscuous sexual intercourse are used as means of securing that unity with the deity which is the final aim of the system.

The philosophical systems and the popular religions thus set before them the ideals either of intellectual insight or of a mystical and ecstatic union with the deity, and neither could make any progress in developing a theory of morality or in distinguishing morality from ceremonial observance. Such ethical ideals are found only in the Samkhya-Philosophie, as reflected in the numerous Sûtris and Nibandhas, reveals no distinction between ritual and morality; the topic of penances is expanded almost without limits, but the sins to be expiated are as often ritual omissions as moral defects, and no discrimination is ever attempted between them—a condition of thought natural enough in the Brâhmanas, but strangely stereotyped in India. Not only, however, had morality to suffer from competition with ritual; the rich and attractive Vâti literature, which is the source of books of so universal a approach to the religious ideal, and often in its rules of conduct enunciates the purest morality, but places alongside of such precepts, without consideration of incongruity, rules of polity and practical expedience of doubtful or not rarely of positively immoral character.

A. BERRIEDALE KEITH.

RIGHTOUSNESS (Jewish).—1. General connotations. — The connotation of the term 'righteousness' (rya and tanya) varies with the different epochs embraced in the literature of the Jews. To discuss the question of what acts, motives, intentions, ceremonies, symbols the Jew designated as falling into the category of righteousness, or as helping to bring it about, is a task best reserved for a host of cardinal Jewish theological teachings on all kinds of allied themes in all their developments and ramifications from the earliest days of the OT down to the latest spiritual product of the movement. In the light of the doctrine, that alone the root rya, counting all its inflexions, occurs over 500 times; and, over such a large space of time as the OT covers, it is impossible to assume that the term always stood for the same ideas to the various successive writers who used it. The OT, which forms the basis of Jewish literature, although admittedly dealing largely with legalistic lore, nevertheless contain a considerable element of theological matter—far more than the Christian theologian is prone to give them credit for; hence, as is inevitable, the term crops up there with great frequency and assumes a new set of meanings in accordance with the then prevalent Jewish views on life, death, duty, religion, and God. The medieval Jewish philosophers, as followers of either Aristotle or Plato, aimed at placing the ideal Jew and the ideal Judaism in quite a new setting unknown to the unphilosophical Jew of the earlier periods, and righteousness with them came to assume a new set of connotations to which the religious consciousness of them arose among the Polish Jews of the 18th. cent., and which has existed down to the present day under the name of Hasidism, the leading eclec- siast is invariably called the rya (godly, 'righteous one' or 'saint'), and, as one of his chief features, would instil this conception of righteousness, that further meanings have from time to time been imported into the term in question.

2. In the early Pharisaic and Rabbinic literature. — Throughout the whole vast realm of the Rabbinical literature the 'righteous' man, the rya, is judged by one invariable norm—conformity to the Torah. Righteousness is an unbroken series of loving and loyal obediencess to the mizváth of the Torah. These mizváth, or 'precepts,' are 613 in number, according to the calculation of the Rabbis, who held that there shold be 613 for the God who aspired after righteousness to come as near as possible to the carrying out of these 613 precepts both in letter and in spirit. The Torah was looked upon as a divine embodiment on earth. Expressions like Torah, 'God,' Holy Spirit, are often used interchangingly and interchangeably with righteousness. To love the Torah with all one's heart and to cleave to it with all one's might was tantamount to the highest and closest communion with the Deity which was possible to the saint. Such was the ideally righteous man. This exaltation of the Godliness or righteousness of all righteousness is already hinted at in Ecclus 12, but grows more apparent in much of the Pharisaic literature of pre-Talmudic times, notably the book of Jubilees and the Psalms of Solomon. Thus, Psalms xiv. of the latter work, after alluding to 'them who walk in righteousness in His commandments,' summarizes by saying: 'He has given us the Law for our life; and the saints of the Lord shall live thereby for ever.' To the minds of the Rabbis the highest type of righteousness is that evinced by what they called the godly (complete saint'), the class who in T.B. Shabbath, 55a, are styled mekuddeshim, 'sainted ones,' i.e. 'they who fulfill the whole Torah from its first letter (Aleph) to its last (Tav). The Torah was the embodiment of Judaism, the first and last word in earth and heaven, possessing nothing superfluous or unimportant. The world was actually called into being through the instrumentality of the Torah, and, should the Jew ever reach so low a pitch as to lay aside the Torah, then will the cosmos be broken up and revert again to its primeval state of chaos. As has already been hinted, the degree of righteousness possessed by a man is dependent upon, and corresponds to, the degree of his conformity to the Torah. The latter situation involves far more than a mere theoretic attitude of mind or heart. It means nothing less than the doing of the whole of the law in every respect, for as has been said, the Deity has bound Himself to this or that dogma. It comprehends the whole domain of human thought, character, and action. Man must not be content with merely following out the rigid letter of the law, a routine holiness tied down to a book. His ideal must be the highness living, which is brought about only by a long-cultivated process of self-sanctification. In the Jewish view, man can never be, he can only be, righteous. To speak of 'Pharisaic self-righteousness' is to falsify the general trend of the Rabbinic ethics. Righteousness was a high peak which the Jew must, during his whole lifetime,
To the Jewish scholar familiar with the theology of his own race the whole argumentation of Paul about righteousness, law, faith, and grace is as unacceptable as it is unintelligible.

"No Rabbinic Jew," says C. C. Montefiore, "could ever have accepted the main argument of the Epistle to the Romans. For it was precisely the Law which the mind of God, and all the other to attain to any measure of human goodness (Sanhedrin and S. T. Talmud, p. 100). Or, as another modern writer has said, 'That the Torah was not such as Paul represented it to be a statement which is true, both philosophically and negatively. He ascribed to its character which it did not possess, and he left out of its description features which it did possess, and which were essential to it.' (St. Travers Hertz, 'Jewish Faith' Chap. 3.)

As a matter of fact, one is inclined to endorse Montefiore's view that Paul, living at the time he did, could not have been familiar with what is generally understood by the Rabbinic position, and therefore ought not to be regarded as a reasonable exponent or critic of it. No Rabbinic Jew was ever cared, as Paul was obviously worried, by the thought that real righteousness was unattainable by him, seeing that the demands of the Law are too multifarious to be ever fully met by any one; nor is there in Rabbinic Judaism any ground for any distinction between 'righteousness of faith' (Rom 4) and righteousness of works. Where there are works in the Rabbinic sense, there must be faith, seeing that the prime motive to the execution of works was the invincible belief in the divine origin of the Torah, and the parts of it, and the means for securing salvation to mankind; and such a belief must presuppose faith in the existence of a God, the simple faith such as Abraham possessed and which gave him the title to righteousness and to the honour of all men. Faith and works together make up the day, the real as well as the ideal life, the life of righteousness before God. The guide to such a life is the Tôrah, whose multifarious precepts the aspirant after righteousness has to fulfil both in letter and in spirit, but not in the way in which Paul (either consciously or unconsciously) travestied it when he spoke of the physical impossibility of any one obeying so burdensome a code. For, according to Sifre, 133a, 'even the truly righteous are not wholly without blame because they too may have committed some unrighteousness outside the letter; for it was the honest striving after righteousness that the Rabbinic mind really had in mind. The seeker after the realization of the ideal of righteousness must resolve to order his life in the way leading to it. If he kept himself up to the same unswervingly high level, fulfilling the precepts of the Tôrah through love and joy of soul' (T. B. Sotâh, 38a; T. B. Shebbâth, 88b), then this very scheme of life was righteousness—no matter what occasional minor lapses occurred in between. Even granted that the Rabbinic Jew may occasionally have felt the pain and anguish of the consciousness of a duty omitted here and a duty omitted there, what was this in comparison with the ineffable rapture of what the Rabbanim termed simhâh shel mizvâh ('the joy of a precept fulfilled')—a joy which inevitably brought in its train other joys of other precepts fulfilled, thus making life an unbroken exercise in the joyous search after a true union with the Divine through a righteously-ordered life? It is of those who have attained this pitch of righteousness that T. B. Sukkâh, 45b, says, 'They beheld the face of God,' viz. that of the righteous who, as is said in T. B. Brôkhâh, 17a, will in the future life 'sit with their crowns upon their heads, delighting in the splendour of the Divine Presence.' To quote a phrase from Lazaurus, 'The essence of a perfect existence is an aspiration joined to unlimited capacity to reach higher and ever higher stages of achievement' (pt. ii. p. 289.)

*See Rashî, ad loc.*
constant danger of an intervening lapse plays no part whatsoever in this Rabbinic programme of righteousness sought and attained. His picture of Rabbinic Judaism is marred by its total ignorance of the Rabbinic doctrine of divine grace. The effect after righteousness is helped and encouraged by heaven, and this because of the very fact of man's frailty, because of the very fact that man's liability to err is so well within the divine ken. 'Let man but sanctify himself only a little,' runs a favourite Rabbinic belief, 'and then God will help him to sanctify himself much by the help and support given him from on High. It was this that King David meant when he said, 'No good thing will He withhold from them that fear Him.' (Ps 84:14) (Mosehli Teshu'atim, Amsterdam, 1740, ch. xxvi.).

Jewish theology looked upon Jews never as a series of isolated units, but always as one consolidated body, a community; a nation, an indivisible entity, and they sought phallic part and whole in righteousness before God. Hence it follows that a life of righteousness on the part of the individual Jew must always involve consideration for the well-being of others. Once dissolve the communal cohesion, then the communal holiness disappears. It is probably owing to some such conception as this that the term ṣam'it, 'righteousness,' came, in the Talmud, to mean 'charity' or 'almsgiving' — a meaning which has remained in popular use among the Jews down to the present day. The Qohelet, moreover, upholds this same view, ascribing to almsgiving — an unbounded borrowing from Judaism. Almsgiving is righteousness, because thereby does Jew help Jew to sustain himself and become one more servant of God.

When asked by Tobias Rofes: 'Why does your God, being the lover of the needy, not Himself provide for their support?', R. Akiba replied: 'By charity wealth is to be made a means of salvation for those among whom the righteous are so rare, that the one to help the other, and thus to make the world a household of love' (T. B. Babba Bathra, 10a, quoted by K. Kohler in S.D. 118a, ed. H. and B.).

4. The sufferings of the righteous; their destiny; their influence on the world.—As one of the cornerstones of Rabbinic theology is the doctrine of divine retribution—that God rewards those who keep His commands and punishes those who transgress them—it is only to be expected that the question of why the righteous suffer should crop up with frequency and find many attempted solutions. The Rabbis developed no systematic philosophy on the subject. Varying opinions are expressed in the Talmud and Midrashim—opinions evidently subjective and individual as the result of the original by the mediæval Jewish theologians and philosophers—but these are tentative and experimental, invested with no dogmatic binding importance. Yet it is true to say that they all cluster round the fundamental assumption which constitutes a premise in the religious creed of Rabbinic and later Jewish thought generally, viz. the reality of a future life. The present world and the world to come are indissolubly linked together. They are mansions of one and the same house. Death, to the righteous, is not the end of all things from one life to another; therefore their sufferings in the present life ought really to give us no occasion for surprise or question, because in all probability a joyous recompense awaits them in the Beyond. Sorrow here will be joy there. Nay, the greater their sorrow in the present existence, the surer is their abounding happiness in the existence which 'eye hath not seen.' The righteous must suffer here, because suffering in the one portal through which they are enabled to reach out to the final inheritance of eternal bliss is the criterion for whether his works have earned for them. Illustrations of these teachings are the following:

In T.B. Qidushah, 460, R. Eliezer b. Zadok says: 'To what may the righteous be likened in this world? To a tree which stands on clean soil but one of whose branches inclines towards an unclean spot. Cut the branch away and then the whole tree stands upon the clean soil. Such are the righteous in the world in order that they may inherit the world as it is come, as it is said, 'Though thy beginning was small, yet thy latter end shall greatly increase.' (Job 8:7). The anger between death and the lopping off of one branch of a tree—the tree still remaining practically in its entirety—is a particularly happy one because it so well brings out the idea of the life here and the life hereafter as one continuous unbroken whole. In T.B. Hor biph, 19, R. Nabanu b. Rab Hida discusses thus: 'What is the meaning of the words in Ecclesiastes 2:14 'There is a vanity which is done upon the earth; that there be just men and unjust men, unto whom it happeneth according to the work of the wicked; again, there be wicked men, to whom it happeneth according to the work of the righteous'? The meaning is this: Ecclesiastes would say that the reward in this world is like the reward of the wicked in the next world (i.e. everyone is rewarded by the world, but it is only the righteous who are rewarded in the next world, i.e. God)'.

Another aspect of the same train of theological thought is presented by the many Rabbinic assertions about the deathlessness of the righteous.

'The righteous 'by whom God himself玳 says a passage in T.B. Bra'ahkoth, 15a; and the statement is supported by a Biblical text. 'They are like lost pearls of great price,' says T.B. Mo'ed, 7:12, 'lost ones; but they are not really lost, because they exist somewhere—and in all their original preciousness and beauty.' All these views are distinctly corroborated in the teaching of A. B. Kohn, whose Wisdom of Solomon: 'Only the soul is immortal and can enter upon the sphere of the world to come' (Wisdom, 7:7).

Invested with so inimitable a sanctity, it is no wonder that the righteous should shed a spirituality over their surroundings—a spirituality which is helpful and uplifting to others generally. The Zohar elaborates this theme repeatedly.

'Come and see what God does on behalf of the righteous, for although the mortal is divinely deereed upon the world, it is held back for their sake and does not come,' runs a Zoharic comment (on Gn 41:4). 'The righteous are the foundation and the greatest glory of the world, as says and as says (Gen 3:19). 'They create peace in heaven and peace on earth and thus unite the bridegroom to the bride,' runs a third (on Gn 41:19), deeply echoing the pietistic and apocalyptic conceptions of the great worth of the righteous in so far as they 'draw goodness down from above in order to do good to us and to all the universe.'

Quite in keeping with these sentiments are the Talmudic sayings to the effect that the coming of the righteous into the world means an influx of light and glory into the world (T.B. Sanhedrîn, 115a), and that the death of the righteous works atonement for their people (T.B. Mo'ed Katan, 29a; Tannâmâ, Hâha Môth, 7). Glimpses of a wide universalistic conception of this efficacy of righteousness are afforded by the Rabbinic comment on Is 26:2 'Open ye the gates, that the righteous might enter in'; it is not the righteous Israelite that is here referred to, but the righteous nation, any people among whom righteousness resides (Sîfîra, ed. I. H. Weiss, Vienna, 1862, ch. 13). There is a similar comment on the words, 'This is the gate of the Lord; the righteous shall enter into it' (Ps 118:20) —not priests, Levites, or Israelites, but the righteous, though they be non-Jews (Sîfîra, loc. cit.).

5. Views of the mediæval Jewish theologians. —The host of textbooks and manuals on ethics abound and phils., and the Talmudic or Rabbinic tradition is a field of fruit for the literary men of the Middle Ages—notably those of the Spanish-Jewish school which flourished from the 10th to the 15th cent.—all adopt conformity to the Tòrah as the norm of righteousness. The interpretation of righteousness as given by the old
7. In modern Judaism.—In modern times the 'orthodox' Jewfinds his ideal of righteousness in the alignment to the standards of living and thinking inculcated in the Talmudic ages by the great Rabbis of the Talmudic ages. Such a self-adaptation grows obviously more and more difficult—and hence more and more rare—with the flow of time and the consequent changes in our values and critical standards. Modern 'Rabbis' Judaism and modern 'Liberal' Judaism (q.v.) lay great stress on the vital necessity of making every allowance for these inevitable developments and changes in the thought and outlook of the Jew. The general science and theology of to-day as well as the dominant critical theories of the nature and authorship of the Bible obtain a large meed of acceptance among these Jewish modernists, this causing them to make many a breach with the old 'orthodox' ideal and materially altering their standards of Jewish religious values.

One has seen in such a movement as the Haskalah, in which the younger generation of Jews who were familiar with the old Talmudic philosophy of the religious and ideal life of righteousness, it is fairly obvious to every student of his writings that the picture that he had in mind's eye of the Jewish saint and follower after righteousness was a compound of Hellenistic, as it were, the man who wields real influence, and suspicion that Maimonides' man of righteousness would have been a somewhat unintelligible character to a Rabbi of the Talmudic epoch.

6. Hasidic interpretations of righteousness.—In the 15th cent. a new religious movement known as Hasidism ('piety') arose among the Jews in Poland—a pantheistic movement in which the mystical element in Judaism, the teachings of the Zohar and the Kabbalah generally, overshadowed and largely crushed out the ceremonial and mysticallist formism belonging to Rabbinic Judaism. The spiritual head of each Hasidic community was known as the pegg, 'righteous one,' whose claims to the possession of righteousness on quite a superlative scale were based upon the peculiarly mystical connotation given to the term 'righteous.' Such an individual was the Divine Source of all life, the man whose prayerful 'righteousness' enables him to become a sort of mediator between God and the ordinary folk, bringing down to them from on high not only spiritual bliss but also material help, miraculous cures from disease, good luck in commerce, family joys, and such like. To select for special esteem a 'man of righteousness,' and to look upon him as a power able to bring heaven down to earth, argues a truly noble conception of Judaism's mission and function. But this also became an instrument of power in itself the poison which proved its undoing. The desire to reach an ecstatic state of mind in prayer came often to be stimulated by artificial means, such as the excessive drinking of intoxicating liquors. The pegg would often seek to impose upon the credulity of his followers by unproved claims to the possession of latent powers; and the gifts in money and kind which would come to him from an adoring clientele could not but exercise upon him a demoralizing influence and serve to breed a corrupt and underhand commerce. Such the pegg has survived down to the present day in many a Hasidic community in E. Europe. Many a one has left behind him an honoured name and an honourable record; and among no sect of the Jews was religion more a matter of life and death than among the disciples of this particular branch of Jewish mysticism.
them. "Have we not served you against the believers?" . . . They waver between the one and the other, belonging really to neither." 2

The Prophet condemns them severely: "At the discretion of the ar-Rigorist," the 'successor' of Muhammad, Abu Bakr, received a surname which shows how much his uprightness was appreciated and the great importance that was attached to this quality. He was called al-siddik, the 'true one,' the 'righteous one,' the 'upright one,' the 'sincere one.' Celebrities of an opposite character are the exception in Islam. In the earliest times we might mention Mu‘awiyyah, a clever, solid, and a victim of crafty disposition; and, in modern times, Muhammad 'Ali, who smiled on reading Machiavelli and said, 'Is that all?'

The proverbs offer some good formulations: "Truth has abandoned me, and I have no longer a sincere record," said Solomon; "Who shall find a man of integrity?" said one of the Psalms: "When truth arises it scatters falsehood." 3

They also contain some subtle psychological remarks:

"The unjust man gives nothing to anyone without getting double return." 4

The fine collection of anecdotes called the Mustatraf contains interesting allusions to sincerity, probity, and righteousness:

"If you say 'yes' about something, do it, for the word 'yes' constitutes a point which is obligatory on a well-born soul." 5

This work quotes Aristotle on the merit of telling the truth:

"The finest discourse, according to this philosopher, is that in which the orator expresses himself frankly, and from which the auditors receive benefits." 6

At the same time, the author of the Mustatraf does not convey the love of justice and truth beyond certain limits. There are times when the practical spirit gains the ascendancy:

"To be just towards some one who is not just may have disadvantages. In this case the unjust measure will be the better course." 7

And farther on he raises a point in casuistry which recalls the famous disputes of the Jesuits and the Jesuit of Lyons who said: 8

"It is said, he writes, 'that lying is laudable when its aim is to reconcile persons who have quarrelled, and that truth is blameworthy when it carries prejudice.'" 9

He gives this opinion as interesting, but takes no side.

If we turn to the accounts of historians and travellers, we find numerous passages in praise of the righteousness of Orientals, especially of the Persians and Arabs. This ascetic virtue in them is connected with the ancient patriarchal traditions. Let us give two or three passages at random.

"The Arabs," says A. de Lamartine, "carried respect for hospitality to the point of superstitious. Their most irreconcilable enemy found shelter, security, and even protection as soon as he succeeded in touching the cord of their tents or the hem of their scarce dress. These heroes, these patriarchs, these virtuous, even all the tenderness of chivalry, unknown in Europe until later, had passed into their customs from time immemorial." 10

Baron d'Aubry 11 cites the medieval romance of 'Antar 12 and the traveller Niehrud and Guermann, on the fidelity of the Arab Bedawin in the matter of hospitality. In 'Antar a young shepherd takes a horseman into his cave to shield him from the pursuit of his enemies. These arrive, and find that the guest has been thrust out. The heroic says: 'Withdraw forty cubits and I shall make him come out.' He then changes clothes with the man and makes him see. The hostile Arabs, recognizing the stratagem, admire the fidelity of the shepherd and let him go free.

An Englishwoman, Mrs. Horterstein, who has written a very interesting account of her adventures at the time of the Sepoy rebellion, praises the integrity of the Muslims, and relates how her elephant-driver, although himself a Muslim, hid her so that she might escape the rebels. 13

Such examples might be multiplied indefinitely.

RIGORISM. 811

RIGORISM.—1. Eastern asceticism. In its philosophical sense the term 'rigorism' is applied to that form of ethical idealism which rates reason as the dominant power of the moral life, to the exclusion or subordination of the element of sensibility. Rigorism is thus the ethics of reason. The roots of rigorism lie far back in early Greek philosophy, notably in the naturalistic Cynic and in the transcendental Stoic schools. By the Stoics especially was rigoristic theory developed. The moral rigour of Christianity came to be widely embodied in the discipline and demands of the various monastic orders. As such applied, rigorism stands in opposition to laxity. Monasticism (qv.), as a system, is founded on a profession of rigour. In the East Basil the Great did much to promote ascetic stringency and disciplined monasticism within the Church. But, in spite of rigid regulations, Eastern laxity in the West the great Benedictine system soon came to absorb all the monachism of that region. It maintained a rigorous discipline, but was more practical and less contemplative than the monasticism of the East. And rigorism remained a dualistic view of the world (see Asceticism (Christian)); matter and spirit were to it incompatible. Its fault was to rest content with a negative ideal. The rigours of overstrained asceticism often passed into self-indulgence or were attended by spiritual pride and fanaticism. The Middle Ages, as marked by the rigorous poverty of St. Francis and the fanatical scourgings of the Flagellants (qv.) —a strange externalizing of the doctrine of penitence. The moral experience of the monastic life came at length to be fairly well represented in the 'seven deadly sins' and in the two opposed extremes of the moral laxity, inertness, and discontent which were summed up in the word 'accidio' (qv.).

2. Jansenist asceticism.—Rigorism was applied, in the 17th cent., to the Port Royalists as a byword from the outset of their history. They were called 'rigorists' because, at the Port Royal des Champs establishment, life was very simple and austere, and free from the grave laxity which had invaded the cloistered life. The term 'rigorist,' however, came to stand for a Jansenist. Jansenism (qv.) in its purity, which was of an ascetic rigour, stood in direct opposition to the worldly spirit of Molinism (qv.). The increasing hold of Jansenism, and the power of the Port Royal press, led to firm persecuting measures against the rigorists. Pascal, says Voltaire, 'was intimately connected with these illustrious and dangerous men.' Pascal (qv.) sought an ethical valuation of his ascetic rigour in the strength brought to man through mortification of his pride and desires, carrying his view, however, to an extreme. The Protestant view of mortifications was only that of their being an engine for warfare against flesh. But men in themselves meritorious. The rigorism of Christianity is dissolved in the love which is the fullment of the law.

3. The Kantian view.—In modern times rigorism is chiefly associated with Kant (qv.), who used it to denote an ascetic or anti-hedonist view of ethics.

The rigorism of Kant, however, was by no means without later adherents, in modernistic character in hedonistic and utilitarian directions. The happiness of others could be to him an end which was also a duty. But, speaking generally, the rigorism of Kant rejected from the outset every hedonistic reference as a motive to morality, which must be transcendental, and non-empirical content or trait (see artt. EUDEMONISM, HEDONISM, UTILITARIANISM).

This initial rigorism proved somewhat one-sided and extreme, since a certain happiness or satisfaction is the natural result of the fulfillment in morality of all the highest instincts of man. No one has, however, in the rigorism of Kant, in making the moral independent of empiric motives of utility and of all externalities, and in basing it on reason, whose demands are unconditionally obligatory and universally valid. But his conception of reason, however, just in this connexion, was too abstract and formal, too isolated from feeling and desire; hence it lacked the force which should have belonged to it. The basis of his rigorism was too narrow and subjective, and non-perception of the concrete character and relations of the moral order of life was transcendent, and lacking in vital elements. Its merit lay in its form; its defect was in its content, from which sensibility had been quite shut out. Hence the Kantian rigorism has had to be transformed by later idealists, as by Hegel, T. H. Green, E. Caird, and others, from the standpoint of organic connexion.

LITERATURE.—The Histories of Greek Philosophy of A. Stöckl (Mainz, 1835), A. H. Ritter (Hamburg, 1836–50); E. Zeller (Tübingen, 1853–68), W. Windelband (Münich, 1854), J. Burnet (London, 1850), A. W. Benn (d. 1862); E. Great. Less is known of the labors of N. F. Hase, Classical Philosophy in Germany and Britain, 1822–1846, 3 vols., (Eng. tr., London, 1847); C. H. Evans, Ethik des Neunzehnten Jahrhunderts (Berlin, 1887), and History of the Modern Philosophy of Religion, 1846–1874, 3 vols., (Eng. tr., Edinburgh, 1874; London, 1875; translations by A. T. Swing in his Theology of Albrecht Ritschl), and Theologie und Metaphysik, Bonn, 1881 (a defence of his epistemology). Lectures and essays were collected in two volumes (Gesammelte Aufsätze, Freiburg, 1883–86), and also in his Life (Albrecht Ritschels Leben, 2 vols., d. 1892–90).

Only after thirty years' activity as a teacher did Ritschl begin to gather a school around him in 1875; and from 1881 onwards he was exposed to the cross-fire of criticism from orthodox and liberal theology on the one hand, and from socialism on the other. In his treatment of the problem of the Old Catholic Church he asserts in opposition to Baur the essential unity of the attitude of the apostles to Christ, the insignificance of Jewish Christianity for, and the dominant influence of Gentile Christianity on, the development of Old Catholicism. His attitude to piety is unsympathetic; yet he succeeds in showing its historical significance, while maintaining that its merits have been exaggerated, and that it did contain reactionary Catholic elements. Even his work has the characteristic excellence that he seeks to get to the root of doctrines and institutions in living piety. His influence as a theologian, however, does not rest on these works, but on his discussion of Justification and Reconciliation, which contains an expression of his development of his whole system.

II. THEOLOGY OF RITSCHL.—Ritschl's position may be fixed in relation to that of Kant, Hegel, and Schleiermacher on the one hand, and to physical science and literary and historical criticism on the other. While he shared Kant's tendency, as is shown in the prominence that he gives to the Kingdom of God as one of the foci of the ellipse to which he compares Christianity, he does not accept the subordination of religion to morality, but strives to assert its independence. His reaction against Hegelianism is seen in his rejection of the organic conception of the development of history, and the intrusion of philosophy into Christian theology in ecclesiastical dogma, and his antagonism to religious mysticism as a philosophically determined type of piety. The emotionalism of mysticism too is uncoiled and expelled with a feeling that in place of emotion in religion, he yet does not follow Schleiermacher in making feeling the distinctive feature of religion, or in emphasizing dependence as its characteristic relation, as he lays stress rather on the assertion of personality over against nature. By his theory of dogmatic judgments he seeks to ward off the intrusion of the principles or the methods of science into the realm of religion.
as well as the dominion of philosophy there. Although trained in the school of Baur and for a time an adherent, he does not fully recognize the transcendental influence of the historical method, and the results of which literary and historical criticism exercises and cannot but exercise. In throwing all the weight that he does on historical revelation, he fails to recognize how much its supports in the literary records have been exposed to attack by this method.

Ritschl's system may be described by four characteristics: (1) religious pragmatism, (2) philosophical agnosticism, (3) historical positivism, and (4) moral collectivism; and, even if we cannot present the whole content of his teaching in the discussion of these features, we shall emphasize what is distinctive of it.

1. Religious pragmatism.—(a) Definition of religion.—We must first of all examine his definition of religion. He refuses to make it dependent on morality or to mix it up with metaphysics, and claims for it a realm of its own. He wrote before the modern branches of knowledge—religions psychology and the comparative study of religions—had proved how universal and necessary a function of mankind-religion is; and doubtless, had he been influenced by these disciplines, his definition would have been more objective and less subjective. Unlike Kaftan, who attempts to define the common element, Ritschl, on the ground that such a definition would be too vague, seeks to determine the common tendency in religion, what in some religions may be so rudimentary as to be scarcely perceptible and can be detected only because it is seen more fully developed in other religions.

"In all religion," he says, "the endeavour is made with the help of the elemental spiritual power which man acquires, to trace the contradiction in which man finds himself as a part of the natural world, and as a spiritual personality, which makes the claim to freedom more.

He recognizes an intellectual factor in religion.

"The religious world-view in all its kinds has the aim, that man in some degree distinguishes himself in value from the appearances which surround him, and from the natural compulsions which press in on him. All religion is interpretation of the course of the world in whatever compass is recognized—in this sense that the existing spiritual power (or the spiritual power) which rules and or over it, maintain or confirm for the person independent of the inherent or inherited, or the current conditions by nature or the natural operations of human society."

As regards this world-view, he is altogether pragmatist.

"It can be shown regarding all other religions, that the knowledge, which makes use of人在 these, is constituted theoretically without interest, but according to practical objects."

This position the most recent thought supports; it is now generally admitted that religion does not primarily gratify intellectual curiosity, but satisfies practical necessity. In it man seeks some good for himself, however he conceives it (goods, goodness, God) by aid of the gods (or God). Ritschl's definition of the good is, however, too limited, and according to recent philosophy, it gives us a permanent feature of human thought and life.

(b) The ideal religion.—The tendency of all religion is completed in Christianity as the ideal religion.

"Cosmic Christianity is the monothestic, completely spiritual and ethical religion, which, on the basis of the life of its Founder as redeeming and as establishing the Kingdom of God, consists in the deeds of the Redeemer and God, including His passion, conduct from the motive of love, the intention of which is the moral organization of mankind, and in the filial relation to God as Father. The Kingdom of God lays the foundations of blessedness."

The ideal more than completes the tendency; the spiritual element of the filial relation to God and the ethical element of the motive of love go beyond the removal of the contradiction between man's knowledge of himself as a spiritual personality and his sense of his dependence on (aspect of) nature, and yet, in working out his system, Ritschl gives prominence to the consciousness of domination over the world as resulting from the confidence in God's universal providence which the assurance of God's forgiveness and its sins brings to the child of God.

(c) Doctrine of redemption.—While the doctrine of redemption and the Kingdom of God as the two foci of the ellipse of Christianity, in his conception of redemption an inadequate estimate of sin and its consequences results in an insufficient emphasis on the canceling of the guilt and the deliverance from the power of sin; and accordingly his representation of the Christian salvation does not correspond with what has been most distinctive of the evangelical type of Christian experience. He denies the doctrine of original sin, and regards sin as a personal fault because of ignorance; and he affirms the reality of guilt as disturbing the relation of man to God, and of the sense of guilt as the feeling which corresponds to this fact.

The standard for the judgment of sin is not a primitive perfection of man, or even an absolute law of God, but the historical process of God, the life of God, of which sin is the contradiction, and to which the totality of the sins of mankind may be regarded as a rival rule in history. There is no present wrath of God against sin; it is only a sense of guilt produced by the thought of the existence of those (if any) who finally oppose themselves to His Kingdom; there is, therefore, nothing in God corresponding to man's fear of His judgment or man's view of the evils of life as God's punishment of sin. God can and does pardon sin, rather long after the time, i.e., so long as God's purpose is not finally rejected.

(d) View of forgiveness.—As is the view of sin, so also is the view of forgiveness. While there is no hindrance either in God or in man to forgive, God is moved to forgive men—i.e. to restore to their filial relation with Himself—by His love to establish the ethical community of men, or the Kingdom of God on earth. This forgiveness (or justification, for Ritschl identifies the two) comes to men in the work of Christ as the Founder of the Kingdom of God. He reconciles God with His religious unity with God through all tests and trials, even unto death; and the relation to God, thus maintained, He reproduced in His community.

This common good the individual believer makes his own by faith, being dependent both logically and historically on the community (to this point we must return in dealing with Ritschl's moral collectivism). Reconciliation, as the removal of man's distrust and hatred of God, and not as any change in God, is consequent on forgiveness or justification. The believer has reached the certainty of salvation only when, conscious of his relation to God in Christ as justified and reconciled, he is also conscious that his relation to the world has changed; and dominion over has taken the place of dependence on the world. In his exposition of Christian experience, Ritschl thus returns to his starting-point in the tendency which he finds common to all religions.

Much had to be rejected which has hitherto been regarded as essentially Christian, in order that this conception of religion might be consistently maintained through its dependence on (aspect of) nature. One-sided as it is, it can be understood as a rejection of and opposition to naturalism, which reduces man to an insignificant result of the cosmic evolution, and even as a recoil towards the Kantian exaltation of moral personality from an absolute idealism, which makes the individual man but a
moment in the evolution of the Idea or Spirit. As the heart makes the theologian, so the theology of Ritschl reflects his independent, vigorous, even aggressive, personality.

2. Philosophical anti-theism. — This religious anti-theism — the opposition of cognition to sensation, of the interpretation of reality to the practical purposes of man, the maintenance of his own personality despite nature’s challenge — results in, and so explains, the second characteristic of his philosophy, viz. the rejection of God and Theism.

(a) Phenomenalism. — The speculative interest must be repressed, and the practical must dominate. Ritschl cares to know only what he needs to know. The attitude is similar to that of Confucius, who declined to discuss the subject of spirits or of the future life as not immediately useful. An individual peculiarity here betrays itself as well as a reaction from the extremes of Hegelian speculation. About Ritschl’s metaphysics (in fact only epistemology) we need not concern ourselves, as it is really an afterthought and not the basis of his system. His philosophical attitude may be very briefly indicated. It is at bottom a phenomenalism, which, while not denying the reality of the noumena, and even asserting that the noumena are apprehended in the phenomena, refuses, though not without reason, the basis of his system. He permits theology to discuss only the phenomenal, the work of Christ, and tries to stop its course before it reaches the noumena, the person of Christ, although, it must be added, not quite effectively.

(b) Independent theism rejected. — Unlike Schleiermacher, in whom mystical and metaphysical elements blended, Ritschl throws all the stress on the experience of the moral personality. He is not less opposed to pantheism than to naturalism or materialism. If the latter are both mistaken, there is a definite personal monothelism, which, however, he rests on an exclusively religious basis (with an inconsistent lapse to a moral argument), rejecting entirely speculative theism either as incompetent to deal with all the problem or as offering only a solution which is illogical on Christian faith. There is no doubt for his mind wavered between those opinions regarding the question whether philosophy could or could not reach any conception of God. In denying the competence of philosophy to reach a world-view, he not only had the whole history of philosophy against him, but he could not even maintain his own position consistently, for he did attempt philosophically to defend Christian monothelism against both pantheism and materialism; and he did seek to show the inadequacy of the theological argument. Independent theism was carried much farther than his purpose to defend the Christian idea of God against speculative modifications required, and than the truth in the matters in dispute justified. Further, he himself, in arguing against Strauss for personal God, asserted the rational principle in both the cosmological and the teleological arguments.

RITSCHLIANISM

‘the acceptance of the idea of God is not a practical belief, but an act of theoretical knowledge,’ in the third edition he concluded the same argument with the contradictory statement: ‘the acceptance of the idea of God is not a practical belief, but an act of theoretical knowledge.’

His inconsistency is due to conflicting aims. Disturbing philosophy, and desiring to assert the sole claims of faith, he yet wanted theology to be regarded as a science, and not to be ignored by philosophy. Refusing the alliance, he tried to ward off the antagonism of philosophy.

(c) Theory of value-judgments. — To the statement just quoted he adds: ‘If, accordingly, the correspondence of Christianity with reason is hereby proved, it is still true, with the reservation that the knowledge of God finds expression in another kind of judgment than that of the theoretical knowledge of the world.

Here he gives his alternative solution of the problem of the relation of philosophy and theology, as well as faith and religion. There need be neither alliance nor antagonism; there may be neutrality. Even if philosophy and theology be both competent to deal with the doctrine of God, their conclusions need not be put in rivalry or conflict, because due to the exercise of different mental functions upon different objects. There is the moral, the spiritual, but much misunderstood, theory of value-judgments.

To meet a common objection, it may be affirmed at the outset that the value-judgment is not less than God, and is better to act on than the theoretical judgment; it is just as much a judgment about reality, and not illusion, as is the other. The distinction between the two kinds of judgment Ritschl expresses as follows:

‘To seek to discern the difference in the sphere of the subject, I recall the double way in which the spirit further appropriates the sensations excited in it. These are determined in the feelings of pleasure and pain, according to their value for the ego. On the other hand, there is the representation judged in respect of its cause, of what kind it is, and what is its relation to other causes.’

The first way of regarding an object—its relation to, and value for, the self—yields the value-judgments; the second—its nature and relations—the theoretical judgments. As, however, even in knowledge there is, and cannot but be, interest, we must distinguish between accompanying and independent value-judgments. In the science we have the former, in religion the latter.

Independent value-judgments are all perceptions (Erscheinungen) of moral purposes, or hindrances to such purposes (Verweihung) in so far as they excite moral pleasure or pain, especially as they set the will in motion to appropriate good (Gut) or to protect itself against what is contrary. Not only are moral judgments value-judgments; so also are religious. Religious knowledge moves in Independent value-judgments, which refer to the position of man in regard to the world, and excite feelings of pleasure or pain, in which he either enjoys his dominion over the world accomplished by God’s help, or grievously feels the lack of the help of God for that end.

Religious value-judgments are concerned not with individual feelings, but with the universal relation of man to God as helped by God to gain dominion over the world; they are not merely subjective feelings, but objective—i.e. true for all who stand in this relation to God. What is true in the theory is that moral and religious judgments are conditioned by personal character and experience, unlike the theoretical judgments, in which methods of reasoning, common to all mankind, are applied. If a man is not apprehended by all sound senses. The pure in heart shall see God. If a man will to do the will, he shall know the doctrine. Although Ritschl’s ungrounded statements of the theory offer some
RITSCHLIANISM

justification for the charge, the theory does not necessarily involve an intellectual dualism—that, e.g., the philosophically true might be the theology false. The Ritschlian version of the unit of all truth must be maintained, and it must be our endeavor to unify our knowledge as to approach that unity as closely as we can; and Ritschel was wrong in attempting to arrest the process. But this does not exclude our recognizing the necessity of knowledge of the Ritschlian, necessary for different objects. The use that Ritschel made of the theory to prevent the thorough intellectual interpretation of the objects of Christian faith is to be condemned—not the theory itself. Religion by its very nature is concerned with ultimate reality. Its quest can end only when the eternal God is its refuge and underneath are the eternal arms; and therefore to use a theory of religious knowledge to shut up faith within the phenominal, and to shut it out of the noumenal, is to deny it its full and abiding satisfaction. In religion the value of the object for the subject may be the starting-point, but its goal can be the assurance of its reality, and its harmonious relation to the totality of reality; e.g., Christ loses His value for faith as God, if there lingers the doubt that there lacks the assurance, that He is God in reality.

(d) Ecclesiastical dogma.—Rejecting the aid of philosophy on the one hand, and limiting the scope of religious knowledge to value-judgments on the other, Ritschel is necessarily opposed to the method of dogma and does not in the first volume of his great work he gives an account of the history of the doctrine, and disserts not from results only, but also from methods; in the third volume he criticizes as he constructs. It is Harnack, however, who in his Diumagenscheschrift (5 vols., Tübingen, 1908, Eng. tr., 2 vols., London, 1894—99) has most fully carried out the Ritschlian condemnation of ecclesiastical dogma. Into the details of this criticism it is not necessary for the present purpose to go.

3. The doctrine of Christ.—An instance, but a crucial one, of the application of the Ritschlian method is the doctrine of Christ. Here we can test most thoroughly its adequacy as an interpretation of Christian faith. The place that Ritschel assigns to Christ in the Christian religion puts it beyond doubt or question him, that he means to affirm the divinity of Christ in reality and truth, although as a value-judgment, i.e., on the basis of Christian experience. His criticism of ecclesiastical dogman is very severe; and he intends to affirm that Christ is divine even more adequately and correctly than it has done. Whatever we may think of his result, we must assume this intention, if we are to do him justice. He modifies the current teaching about the work of Christ, from which, he insists, we must start in dealing with the doctrine; (a) He re—affirms personal vocation for office; (b) He lays stress on the likeness of the Founder and the members of the Christian community on the ground that 'what Christ is for us must be verifie in the transfer of His worth to us'; (c) consistently with the peculiar position of the Ritschlian dogma in his conception of Christian life, he subordinates the priestly (or Godward) and the prophetic (or manward) function to the kingly; (d) instead of assigning the three functions to different periods, he gives them all in the same measure of unity in the exercise of all the three in the state of di-rect judgment and of exaltation. The perfect fulfillment, in doing as in suffering, of his vocation yields us the ethical estimate of his person. His vocation being what it is, the revelation of God to man and of man to God, i.e., wholly within the mutual relation of God and man, the religious valuation inevitably follows on the ethical in the predicate of His divinity. He who in all respects perfectly realizes the relation of God to man and of man to God. As He in His vocation identifies Himself with God, so God in His mind and will identifies Himself with Him.

The personal purpose of Christ for Himself has the same content as the relation of God to man as God, e.g., Christ knew and wills as much: and accordingly He as the center of the relation of God to man and of man to God. As He in His vocation identifies Himself with God, so God in His mind and will identifies Himself with Him. The personal purpose of Christ for Himself has the same content as the relation of God to man as God, e.g., Christ knew and wills as much: and accordingly He as the center of the relation of God to man and of man to God. As He in His vocation identifies Himself with God, so God in His mind and will identifies Himself with Him. The personal purpose of Christ for Himself has the same content as the relation of God to man as God, e.g., Christ knew and wills as much: and accordingly He as the center of the relation of God to man and of man to God. As He in His vocation identifies Himself with God, so God in His mind and will identifies Himself with Him.

Even although He brings men into the same relation to God as He holds Himself, He nevertheless in our religious estimate of Him as God is unique. As He as the Founder of the Kingdom of God, or as the bearer of the Kingdom of God over all, is the Unique One [Einzige] in comparison with all others who have received from Him the same final determination [Zweckbestim- mung] of His will, so He is also the only one in whose eternal self-end God makes His own eternal self-end in an original manner alone and manifest, whose whole action in His vocation accordingly forms the content of the complete revelation of God present in Him, or in whom the Word of God is a human person.

So far many theologians would heartily go with Ritschel, but he bids them stop here. Christ is given to men as the Revealer of God that they may believe in Him; and this faith in Him can be disturbed only by vain attempts to offer a scientifical explanation of the relation of God to man. That the theologian cannot arrest his inquiry at this point Ritschel himself shows by going beyond it at a later stage of his discussion. The reasons for which the predicate of divinity may be ascribed to Christ are: (a) His grace and truth, (b) His mission in the world, (c) His oneness in being as God and man alike in action and in passion, (d) His success in establishing on earth a community in which He reproduces His own relation to God, which, original in Him, is imparted to others by Him. At this point Ritschel makes his speculative attempt to get from the phenomenal to the noumenal, from the temporal to the eternal. His statement must be given in his own words, lest a paraphrase might put too much or too little into them:

'The unity and the similarity with God, which the Kingdom of God ultimately possesses in order to be understood as the objective of the love of God, belongs to the same only in so far as it is evoked by the Son of God, and subordinates itself to Him as the Son.

Accordingly the lovd of God must be directed first place to the Son of God, and only for His sake to the community of which He is the center. The tasks of the community, further, are eternally posted in the loving will of God, then it arises from this knowledge, that the specific significance of Christ for us is not already exhausted in this, that we value Him as a revelation temporarily limited. But it further belongs to this—

that He as the Founder and as the Lord over the Kingdom of God, is in the very object the eternal knowledge and volition of God as is the moral union of men, through which Him becomes possible, and which possesses in Him its type, or rather that it is the unity of the divine knowledge and volition also precedes His community.'

This statement might mean only an ideal pre-existence of the community as of the Founder. While Ritschel, on the one hand, re-asserts the conviction of the mystery of the relation of the Son to the Father—the eternal divinity of the Son of God is completely intelligible for God Himself alone—yet, on the other, he asserts the necessity for our thought of setting aside as regards God the differ- ence which is traceable in the fact that the oneness in the Father and the Son of God has in His conception of Christian life, he subordin-ates the priestly (or Godward) and the prophetic (or manward) function to the kingly; (d) instead of assigning the three functions to different periods, he gives them all in the same measure of unity in the exercise of all the three in the state of direct judgment and of exaltation. The perfect fulfilment, in doing as in suffering, of his vocation yields us the ethical estimate of his person. His vocation being what it is, the revelation of God to man and of man to

1 Rechtleitung und Vereinszweck, iii. 355, Eng. tr. p. 435.
5 ib.
RITSCHLIANISM

for God as they are recorded for us: for he does recognize that as pro-existing Christ is a mystery to us, and cannot, therefore, be in all particulars just as the Kingdom of God is known. His idea is that God recognizes Him as divine, that and that only we may suppose to exist eternally in God. This falls short but moves in the direction of the doctrine of the Trinity as speculatively construed, in which stress is laid on the necessity of a personal object of the love of God. It is more debatable whether and volition might be ideal; must not an external object of love be personal? And does not Ritschl in the statement quoted speak of God's love as first directed to the Son? The conclusion of the matter seems to be that he goes as far in affirming real pre-existence as his phenomenological allows.

3. Historical positivism.—Rejecting the aid of philosophy in giving objectivity to the judgments of value, Ritschl seeks to escape the subjectivism which his theory of knowledge in religion seems to involve by his historical positivism in criticism. This is often forgotten in the criticism of Ritschl is that the judgments of value do not give themselves their own content; in them through religious appreciation there is intellectual apprehension of an objective reality; and that reality is given in a historical rather than arbitrary way.

(a) Attitude to revelation.—In his attitude to historical revelation there are both attachment to, and detachment from, his intellectual environment. With Hegel he values history in relation to the moral and religious life of man, as the 18th cent. with its abstract rationalism had failed to do. To this his religious pragmatism also led him; the religion which achieves dominion over the world must have firm footing in the world. Nevertheless, though he was for a time an adherent of the school of Gaur, and preserved the methodical critical disposition which he had found in his teacher, he was not able to maintain that his treatment of the Scriptures is not always critical; his exegesis is sometimes dogmatic rather than historical. Further, he isolates the Christian religion and its forerunner, the Hebrew, from the general and universal history of human history; he is unaffected by the influence of religious psychology and the comparative study of religions, which dominate the religious-historical school.

(b) Use of the Scriptures.—Ritschl does not see the Bible, as the Protestant scholastics had done, as an inspired textbook of theology. His conception of religion limits his appreciation of revelation; the divine supply in revelation corresponds to the human demand in religion. His conception of the Kingdom of God, as we shall see, is not historical, but dogmatic, and may be taken as an instance of how he uses the Scriptures as the basis of his system. The person and work of Christ as the Revealer of God, and so the Founder of the Kingdom of God—that is his dominating interest. But he recognizes the value of the interpretation of Christ by the primitive community. As the Founder of the community, He can be understood only as we know what the community, in its historical beginnings, thought of Him; and the inquirer must even assume the same relation to Him when no act of man, Godward in human history; he is unaffected by the influence of religious psychology and the comparative study of religions, which dominate the religious-historical school.

The full compass of His historical reality one can reach only from the faith in Him of the Christian community; and even his intention to found the same cannot be understood historically. He does not perceive the historical significance of His Person as a member of that community. ... It would be a fatal error to regard the form of the Kingdom of God as the result of a development of forms of thought, but in maintaining them erect in theological use, because they serve the purpose of expressing most distinctively the character of Christianity and Judaism.

Thus the idea of the Kingdom of God is interpreted not at all eschatologically, and not only ethically, but soteriologically. The Pauline circle of ideas which already is known as apostolic. This does not involve, however, that Ritschl sets up Paul as an infallible theological authority. When he does not agree with Paul, he does not hesitate in setting aside his teaching; an apostolic idea is not necessarily a theological rule. There is evidence of a difficulty in his use of the Scriptures. A doctrine is true, not because it is in the Bible, but because it verifies itself experimentally and practically.

(c) Pragmatic view of the Bible.—Ritschl does not deal with the apologetic problem of proving the value and authorship of the Scriptures. He writes for and within the Christian community, for which the problem does not press for solution. With all that is included in Christian evidences he does not concern himself. Maintaining as he does the independence of religion, it is probable that the answer which he would have given to the question of the authority of the Scriptures would have been that they are the records of the historical revelation which meets the religious need of man. Here again is pragmatism; what works as religion is true as religion. His historical positivism explains his antagonism to the two types of religion which depreciate history—mysticism and philosophical theism. The problems that now press on us most are those for which he offers no solution directly.

4. Moral collectivism.—As a historical revelation gives the content to the value-judgments (the formal principle), so the Kingdom of God gives the regulative idea (the material principle, as the doctrine of justification had been at the Reformation).

(a) The primacy of the doctrine of the Kingdom. It is true that he speaks of the Kingdom of God and redemption as the two foci of Christianity; but there can be no doubt that in reality he subordinates the doctrine of redemption to the doctrine of the Kingdom as the means to the end on account of the recognized teleological character of Christianity. The account which he gives of the relation in the mind of Christ between the two ideas points to such a subordination:

'The purpose recognized by Christ of the universal moral Kingdom of God has to be realized by the Church in order to find a solution for the kind of redemption which He accomplished by maintaining His fidelity to His vocation and His blessed communion with God in suffering unto death.' So also does his speculative deduction of the Kingdom of God from the love of God as its necessary object. Further, in his treatment of sin and salvation the conception of the Kingdom of God dominates; he is concerned not with man's actual condition of sin, but with his possible destination as a citizen of the Kingdom of God. While Christian theology must be pietistic, resting on personal faith, bibliophile, getting its contents from the Scriptures, and Christocentric, having Christ as its standard, it is as the Founder of the Kingdom (the King) that He is God (the Prophet) and redeems man (the Priest).

(b) The Kingdom defined. It has already been pointed out that Ritschl's use of the idea of the Kingdom of God is quite unintentional, as the recent discussion of his understanding of the term has shown. So he regards the good, oneness as much as it is the same time it is reckoned as the moral ideal, for the realization of which the members of the community bind themselves to one another by a definite mode of reciprocal action. 1

1 See Rechtfertigung und Versöhnung, III. 341, Eng. tr., p. 7.
2 Ib. p. 9.
3 Ib. p. 10.
RITSCHLIANISM

While the religious good (justification and redemption) is put in the forefront, yet the second
clause shows that the religious good is subordinated
to the moral ideal. It is quite in accord with
Ritschl's religious pragmatism, with its emphasis on action rather than thought or feeling, with its
directness, free from philosophy and its attachment
to history, with the natural acceptance implicit in this
moral collectivism. His affinity is with Kant
rather than Hegel or Schleiermacher; but he ad-
bances beyond Kant's individualism to collectivism.
It is to the community that the religious good of
justification or redemption belongs, and the indivi-
dual appropriates the good for himself only as he
reckons himself a member of that community and
within it sets himself, by actions from the motive
of love, to the realization of its common ideal. If
redemption is a means towards the Kingdom of
God, Ritschl is quite consistent in maintaining
that the individual can make this good his own
only as he enters the community and accepts its
common tasks. While, of course, he is not think-
ing of an ecclesiastical organization exclusively,
he so far identifies Church and Kingdom that it is
true that he is interested in the question of who,
what or which are the persons who are saved by
God's grace, and what or which are the persons
who are saved by God's grace, and as the other acts,
in the relations of its members, from love, the
Church being as it were the Kingdom on its knees with hands folded
in prayer, and the Kingdom the Church on its feet
with hands outstretched towards its Divine
source. As identical with the Kingdom, Ritschl
would say of the Church: 'Extra ecclesiam nulla
salus.' The individual is not forgiven by God's
grace, immediate and direct, when he repents and
believes; but these isolated acts of justification
are (as we shall see presently) the temporal appear-
ance of the eternal resolve of justification for mankind for
Christ's sake; 1 for 'there is One Divine predestination according to which out
of the total possible mass (total mass, organic total) of the new creation
will be evoked.'
Ritschl does not in these words teach a restricted
election, as he admits that God's wrath conditions
God's love only as the resolve of God finally to extinguish the life of those who ultimately oppose
themselves to His purpose in the Kingdom; but
still it is the community rather than the individual
that is his interest as a theologian. Further, in
developing this argument he maintains that God's
purpose is realized in nations rather than in indivi-
duals, so that it is in his citizenship and conse-
quent participation in the national religion that
the individual becomes a member of the Christian
community; and that only the historical nations
of the West seem capable of realizing that purpose.
This is a trait characteristic of German theology,
which since the days of Luther has identified
nation and Church, patriotism and piety, in a way
which recalls the national religion of the OT
rather than the individualism so strongly praised
by Jeremiah and Ezekiel and, therefore, the univer-
salism (presented even in the Deutero-Isaiah)
of the NT.
(c) The savor of the Spirit.—We may briefly
recall the merit of Ritschl in emphasizing
Christian character and conduct against a mere
religious dogmatism or emotionalism (orthodoxy
or pietyism) and in giving prominence to the Christian
community. The NT demands the fruits of the
Spirit as the test and proof of faith; and the latter
Flower through the grace of the
Son has for Paul its issue in the savor of the Spirit
(not the individual possession of a common
Spirit, but the common participation in one Spirit).
Yet Ritschl is one-sided; Christian experience as
the realized relation of God and man has its own
intrinsic value, and not merely as the βωμος, of
1 Rechtsfertigung und Verwöhnung, ill. 123, Eng. tr., p. 128f.
VOL. X.—52
which character is the τελειος, even although
faith is energetic in love (Gal. 5:6). For
as Christ has taught us, cares for, seeks, and
saves each and all of His children. Ritschl's antag-
onism both to mysticism and to pietyism is due to this
moral collectivism.
III. The School of Ritschl.—Although
Ritschl had many influential scholars, it was not till
after thirty years' activity that his school began
to be formed. It was a letter of W. Herrmann
(Jan. 1875) that Ritschl himself regarded as the
beginning of a common theological movement.
Herrmann had been a disciple of Ritschl out of
Tholuck and Julius Müller (both mediatorial
theologians), and yet he confessed that Ritschl's
views had had a decisive influence on his theo-
logical development. 1 In 1876 Harnack extended
his influence to Leipzig. Schüler as editor of the
Theologische Literaturzeitung in 1878 also made
it the chief organ of the school, until it came to be
represented also by the Christliche Welt in 1887,
and the Zeitschrift für Theologie und Kirche in 1891.
From 1876 appeared the Zeitschrift für die
Kirchengeschichte, of which Ritschl himself was an
active contributor. By the influence of Stade,
there was formed in Giessen, in 1878, a theological
faculty largely inspired by Ritschl, and including,
besides Stade, F. Kattenbusch, E. Schüler, A.
Harnack, and J. Gottschick. In Göttlingen itself
Ritschl did not enjoy any general popularity; but
many of the best students came to him. Although
his personality impressed those who came into
contact with him, his influence was exercised
mainly by his writings, and continued as great
after his death as during his life. His theology
was mainly dominated by the doctrines of
Bonn, Jena, and (for a short time) Leipzig.
Herrmann Schultz and J. F. T. Brieger, though
not his students, associated themselves with
Ritschl. To the first generation of his students,
besides those that are mentioned above, belong J.
Kaufman, T. Häring, P. Lobsiein, and H. W. Wendt;
and to the second circle of those who had either
heard Ritschl himself or been influenced by some of his
followers belong S. Eek, O. Kirn, F. W. B.
Bornemann, F. A. Loofs, M. W. T. Reischel, F. M.
Rade, Otto Ritschl, P. Traub, J. Weiss, and even
G. Troeltsch, who was however later the leader of
other paths. By the end of the 19th cent., however,
divergences of interest and conviction showed
themselves, and the unity of the school was broken.
Some of the older Ritschians, whose interests
were critical, have gone over to the religious
historical school; others, whose interests were in
dogmatics, have attached themselves to the modern
positive school, which seeks, on the one hand, to
retain the orthodox inheritance, and yet, on the
other hand, by restatement to meet the demands of
literary and historical criticism. It must be
admitted then that, while Ritschl has permanently
enriched theology in his writings, the school which
was formed by his influence has run but a short
course.
1. Features common to all disciples.—Although
ready to acknowledge their indebtedness to
Ritschl, yet his disciples are also so given to asserting
their independence even by criticism of the
master that Pfeiderer has asked the question:
'1 Do not their opinions now already differ in so many ways
that it appears perilous to bring them together under a common
label? 2
Nevertheless there are several common features:
[1] The exegesis of the NT as a rejection consequent of speculative theism;
[2] The condemnation of ecclesiastical dogma as an illegitimate mixture of theology
and metaphysics; [3] the agitation shown to religious mysticism as a metaphysical
type of pietism; [4] the practical

conception of religion; [6] the consequent contrast between religion and the ethical theory of life; [7] the emphasis laid on the historical revelation of God in Christ as opposed to any natural revelation; [8] the explicit denial of the regulative principle of Christian dogmatics; [9] the tendency to limit theological investigation to the contents of religious consciousness, and to ignore all contact with the natural science.

Not all the adherents of the school have concerned themselves with all these features; some were attracted to Ritschl in one way, others in another; and yet there is such organic unity in Ritschli's system that we may claim in these respects agreement.

2. Hermann.—Herrmann has in his Metaphysik in der Theologie (Halle, 1878) and in his Die Religion im Verhältniss zum Welterkennen und zur Sittlichkeit (do. 1879) treated with vigour and rigour the relation of metaphysics to theology. His book, Der Verkehr des Christen mit Gott (Stuttgart, 1886, 1892, Eng. tr., The Communion of the Christian with God, London, 1906), which may be described as a religious classic, expresses unrestrainedly, in its critical discussion, the antagonism to religious mysticism, and yet in its positive treatment of the relation of the Christian to God through Christ it is marked by what many would call mysticism; for it very closely resembles what has been called Paul's faith-mysticism. It is true that it confines 'the inner life' of Jesus, in which the Christian is found of God, to the historical Jesus of Nazareth, and omits the spiritual book of meaning to suppose that Herrmann confines communion with God to the recalls, however, vivid, of the earthly Jesus, and excludes experience of the heavenly Christ as a present reality, and confines the kingdom of the heavenly Jesus. It is against a metaphysical and a non-historical mysticism that Ritschlianism sets itself; but it goes beyond the NT when, as in Ritschl and Hermann (not Kaftan), it excludes the Risen and Exalted Lord as the object of knowledge. In the same way it goes beyond the NT when it confines the definition of the kingdom of Christ to the NT revelation, and, without excluding, and ultimately admitting, the Scriptures generally as the channel of revelation, it holds that it is in the fact of the 'inner life' of Jesus that God primarily reveals Himself to us. His moral and spiritual influence, and, in the hands of the Church, the sins of his followers, the other, give us certainly of, and confidence towards, God as love. He so lays stress on the personal experience of inward transformation by this 'inner life' of Jesus as God's act of revelation that he obscure the truth that there is preserved and diffused in the Holy Scriptures the permanent and universal historical revelation, as the ever available source of this personal experience (see Der Bergfrih der Offenlauung, Giessen, 1885, Warum bedarf unser Glaube geschichtoll, Thatsachen?, Halle, 1884). While Ritschl offers no proof of the truth of the Christian revelation, Herrmann answers the question as follows:

'There are two objective bases on which the Christian conceptions of communion with God rests. First, the historical fact of revelation; and secondly, the fact of our own reality. . . Secondly, the fact that the moral demand lays claim to our actions. Christians who have experience of this need cannot take it as a grievous problem for us, and begins to be the element in which we live. . . Other objective bases there are not for the truth of this doctrine.'

There is a warm glow of personal devotion to Christ in Herrmann which is somewhat lacking in Ritschl himself. He has latterly given more attention to the subject of the Christian ethics (Könischkattol. und evangl. Sittlichkeit, Marburg, 1900 [Eng. tr., Religious and Moral Morals, London, 1904]), Ethik, Tübingen, 1901, Die sittlichen Weisungena. Jésus, Göttlingen, 1904).”

3. Kaftan.—Kaftan, to whom Ritschl was indebted for the term 'value-judgment,' often takes quite an independent course. He admits a mystical element in Christian faith, and objects to the narrowing of the term by Ritschl and Herrmann. But he insists that 'the highest good of Christianity is the kingdom of God above the world,' and that consequently 'to this religion as a way is absolutely impossible to move away from the world, and an ethically side towards the world.'

Kaftan also differs from Ritschl in his definition of religion. Instead of describing this common tendency, he claims to be able to determine the common element—man's feeling of dissatisfaction with this world, and the search for a satisfying good, either natural or moral, in or beyond the world. On the postulate by the practical reason he cannot go, he restates the proof of the true faith of Christianity. In Das Wesen der christl. Religion (of which the first edition appeared in 1881) he deals with the nature of the Christian religion; in the companion volume, Die Wahrheit der christl. Religion (Basel, 1888, Eng. tr., The Truth of the Christian Religion, 2 vols., Edinburgh, 1894), he offers the proof of its truth: (a) first of all he gives a criticism of ecclesiastical dogma in order to expose its failure as an apologetic; (b) next, insisting on the primacy of the practical reason, he rejects the traditional speculative method; (c) lastly he puts his own postulate, the 'Only the Christian idea of the kingdom of God as the chief good of humanity, answers to the requirements which can be made of the true, moral, historical and religious chief good.' (d) There has been a 'special revelation of that kingdom of God in history.' (e) As these two postulates of the critical reason have been failed in the case of the Christian religion, the reasonableness and the absoluteness of the faith reposed in it have been proved.

As the second stage of the above argument shows, Kaftan also attaches importance to the historical character of revelation. He has turned his attention to the restatement of the Christian faith in the new intellectual situation (Glaube und Dogma, Bielefeld, 1889, Branchen wir ein neues Dogma?, do. 1890, Zur Dogmatik, Tübingen, 1904; especially noteworthy is his Dogmatik, do. 1897). As these titles show, he does not accept Harnack's restriction of the term 'dogma.' What he means by it is the intellectual expression of the contents in faith.

4. Other writers.—Kaftan and Herrmann represent the more positive tendency in the Ritschlian school, and on many points of doctrine desire to come to an understanding with the evangelical theology; still more so Haring. Harnack, whose manifold interests and activities have led him to some critical studies, and, by the side of the school, to a more positive standpoint. His Christliche Glaubenslehre (Halle, 1892) is a brief summary of Christian doctrine of a constructive tendency. He, as it were, stretched one hand backward in his helpful exposition of the theoretical history of religion in Werturteile und Glaubensurteile (Halle, 1900), and one forward in his critical discussion of the methods of the now dominant religious-historical school in his Theologie und Religionsgeschichte (Tübingen, 1904). Rateb reckons Otto Rahn's and the
RITSCHLIANISM

theory of value-judgments in his pamphlet Uber Werththeilthe (Freiburg, 1893). Both lie and Reisch have done much to remove misconceptions and to introduce modifications so as to get rid of objections to this characteristic feature of the Ritschlian theology.

IV. THE INFLUENCE OF RITSCHL. — What gave Ritschl his influence over so many notable scholars is, I think, the personal quality and his wide learning would not have been noticed, were not the theological situation given him his opportunity. The service which he rendered, according to Rade, 1 was fivefold: he broke the Hegelian yoke; he ended the confusion and compromise of the mediating theology; he was more fully the exponent of Luther than the Neo-Lutherans; he was truly a Biblical theologian; and he had regard both to the interests of the Church and to the claims of practical life.

1. The new theological position. — Since his influence in his school was dependent to some extent on these temporary conditions, the changed intellectual situation has necessarily lessened that influence, as the differences within the school itself show. Three changes may be specially mentioned. The first has been a philosophical revival—a neo-idealism which Ritschls discilples have adopted, but which, as has already been indicated, has affected members of his school; so that those who have not identified themselves with the tendency have been compelled to offer a defence of their faith against it. Probably the greatest contrast between the theological position of Ritschls school and that of the church is the extent of knowledge. The literary criticism, of which Ritschl did not take full account as it existed in his own day, has developed into a historical criticalism, against the negative conclusions of which Ritschls thought was destined to be reasserted. The second change is the recognition of the Church's right and power to concern itself with the religious and the political and the practical problems of the world. The third change is the awareness of the extent of religious knowledge, and the necessity to ascertain its influence on the religious life of his time. Ritschls work is part of this scientific movement of the Church, the expression of which is the study of modern religions, and the attempt to know and understand them as religious phenomena.

2. Weaknesses in the Ritschlian teaching. — Weaknesses in his theology, apart from its irrelevance to the problems and needs of the hour, have been more clearly recognized with the lapse of time. The epistemological foundation is not solid, but shifting sand. His conception of religious knowledge is far too cerebral to be of any practical use. It is a personal conception, and the Church is not a personal concretion. It is a concept of a religious life, and the Church is not a personal life. It is the Church that has a religious life, and the Church is not a personal life. It is the Church that has a religious life, and the Church is not a personal life.

3. Ritschl's merit. — Has his theology then only been of historical interest, and no present value? So vigorous a personality in a masterly way shaping a system which, apart from some inconsistencies, has an organic unity so lacking in much of the theological thought of to-day commands respect. In time the whole system required many cross-currents in religious thought and life in order to be learned from the independence and solidity of his religious attitude; and against the many challenges of religion his assertion of its place and power as giving sure footing to the soul is reassuring. This appeal to the Christian in every age will never lose its force. That he rescued theology from its precarious support in philosophy and discovered for it the foundations in history remains his merit, even if historical criticism makes the defence of his position more difficult than it ever appeared to be to him. From him too theologians may learn to construct as they criticize—to advance to new positions not by disregarding the thought of the past, but by rethinking and, when needful, reshaping that thought. A theology will bear richest fruit for the future which strikes deepest into the spirit and the heart in the working of human insight. Ritschls stress on the Christian community is not only in harmony with the modern conception of society as organic, but is a necessary corrective of an individualism within the Christian church which has not yet recognized the significance of that conception. While his representation of Christianity as an ellipse with two foci may well be forgotten, his inability to maintain it is a convincing proof of the need of some one regulative principle in theology. If modern scholarship has forbidden the Church to regard it as 'Kingdom of God,' some other conception more central still must be sought for. Can it not be found in the Christian doctrine of God as expressed in the apostolic benediction — the love of the Father through the grace of the Son in the community of the Holy Ghost? 2

4. British appreciation. — In Britain Ritschlianism at first had a very hostile reception; but soon the tide turned, and, although the movement never gained any popularity, and no prominent British theologian has avowed himself a disciple of Ritschl, the interest he has inspired and the good will has been considerable. The first generation of Ritschlians reached their maturity, and their influence increased; it is probable, however, that, as in the land of its birth, so here, the influence of the school is at an end; but in the matters mentioned above it has made a permanently valuable contribution to Christian thought.

1 Bocc. iv. 2266.

2 Are many practical problems of to-day which he betrays no knowledge whatever.
It will be convenient at once to indicate the periods into which, by the common consent of inquirers, the history of the Roman religion falls. They are four: viz. (I.) from the earliest times (no more definite limit can be assigned at the end of the regal period—an age lasting, we may presume, for several centuries, in which the religion was in the main that of the city-State proper, answering to the jus civile in the sphere of law, and in fact constituting a part of it; (II.) from the time of Rome's recognition by the Greek world; (III.) from the war with Hannibal—a period of nearly three centuries (507–218 B.C.), in which the increasing commercial and political intercourse with foreign peoples and the spread of the Roman dominion in Italy brought in new worships and began to cause the neglect of the old ones; (IV.) from the Hannibalic war to the age of Augustus, in which the same process was continued with ever increasing strength, while the intellectual awakening under the influence of Greek philosophy sapped the faith of almost all educated men in the efficacy of their cults, and in the very existence of their deities; (IV.) from the age of Augustus to that of the Antonines—a period which is marked, on the one hand, by a partially successful attempt to revive the old cults and, on the other, by the introduction of new ones, with a change in meaning, viz. the worship of the Emperors. The characteristics of these four periods will be traced in detail in the course of this article; but it will be necessary first to give some account (a) of the sources of information on which we depend for our knowledge of the Roman religion, and (b) of the principal modern works in which those sources have been utilized with good results.

(a) Ancient authorities.—The most important evidence that we have of the original character of the religion of the Roman State is contained in the surviving religious calendars, or Fasti, of which we have fragments of about thirty, and one almost complete. These exist chiefly on stone, but for four of them we have to depend on written copies of lost originals; they were edited together by Mommsen, in vol. 1. of the Corpus Inscriptionum Latinarum, and we have the benefit of a revision of this edition by the same hand, published in 1893, with one or two newly found fragments. They all date from between 31 B.C. and A.D. 51, and thus represent the calendar as revised by Julius Caesar; indeed, it is fortunate that the year of the original Republican calendar, first published, according to Roman tradition, in 304 B.C., is fully preserved in them, as Mommsen conclusively showed. This skeleton is easily distinguished from later additions by the large capital letters in which it is inscribed or written in all the fragments that we possess; it gives the days of the month with their religious characteristics as affecting State business (e.g., V. = fastus, a day on which legal business may lawfully be transacted, and N. = nefastus, on which it is unlawful and ill-omened) and the names of the great religious festivals which concern the whole State, including the Kalends, Nones, and Ides, or days of the new moon, the first quarter, and the full moon. Excluding the latter, we have the festivals, in order, of the Equus, the Equilia, the festivals, from the Equirria on March 14 to the festival of the same name on Feb. 27, the last day of the old Roman year; and, though it is not in every case by any means possible to recover the meaning of the name, yet it is obvious that these festivals, which have left such a distinct and clear record in their right place both in each month and in the year, must be the foundation of all scientific study of the religious practices of the Roman State, taken together with the additions in
smaller capitals, which date from the Republican period. (For fuller information about the Fasti see How Different It Was and Why, which is now published by Munster in 2838; also condensed in Fowler’s Roman Festivals, p. 11 af.)

This invaluable record would, however, be of little use to us, were it not for other evidence of a varied character supplied by Roman literature and by Greek writers on Roman subjects, to which must be added the commentary in Fasti, the Fasti of Preller, and Chiefly in those found at Praeneste and in the groves of the Fratres Arvalae.

Two men of real learning, who lived and wrote at the end of the Republican period and at the beginning of the Empire, would, if we only had their works complete, furnish us with an immense amount of detail, both on the public religious calendar and on the religious life of the family and gens at Rome: these are Varro and Verrius Placeus, who, though deeply affected by ideas in reality quite foreign to the Roman religion proper, took great pains to investigate the facts and the meaning of the ancient rites. Earlier writers are of comparatively little use to us, for Roman literature began in an age when men were far more interested in politics or in Greek philosophy than in the religious condition of their people. We proceed therefore to Fasti, and it was only with the revival of that religion under Augustus that scholars, poets, historians, and writers on law began to interest themselves in it once more.

The works of Varro and Verrius have come down to us in a fragmentary condition or embedded in the works of others, such as Servius, Nonius, Gellius, Macrobius, Plutarch, and some of the Christian Fathers, especially Tertullian and Augustine. Three other writers of the Augustan age, whose works are partly incomplete, need special mention: Livy, who in religious matters, like Varro and Verrius, made some use of the books of the Pontifices, the sacred archives of the old religion; Dionysius of Halicarnassus, who was for some time in Rome, and occasionally records what he saw as well as what he had learnt of Roman rites; and Ovid, whose six books of poetical commentary on the Fasti contain a great deal that is curious and interesting about the festivals from January to June, mixed up with stories of late Greek origin and fanciful explanations which call for correction as well as appreciation. No, however, of the works of art we have very few until the Empire, and the few we have are difficult of interpretation; nor is it likely that modern excavation will produce anything that will throw much light, except indirectly, on the problems with which we have to deal. Thus it may fairly be said that at every point in the detail of this religion we are met by very serious difficulties, owing not only to the fragmentary condition of our authorities, but to the difficulty of explaining and piecing together what survives of them (Wissowa, Religion und Kultus der Römer, ch. 1.).

(b) Modern research.—Until the 19th cent. very little progress had been made in this work of reconstruction and interpretation; but the new impulse given by Niebuhr to the study of early Roman religion, the general interest in searching, and the names of Hartung, Ambrosch, Schwiegker, Preller, Marquardt, Jordan, Wissowa, and Aust are now familiar to all students of the subject. Of these the most important are Marquardt, who in his commentaries in Fasti, the facts of the worship of the Romans as the only legitimate basis for arriving at any conclusions as to their religious ideas (Römische Staatsverwaltung, ill., ed. Wissowa, Leipzig, 1855; Preller, whose Römische Mythologie (ed. Jordan, Berlin, 1881-83) is indispensable, and Vandendriessche, inasmuch as it is based on a conception of the Roman deities as impersonations of natural forces which is now generally acknowledged, is in great part misleading; and Wissowa, whose Religion und Kultus der Römer (Munich, 1902 [2nd ed., much improved, 1912], vol. v. pt. 4 of Iwan Müller’s Handbuch der klassischen Altertumswissenschaft) is at present the most complete, and at the same time the most cautious, account of the subject that we possess, its only considerable defect being the author’s unwillingness to recognize the value of the tentative efforts of folklorists and anthropologists to explain Roman ritual by the comparative method.

To these works must be added the edition of the Fasti by Pauly and Wissowa, already mentioned, and many other valuable contributions by the same great scholar made in the course of his indefatigable researches into Roman history; and, lastly, the Ausführliches Lexikon der griechischen und römischen Mythologie, ed. Roscher, in which the Roman articles, though of varying value, taken as a whole, indicate an important advance in our knowledge. The new ed. of Pauly’s Real-Encyclopädie, by Wissowa, has already rehearsed some of the articles in Roscher’s work.

Wissowa in his chapter on the four periods into which, as has been explained, the State religion may be historically divided. In dealing with these, and especially with the first, the characteristics of the Roman attitude towards the supernatural should be made tolerably plain.

I. First Period

(From the earliest times to the end of the regal period).

It has already been said that the Fasti, i.e. the skeleton of the oldest religious calendar, must be the basis of our inquiry, and that this was first published, according to tradition, in the year 304 b.c. But, just as Domesday Book is a record which carries us back for centuries before it was drawn up, so with the Fasti which the Romans themselves attributed to their priest-king Numa, and which bear unmistakable internal evidence of a very high antiquity. Though no actual date can be assigned, it is important to notice two facts which indicate the age in which it must have been drawn up. (1) The terminus a quo is the date of the building of the Capitoline temple, universally attributed to Tarquinus Superbus, since there is no festival in the calendar which has any relation to the trias of deities (Jupiter, Juno, Minerva) which was worshipped there. (2) The terminus a quo is the absorption of the Quirinal hill in the limits of the city, for the Quirinal and the cult of Quirinus on that hill are included in the Fasti (see Wissowa, p. 31). Thus, abandoning the doubtful names of legendary kings, we may say with confidence that the Fasti came into existence, in the form in which we have them, in the period of the city which included the Palatine and Quirinal hills, with the Subura, the Esquiline, and part of the Caelian hill. That is, when the city-State had grown to the form in which we begin to see the work of religious as well as political organization (and the two were at no period wholly distinct) had begun with a definite catalogue, for the use of the religious-political rulers of the people, of the religious ceremonies which concerned the welfare of the State as a whole.

We have thus gained a firm footing in a definite period of the development of the Roman city-State; but the Fasti then drawn up do actually carry us back still further; as we might naturally expect, we find ourselves already, as organized

1 Hereafter cited as ‘Fowler.’
2 Hereafter cited as ‘Wissowa.’
parts of the worship of the city, cults and rites which beyond all question arose in an age when there was no city-State as yet, and which belong to the life of the shepherd and the agriculturist. It is not, indeed, too much to say that the native Roman religion had its roots in the mental attitude of the men of that early age towards the powers to whom they believed themselves indebted for the prosperous issue of their labour spent in procuring subsistence from crops, flocks, and herds, or to whom they fancied that they owed its failure. Almost all genuine Roman ideas of the supernatural can be referred to this principle of origin, and it must be carefully borne in mind throughout the following pages. In order to make this clear, a list of the festivals (i.e. holy days of special religious importance) is here given, in the order in which they stood in the oldest calendar, beginning with March, which was the first month of the old Roman year (see Fowler, p. 5, and ref. there given):

17, Agonia, Liberalia. 25, Opferstichtis.
20, Quirinalia. 29, Quirinalia.
19, Cerialia. 13, Fonsalia.
21, Pansa. 19, Armilustrum.
23, Vestalia. Nov. 1, Nona.
25, Robigalia. Dec. 11, Agonia.
May 9, 20, Lemuria. 15, Consalia.
11, Vestalia. 19, Opalia.
23, Tribulum. 21, Divalia.
June 5, Vestalia. 23, Larentalia.
11, Matralia. 15, Lepidalia.
July 19, Toscalia. 22, Lepidalia.
21, Lucaria. Feb. 15, Lupercalia.
23, Neptunalia. 17, Quirinalia.
25, Furinalia. 21, Feralia.
Aug. 17, Portunalia. 23, Terminalia.
19, Vinalia. 24, Rosicervum.
21, Consualia. 27, Equitaria.

Now, though there are in this long list many festivals of which the origin and meaning are obscure, yet we can distinctly trace in it the course of the operations of agriculture, and may conclude that these festivals in which this feature appears were taken into the State religion from a purely agricultural population. Thus all the April festivals have to do with the safety of the corn and herds; at the Forcidae pregnant cows were slaughtered, and the unborn calves torn from the womb and burnt by the Virgo Vestalis. A similar origin is witnessed by the passage in which Servius suggests that the first of Vestalia became identified in later times with Greek gods of a polytheistic system; Quirinalia seems to be a form of Mars, either an independent deity identified with him or an adjectival name of Mars which took shape eventually as a separate deity. Thus it became as obvious to the Romans that we seem to have no doubt as to her existence as a definite deity; yet the Romans themselves were not agreed as to her real nature, and we cannot safely distinguish her as a deity from the sacred fire itself which was the chief object of her cult. Again, it is easy to say that the Cerialia in April were in honour of Ceres; but a very little investigation will dispel all possibility of discovering under this name any clearly conceived goddess of the type to which we are accustomed; she is, we must remember, a vestal whose origin, as we shall see, is to be found in the daughters of the agricultural household, cleansed the pennis Vestae, the representative of the store-house of the State, and made it ready for the reception of the grain about to be reaped; this work was done on the 24th of April which is marked in the ancient calendar by the letters Q. St. D. F., i.e. 'Quando sterces delatam fas' (Varro, de Ling. Lat. vi. 32); when the re Suef had been cleared away, public business, which had been forbidden since the 7th of the month, might be resumed. In August we meet with the true believers of Ceres, i.e. who cleaned their corn, a festival called the titrians, a name which is derived from the fact that the corn which was the chief object of her cult was sown and harvested in the same time (see art. 'Ceres,' in Roscher; Wissoon, pp. 192 ff., 207 ff.). The Robigalia of April 25 was supposed to be the festival of a god Robigus, and a note in the Præneste fragment of calendar, almost certainly from the hand of Verrius Flaccus (cf. CIL 7, 1505), we do not distinguish this deity from the one mentioned above, he is described as a patron of corn (verbo frumenti). It is impossible to be sure that, when the calendar was first drawn up, many centuries before Verrius' note was written, Robigus as a god was clearly distinguished from robigo, the term now on the corn. So with the Terminalia of February, teryna, which was a boundary-stone between two properties, and we have explicit accounts of the ritual used in fixing the stone, which bears the mark of a high
antiquity, yet does not indicate any clear conception of such a deity as became associated with Jupiter in the legend of the Capitoline festival (Fowler, p. 324 ff.). Once more, the Lupercalia, which became famous owing to a well-known event in the life of Julius Caesar, is generally believed to have been in honour of Faunus; but the Romans themselves were not agreed on the point; and it is possible that together with others, we need to associate the rites with the name of any deity at all. Lastly, it will be noticed that the names of Jupiter, Juno, Minerva, the great triad of the Capitoline worship of later times, as also those of Mars and Janus, are not indicated in the names of the festivals; and it is only from the additions made to the calendar under the Republic, and from Roman literature, that we learn that the Kalends of each month were sacred to Juno and the Ides to Jupiter, that the rites of March and of the October-horse had some special connexion with Mars, and that at the Agonía (which is probably an ancient name for sacrifice) of Jan. 9 a ram was offered to Janus.

These examples will be enough to show that we should not be justified in supposing that the most ancient Roman religion was very clear and explicit about the supernatural beings whom they invoked, and that it is better to rid our minds at once of the impression conveyed by both Greek and Roman literature, that each deity was a clearly realized personality with distinct attributes. It seems certain that the cults and religious ceremonies were not the practical means of obtaining their desires, of warding off evil influences from all that they most valued, while the unseen powers with whom they dealt in this cult were beyond their ken, often unnamed, or named only by an adjective signifying some quality, and visible only in the sense of being seated in, or in some sense symbolized by, a tree, stone, animal, or other object, such as the midlew, the fire, a spring, etc. Had they been as personally conceived as we are apt to suppose, we may be sure that they would not have been so easily superseded and absorbed by Greek and other deities as we shall see that they were. They are often multiplex, as the Faunus (on this point Wissowa1, p. 298 ff., holds a different opinion), Silvan, Lars, Penates, Semones, Carmentas, Mars, etc., as events conjoined, as the Dea Dia of the Arval Brotherhood (G. Henzen, Acta Fratrum Arvalium, Berlin, 1874, p. 48). In fact, we have beyond doubt in this oldest stratum of Roman religion thought a daemonistic and not a polytheistic type of religion, such a type as has been shown by J. E. Harrison (Prolegomena to the Study of Greek Religion, Cambridge, 1903) and others to have existed in Greece before the great deities of Olympus occupied the attention of the Greek mind, and such as is known to have existed not only among savage peoples but also in Europe (e.g., Lithuania) and in China (see Usener, Gutternamen, p. 801, and P. D. Chantepe de la Saussaye, Lehrbuch der Religionsgeschichte, Freiburg, 1887-89, i. 240 ff.). The Roman objects of worship were powers which they thought they would find material for myth; and they being whose undefined nature made them very hard to invoke with certainty or security—a fact which in the history of this religion gave rise to an elaborate priestly system of invocation (see below).

Fowler, with an insight into which a theory there could have been little chance for even a people more naturally imaginative than the Romans were to find material for myth; and we may fairly conclude with Aust (Religion der Römer, p. 19) that, though there were Roman deities and Roman worship, there was no Roman mythology.

'The deities of Rome,' he goes on, in a very instructive passage, 'were for the most part cults of sacred virtue. They had not, in the form, they had not the human heart with its virtues and vices which is the common or commonest source of deity; they enjoyed no nectar or ambrosia, . . . they had no children, no parental relation. They were, indeed, both made and forgotten, and the name and form of any deity are often in close relation to each other; but this is not a relation of marriage, and rests only on a similarity in the idea of the deities such as we have seen. The Fides, Fortuna, Roma, Ceres, Juno, Libera Libera, Consus Ops, Luna Satural, Salacia Neptuni, Hora Quirini, Maia Valesuni, Nerio Maris, the expression pater and mater that appears in the cult (Janus pater, Jupiter, Mars pater, Mater Matuta, etc.) point to a creative or generative power only in the relation of nature. These deities were of a type that became independent existences: they remain colourless cold conceptions, nuncius as the Romans called them, that is, supernatural powers when existence only betrays itself in the exercise of certain powers. The Roman did not trust himself to mark clearly the sex or name of his deities, as we see in the custom of invoking all deities confus or generation after prayer to a particular one, in order not to pass over any from ignorance or to give him a wrong name. In the formulas of prayer we meet with expressions such as 'sive deus sive dea est,' 'sive mas sive femina,' 'quiquis est,' 'sive alio quo nomine te appellari volueris.'

Again, after what has been said, it will easily be understood that such sacrifices did not have to be offered in temples made with hands, or have been represented in iconic form; what Tacitus says of the German Suevi may be taken as adequately describing the ideas of the early Romans themselves: 'nee cothibere partietibus deos, neque in ullam regionem orizentibus adhibere deos.' These deities of a cult, which became independent existences: they remain colourless cold conceptions, nuncius as the Romans called them, that is, supernatural powers when existence only betrays itself in the exercise of certain powers. The Roman did not trust himself to mark clearly the sex or name of his deities, as we see in the custom of invoking all deities confuse or generation after prayer to a particular one, in order not to pass over any from ignorance or to give him a wrong name. In the formulas of prayer we meet with expressions such as 'sive deus sive dea est,' 'sive mas sive femina,' 'qui quis est,' 'sive alio quo nomine te appellari volueris.'
Here it must be obvious that the fixing of Roman religious Ideas, and of the great festivals, together with the distinction of the days as proper (F. or C.) for State business, or improper (N. or Ν.), or proper only after certain sacrificial rites were over (EN, Q. R.C.F., and Q. St. D.F.), proves that the State whose religious life is regulated had already gone through a long general development, and was in the hands of capable and clear-headed religious rulers. We have to see, now that we have reached this stage, who these rulers were; what deities they admitted as specially concerned with the welfare of the Roman State; what holy places they reckoned as proper for their religious functions; and what sacrihculus they performed there, and in what insignia of office.

i. THE PRIESTHOODS.—At the head of the whole religious system was the King (Rex). This is made certain by what may be called the school of sacred symbols, by which alone we can conjecture safely the details of administration in the regal period. When that period came to an end, the sacrificial functions of the Rex passed to a Rex sacrorum or sacrificius (cf. the ἔργων βασιλείας at Athens), who continued to hold the first rank in the Fasti until 336 B.C. (p. 198 [ed. Lindsay]). We may be almost as sure that other functions exercised in Republican times by the Pontifex maximus also belonged originally to the Rex, viz. the selection of the Vestal virgins and the Flamines, and the superintendence of his potes familiares (Munatius, p. 240). The Vestals had the care of the sacred fire, the symbol of the unity of the State, while the Flamines were sacrificing priests attached to particular worship; thus it is now generally admitted that the State in this early form represented the discipline of the earliest Roman household, the Rex taking the place of the paterfamilias, the Vestals of the daughters of the family, and the Flamines of the sons. Further, in accordance with a Roman practice which also had its origin in the school of the Rex, it is to be remembered, in all matters relating to religious law or custom: one collegium, the Pontifices (five in number, according to tradition), was specially concerned with the administrative details of the jux sacrum, and another, the Augures, with the interpretation of the oracles. It is certain that the whole system was originally one kindly united to the king, but is not certain that the Vestals. Now we find that the Rex sacrificed to Janus on Jan. 9; he was also, no doubt, concerned in other rites—e.g., at the Regifimgnum on Feb. 24 (see Fowler, p. 327) and in those of the Vestals which afterwards fell to the Pontifices; but this is the only one of which we have certain evidence. The Flamen Pacis was the special priest of Jupiter, and sacrificed the avis idialis on ali Ides to the god; on many other occasions—e.g., at the Vinalia both in April and in August, and at the Lupercaalia—he was present; in the latter case he may, however, have been the first priest of the Rex after the abolition of the kingship. The Flamen Martialis and the Quirinalis were obviously connected specially with the cults of Mars and Quirinus, though we are in need of more explicit evidence; it is probable that on the other occasions (e.g., on the 'October-horse' (Oct. 15) and in the Ambarvalia in May, and of the Quirinalis we know that he officiated at the Robigalia and the Consualia (for details see Marquardt, p. 332 ff.).

The Vestals were, of course, chiefly occupied with the cult of Vesta, though in Republican times they seem to have taken part in many other ceremonies (cf. Marquardt, p. 336 ff.).
The most prominent deities, then, were Janus, Jupiter, Mars, Quirinus, and Vesta. These form the core, so to speak, of the Roman ideas of the supernatural in relation to the State; others which we find in Wissowa’s table will grow faint and lose vitality—e.g., those to which the Flamines minores were attached—or will take a different shape under foreign influences; but these live, or four, if we take Mars and Quirinus as two separate entities in the same one of the calendar gods, to the Palatine, the other to the Quirinal city, remained at all times leading Roman religios conceptions, and must now be briefly considered as the characteristic deities of this period.

1. Janus and Vesta.—These two may be taken together, for in Roman ritual they were the first and the last deities in all invocations, public and private (Marquardt, p. 25 and notes). There is no congruence formal between them (that, as we have seen, is foreign to Roman ideas), but they had beyond doubt a common origin, and left its traces on their cult to the last. Originally they were the numina residing in the doorway and the hearth of the house, i.e., they symbolize (if the word can be safely used) the sacred entrance to the house and its sacred innermost recess, where the sacrificer stands as the center of the domestic world of the foundation of Roman civilization, so were Janus and Vesta the foundation of Roman worship. The temple of Janus, famous in later times, was in reality no temple at all: it was a gateway, with dazzling procession of priests and deities; it was under the special care of the king, as the doorway of the house had been in the care of the paterfamilias, so that no evil thing, natural or supernatural, might pass through it into the house. This position of Janus in the house and in the State may safely be taken as the origin of all the practices in which he appears as a god of beginnings: he was the oldest god, deorum deus, the beginner of all things and of all acts; he is an object of worship at the beginning of the year, the month, and the day; but all this arc connected with the Janus of (Venus) pater, from root divi), the god of a numen with the doorway of the house and the gate of the city (see Wissowa, p. 103 ff.; art. ‘Janus,’ in Roscher; Fowler, p. 282 ff.).

2. Jupiter.—In contrast with Janus and Vesta, who represented the sacred character of the house, Jupiter (Divus pater, from root divi) was the great numen of the open heaven under which the Italian, then as now, spent the greater part of his time. He was the numen of that heaven at all times and under all aspects, whether by night or by day, in clear weather or in storm and rain. In the Salian hymn, one of the two oldest fragments of Roman invocation that we possess (Macrob., Sat. 1. xvi. 14), he is addressed as Lucetius, the deity of light; theIdeas, when the moon was full, were sacred to him; when rain was sorely needed, his aid was sought under the name Elicius, by a peculiar ritual (Fowler, p. 252); as Jupiter Fulgur or Sumnemus he was the power who sent the lightning by day or night, and all places struck by lightning were sacred to him; the festivals of the Meditations, which specially needed the aid of the sun, and the light, were dedicated to him, and his Flamen was on all such occasions the priest employed. This conception of the deity was not only Roman, but common to all the Italian peoples who were of the same stock. It may be that the greatest of the Roman deities was worshipped on the summits of hills, where nothing intervened between the heaven and the earth, and where all the phenomena of the heavens could be conveniently observed.

In Rome the oldest cult of Jupiter was on the Capitoline hill, and on the southern summit, where it became overshadowed in the next period by the great temple of Jupiter, Juno, and Minerva. This was the cult of Jupiter Feretrius, which sustained itself and also the temples of them on their official journeys; and the oath by which treaties, etc., were ratified by them was said to be ‘per Iovem (lapidem).’ Here we get an early glimpse of that moral aspect of Jupiter which was retained in one way or another throughout Roman history; as Deus fides Fowler, p. 158, and perhaps also under the clearly Greek name Hercules, he was the deity in whose name oaths were taken (‘medius fidius,’ ‘mehereule’); his Flamen presided at the old Roman marriage ceremony of the confarreatio, where he seems to have been regarded as a kind of witness of the solemn contract entered into (Wissowa, p. 118); and on the Alban hill his cult, though overshadowed like that of the Capitol by the later innovations of the Tarquinian dynasty, was doubtless from the beginning of Rome characteristic of the comunidad aspect of the Latin league. (For the many forms of the Jupiter-cult, of which only the prominent features in the earliest period can be here described, see the exhaustive article by Aust in Roscher, condensed in Wissowa, p. 126.)

A word must here be said about Juno, who does not seem at all times to have been closely associated with Jupiter, certainly not as his wife, until Greek anthropomorphistic conceptions gained ground at Rome. That she, too, represented the light and the protection of the hearth and the stock, may have been regarded as a kind of witness of the solemn contract entered into (Wissowa, p. 118); and on the Alban hill his cult, though overshadowed like that of the Capitol by the later innovations of the Tarquinian dynasty, was doubtless from the beginning of Rome characteristic of the comunidad aspect of the Latin league. (For the many forms of the Jupiter-cult, of which only the prominent features in the earliest period can be here described, see the exhaustive article by Aust in Roscher, condensed in Wissowa, p. 126.)

name of Mars, that the cult of this deity was most prominent.

In March the dancing warrior-cerists of Mars, the Salii, whose antiquity and tradition are largely preserved by the fact that they must be of patrician descent, dressed in the costume of the old Italian warrior, performed a series of processional dances, clashing their shields and spears as if to avert some evil influence, and singing the songs of which a fragment has been preserved, and slaves, and prayer for watering the sacred corn... (cf. Wissowa's Specimens of Early Latin, Oxford, 1874, p. 567). The table given above shows that the 1st, the 14th (originally probably the 15th, as no other festival was on a day of even number), and the 17th were also great days in his cult, though we are more or less in the dark as to the rites performed; but on the 23rd, the Tubilustrum, the tubae used in war seem to have been made ready for the war season by the religious process of Iustratio; and it may be that the horses of the cavalry were treated in the same way at the Equitaria on the 14th. At the Ambarvalia in May, where Mars was eventually ousted by Ceres or Dea Dia, the Fratres Arvales went in procession for the lustration of the aeger Romanus, and the hymn they sang, so far as we can judge from what we possess of it (Marquardt, p. 457; Henzen, p. 20), but to make them invincible to man, and render them capable of averting noxious influences. This is confirmed by the prayer of the Roman farmer preserved in Cato (de Agricultura, 141), which begins, 'Father Mars, I pray thee to be willing and propitious to me, to bestow my good fortune on me... for my protection and... to avert all evil from crops and herds, and to bring the farmer's labour to a successful issue. From May to October we lose sight of Mars; but at the end of the agricultural and military season we find him again prominent. On October 15, which presumably is the birthday of Mars, we find a festival... March 14 (or 15), a horse was sacrificed with very curious ritual in the Campus Martius; in this rite we may perhaps see a survival of an old harvest custom, which took a new shape and meaning as the State grew accustomed to war, just as Mars himself, originally peripheral to the protector of man, herds, and crops alike, became the deity of war-horses and war. (Fowler, p. 249). The Mars-season was completed on Oct. 19 by the festival called Aramilustrum, at which the Salii again appeared with their arma and ancilia (sacred shields), which were then subjected to Iustratio and put away until the ensuing March. This short sketch of the ritual connected with Mars will suffice to show that the leading ideas in it are, as we said, agriculture and warfare; it is needless to distinguish the two more precisely, for we cannot separate the Roman warrior from the Roman husbandman, or the warlike aspect of his deity from his universal care for his people. (For more detail see Roscher's art. in his Lexikon; art. 'Salli,' in Smith's Dict. of Antiquities; Fowler, pp. 245 and 241 ff. with ref. there given.) Of Quirinus all that need be said here is that it is probable that this very obscure deity was a form of Mars belonging to the community settled on the hill that still bears his name; he seems to have had the same two characteristics as the Palatine deity, that is to say, the role of protector to the family and certainty (see Wissowa, p. 153). The most convincing evidence for the essential identity of the two lies in the fact that there were twelve Salii Collini, i.e. of the Quirinal hill, concerned in the worship of the deity now attributed to the twelve Salii Polatini of the Mars-cult (Liv. v. 52).

iii. CULT OF THE DEAD.—The Romans do not seem to have had, in early times at least, any idea of an under world tenanted by deities; Orcus and Dis Pater are not conceptions of home growth, and Vojovis, in spite of Wissowa's reasoning (p. 237), is far too obscure to be reckoned in such a category. Nor is this surprising: the deities of the Romans were always something of a mystery. How else could they have been able to control the dead and live. They were at once the instrument of punishment and reward, there was no call upon the imagination of the Romans (which was never strong or inventive) to create an under world like that of the Greeks, and the splendid picture of such a world which we find in the sixth Ecumen is wholly the result of Hellenic fancy.

But the Fasti supply us with certain evidence that the dead, when duly buried with the proper rites, were the object of an organized cult. In February, the last month of the year, and one specially appropriated to what we may call, for want of a better word, purification, nine days were set apart for this cult (dies parentales), of which the last, the 21st, appears as a State festival, the Feralia. Whether the dead were cremated or buried (both customs existed in this period, as we learn from the Fasti), the Salii, who were the custodians of the cult, in either case the dead man was believed in some sense to live on, to have entered into that world of spirits which contained all the Roman deities, and thus the dead came to be di parentes or di numines, the latter word being explained by the Romans themselves, as meaning 'the dead.' On these days in February the rites of burial were, as it were, renewed, to make sure that the relation between the living and the dead should be a happy and wholesome one. The dead had long been buried in the family tomb in the city of the dead, the site of the burial having been well cared for since their departure, and were still members of the family. They had their jura (jus manuum) under the supervision of the Rex and later of the Pontifices; experience has taught the citizen that the State must regulate his conduct towards the soul of his ancestor, with whom he might have to do in his lifetime. Another month of purification and apparently of ill omen, we find three days, the 9th, 11th, and 13th, styled Lemuria, i.e. 'festivals' (if the word may be here used) of the Lemures or Larve, the ghosts of ancestors who had died away from home, war or otherwise, and had not been buried with due rites; these were probably supposed to be apt to return to the house which they once tenanted, and had to be got rid of again by special ceremonies, of which Ovid has given us a specimen in his Fasti (v. 432). These days of the Lemuria are marked 'nefasti' in the calendar, while the dies parentales of February are—some of them at least—'C.' (comitiales), and the Feralia is 'F.P.'; hence it has been inferred with justice that the Lemuria was the older festival, representing a conception of the dead as distinctly of the living, had been well cared for at home. In this view (Fowler, pp. 107, 308) may account for the fact that of the Lemures we hear hardly anything but what the Lemurian cult reports that belongs rather to the private life of the household than to the jus sacrum of the city. It would seem that the cheerful and service of the dead which we find in February had entirely taken the place of the older and ruder rites. (For other indications in the calendar of the cult of the dead see Wissowa, p. 236; and, for the whole subject, Marquardt, p. 310 ff.; Aust, p. 225 ff.; and De Marchi, II Culto privato, p. 190 ff.; cf. art. ANCESTOR-WORSHIP [Roman].)
iv. Holy places.—All places in the city and its ager which, for want of a more exact word, we should term ‘holy’ were of two kinds, according as they were or were not authorized by the State; if they were so authorized, they were the objects of public worship, and if not so authorized, they were places of private worship. The distinction was made by the Senate, and it was the process of aedilitia and conscrip.tio, i.e. devotion to a deity by the Pontifices, which were loca sacra. If, on the other hand, they were objects of fear or reverence from their own nature only, and as a consequence of the previous reception of the deity by the people, on any part of it, they were loca religiosa. The best authority for this distinction is Allius Gallus, ap. Festus, p. 424 (ed. Lindsay): ‘Gallus Allius ait sacrum esse quaedumque more et instituto civitatis conscriptum sit, sive religioso, sive nec non loco esse,’ quid quid aliud, quid deditum atque conscriptum sit; quod autem privati sue religionis causa aliquid earum rerum denuntiarum docend is, id Pontifices Romanos non existimant sacrum. We may thus infer that before the completion of the city-State and its organization, and probably for some time afterwards, the spots supposed to be inhabited by numina were loca religiosa, and this is borne out by the fact that places such as those which had been struck by lightning, the Lacus Curtius in the Forum, and others to which the people had given no name, but which had, however, been consecrated by the willed or surmised ill omen, were loca religiosa. The term, therefore, though often applied to objects simply because they had not undergone the rites necessary to make them sacra (e.g., tombs, sacrates, etc.), seems to take us back to a time when the civilization and religion of the city-State had not yet done its work in bringing the divine inhabitants of the city into happier relations with the human population. But, when once a deity had been successfully settled in a particular spot, with cere-monia about the efficacy of whose possession was indubitable, and they had authorized and carried out by the State authorities, there was no further cause for any vague apprehensions about his attitude to the people; if duly propitiated, and especially on the anniversary of the dedication of the spot, he would be retained as the patron of the community, unless, indeed, some enemy could persuade him to desert it (evocare); and his attitude should be beneficent. All places in which deities were thus settled were designated by the word sacrum.

Strictly speaking, it was the ground they occupied that was thus styled; and it was matter of no moment what might be erected on it. When a temple or altar had been destroyed, the ground still remained sacrum. The general word for such a place, without any special reference to what was erected there, was fastus; the simplest kind of erection was a sacellum, i.e., as Trebatius defined it (Gell. vii. xii. 5), ‘locus parvus deo sacratus cum ara,’ and without a roof (Festus, p. 422); there were many of these in the city, even in the time of Augustus. Later on, some of them were covered by a roof, or an opening within it (locus), a cave like the Lupercal, a heath like that of Vesta, or an archway, as that of Janus. All these were loca sacra if they had been duly dedicated and consecrated.

The oldest example, so far as we know, of a house erected for the dwelling of a deity is the shrine of Vesta, which was round, like the earliest form of Italian house (A Companion to Latin Studies, ed. J. E. Sandys, Cambridge, 1913, p. 217); this was dedicated to the deity and consecrated, but wanting the usual marks of the augurs, which was necessary for a templum. This word was applied to a building erected on a locus sacrum, which had been not only dedicated and consecrated, but also inaugurated according to the technical system of which the augurs held the secrets, and of which we have but little definite knowledge. When a building with its site had been dedicated by the State, consecrated by the Pontifices, and inaugurated by the augurs, it was not only the dwelling of the deity, but was in all respects of the same nature as the temple of the city-State, in the sense in which we should call secular purposes—e.g., for the assembly of the Senate. A document, in later times at least, in the form of an inscription, was drawn up by the Pontifices, recording the dedication, the amount of consecrated land, the rites to be performed, etc., at fixed points; this was the use of the lex dedicatio or lex templi. (See Marquardt, p. 270 ff.; and, for the whole subject of loca sacra, ib. p. 145 ff.; Wissova, p. 467 ff.; Aus., p. 290 ff.)

As the collegium of augurs was certainly in existence in this first period of the Roman religion, it is possible that a few temples, in the proper sense of that word, may have come into being before the end of it. But, if we once more interrogate the Fasti, we shall find that the oldest festivals (see above, p. 822), with hardly an exception, are connected with sites that had not been subjected to inauguratio, though they were loca sacra.

The Robigalia, for example, was held at a grove, the Vestalia at the Alae Vestae, the Lataria at a grove, the Consualia at an underground ara, the Opuncisini in the Regia, as also the Agonia of Jan. 9, the Opalia. The spirit of the augurs was that of the oldest, buried places, the Lupercalia at the Lupercal, and the Regifugium in the Comitium (see Fowler under head of these festivals). The evidence seems convincing that, when the Fasti were drawn up, there were no templi technically so called. Where, as at the Quirinalia, we hear of a sacrificium at a spot where a templum is known to have existed in later times (Fowler, p. 322), we are not justified in inferring that it took place originally in such a building; there, as in other cases (Aust. de edibus sacrarum populor Romanorum, Marburg, 1889, p. 33), the temple was without doubt preceded by a sacellum.

v. Ritual of worship.—The basis of the Roman’s ritualistic dealing with his deities consisted in sacrificial and prayer, the two being, so far as we know, invariably combined. On important occasions, and for particular reasons, these were performed in the course of a procession or circuit round some object—land, city, army, or instruments, such as arms and trumpets—or, again, the whole Roman people, if supposed to be in need of ‘purification’ from some evil influence; in the extended form the ritual was called lavatio; and this ceremonial was perhaps the most characteristic, not only of the Roman, but of all ancient Italian forms of worship.

Sacrifice (sacriecess), as the word itself implies, was an act of making over to the deity some property more or less valuable, the meaning of sacer, as has already been explained, being ‘that which belongs to a deity.’ The nature of the sacrificium, as Marquardt puts it (p. 109), depended on the nature of the cult of the deity; it was only the last stage in the purpose of making sacred cakes, and the Flamen Diaulis did the same with the grape-crop in August, with prayer for the safety of the whole vintage (Fowler, p. 294). Unbloody sacrifices of a similar kind also occurred, and were performed by the private worship of the family and at the resting-places of the dead, but in the ritual of the sacrifices which descended directly from an earlier pastoral and agricultural life; e.g., at the Parilia in April we hear of baskets of millet, cakes of the same,
PAUL R. OLIVER

Roman Religion

pails of milk, etc. (Ovid, Fasti, iv. 743 ff.); and at the Vestalia in June the Vestals offered sacred cakes made, in antique fashion, of the ears which they had plucked in May (mola salsae). But the evidence of the Fasti itself suggests that we cannot back to a time when animal-sacrifices were not also in use; and this is in entire accordance with the nature of Italian husbandry, which was always more occupied with the rearing of cattle than with the raising of crops. We may suppose that animal-sacrifices were chiefly of cattle, and in State festivals we are not surprised to find that animal-sacrifices formed the staple of the worship. The animals most commonly sacrificed were oxen, sheep, and pigs; but the pig, as the cheaper and less honourable of animal, was rarely used except in conjunction with the other two, or as a piacular sacrifice—a term to be explained below. The technical word for the slain animal, if ox, bull, or cow, was victima; if any kind of sheep, hostia. Male victims were employed in the worship of male deities and female victims in the worship of female deities, in later times at least; but, in view of the uncertainty of sex in the most ancient deities, it may be doubted whether this held good in our first period. But, so far as our information about the ritual of the earliest festival is any guide, we may conclude that what was sacrificed to Janus, a heifer to Jupiter (this was Jupiter Feretrius [Festus, p. 204]), and at the Fordicidia, presumably to Tellus, a pregnant cow; to Mars in the lustratio agrī, presently to be described, ox, sheep, and pig accordingly. Of ancient usage also was the sacrifice of a dog at the Robigalia in April, and of a horse to Mars, as has already been mentioned, on Oct. 15. Of human sacrifice in the usual sense of the term there is no trace; but it might happen that in a season of great peril or pestilence the children be sacrificed. Of such cases, however, we have no record. The victims were made over to the god (per sacrificum), and, when they had grown up, were driven out of the Roman territory (Festus, p. 619; Liv. xxi. 10, xxxiii. 44).

The sacrificial ritual of the altar was extremely elaborate in later times, and it is impossible to say how much of it was in use at the time when we are now treating; it may best be studied in Mar-

quardt, p. 180 ff. All that need be said here is that the victim, which must be unblemished, was slain by the assistants of the priest, after its head had been sprinkled with fragments of the mola salsae, or at any rate in milk, and with wine that, in all ordinary sacrifices its internal organs were carefully examined, and, if of good omen, were placed upon the altar, while the rest of the animal was eaten. We can have little doubt that the examination of the liver, etc., formed a part of the ceremonial in the earliest period, since the object was to determine whether the deity would be satisfied with the condition of the animal offered him, and especially with those vital parts which were to be his share; but the extraordinary development of this examination must be left long to a later time. At what precise point in the ceremony the prayer was said does not seem to be known; but it was probably during the laying of the exta on the altar. The priest or other person who uttered it had his head covered, to show his subjection, and he said, either orally, while a tibicen played the tibia in order to secure the same result for the ears; all bystanders maintained a strict silence (Marquardt, p. 175 ff.). As is seen below, the prayer was the expression of a desire, if not a claim, on the part of the sacrificers, that the god should do them good, and it was part of the great pietas of which the wishes and interests of theirs as were within the range of his activity, either by averting evil or by doing positive benefit. To obtain the desired result, every detail, both of sacrifice and of prayer, had to be gone through correctly; and a slip in either or any accidental hindrance, such as the stopping of the music of the flute-player, made it necessary to begin the whole ritual over again, and to offer a new sacrifice to the god. But, on special occasions for all to.expire any omission that might happen; but it is possible that this was one of the later developments of the jus divinum (the victim in this case was a porcus procediunus [Gell. iv. vi. 7]). Undoubtedly, however, it was in the first period of religious organization within the State that this extraordinary precision in ceremonial detail had its beginning. It was itself the result of that peculiarly Roman conception of the supernatural which has already been touched upon.

It was the outward expression of that vague fear of the unknown which, in most highly developed the early Roman: he did not know his deities intimately, did not of himself know how to approach them with confidence, and might at any moment, for all he knew, be doing or saying things which would put them in evil mood towards him. It was the beginning of the State attitude towards the unbouded confidence of the early Roman in his State authorities, both civil and religious, his habit of unquestioning obedience to them, and his sense of obligation or duty, in both private and public life, are largely, perhaps mainly, due to his feeling of helplessness as an individual in his relation with the unseen world. We shall have to trace later the decay of this confidence and sense of duty (pietas), as the Roman mind became subjected to new influences, and as the extreme form of the old cults, sacrificial to the destruction all their life and meaning. But in these early stages of the Roman State the religious discipline of minute ritual unquestionably had certain good and useful results (see Fowler, p. 344 ff.).

Before we leave the subject of ritual, it may be well to indicate in it, in the most highly developed form which it took in this period, from the ceremony of lustratio, in which sacrifice, prayer, and procession were combined. The most remarkable record which we have of such a ceremony is not indeed Roman, but belongs to the Umbrian town of Iguvium. It is an instance of the growth of ritual containing a mass of detail for the instruction of the priests taking part in the lustratio of a sacred hill (orix fīsis); it is in the Umbrian dialect, and difficult of interpretation, but it entirely confirms all we know of this religious process from Roman sources (Bücheler, Unbriait, 1888). The object of this process of lustratio, as explained by Wisossa (p. 290), was twofold: (1) to purify the object round which the procession went from all evil that might be lurking there, and so to obtain the goodwill (pae) of the deity, and the blessing (of the sacred sacerdotium); (2) to protect it, by the aid of the god thus obtained, from all hostile influences, the circuit taken being a boundary within which no evil could come if the victims before their slaughter were driven round it according to the plan described, and the circuit was the symbol of the home (literally of the house). In the account of 15, 15, presents very peculiar features, which cannot altogether be explained in this way (see Fowler, p. 310 ff.), and also that the boundary line of city or ager, being carefully followed each year on
these occasions, was thus kept accurately in remembrance.

But the typical illustration of which we know the details is that of the Ambvarvilia in May, itself developed beyond doubt from the illustration of the feast by the Roman husbandman, of which the detail has been preserved to us in Cato's treatise on agriculture. We have to follow Cato, applying his account to the developed festival of the city; but we have sufficient evidence that the later Ambvarvilia, though it preserved the same lines (Cato, de Agricultura, 141). The procession of victims, bull, sheep, and pig—the most valuable property of the Roman— passed all round the fields just as the crops were ripening, and therefore most liable to injury from storm or disease. Three times they went round the land; at the end of the third round they were sacrificed, and a solemn prayer was recited, which, according to Cato's formula, ran thus (we must suppose that the Fratres Arvales, who were the priests presiding at the Ambvarvilia, used a similar formula, on an extended scale, for the land itself):

"Father Mars, I pray and beseech thee to be willing and propitious to me, my household, and my slaves; for the object I have caused thee to be driven round my farm and my lands. I pray thee to bless the plants, and all the disease, seen or unseen, all desolation, ruin, damage, and unreasonable influence; I pray thee, give increase to the fruits, the corn, the vines, and the plums, and bring them on to a prosperous issue. Keep also in safety the sheepfolds and their flocks and vines, and the barns and the household. To this end it is, as I have said—namely, for the purification and making due restitution of my farm, my land cultivated and uncultivated—that I pray thee to bless this threefold sacrifice."

At all these religious ceremonies the sacrificing priest, and all magistrates who had the right of sacrificing (in this period the Rex only), wore a peculiar dress. The most regular and characteristic one was the "parcilia," or what we may call the "cape," or "pretecta," which was also worn by children, both boys and girls, up to the age of puberty, probably because they had originally taken part as acolytes (camilli, camillus) in the sacrifices of the family (see Fowler, in Æn. i. 317 f.). But the most ancient priests, who were attached to particular cults, and whose sacrificial functions were continuous throughout the year, had special insignia of their own, which they wore at all times to distinguish them, and so to avoid the many causes of pollution with which they might accidentally meet. The Flamen Dialis, an "apex" or a leather trumpet in which was fixed an olive twig with a wisp of white wool (Serv. ad Æn. ii. 683), and their wives (flammaria) a "tutulus," or raised head-dress, bound with a purple fillet. The Vestals wore a white robe, and, when sacrificing, a thick white veil with purple stripe (see, for this explanation, J. H. Middleton, Ancient Rome in 885, London, 1885, p. 190). The Sali, when performing their dances, etc., wore a primitive military dress, the "trabea" and "tunicia pieta"; the Luperci ran round the Palatine hill at the Lupercalia, girt with skins, probably those of the victims (Marcellus, p. 444, note 3); the Fratres Arvales were conspicuous by a crown of corn-ears made fast with white fillets (Gell. vii. viii. 3).

From what has been said in this sketch of the Roman religion in its earliest form as a concern of the State, the following characteristic points should have become conspicuous.

1. The Roman believed himself to live in the midst of a population of spiritual beings (numina), whose attitude towards him and his actions the gods continually influenced by what he did or said.

2. As a consequence, it was necessary for him to be on good terms with them, and this could be securely accomplished only by the constituted authorities of a State who by experience and tradition had learnt how to deal with them.

3. This being not only an essential, but the most essential, part of the duties of the State, there was a real distinction between the "jus sacrarum" and the "jus civile;" the former was a part of the latter, and always continued so (cf. Cic. de Legibus, bks. ii. and iii.).

4. So, too, there is no original distinction between priest and magistrate; they were both alike concerned in controlling the divine inhabitants of the city. 'It was not a poet or prophet, but a King, and a priest-king, to whom the Romans attributed the origin of their religious organization' (Aust.).

5. This inseparable union of State and religion had important and valuable effects on the Roman character; the State was more to the individual than perhaps in any community ancient or modern. But the religion, as a religion, had an insufficient vitality.

6. This was chiefly because it was originally based on a feeling of fear, which was never wholly shaken off. It was mainly negative in character; i.e., the range of its prohibitions was far larger than that of its precepts. It can hardly be said that the moral law was enforced by it; and there was no distinction between it as it was to one's fellow-men (jus) and what was due to the gods (fides).

7. The one feature of this religion which had a moral value was the constant and inseparable attention to the details of duty; if these were not observed to a deity who was righteous, and who was in possession of all righteousness, yet they were duties that must be fulfilled; and they constituted a righteous dealing towards the divine beings, which created a claim upon them to deal righteously towards the Roman, and to hinder and destroy his enemies, whom he had not been able to destroy himself. Beyond this we cannot go; the pietas of the old Roman was a valuable quality in itself, but it never led him to base his daily conduct upon higher motives than obedience to the State and its authorities as mediators between himself and a dangerous spiritual world. It would always have been difficult for a Roman to appreciate the story of Antigone.

II. SECOND PERIOD

(From the Etruscan kings to the war with Hannibal.)

The religious system which has been described belonged exclusively to the State proper, i.e. to the patricians, or members of the old patrician gens; no plebeian or 'outsider' had any part in it whatever, either as priest or as worshipper. This will be easily understood after what has already been explained as to the relation of the divine and the human members of the State; the former had no existence apart from the latter, and, as the State consisted of the patrician gens, the deities who had taken their origin from a State had, of course, no dealings with any others, and could be approached only by those who had entered into relations with them. But by the 7th cent. B.C. a considerable population was growing up in the city, and its territory which did not belong to the old gentes, and whose cults and deities were altogether outside of the religion of the State proper. With the origin of this population we are not here concerned; what is of importance for our present purpose is to note that along with the Etruscan evidence that the Etruscan kings of Rome were not Romans but Etruscans, and that the patrician State succumbed for a time to an invasion of that great Etruscan power which at this time spread itself over central Italy, entering into relations
not only with the Latins of the Campagna, but with the Greeks of Cumae and the western coast. The consequence was a great and permanent revolution, not only in the political institutions, but in the religious system of the State. The second king, Servius Tullius, admitted the plebeians to the army, and divided the city and its territory into four tribes, comprising all free men, whether patricians or plebeians, who occupied a certain amount of land. The last king, Tarquinius Superbus, has all the characteristics of the tyrant. While he was extending the aristocracy of the patrician gentes was oppressed, while the unprivileged classes were brought forward and utilized. A great religious development accompanied the political one, of which we can distinctly trace two features: (1) the admission of the plebeians to a share in the worship of the State; (2) the introduction of new deities and worship, of one new and important priesthood, and of new methods of approaching the divine protectors of the State, both old and new. In the period we have now before us the old worship continued to exist as before, for the Romans held tenaciously to every custom and cult which they had at any time recognized; but the Rome that in the three following centuries extended her dominion over Italy, Sicily, and the western end of Spain, in every way surpassed the range of the old deities and their worship. Conquest, commerce, alliance, and, we may add, even peril and pestilence brought new additions to her divine population. If a community was conquered by her, its deities and their cult came into her hands, and she must combine their worship within the conquered city or invite them to take up their abode at Rome (Marcqardt, p. 35 ff.). Again, if the State was in peril, either from enemies or from pestilence, it might be necessary to call in the aid of new deities where the old seemed to be of no avail; for, as the dominion and intercourse of the State were extended, it came into contact with deities of whom the Roman authorities knew nothing, and who needed special invocation by experts in the right methods. This was the case with Sibyls, which are mentioned for the first time among those of the di novensides, the new-comers, was continually being increased; new and startling forms of worship were seen in the city, and temples were frequently being vowed and dedicated both to old deities and to new ones—to old deities under new names and forms, and to new ones who consented to take up their abode in or just outside the city. It is a period of religious activity as constant and vigorous as the political; but it can be sketched in this article only in outline.

1. The first and perhaps one of the best authenticated examples of the introduction of new cults at Rome is the foundation of the Aventine, outside the pomerium, of a temple of Diana. This was universally attributed to Servius Tullius, and is described by Varro, Latin. L. x. 99: 'communi Latinorum Diana templum.' Now, the famous cult of Diana at Ariesia, which has become familiar to us since the publication of Frazer's Golden Bough, was undoubtedly the centre-point of a Latin league which succeeded that of Alba Longa, and from which we may infer that league was later transferred from Ariesia to Rome, and with it the cult of Diana, who will not be found (see above) in our list of the di indigetes. This was a temple in the full sense of the word, and its legal dedications, or lex templi, became the basis of the laws for all towns (Cic. De Or. iii. 4333). Later on, it contained, after the fashion which began in this period, a statue of the goddess modelled on the type of the Ephesian Artemis, and borrowed from her cult at Massilia (Strabo, iv. 180). For further details and references in connexion with this important event in the history of the Roman religion see Wissowa's exhaustive art. Diana, in his ed. of Pauly's Real-Encyclopedia.

2. To the same period of Etruscan influence, and traditionally ascribed to Tarquinius Superbus, belongs a far more famous sanctuary, and one destined to be for ever the central religious point of the Roman dominion; this is the temple of Jupiter Optimus Maximus Juno, and Minerva at the north end of the Capitoline hill, where its foundations, showing unmistakable signs of Etruscan design, may still be seen (Middleton, p. 232). The combination of three deities in a single cult and a single temple was foreign to Rome, though not uncommon in Greece and, though we do not know why Juno and Minerva shared this great temple with Jupiter (who was at all times the great object of worship there), we infer that the triad came with Italian names from Tuscany, where it represented an original triad (Tinia, Thalna, Minerva) introduced under Greek influence. The temple was on a scale of magnitude utterly unknown to the primitive Roman builders; it was divided into three parts by two lines of pillars, and three cells at the north-western end, and with Jupiter in the middle holding his thunderbolt. Such a foundation indicates a very great change in the religious ideas of the Romans, and the researches of recent times have placed it beyond all reasonable doubt that it was meant to overshadow all the old cults of the patrician gods by exhibiting in the utmost splendour one which should be common ground for the plebeian and patrician alike, and which should symbolize the unity of the Roman State in its new form—the Roman State in its new form and dominion till it overshadowed all the States of the civilized world (see J. A. Ambrosch, Studien und Anderungen, Breslau, 1839, p. 205 ff.). At the same time, in all probability, was also built the temple of Jupiter Latiaris on the Alban Hill, where it represented an original triad (Diana, Laius, the Thunder) in the temple of Diana in uniting the members of the Latin league in a religious worship (Fowler, p. 95 ff.).

In close connexion with this great temple there came in new usages of the utmost importance in the history of the Romans, which have the Divine, dedication, or dedication, day of the temple, was Sept. 13, and on this day took place the epulum Jovis, when the images of the three deities were decked out as for a feast, and the face of Jupiter was painted red with minium; the magistrates and Senate partook of a meal in which the deities were supposed also to share. We do not know for certain at what date this practice began, but it is by no means impossible that in one form or another, though hardly perhaps as a completely anthropomorphic conception of the deities concerned, it may be attributed to the same origin as the temple (Marcqardt, p. 345; cf. Fowler, p. 218). This temple also was the goal of the triumphal procession of the victorious king or consul, who was then dressed and painted like the statue of Jupiter himself; and there were sacrifices after the letter with Jupiter on the Capitol, which he had vowed to make in honour of the god if victorious, were originally celebrated on the same day.

3. The most important of all the innovations of this age was the introduction into the temple of the so-called tria recta, of which an entirely new system of ritual was brought into vogue. This must now be explained in some detail. (For the Capitoline temple and
Jupiter see esp. Aust's art. 'Jupiter,' in Roscher, iii. 705 ff.) According to the familiar Roman story, these 'oracles' were pressed on the last king of Rome by the Sibyl of Cumae herself, and he finally took from her three books of them, which were preserved in the Capitoline temple. It may be that the Romans first made acquaintance with the Cumean Sibyl at this time; appearing to partake, and was invented to give credit to the verses which from time to time were invented by the Roman priests themselves to suit particular exigencies of the State (II. Diels, Sibyllinische Blätter, Berlin, 1890). What is certain is that these verses contained not prophecies of future events, but religious 'prescriptions' as remedies for alarming prodigies, pestilences, etc., and that these had nothing to do with the old Roman worship of the di indigetes, but involved the introduction of new deities, or of old ones in a new form, and of new ceremonies of a kind much more sensational, if the word may be used, than any yet seen in the city. The intercourse with Cumae and the Greek cities thus led directly to great changes; and, though it was the immediate result of the Etruscan dynasty, there can also be no doubt that it was the Bjork that the Roman aristocracy which succeeded that dynasty, and that they manipulated the new 'oracles' with far-reaching effects. The verses were committed to the care of a new priestly priesthood, consisting of two hundred men, who, on the authorization of magistrates and Senate they were from time to time consulted by these priests, who then announced (without divulging the verses themselves) the result of their inquiries, and recommended certain ceremonies or sacrifices for the prevention of evils to be averted. Thus it is at once clear that the governing class acquired in this way the legal means of metamorphosing the whole Roman religious system; and it is hardly too much to say that they succeeded in doing it.

The abolition of the kingship, according to the Roman chronicles, that the new priesthood first introduced a new worship; in 493 B.C. was built the temple of the Greek trias Demeter, Dionysus, Persephone, under the Roman names Ceres, Liber, Libera. Apollo, with whom the Sibyl was identified, or at any rate, of Pulcinella, as soon, in 483 B.C. Among other Greek deities introduced in the same way were Artemis as Diana, Aphrodite as Venus (the latter an old Italian deity of the garden), and Aesculapius. All these were worshiped with the ritus Graecus, which henceforward was recognized as equally legitimate with the ritus Romanes; e.g., the head of the sacrificing priest, which in Roman usage was always covered, as has been described above, was in the ritus Graecus uncovered (Marquardt, p. 186). This is the only detail of the new ritualistic form of which we have certain knowledge; but there were other ceremonies introduced by the same agency which had a more important bearing both on the Roman religion and on its character. In the year 280 B.C. we learn from Livy (v. 15), which is peculiarly. It was for the first time ordered by the Duoviri 'ex Sibyllinis libris,' in consequence of an alarming pestilence. For eight days Apollo and Latona, Hercules and Diana, Mercurius and Neptunus, were seen reclining on couches in Greek fashion, and appearing to partake of a meal laid out on a table in front of each of them; the figures were wooden puppets richly robed, and rested with their left arms on cushions (pulvinaria). Here there seem to be at least one or two of the old Roman deities; but we soon discover that Diana is really Artemis; Latona, Leto; Mercurius, Hermes; Neptunus, Poseidon; and we can guess that, though the experts may have believed that the foresign of a new religion or efficacities for the purpose in hand, it was desirable to propagate the people by introducing some of them at least under familiar names. These lector sternaria were frequently repeated, and came to form the essential part of the supplications, or during the festivals of a new pestilence, or in instances also ordered by the Duoviri 'ex Sibyllinis libris,' though sometimes also by the Pontifices and Senate (Marquardt, p. 48), and consisted of processions and worship at each place where the gods were exposed to view, as described above. It is noticeable that, while on the old Roman system the priest alone took part in religious rites and was alone admitted to a temple, here the whole populace was expected to view the processions; men, women, and children prostrated themselves in prayer before the images of the gods, or crowded into the new temples (Liv. iii. 7, 7).

These rites mark the first appearance of a tendency, constantly recurring in later Roman history, to seek for a more emotional expression of religious feeling than was afforded by the old forms of sacrifice and procession. It is evident that religious fever in Rome, as if the simple ancient methods of dealing with the divine inhabitants who had been induced to settle on the site were felt to be no longer adequate to the needs of a State which was steering its way to empire among so many difficulties and dangers. It is evident, too, that if, or some of them, may not have had their prototypes in old Italian usage (see Marquardt, p. 46; Fowler, p. 218); but what we can be sure of, so far as our evidence can carry us, is that the emotional element was wholly new. In Livy's account we seem to see a kind of sin, or at any rate of pollution—a something wrong in the relation of the State to the supernatural, which did at times show itself in the ancient world, as, e.g., at Athens in the 6th century B.C. No doubt it indicates, both at Rome and at Athens, the progress of one outside of political privilege, which cannot rely upon the efficacy of methods in which it has no share and of which it knows nothing—a population left out of account to a great extent in the dealings of the State with the gods, and, therefore the more liable to anxiety and emotion. If we can judge of this period of Roman religious history by the general tendency of the policy of the Roman Government, we may see here a deliberate attempt to include the new population in worship of a kind that would calm its fears and satisfy its emotion, while leaving uncontaminated the old ritual which had served the State so long.

But there are not wanting signs in this period that the old religious forms were being cared for and developed in a new way; and this is more so, the last century before the war with Hannibal. This brings us to a consideration of the part played after the expulsion of the last king by the two great colleges of Pontifices and augurs, who, as we have seen, were during the period only the consulting staff of the Rex in religious matters. The patrician aristocracy used them with consummate skill in establishing their control over all religious aspects of the State's business, and it was not till the year 300 B.C. that plebeians were admitted to them, though long before that date (in 367, Liv.
vi. 37) the Duoviri had been increased to ten, half of whom must be plebeians.

5. The Pontifices.—This collegium was originally an offshoot of the municipal power (see above, 2.41), was increased to nine in this period as the business of the office grew, and later rose to fifteen. Of these members the Pontefex maximus was at all times both nominally and really the head, while the others formed his consilia, according to Roman notions of office. When he devolved, when the kingship was abolished, the whole of the functions of the Rex in relation to the ius divinum; i.e. the sacra of the State, in the widest sense of the word, were in his care. The Vestals, the Rex sacrorum, and the three great Flamines were selected by him under a process which placed them in his potestas as they had been in that of the Rex (see above); and he succeeded to the Regia, which had been the king's dwelling, and which was close to the temple of Vesta, the heart of the State, on the Via Sacra. As he held his office for life, and as under his presidency the collegium co-opted its own members when vacancies occurred, it may fairly be said that he was the most important and influential personage in the State during this period; and this will be still more obvious if we add that he was both a civil and a military magistrate. These were chiefly administrative, and may be explained under two heads, as they affected (1) the State in general, and (2) the life and interests of families and individuals.

(1) State authority. The special sacrificial functions of the Rex, which were traditionally associated with his title, passed to the Rex sacrorum; but much ritualistic work remained for the Pontefex maximus and his colleagues. For example, all sacrificial acts, except those which were undertaken after inspection of the Sibyl line books by the Pontefices, were ordered and carried out under the supervision of the, Pontifices; the books of Livy abound with examples of this practice. Events were constantly happening which required such expiation, and it was only in extreme cases that the Pontifices gave way to the Duoviri. All pontifical acts, and especially the stripping of any spot or building by lightning, called for their action (procuratio fulguris), and such places were under their directions walled in and remained sacred. Again, all vows (vota) made by magistrates—e.g., in undertaking to build a temple, or to hold ludi, in a religious capacity, by public or private enterprise—were subject to the approval of the Pontifices, who dictated the exact wording of the votum, and superintended its fulfilment. No temple could be made over to a deity without their sanction, and the terms of dedication as well as the whole ritual to be followed were laid down by them in the lex dedicationum. The reception or admission of new deities lay within their sphere of action; and, though we do not hear of collisions between them and the Duoviri sacris faciundis, we may see in their control over the matters of any spot or building by lightning, the exaction of a tribute. As the pontifices had the ear of the magistrates, the latter could hardly resist objections on the part of the higher collegium to any new cults brought in under their auspices. But, as we examine the list of temple foundations of this period (see Aus, de Editio), we seem to see that those which were due to the Duoviri, and especially the stripping of any spot or building by lightning, are largely absent in the first two centuries after the expulsion of the last king, while a new period of pontifical activity in this department seems to begin after the opening of the collegium to the plebs in the year 300 B.C. Between 273 and 294 B.C. we find foundations of Italian origin: to Consus, Pales, Tellus, and Vertumnus; and during the first Punic war to the Tempeastes, to Janus, to Juturna, and to Fons, all deities connected with water, who were perhaps utilized, in the absence of any distinctly Italian gods, in the war. As the pontifices were in continual peril. The Pontifices seem, too, at this time to have been very active in inventing new deities on Roman lines and in harmony with Roman ways of thinking of the divine; thus abstractions, such as Salus, Fides, Spes, Pulcilita, are provided withRocketettes, and a deity Avellius, according to a highly probable conjecture of Mommsen, was introduced when silver coins were first struck in 208 B.C. In fact, the Pontifices, under the headship for many years in this 3rd cent. B.C. of plebeians (T. Cornelinius [Liv. Epit. xvi], Cæcilius Metellus, from 248, to 224), were so extremely active in this way that it is not unreasonable to ascribe to them that strange catalogue of deities called the Indigitamenta, which is usually referred to a much earlier time, and which is constantly quoted to prove that the Romans of the earliest age invented and named deities who presided over every action of their lives. Varro copied this list from the libri pontificum, and St. Augustine (de Civ. Dei, iv. 8 ff.) copied them from Varro to show the absurdities of the Idols. Here, it seems, among their deities, the priest who attended the school to children, Sterculia, the dunghill spirit, and the rest, a pontifical classification which probably had no other effect than to assist in taking the life out of the old Roman's feeling towards the xanthis which surrounded him; an example of the process by which a religious system was gradually killed by the exaggeration of its own methods (see art. Indigitamenta.; and, for the view given above, Fowler, p. 341, and Religious Experience of the Roman People, p. 159 ff.).

Two other acts, the retaining to public administration remain to be mentioned. First, they had the entire charge of the calendar with its course of religious festivals. It is not necessary here to go into the history of the Roman measurement of time or the nature of their astronomical year; but all such matters, as well as the adjustment of religious rites within the year, were absolutely in the hands of this college, and the frequent necessity for intercalary put a power into their hands which, in later times at least, was often used for political purposes. Secondly, they possessed the power of keeping, and of records drawn up by themselves, both of religious and of political events.

(2) Authority over private life. Every Roman family had, like the State, its own sacra, which it had been bound by law to observe, and which ceased to exist when it came to an end; we have already noticed the worship of the door and the hearth, and that of the dead ancestors, and to these we need add doubt that in some families special cults of particular deities, as, e.g., that of Jovevicus. Thus every marriage, every death of a poterfamilia, and every testament made by persons sui juris was of importance not only in the way in which we regard them at the present day, but as affecting the maintenance of...
these sacra, which became eventually so often a burden upon the family that a hereditas sine sacris was a proverbial instance of good luck. The supervision of all these matters, originally so immensely important for the integrity and perpetuity of the Roman family, was the work of the Pontifices, the pontifical guild. An older title to this confraternity, a rite of distinctly religious character (De Marchi, p. 147 ff.), could be completed only by the consent and in the presence of the Pontifex maximus; for by this process a new family was created, of which the new sacra had to be organized. The performance of a will was a process of a sacred character, to which the consent of the collegium was necessary. In the days of the kings the Rex had presided on these occasions twice in the year; on March 23 and May 24 (Mommsen, Romisches Staatsrecht, iii. 375) at the Comitia Curtiata (called on these days Calata), no doubt with the Pontifices as assessors; and to the Rex succeeded the Pontifex maximus, as we may infer, though we have no direct evidence (cf. Marquardt, p. 397). Once more, the wills, by necessity the residue of the rites of burial were conducted, and the yearly renewal of these at the Parentalia, the choice of the last resting-place, and all questions as to the right of a dead person to burial—these matters were also wholly under the jurisdiction of the collegium. As already stated, the apices of such things were infinitely more important in the eyes of the early Roman population than they are for us—that the least flaw in carrying them out might lead to very unpleasant consequences for the family—we shall begin to understand how great and far-reaching were the powers of the collegia over the conscience of the privatus homo: it can be compared only to the power of the medieval priest, and might have become a yoke on the popular mind as heavy and as continuous, if the Romans had been sensitive to threatened terrors in another life, or if they had not come into contact with the unbelieving Greek even before this second period came to a close. (For further details see art. PRIEST, PONTIFRHOOD [Romans]; A. Bouhé-Ledero, Les Pontifes de l'ancienne Rome, Paris, 1877 [Marquardt, p. 237-290]).

6. The Augures.—The collegium of Augures, originally, like that of the Pontifices, three in number with the Rex at the head, was also increased to nine, and opened to the plebs in the eventful year 300 B.C. by the Lex Ongulina. It stands apart from the other priesthoods, inasmuch as it had nothing to do with the actual worship of the gods; its activity was entirely concerned with the interpretation of omens, which were supposed to affect all State business, including the appointment of priests, the consecration of temples, the reaping of the crops, and the meetings of assemblies for the election of magistrates and the passing of laws. Doubtless the Italian husbandman, before he had become the citizen of a State, had been wont to observe carefully all signs of weather, among which were included particularly the omens of birds and other animals; in part such omens would be based on experience and of some practical value, in part also on fancy and superstition. The work of the augurs in the city-State was to reduce such signs to a system; the Pontifices reduced to a system the details of coronation, marriage, and adoration of the gods. Conflicting interpretations would lead to delays and quarrels; and it is most characteristic of the Roman ideas of government that the whole authority in such vital matters should be placed in the hands of a collegium, in whose decisions the State and all its members should have absolute confidence as the interpretes Jovis, who could construct a system of their own, hold their meetings in strict privacy (on the Nones of each month), and so relieve the minds of the people from constant scruple and doubt.

Every Roman magistrate of the highest rank had the right of auspicio, i.e. of taking the auspices; but the college of augurs was the referee in all doubtful cases, and in the city the magistrate was accompanied with a magistral auger. If on the evening of a festival the augur took a rest into the night, he took his position at the proper place in order to observe the heavens (Marquardt, p. 401 and ref.'). The details of augural lore which were strictly followed on these occasions are very complicated, and imperfectly known; but they have in reality little to do with the religious beliefs of the people. As an example we may cite the fact that, apart from the observation of the flight of birds and of lightning, which was the chief subject of the elaborate systematization of this collegium, that of the manner of feeding of the sacred chickens was also developed under their superintendence: if the chickens refused to feed, the omen was bad; if they so greedily devoured that they dropped grains out of their bills, the omen was good (Cic. de Divinat. i. 15). It is impossible to say that such ordinances led to a disbelief in the whole system among educated men, though it was kept up for the benefit of the ignorant and superstitious multitude; and before the close of our period we have a Consul in command of a fleet throwing the sacred chickens (which every fleet and army carried with it) into the sea because they would not feed (in 249 B.C. [Liv. Epit. xix.]).

Before we leave these two great collegia of the Pontifices and Augures, it is necessary to point out that these ‘priests’ were in no sense what we should now call religious persons, but the representatives of that world of laymen to live a holy life, to teach, and to preach; they might be magistrates as well as priests, they taught no doctrine, they practised no asceticism. The religion which they represented was one of works and not of faith; so long as the cults were properly carried out and the omens duly observed, all was done that need be done for the safety and prosperity of the State and its members. As the jus divinum was part of the jus civile, so were the priests to be reckoned among the officials of the State. Only the most ancient ones, the Vestals and the Flamines, were kept apart from the rest of the population as being engaged in daily sacrificial operations which would be indirect in their faith if they were liable to contamination, and of these the Vestals alone maintained their exclusive priestly character to the last.

To sum up the characteristics of this period, we notice:

1. The introduction of numerous new deities and their cults, both of Italian and of Greek origin, and of a more showy and emotional ritual, the latter more especially under the direction of the Sibylline books and their keepers, the duoviri sacris faciundis.

2. The systematization of the jus divinum as an essential part of the jus civile, or law of the State, to such a degree that all the important acts of a Roman citizen, both public and private, were regulated in their relation to the divine inhabitants of the city.

3. The rise to paramount power in the State of the two great collegia by whom this regulation was effected, and especially of the Pontifices.

III. Third Period

(From the war with Hannibal to the Empire, 218-31 B.C.).

The religions system which we have been so far examining may be described as the sum-total of
all those cults which were recognized and maintained by the State; this maintenance by the State was the unifying principle in the period now to be dealt with we shall find the care of the State for the old cults becoming rapidly relaxed, while at the same time new and foreign ones are introduced of a kind much more incompatible with the old Roman ideas than any that had been adopted in principle in the earlier period. The old ideas themselves being used more and more for political purposes only, as the governing class discovered that under the influence of Greek philosophy it ceased to share them, while the lower population remained at least as superstitious as ever. Here, then, the Roman State-religion might be said to come to an end, so far as it was an honest supervision of the relations between the human and the divine population for the mutual benefit of both—a performance of duty from genuine motives, with the object of safeguarding the best interests of the community. As Ausl has well said (p. 57), the subject now branches in three directions, if we are to follow the history at Rome of those ideas which may broadly be termed religious, though they no longer bound the thought of people in any definite form of religion. We should have to trace the decay of the old cults; the growth of new beliefs or speculations about the nature of the gods, Fate, divination, and duty; and, thirdly, the superstitious manifestations of these—ill-omened and superstitious as ever. The influence of exciting foreign worship. But to work all this out in detail would be quite beyond the scope of this article. It will be better (1) to give a brief account of the immediate effects of the war with Hannibal, both during and soon after it, in order to show the religious feelings and ideas of the people and on the policy of the governing class; (2) to sketch briefly the influence of Greek literature and philosophy in disintegrating the old religious ideas; (3) to summarize the actual results of these causes on the religious policy of the State, and to point out the number of certain vows if the State should be in existence ten years later. 'Hec procura pro vita libris Sibyllinis,' adds Livy (xxi, 62), 'magnae ex parte levantvar animis religiosis; i.e., these measures served for the time to quiet popular scruple and anxiety. But almost directly a new trouble seized men's minds; for the Consul Flaminius, the victim of two of the Sibyls, was said to have committed suicide through supernatural agencies. The Decemviri, led the city to assume his command without taking the auspices or making the usual vows in the Capitol, fearing that for political reasons the Senate might detain him by falsifying the auspices. He also went to the Temple of Aesculapius, and his subsequent defeat and death thus served only to increase the general panic. In the first chapter of bk. xxii, Livy records a new series of prodigia of all kinds, and recourse was again had to the Sibylline books, and fresh directions were given for expiation, among which we notice the growing Greek influence in the prominence of Juno, the legendary enemy of the Trojans, from whom the Romans were now beginning to believe themselves descended. After the disaster at Trasimeene the record becomes still more astonishing. Besides lectisternium and supplicationes, the Sibylline books directed the general vow of a ver sacrum to be made (Liv. xxii. 9); i.e., if five years later the State still existed in integrity, all sheep, oxen, pigs, goats, etc., were to be dedicated at the greatest places and the Senate and Roman magistrates were to take part in the ceremony. The auspices were generally vouched for, and the people were also vouched for; cost 333,333 Attic asses, the number three having a special religious significance. Lastly, the Decemviri ordered a lectisternium of three days, in which there were as many Greek gods and goddesses represented as Roman names; Zeus, Hera, Poseidon, Athene, Ares and Aphrodite, Apollo and Artemis, Hephestus and Hestia, Hermes and Deumter (Liv. xxii. 10). After the crushing defeat at Cannae envoy's were sent to Delphi to inquire whether there was to be any end of these disasters; and during their absence the Decemviri ordered
ROMAN RELIGION

'sacrificia aliquot extraordinaria' (Liv. xxii. 57), among which Livy mentions that of a Gallic man and woman and a Greek man and woman, who were buried alive in the Forum Boarium—a horrible rite which is said to have survived even into the Empire (Wissowa, p. 421).

These examples will have made it clear that the strong faith of Oriental people was giving way under constant peril and anxiety; their belief in supernatural agency was profound, but they knew not what deity was persecuting them, or where to turn for help, and were in danger of complete demoralization. All the Oriental religious experiences which Livy has recorded are the attempts of the governing classes to quiet the minds of the people by convincing them that no effort was being spared to set right their relations with the unseen world, to vindicate themselves as mediators with the hostile deities; but so far all had been in vain, and the devices of the great colleges must have been put to a very severe test. Fortunately the worst was over, and only once during the course of the war was the danger again so imminent. When Hasdrubal was nearing Italy in 207 B.C., a fresh outbreak of the Bacchus-cult, and with it the predominance of Greek features in the steps taken to appease her. Two years later (205 B.C.), the Punic force was again growing, and the house of persuading the people to hold out a while longer until Hannibal should have evacuated Italy; twelve years had passed and he was still there, and both Rome and Italy were exhausted. They said that they found in their books an ancient prophecy that, if the sacred stone of the Magna Mater Idea, the great goddess of Pessinus in Phrygia, were brought to Rome, the king of Pergamus, to whom the place and stone belonged, gave his consent, and the sacred symbol would be transported to Rome, and rejoicing by an excited and now hopeful people. 'Scipio was about to leave with his army for Africa; a fine harvest followed; Hannibal was forced to evacuate Italy the next year; and the goddess did everything that was expected of her (Ptolemy, Frigia, i. 5). An annual festival was made a festival (April 4), called by the Greek name Megalesia. No Roman was allowed to take part in the service of the goddess, for such Oriental worship were of a dangerously orgiastic character; it might, in the wrong hands, be used as a testy, though a popular one. Nevertheless, the Government was willing within a few years to admit this stone into the very heart of the ancient city; it had been placed at first in the temple of Victoria, but in 191 B.C. was transferred to a temple of the Magna Mater herself on the Palatine hill, dedicated in that year (Aust. de Edibus sacris, p. 29). With the introduction of this cult, which was freely taken up by all classes, we may connect the fashion of consulting Oriental astrologers, called by the Romans Chaldaei or mathematici, which continued far into the imperial age. Of frequent attempts to restrain it, as in 130 B.C., when they were expelled from Rome and Italy (Val. Max. i. iii. 3; and see the new Epitomes of Livy's sixth decade brought from Egypt by Gren. ian. i. iii. 14). The worship of Ma or Bellona from Cappadocia, and those of Isis and Mithras, were to follow in due course.

There can, indeed, be no doubt that both Romans and Italians found their own narrow system of religion quite inadequate to express what we may call their religious experience of the last twenty years; they had longed for aid and protection, and for knowledge of the right way to address themselves to the supernatural powers in whose existence the great mass of them still profoundly believed; and they had invited in vain, on the old rigid methods, their own local and native deities. Undoubtedly the times had aroused deep emotions of a religious kind, and this had found no legitimate outlet. A still more striking proof of this than even the introduction of the Magna Mater is the extraordinary rapidity with which the rites of Dionysus-worship, surreptitiously introduced at this time, seized upon the minds of men and women of all classes in the year 186 B.C., spread over a great part of Italy, and drove the Government to interfere forcibly to save the State from the moral disintegration which accompanied it. The story is told in full by Livy (xxxix. 8 ff.), and we still have a part of the decree by which the Senate commissioned Consuls to investigate and check the mischief (CIL i. 43). This object was achieved; yet the Bacchus-cult was allowed to remain, under strict supervision—the best of proofs, as Aust observes (p. 78), that the State religion no longer possessed the power to satisfy the impulses of men. It seems as if Rome had remembered that the population of the city was by this time of a very mixed character; the true Roman people had suffered severely in the wars and by pestilence, and their place was largely taken by new arrivals, who, without knowledge of any religion of their own. To such, and to their descendants, even Jupiter Optimus Maximus himself could hardly appeal, for he was, in fact, a political rather than a religious conception. We may take it as a fact that this population of Rome, lacking the old cults and the old ideas, and little or no aid towards right conduct. All that could be done was to keep it amused with constant games and shows, which had been originally of a religious character and limited to single days, but now were secularized and freely extended in length, and to keep it provided with the means of existence. To provide it with a common religious belief or worship was utterly beyond the power of the Government. The old dying religion could indeed be used, so far as its forms went, for patriotic purposes, to control the naturally superstitious masses; but it had lost its unifying and comforting power.

II. THE INFLUENCE OF GREEK LITERATURE AND PHILOSOPHY.—The Hannibalic war affected the beliefs and the morale of all classes alike; the critical spirit of Greek thought was to affect chiefly and directly that upper stratum which was more or less capable of comprehending it. This critical spirit had long been acting as a solvent in Greece, not only on the ideas of the gods derived from the old mythology, but on the local cults of the Greek who and the belief in their efficacy; and in this process it had been greatly assisted by the conquests of Alexander and the wars of his successors. With the break-up of the keen individual life of the Greek city disappeared the genuine relation of the polytheistic Greek religion to the life of the citizen; though the old city-cults lingered on in outward form, they lost their real meaning under the overshadowing power of deified kings and the attempts of philosophers to provide a rational basis for the daily conduct of the individual. This means the Romanization of the old religious ideas very rapidly under the influence of Greek thought in the period with which we are now dealing, when it began to develop a literature and to think, found nothing to learn from the Greeks which could act otherwise than as a solvent of its old religious ideas, expecting.

The very first example that we meet of this destructive process is too striking to be omitted
here, though it is no doubt possible to exaggerate its importance. Ennius, the first man of real genius who wrote in Latin, among his many works translated the range of Hellenic philosophy, in which he attempted to explain the Greek gods as merely ancient kings who had been deified—an idea quite in harmony with the prevailing practice of the post-Alexandrian period; and this translation does not seem to have been received with any disapproval at Rome. It is characteristic of the age that the man who did more than any one before Virgil to glorify the Roman character and dominion should have struck the first direct blow at the popular belief in the gods; but Ennius was no Roman sailor, and he was perhaps only expressing his personal views (Kranmer, p. 44). It is doubtful whether the book became popular; it is mentioned only once in Roman literature (Cic. de Nat. Doctr., i. 42, 119), and the methods of publication were then but little understood; but in other works Ennius shows the same tendency (cf. the famous lines in his Telamón, based on the teaching of Epicurus: 'Ego deum genus esse semper dixi et dieam cellitum, Sed eos non curare opinor quasi agat humanum genus,' etc. [O. Ribbeck, Troy, Rom. Frag., Leipzig, 1857, p. 166]).

As his class to himself and his people, the Stoics was coined by the Romans in a naturalistic spirit. In the first two centuries of the Republic had a far more profound and lasting effect on Roman religious ideas. (The third, the New Academy, being neither positive nor constructive, but critical only, need not be considered here.)

Epicureanism was first in the field, but was slow in gaining ground, and Rome produced no great Epicurean but Lucretius the poet; nor did even he become popular, for his direct and enthusiastic denial of the value of religio, and his appeal to the intellectual faculty of man to rid himself of the degrading bondage of that religio, were not in harmony with the Roman genius. Epicureanism was to some extent popular on its practical side (Cic. Tus. iv. 3, de Div. ii. 59), with bad moral effects; but, as taking no account of gods or cult, except as a matter of utility, it could not gain, neither the class that was responsible for the surviving forms of the State religion nor the lower orders still steeped in superstition. See art. Ep-

cureans.

Stoicism, on the other hand, laid a strong grasp on the best Roman minds; its ideal man was in many ways in keeping with the ideal Roman character, and its cosmopolitanism suited the wide range and the varied populations of the Roman Empire. It did not deny the existence of the divine or even, as did the Epicureans, the interest of divine beings in the affairs of the world; it postulated a Supreme Deity, identical with Reason, Law, or Destiny, and left place for the existence of subordinate deities by making them functional emanations from the Supreme Deity. As his duty he aimed to rid himself of the degrading bondage of that religio, and with some of the ablest Romans the teaching of an earnest and learned Stoic like Panetius, the intimate friend of Scipio the younger, and founder of what may be called Roman Stoicism. This is almost a substitute for religio. While Stoicism did not strive to save the old cults from neglect or extinction, it did much to save the educated Roman from the contempt of all religion which Lucretius had expressed so vehemently, and even did something to save him from moral disintegration. And at the very end of this period we meet with a very curious attempt, on Stoical principles, to harmonize the old religious beliefs with philosophic theories of the universe. See Cic. Acad. vii. 16, with De legibus, 1; Tertullian, De spir., 20; and G. F. Kranmer, The Roman Em-pire, the part of the Christian writer Eutocius, who noted on all religions as mere folly.

Varro assumed the Stoic doctrine of the animus mundi, the divine principle permeating all material things, which, in combination with those material things, constitutes the Universe, Nature, God, Destiny, or whatever other name the Stoics used to express it. The mundus is made up of the four elements, and these partes mundi are also divine, as are the various phenomena which they underlie. In the 16th book of his work Varro co-ordinated this Stoic theory with the Greco-

Roman State-religion of his age. The chief gods, according to varro, were parecclesiastical deities, the deus mundi in various ways; and even the difference of sex among the deities was explained by regarding all male gods as emanating from the heaven, and all female ones from the earth, according to a familiar ancient idea of the active and passive factors of generation (Augustine, de Civ. Dei, vii. 23).

The Stoic theory of deusos was utilized in the same way to find an explanation for semi-deities, heroes, Lares, Genii, etc., and thus another feature of the old Italian religious mind was to be saved from contempt and neglect. At the head of the whole system was Jupiter, who seems to have been recognized by the Stoics of the Roman school as representing not only the heaven but even the animus mundi itself (Cic. de Nat. Doctr. i. 1, 4); and the various functional activities of this supreme god multiplied his almost incalculable titles (Tertullian, Apol. 14). So, too, with the other chief deities; and thus another tendency of the old Roman religion was skillfully worked into the new system, viz. that tendency to see the supernatural manifesting itself in innumerable ways expressed instead of being repudiated. The idea that the human action and suffering, of which the Pontifices had taken advantage to construct their so-called Indigentmenta. But the deities of the Roman cults had become so worn and indistinct with age that in many or most cases their functions were no longer clearly to be discerned, even by a learned antiquarian like Varro; and he was compelled to include in a large class of di incerti those of whose functional activity he could not be sure (Wissowa, p. 75).

Thus the one system of philosophy which could really appeal with effect to the best type of Roman mind was harmonized with the leading features of the old beliefs in a way which was neither unreasonable nor Indicous. The people, Varro seems to say, have neither time nor ability to reason on religious things, but can only take things on blind faith in indistinct beliefs, and may be led to take up from that of the Epicureans and Lucretius, who looked on all religions as mere folly.
and mental bondage; and, to judge from the attacks made on it by St. Augustine and the Fathers and from the temporary revival of the old cults which Augustus succeeded in achieving shortly after Varro's death, it was probably not without some substantial practical result. But it could have affected only the higher and educated classes; and it is an interesting fact in dealing with such questions. Varro himself, a Sabine of the sturdy old-Italian type, with an extraordinary interest in matters of religious antiquity as well as religious philosophy, was probably more in earnest than any other man of that age; but the ordinary attitude of the cultivated Roman to such speculations may be well seen in Cicero's three books, de Natura Deorum, which followed the work of Varro, and were to some extent influenced by it. Cicero's attitude to religion was simply sceptical and eclectic; he inclined to the Stoic view, but treats the whole subject as a matter for pleasant discussion, without showing any conviction of its importance to Rome or mankind. In all his voluminous writings, including his correspondence, there is no sign that his life was in any way disturbed by religious questions, or interested him in any way in which religion interests him as its use for political purposes. And Cicero is a type of the educated Roman of his day (see some good remarks in Boissier, Religion romaine, i. 56).

iii. THE ACTUAL RESULTS OF THE NATIONAL RELIGION.—We have now to illustrate the actual results for the old religion of these two main causes of disintegration—the Hannibalic war and the influence of Greek philosophy.

(a) The cults.—The most striking evidence of the decay of the worship in the Roman period is suggested by our present ignorance of the meaning and the details of so many of them (see above, p. 820). Had they been maintained or fully credited with efficacy, the literature of the last century B.C. would assuredly have contained allusions to them sufficient to give us some idea of the nature of the deities and the details of their worship. But neither Cicero nor any of his contemporaries but Varro has anything important to tell us of them. Varro was the only Roman really interested in them. A little later, Greeks like Diodorus of Halicarnassus, or foreigners like the Manetianus Julia, took some trouble to understand them, also from antiquarian or philosophical motives. But by the time of Varro and these antiquarians the decay had already gone so far that many of the old cults were quite neglected and forgotten. A few examples will suffice.

The name Agonia, which stands for a festival four times in the ancient calendar, was so much a mystery even in Varro's day that we do not know for certain the meaning of the word, or what the rites were performed on those days. The Furrinalia, Lucaria, Divalia, are almost entirely lost to us, as they were to Varro (so far as we can guess from what we know of his writings). The Regulium in February and the Popiligia in July were even then little noticed and frequently neglected and the local oblations just before Caesar's death. It can hardly have been one of the wholly neglected festivals, yet the fact that no writer mentions it before that date shows conclusively how little interest such old customs excited. With the cults the old deities, of course, vanished in many cases, though this is less astonishing, since the Romans, as we have seen, at all the early stages of their religious life paid far more attention to worship than to the objects of it. No one knew the true nature of Jeovis, nor do we know ourselves; so, too, with Summanus, of whom Augustine says, no doubt following Varro, that he was at one time a greater deity than Jupiter himself (De Civ. Dei, iv. 23); (quibus est est," writes Ovid in speaking of Minerva (Fasti, vi. 100), how little, then, we know of Varro was equally in the dark. Consus survived only because he had become oddly identified with Poseidon Hippo, and we are left to conjecture from stray facts of the cult that he was originally a harvest-god. Even augurs were too dangerous whose so-called temple by the Forum was matter of public interest owing to the practice of keeping it open whenever Rome was engaged in war, became the subject of vain philosophical speculation, no one suspecting that his origin was really as simple and humble as we now believe it to have been (see above, p. 826); and Ovid fancifully 'interviews' the old god in the vain hope of discovering his nature (Pasti, i. 89 ff.). Vesta survived at all times, with her cult and her virgin priestesses; the latter could not become secularized, and the character of shrines which the cult maintained was too well recognized as a symbol of the State's vitality to be subject to neglect like other less significant cults. Yet, if we turn to the list of deities represented in the rites of the Numan calendar (see above, p. 824), we shall find among the goddesses of Etruria, whose domain was the only one of them who has not been either forgotten or metamorphosed in one way or another under the influence of Greek literature and mythology.

Further, it is a well-attested fact that in the general Indulgence of the last century B.C., the day of orderly and detailed administration, the temple-buildings of the city were fast going to ruin in the last age of the Republic. Augustus has told us himself that he restored no fewer than eighty-two (Monumentum Annonarium, iv. 17); and the ode of Horace (iii. 6) which begins, 'Deliciae maenianae inermius Iues, Romane, donec templum refeceris,' etc., is familiar to everyone; and Propertius and Ovid tell the same tale (Marquardt, p. 67 and reft.). The greed of capitalists and the want of space for building had long before this begun to override the sacred character of shrines in the city; thus in 178 B.C. the censors had to rescue a number of sacrilegium from private occupation (Liv. xi. 51. 8; cf. Cie. Harusp. Resp. xv. 32); and in his dialogue de Natura Deorum, supposed to have taken place in the year 75 B.C., Cicero writes of theft of statues and other property from temples (L. 20, 82)—sacrileges which we may probably attribute to the demoralization caused by the social and civil wars. A number of new temples were founded in this period, but they seem to mark the fancy of those who vowed them rather than any fixed religious policy such as was traced in the previous age; and, before the end of the period with which we are now dealing, we find a temple which ominously forecasts the future, that of dieus Julius, begun the year after his death. (For these foundations see Aust, de Edi-

(b) Priesthoods.—The oldest of these, the Rex sacrorum and the Flamines, which were attached to particular worship, fell into partial or complete neglect during this period. From the nature of their duties, the sacred fire which they had to keep was of no use in any office which might take the holder away from Rome; according to the old ideas of the relation of the State to its deities, their absence would have been detrimental to public interests. But from the Hannibalic war onwards every ambitious member of the governing class looked to office and military command to procure him both wealth and influence; and as a consequence he avoided all
employment which would keep him at home. Attempts were made to break the rule, but for a long time the Pontifex maximus forbade such elections; and, with the priest in question out of his position, disobedience was practically impossible. In 190 B.C. a Flamen Quirinalis was Praetor peregrinus, but was not allowed to hold a foreign command (Liv. xxxviii. 47). In 180 a Rex sacrorum tried to hold his priesthood together with a high Roman office (duumvir, duovir), but was compelled to resign it (Liv. xl. 42). In 131 a Flamen Martialis was Consul, and wished to have a command in Sardinia, but again the Pontifex maximus interfered (Cic. Phil. xi. 8); yet this same Pontifex maximus, P. Licinius Crassus, later in the same year went to Asia with an army, 'quod nondum Antea factum erat,' says Livy's epitomist (Epp. 59).

Perhaps the most remarkable instance of the degradation of the old sacrificial priesthoods is one which has been worked out by the present writer in CIR vi. (1898) 193 ff. from records in Livy; a youth of bad character belonging to the great family of the Valerii Flacci was made Flamen Dialius by the Pontifex maximus at the urgent request of his family in order to place him under the innumerable restrictions to which that important priesthood was subjected. He even was compelled to say, in the presence of augurs, he had the effect of reforming his character, and he became Curule solile and Praetor later on, his brother being allowed to take the oath of office for him, as the Flamen was not allowed to swear.

The general tendency was undoubtedly to shirk these priestly offices with their awkward restrictions, and it is almost certain that the Flaminium Dialis (from 77 to 11 B.C. [Williams, p. 71, note]) and the Flamines minores are not heard of in the last century of the Republic, and, as Marquardt justly argues (p. 67, note 1), if they had survived, Varro would hardly have been at a loss for information about the cult and nature of those priesthoods. If no great thing happened to such a priest, he seems to have had no chance to save himself; if he had adjoining priesthoods, of course, those posts had become completely secularized, and were filled by popular election like the magistrates. The Pontifex maximus seems to have been elected in Comitia as early as the Second Punic War (197-205 B.C.; Sestio, viii. 37, 39). In the case of the pontificals, priesthoods, of those Pontifices, Augures, and Decemviri (Quindecemviri in the last century B.C.), were thrown open to election by a Lex Domitia in 104 B.C., though by a method peculiar to themselves (Cic. de Lege Agraria, ii. 18). The last thing that a Roman thought of at this time, when he gave his vote for a Pontifex or an augur, was the qualification of the candidate to perform the traditional duties of his office; the Pontifices let the calendar be taken over into a state of chaos, and failed to keep up the sacrificial priesthoods which were under their control, while the augurs, as Cicero expressly tells us (de Divinatione, i. 15, 25, de Nat. Deor. ii. 3, 9), had become entirely ignorant of the ancient science, and were not allowed to be consulted about it, if we consider how severely the art of divination was criticized by the philosophers, and, on the other hand, how simple was the process by which it might be turned to account for political purposes.

If a Consul, even without calling in an augur, announced that he was going to 'observe an omens,' i.e. for lightning, that alone was sufficient in the eyes of constitutionalists like Cicero to put a legal stop to all business for that day; this was the consequence of the Lex Flia Fufia of 153 B.C., passed in order to give extra legal strength to a ministerial Government which was beginning to lose its moral weight. Cicero, though himself sceptical about the whole business of divination, repeatedly speaks of this law as a great bulwark of the constitution, and of its abolition in 58 B.C. as a fatal blow to the cause of Republicanism (Cic. pro Sestio, xv. 31 in Vatinius).

Of the collegium in charge of the Sibylline books we do not hear so frequently in this period; but, whenever the books are consulted, it is in the interest or against the interest of some party or family. To give a couple of examples: in 189 B.C. recourse was had to this device to prevent the great family of the Marcii from having the honour of bringing a new water supply into Rome, without effect in this case (Frontinus, de Ag. i. 7; cf. the new Epp. of Livy, Grenfell and Hunt, line 183); on the other hand, in 71 B.C. it was brought into play that forbade the invasion of Egypt by a Roman armed force, at a time when such an expedition was obnoxious to more than one party in the State; in this case the object was successfully achieved by this intrigue. The destruction of the old Sibylline books in the Governing of the Capitoline temple in 81 B.C. had compelled the Government to acquire a new collection by diligent search in Greece and the East (Marquardt, p. 352, note 7), and this had naturally given opportunities for much forgery and double-dealing (Suet. Aug. 31, Tac. Ann. vi. 12). The last thing that a Roman thought of was simple alleviation of wealth; Cicero was the last man to attempt to suppress the superstition, for he feared little or nothing; the conscience of the people was blunted and callous; if the State was in danger, as in the Cimbrian war, the people hardly realized it. But in 113 B.C. a temple to Venus Verticordia was ordered 'ex Sibyllinis libris,' 'ob incesa Virginitum Vestalium'—a significant fact (Aust, de Edibus, p. 28).

Thus, when the Republic came to an end, all real life, all incentive to dutiful conduct, all unifying influence, had departed from the religion of the Romans, and all honesty of purpose, all genuine belief in its efficacy, had vanished from the minds of those who were entrusted with the supervision of it. It must, however, be confessed that, historically speaking, little damage was done by this decay of the old cults and priesthoods, which had no pernicious influence upon the religious structure of the population like that of Rome, no saving health. But, like all the striking phenomena of this period of transition from city-State to Empire, the decay set in too rapidly, as the result of the unique struggle with Carthage, in which the Roman municipalities and in the lower classes had had time to learn to think, much less to think with due reverence for the past. It came so quickly that no efficient substitute had time to grow up among its ruins as a sanction for morality. If Stoicism could save some men, or a natural sense of duty to the State, as with Cicero, or even only
the love of hard work, as with Caesar, the ordinary individual, if ritual were neglected, and all trust in a spiritual world failed him, had no moral ballast, no bond of conduct to keep him from evil doing. Hence, in spite of noble exceptions, there was a real lowering of the level of morality in this age; that there was wickedness in higher circles we know; and we have every reason to believe that all classes were equally selfish and equally callous.

IV. FOURTH PERIOD

(From the accession of Augustus.)

It will be our object, in dealing with the last period of the life of the religion of the Roman State, to examine (1) its resuscitation by Augustus, and (2) the traces of its survival in Rome and the provinces during the next three centuries. We shall leave out of account the foreign religions which became fashionable in this period, as being fully dealt with in other articles; and also the worship of the Cæsars, the most remarkable feature of the religious practice of the early Empire, except so far as it was superimposed upon the older cults already discussed. There was a. separate and distinct worship of the imperial divinities. The worship of Cæsar as the divine Saviour, the Messiah, who would revive and extend the Roman Empire, was in some respects in its spirit quite similar to the worship of the State, as has been shown throughout this article, was quite consistent with that of the Romans and not a mere addition to it. It is possible, officially, no doubt for this reason, only dead emperors were allowed to be worshipped by the State, as dead ancestors had been by the family, the actual practice went far beyond this, and the ideas connected with the practice do not really belong to our subject. See Boissier, Deification (Greek and Roman), vol. iv. p. 529 ff.

i. THE REVIVAL OF THE STATE RELIGION BY AUGUSTUS.—This is not only the most remarkable event in the history of the Roman religion, but one that is almost unique in religious history. We have seen how completely the belief in the efficacy of the old cults had vanished among the educated classes, and how the outward practice of religion had been allowed to decay; and to us it may seem almost impossible that the practice, and to some extent also the belief, should be restored at the hands of a single individual, who, though that individual represented the best interests and the collective wisdom of the State. The explanation lies in the fact that, though it was too late to revive the old religion in its primitive form, the temper of the age was such as to revive the idea, common to all ancient States, that the morality, the political tranquillity, and the physical efficiency of the State were intimately bound up with the attention paid by the State to the divine beings who were interested in it. Right conduct, public concord, and the fertility of men, animals, and crops could not be secured to that State, it used to be firmly believed, unless its divine inhabitants were properly and continually propitiated. Thus the religious revival of Augustus is a part, and a necessary part, of his whole political scheme. He had learned from the experience of his predecessors in political power that reform on political lines only was quite insufficient and without any element of stability, because it did not appeal to any deeply rooted feeling in the popular mind. The Roman people were tired of political quarrels, of constitutional changes, of endless party legislation, of civil wars; Augustus gradually came to understand that the only healing medicine he could prescribe for the State was not so much of a political as of a moral and religious nature. Real political convulsions had long been evanescent; but there still remained the inherited conviction, especially among the masses, of the power of the gods to give or withhold prosperity, and it was this conviction that Augustus determined to use as his chief political lever. This will be appreciated by any one who will take the trouble to read and meditate upon the famous hymn which Horace wrote, at the request and doubtless almost against the dictation, of Augustus, in 17 B.C., for the Secular Games; there the ideas of religion, morality, and fertility are deftly woven together, and seem to express exactly this remedial policy of the Princes. Whether Augustus himself shared those convictions on which he determined to work it is impossible to say, but he did not fail to emphasize their importance for our present object. But, inasmuch as a man's religious beliefs are largely the result of his own experience and that of the society in which he lives, it would not be unreasonable to guess that in his religious revival he was expressing naturally a popular conviction in which he shared, rather than standing entirely apart and administering a remedy which he thought of as mechanical and not organic in its operation. And this view is confirmed by the tone and spirit of the great literary works which he stimulated or inspired. There is another reason why the Augustan revival should be of importance to our subject. See above, p. 846, note 4. We are dealing with the poets and historians of the time—e.g., in the preface to Livy's history, in the fourth Eclogue of Virgil and the conclusion of his second Georgic, and in some of the earlier poems of Horace, notably in the 16th Epodes and Odes, i. 6; and it was accompanied, as so often happened in the ancient world, by a tendency to superstitious beliefs and practices unauthorized by the State—astrology, magic, etc. (Boissier, i. 76). This consciousness of neglected duty—duity both to gods and to men, such as alone could make the State efficacious—had to carry out the will of Jupiter and the Fate—is, in fact, the raison d'être and the moral of the great representative poem of the time, the Aeneid of Virgil, without a careful study of which it is impossible to understand either the work of Augustus or the spirit of his age. It is an emphatic appeal to the Roman to put away from him individual passion and selfishness, and to respond to the call of Fate—of those moral forces which had wrought through the Roman dominion such mighty changes in the world. In the very years when Augustus was endeavoring to restore the old sense of ratio and pietas by rebuilding temples and resuscitating cults Virgil was leading his hero towards the accomplishment of his mission in Italy, developing in him the true quality of pietas, i.e. not only the due performance of service to gods and the community, but the sacrifice of self to the interests of the community, submission to the divine will in full confidence of ultimate success. The real meaning of Roman pietas is as clearly expressed in the poems of Virgil as in the best spirit of Puritanism is expressed in those of Milton. If it is not true that the spirit of the Augustan revival was embodied in the narrow bounds in which we have so far been tracing it, in accordance with the expansion of the State from a city into an Empire, and it is accompanied by the idea that a great future is yet in store for the State, of which the initial moments are close at hand. Whoever contemplates closely the work of Augustus in combination with Virgil's poem will find the same essential elements in each
of them: an appeal to the past as the only safe basis of reconstruction, and a confident hope for the future in a new life that he was declaring war against. In the poem, too, is to be found the conviction that the man who was thus reviving the past and at the same time securing the future was not only divi filius, but in fact himself divine.

Much more might be said about this subject, but the attempt to explain the ideas underlying what has often been wrongly described as a gigantic piece of deception. It is now, however, generally acknowledged that, even if Augustus was himself an unbeliever, he was reflecting and expressing a strong popular feeling (see Bössler, vol. i. chs. i. and iv.; Wissowa, p. 78 ff.; cf. his paper on the ‘Ludi Seculares’ in his Gesammelte Abhandlungen, p. 192 ff.; and Aust, p. 90 ff.). The one point steadily to keep in mind is that this strange movement was not merely a revival of religious rites, but an appeal through those rites to the conscience of the people. A revival of religious life it certainly was not, for what we understand by that term had never existed at Rome; but it was an attempt to give expression, in a religious form and under State authorization, to certain fundamental ideas not far removed from those which we in these days describe as our religious experience.

We may now proceed to a brief account of the revival of the old cults and priesthoods, noting the changes introduced to suit new circumstances, such as the expansion of the Empire into a cosmopolitan State, and the elevation of a single Roman family to the first place in outward dignity as well as in actual influence.

Augustus did not become Pontifex maximus till the year 12 B.C., i.e. nineteen years after the battle of Actium; he waited with scrupulous patience until the great priesthood became vacant by the death of Lepidus. This, however, did not prevent him from pursing his religious policy with great earnestness before that date, for he had long been a member of the college of Pontifices, as well as of the Augures and Quindecemviri. The year 12 B.C. may, however, conveniently serve as a landmark, dividing the consummation of his religious authority from a comparatively limited form of it. A good example of his earlier reversion to religious medicine, as it was called in the days of Antony, or more strictly against Cleopatra, he had revived the old college of the Fetiales (see above, p. 824), with its curious ceremony. On his return to Rome two years after the victory he began his great work of temple restoration, which he has himself put on record (Monumentum Ancyranum, iv. 17): ‘duo et octoginta tempora deum in urbe consul sextum (28 B.C.) ex decreto senatus refeci, multo praetermissae quod eo tempore refici debetat.’ The great importance which he attached to this work is thus made abundantly clear; and it is confirmed by the prominence given to the subject in the poems and histories of the period (e.g., Liv. iv. 29; Hor. Odes, iii. 6; Ovid, Fasti, ii. 59), and by the energy with which it was followed up by his successors (see below). Nothing could so well anoint and reassure the new life that was rising in the very eyes and minds of the Roman people; the employment of workmen, the adornment of the city, the solemn processes of dedication and consecration—all served the same general end in different ways, and must have done much to relive the old feeling that there were divinities as well as human inhabitants of the city, and the sense of duty in regard to them. But even from the outset it is most interesting to notice how this austere reformer contrived to combine the ideas of the Empire and of his own supremacy with the purely civil virtues; his family, i.e. the Julia, had always had a special connexion, not only with Venus but with Apollo, the Greek substitute, as it would seem, for the mysterious Roman Vejovis (CIL i. 807, xiv. 2387; Wissowa, Gesammelte Abhandlungen, 1908); and it was well known whom he had assisted him in that decisive moment of his fortunes. It was Apollo, too, who had become the authorized Roman deity of prophecy, and with his cult were connected the Sibyline books and the idea of a new and better age (Virg. Aen. iv. 7); Augustus therefore, in the year 28 B.C., dedicated to Apollo Palatinus a splendid temple on a site which belonged to himself and not to the State (Velleius, ii. 81), thus founding a cult which, though beginning as a private concern of his own family, was destined (as he doubtless well knew) to become one of the most important in Rome.

Another great temple which he built, also ‘in solo privato’ (Mon. Anc. iv. 21) in his own Forum Augusti, S.E. of the Forum Romanum, was that of Mars in the capacity of Ultron, i.e. as the avenger of the murder of Julius. The lex templi of this foundation was preserved in a paper (CIL iv. 10), and shows that its founder intended that even the great Jupiter of the Capitol himself was to epee some of his honours to this old deity of a new dynasty; here the members of the Imperial family were to sacrifice after assuming their tropa simulacra; here, too, the Emperor used his insignia after the triumph which had been decreed him by the Senate in the same building; here, too, after each Fasti, the Censors were to drive a nail into the wall (Wissowa, p. 126). This temple also stood in the close’s rehoused, a circular temple, for it contained not only a statue of Mars, but one of Venus (a Greek combination long familiar to the Roman mind, as we have already seen), thus bringing together the characteristic foundation—deity of the city with the reputed ancestress of the Julian family (Wissowa, p. 260). It is interesting to notice that this temple was not dedicated until some years after Augustus had become Pontifex maximus (Aug. 1, 2 B.C.); he had meanwhile been content with a small round temple to the same deity in the Capitol (Mommsen, Ges. Ost. Diss. Aug. 1898). The Pontificate, in this case, was a patronising step he also waited, and took it within a few weeks of his election to the great priesthood—viz. the dedication of a new temple of Vesta on the Palatine hill, immediately connected with the house of the Imperial family (CIL ii. 517; Wissowa, p. 79). This did not supersede the old temple below, with its ancient associations, but it signified none the less that the heart and life of the State, in one sense at least, was bound up with the hearth and home of the reigning Princeps.

It was going only one step farther when Augustus a few years later took the opportunity of his reorganisation of the city, and its division into fourteen regions, to introduce the figure of the Genius Augusti between those of the two Lares Compitales at each comitum, or meeting of two streets, to represent his family, and his new historic relations of the city with the incensation of the idea that the Princeps stood to the public religion as the paterfamilias stood to that of the household (G. M. Rushforth, Latin Hist. Inscriptions of the Early Empire, Oxford, 1893, p. 38 f.); Wissowa, p. 171 f.).

We do not know how far Augustus went in restoring the old temple cults; we can only suppose, on the evidence chiefly of Ovid’s Fasti, that with the restoration of the temples the old forms of worship were as far as possible rescued from oblivion. But we do know that he contrived
to revive the old sacrificial priesthoods, as distin-
guished from the flourishing semi-political col-
leges of Pontifices, Augures, and Quincte
cnervi. In spite of all its disabling restrictions, it was possible
once more to fill the post of Flamen Dialis; of Rex
sacerorum and the other Flamines we also hear in the early
Empires. This priesthood, which as these were in the potestas of the Pontifex
maximus, i.e. of the Princeps himself, it was not likely
that they would be allowed to neglect their duties.
Other ancient colleges were also revived, or con-
firmed by the inclusion of the Emperor himself
among them, as the Confessoria and the rele-
ables, the Sodales Titienses, the Salii, the Luperci,
and above all the Fratres Arvalis, the brotherhood
whose duty it had once been to lead a human pro-
cession round the crops in May, and so to ensure
the blessing of the gods on the most important
material of human subsistence (see above, p. 824).
A priesthood of this kind was after Augustus' own
heart, for it combined in its operations the ideas of
agriculture and religion, prosperity and moral-
ity, which, as we have said, are so prominent in the
Cornicen and Flamines of Horace; and the
people, tiring of the large number of sacrifices, records,
dating from shortly after the battle of Actium,
shows that it continued to work and to flourish
down to the reign of Gordian (A.D. 241), and from
other sources we know that it was still in exist-
ence in the times of Tacitus and Suetonius.

This record, which belongs to the year 69 or the accession
of Vespasian, shows that the sacred college of the
defied Emperors Augustus and Claudius, together
with the defied Divus, associated with the trias
of the Capitoline temple and the Salus publius
in the sacrificial rites, Otho himself being the
magister of the college, but represented by his
brother (as we have already said, see pp. 282, 283).

Under the Flavian dynasty which followed, this
association was, however, judiciously dropped.

No account of Augustus' work in the sphere
of religion would be adequate without some allusion
to the Secular Games (ludi seculares) of 17 B.C.,
the full account of which beyond the limits of this
book. In outward show, in the space of three days, all
his views and hopes for the political, moral, and
religious future of the Roman world. That year,
in which his faithful colleague Agrippa was still
spoken of him, and no serious misfortune had as yet
fallen upon the State or the Cesarian house,
yet be taken as the zenith of his career, and is aptly
marked by this singular celebration, of which the
details have come down to us almost complete.
To the Sibyline oracle which indicated the rites
and sacrifices of the Secular Games (ludi seculares)
for the year 18 B.C. by Augustus, the Moscoviensis
(Christian) Ussow has reproduced the contents of
this document with much skill and sympathy. The
most important part of it is now easily accessible
to students in H. Dessau, Syzygies Inscr. Lot.,
vol. ii. p. 282 ff.; but in view of the
information we add the hymn which Horace wrote
for the occasion in accordance with the views of
Augustus, and which is mentioned as his composition
in the inscription, it must be acknowledged that
there is hardly another vital moment of ancient
which can be so clearly reproduced in imagination,
and with all its meaning as well as its minutiae of detail.

According to certain old Roman ideas, of which
it is hardly possible to trace the origin, a new
season would be a period stretching from any moment to the
death of the oldest person born at that moment, and a hundred years was the average period so
conceived. A new season might thus begin at
any time, and might be endowed with special religious significance by certain ceremonies. The idea seems to have been that a new leaf, so to speak, might in this way be turned over in the history of a people, all past evil, material or moral, put away and buried (so the expression 'seculum conditum' is now explained), and a new period of peace and goodwill began anew. This idea has manifestly something in common with that underlying the many curious rites first collected by Mannhardt in his Baumkultus, and familiarized to English readers by Frazer in his Golden Bough, in which objects are thrown into the fire as symbols of the sorrows and sorrows to represent the cessation of one period of vegetation and the beginning of another. It is easy to see how exactly it would suit Augustus' policy, and how it might be manipulated to further his aims. Ever since his active life had begun, the idea had been in the air, and had won general recognition through the 4th Eclogue of Virgil and the fashionable mysticism of the age, while at the same time, as we have already seen, the popular feeling of depression and the desire to make a new start is not by any means uncommon in times of revolution and force. But Augustus did not work it out merely on old lines; he did indeed retain for the rites to be performed by night the underground altar of Dis and Proserpina in the Campus, which had been the scene of the Indl since their initiation by Mithras as a preparation in the winter months for the spring (249 B.C., a period of great depression and danger), but the place of these sombre deities was taken by such as would more exactly suit the lessons that he wished to inscribe: the Greek Moroe, the Greek birth-deity of the Hyades, and the popular deity of the Earth, the deity of all fertility. Thus the fortunes and destinies of the Empire and the fertility of man and of crop were brought in combination to the notice of the people. It was in keeping with this that the date selected for the celebration was the end of May and the beginning of June, when the crops were just ripening, a time when the Amburvalia used to be held, and the preliminary harvest festival of the Vestalia was about to begin; and it was also arranged that the people should make offerings of ears of corn to the Dis and Proserpina at those three days at the end of May (May 29–31), before the harvest months followed on June 1–3.

But the bright prospects and hopes of the coming seculum were represented, not by night or at an underground altar where the old seculum might still be kept, but in a more public manner on the Capitol and Palatine hills. On the first and second days the Emperor, with his colleague Agrippa, sacrificed on the Capitol to Jupiter and Juno (Minerva is not mentioned), and prayed for the preservation of the State; on the third day, after the sacrifice to Apollo and Minerva on the Palatine, i.e., to the protecting deities of the Imperial house in their private dwelling, Horace's hymn was sung by choruses of twenty-seven boys and as many girls, on the Palatine, and on the Capitol, in the temple of Apollo and Minerva (see Fowler, Religion of the Romans, i. 162). The spectacle must have been extremely beautiful; and so anxious was Augustus to make it universally popular that he even allowed the unmarried, who were excluded as a rule from Indl, to take part in it. It was approved by the Senate (votum) from the inscription, line 54. The Principate was to initiate a new era of peace and goodwill, of prosperity and populousness, of agriculture and plenty — and all of these were to be acquired and secured by faithful performance of service to the gods. This was the idea that lies at the root of this famous celebration, as it lies also at the root of the Aenid, whose author had died but two years earlier. Many details might be added to this account of Augustus' revival; but what has been here said will be enough to indicate the general outline and meaning of it. It remains to sketch the survival of the old Roman State religion in the Imperial period; but the material for this is as yet imperfectly gathered together from the volumes of the CIL.

ii. Traces of survival of the Old Roman State Religion in the Imperial Period. — The State religion was now beset, as we have seen, by three formidable enemies which tended to destroy it even while they fed upon it, like parasites in the animal or vegetable world which eat up their host, viz. the rationalizing philosophy of scepticism, the worship of the Caesars, and the new Oriental cults, yet, strange to say, it continued to survive in outward form, and to some extent, no doubt, in popular belief, for more than three centuries. This is the result partly of the tenacious conservatism of the Roman mind in regard to ancient forms and ceremonies, partly of the generous spirit, which had been given it by Augustus and his men of letters, and the conscientious care with which the successors of Augustus carried out his policy in this department. Tibertus himself had a curious interest in matters of religion, and seems to have made a study of them, and we find, for instance, in his work, the Baumkultus expounded and given a rational explanation by C. Mannhardt (Doctrina Baumkultus, 1856, p. 191), and a fresh idea of the plastin and the progress of the Flamen Dialis, or (ib. vi. 12) where he expounds the proper method of consulting the Sibylline books. Claudius added to the same tendency a pedantic anti-quarianism which made him also a faithful follower of Augustus' policy. With the Flavian dynasty, which was well disposed to the religious prestige of the Julian house, the tendency is rather to revert to those cults which were not specially connected with the Imperial house. The great trias of the Capitol—Jupiter, Juno, Minerva—seems to overshadow the Apollo of the Palatine hill and the Mars of the Capitoline, as it seems absolutely not, indeed, that the trias had ever lost its place as the foremost protecting power of the State (Wissowa, p. 128), but there is no doubt that the advent of a new family to power tended to diminish the prestige of those worships which were associated in the popular minds with the Caesars, and that the Caesars made a special point of the worship of Jupiter; he built temples on the Capitol to Jupiter Conservator and Jupiter Custos, and added to the prestige of the cult of the trias by the institution of a festival, the Agon Capitolinus (Tac.Hist. iii. 74; Ausp. in Roscher, a. 'Jupiter,' p. 749; for his fanciful devotion to Minerva see Wissowa, p. 255). The Antonines, even Marcus Aurelius himself, in spite of a grandeur of religions and moral belief which has rarely been equalled, were most careful in keeping up the tradition of the old Roman religion, and did not hesitate in times of public distress to put in action the whole apparatus of the old religion (Jul. Capit. 13). During all this early period of the Empire the temples were kept in repair assiduously, as is proved by the numerous inscriptions (vot. 962, etc.); Antoninus Pius is thus honoured 'ob insignem erga cerimonias publicas curam ac religiones,' CIL vi. 1001; and that there was no falling off in this respect seems to be shown by the well-known story of Constantius in A.D. 329, leaving shown round the temples 60 ludi of Minerva for the first time, and the curious interest which he took
in them in spite of his Christianity (Symmachus, Rel. iii.). And there can hardly be a doubt that this spirit of conservatism was not merely an affair of the Government, but that the Government was acting in harmony with popular feeling. In the Theodosian Code (xvi. 10. 2) we find that the worship of the family, i.e. of Lares, Penates and the Genii, had to be forbidden. But, in order to appreciate this tenacity, the student will do best to become acquainted with CIL vi. i., so far as it preserves the votive inscriptions of that age; for the number is enormous especially in Italy and Sicily, which recall in the greatest deities of the old time, and especially (apart from the Capitoline trias) in Mars, Minerva, Mercureius, Venus, Apollo, Diana, Ceres, Liber, Fortuna, Hercules, and others. A more concise survey of these inscriptions will be found in the selection by H. Desse, Sylloge Insaur. Lat., vol. ii. Again, the student of the Christian Fathers will not fail to note that their tendency is to accent the absurd minutiae of the old Roman religion rather than the philosophy or the Oriental worship of their time; and this is more especially the case with the use of the name for the deities of which we have already been mentioned, we thus incidentally learn so much that is of value for our subject (see esp. bk. iv. and vii.). The very necessity under which the leaders of Christianity found themselves of suitting their own religious calendar, and in some instances even their ceremonies, to the habits and prejudices of the pagans tells the same story; the Christian calendar of feasts is obviously based upon that of the Romans, and to this day there are many practices of the Roman Church of Rome in Italy and Sicily, which remind the student of the Roman religion of both the forms and the ideas that are familiar to him. (This very interesting subject, which lies outside the sphere of this article, is handled with great learning by H. Usener in his Religionsgeschichtliche Untersuchungen, etc., cf. his Sittengesch. p. 116, for the way in which the Christian doctrine of saints and angels fastened itself upon the gods of the Indigetomenta, aided perhaps by the philosophic doctrine that had explained these same gods as demons [Aust, p. 109].) To this process the Roman idea of the genius of an individual contributed not a little. But we need not here pursue the stages of the death of Roman paganism; nothing is to be learnt from them as to the nature of the old religion, except its extraordinary tenacity of life and its tenacity of life which has persisted for many years. (See especially chapters in Dill’s Roman Society in the last Century of the Western Empire, London, 1899, bk. i., and to Boissier’s La Fin du paganisme, Paris, 1891.)

(b) In the provinces. The volumes of the Corpus inscriptionum, especially those which collect the inscriptions of the northern and western provinces, show us the names of Roman deities with which we have become familiar in the course of this article, continually recurring in large numbers, and serve to remind us that the Roman soldier and the Roman soldier were the former parts of the Empire still worshipping the ancestral deities of the State. But here a great difficulty meets us, which it is not possible entirely to overcome. It was the Roman practice to note the points of interest in the story of the Province in the provinces they acquired and those of their own religion, i.e. points both in the cult and in the conception; thus both Cesar and Tacitus use this ‘interpretatio Romana’ instead of giving us the local names of the strangers (Ces. de Bilt. Gall. vii. 17; Tac. Germaniae 19). As Romans became more permanently settled in distant parts, and as the army came to be recruited almost entirely from provincials, the distinction between the deities of the Roman pantheon and those of the native provincials was gradually lost sight of, and even for the period of the early Empire it is extremely difficult to be sure to which category a name should be referred. Often, indeed, a cult-title added to the name of the deity enables us to be sure that the conception underlying the name is foreign and not Roman; and in the articles ‘Mars’ and ‘Mercurius’ in Roscher (ii. 2366 ff., 2828 f.) will be found a list of all such titles applied to these deities (which chiefly repre- sent the gods of the Roman arms and Roman commerce respectively in the provinces), which may mark them as foreigners under Roman names. But it would be rash to assume that where such titles are not found the deities are always genuinely Roman; and, in fact, we know from other sources that Roman names became permanently attached to local deities, and were so used even by the provincials themselves. Thus in CIL vii., which contains the British inscriptions, we find the goddess of the hot springs of Bath addressed as Minerva (no. 43), ‘Liber’ is the name for the god of the harvest, and in CIL viii. 792, s96, etc.; cf. von Domaszewski, Die Religion des römischen Heeres, p. 54; ‘Hercules’ represents the German ‘Donar’; and ‘Silvanus’, whose cult is widely spread over the Empire as a cult of gardens and woodlands (cf. also Olymp. iv. 282), is generally identified on inscriptions (cf. Wissowa, p. 215), and belongs especially to the life of the Roman settler and farmer, was in Dalmatia undoubtedly the representative of a native deity. The legions, however, retained in the provinces the genuine worship (combined with that of the Emperor) of Jupiter Optimus Maximus, of whom the aquila was the symbol (von Domaszewski, p. 12), of Mars, and of Victoria (ib. p. 4 ff.); the auxiliary corps, who were not necessarily Roman citizens, continued to worship their own gods, whether under Roman names or not; but the leginary was a citizen, and the very nature of his oath and his service compelled him to the cult of the deities who protected the Roman State by its armies, though in the great majority of cases he was neither a Roman nor an Italian by birth. It is curious to find that in the middle of the 3rd cent. A.D., clear instances of the Orientalizing tendency of recent Emperors, a new military Mars-religion appears, the work of the legions themselves (cf. von Domaszewski, p. 34: ‘No god is so often found on the coins of the Em- perors of the eutoces as Mars, as the two emperors of the Senate have developed the cult of the god out of the worship of the family, and in certain of its most primitive and characteristic features, such as the cult of Vesta, always retained the marks of its ancestry. Other festivals, such as the Pagan- tinae and Corpus Hispania, and probably even the worship of a union of families before the era of the State was reached; these were taken up into the religious life of the State, and became sacra publica, according to the definition of that term in Festus, p. 245. But the religion of the family is included in the term sacra privata, and, in fact, forms the greater part of such sacra (At privata [sacra] qua pro singulis hominibus, familias, gentibus, funct., Fest. ad loc.); nor need we here go into
the question how far the individual was or could be the subject of religious rites, nor into the obscurer one of the cults which had become the hereditary property of particular gentes or clans.

Of the religion of the family we have considerable details surviving, and these have of late been well put together and more or less wholly based in his book on La Religion gentilicia et collegiata, appeared in 1905. Other modern authorities are De Marchi, iii., ii., Praeclarissimi divinarum religio... thürner, vol. i., where the private life of the Roman may be studied; and of epigraphical works, Inscriptionum Romanarum, edited by C. and E. Buck (1903), has interesting discussions of certain practices from the point of view of comparative religious practice; and a short article in Fowle's Festschrift in E. and S. London, 1914, p. 14 ff. It hardly needs to be said that the material from which our information is drawn on this subject is scattered over the whole range of Roman literature from Plautus and Cato to the Christian Fathers, and that the Corpus Inscriptionum and archæological researches have of late years added very important matter, which is still increasing, and still imperfectly sifted and absorbed.

Two preliminary remarks seem necessary. (1) There is no question here of periods of development, as in the religion of the State; development, or the evolution, is present and can be seen, but in the worship of the family and but little within it. True, the wealthy Roman families towards the end of the Republic period doubtless felt the influence of the general carelessness, but the sacra privata was not set in great legal relations with the continuity of the family and its property that the natural conservatism of the Roman was here strongly and for the most part successfully appealed to. On this point, and on the duty of the Pontifices to see that the sacra privata were duly maintained, see Serv. de Leg. ii. 46 ff. So far as we know, the only important change in the character of domestic worship was the iconic representation of the 'household gods,' which came in at the end of the Republican period: e.g., the Penates came to be represented by images of the Dioscuri (Wissowa, Gesammelte Abhandlungen, p. 95 ff.); otherwise in the country and in families of ordinary means the religious forms remained always much the same. (2) It is not to be supposed that the religion of the family was entirely independent of the State authorities. In the older forms, it is true, but so it seems to have been understood in the later times, if Servius is right in stating that the focus was the altar of the di Penates (ad Æn. xi. 211). The Lar was also included in historical times (Ov. Fasti, ii. 633), and the deities of the household were reckoned all together in the offering (so the vulgar dei is perhaps servilely put). Not that the practice of casting it into the fire points to a primitive usage in which Vesta alone was concerned, and supports the view taken above that she was the centre-point of the whole group, and the most essential representative of the life of the household. A very late development (De Marchi, p. 67, tab. iii.) shows Vesta sitting between two Lares, with the ass, her favourite animal, behind her; but this only serves to illustrate the anthropomorphic influence of Greek art on Roman religious life. Cf. also art. Health, Heath-Gods (Roman).

2. Penates are the spirits of the household store (penus, which word Cicero explains as 'omne quo vestiventur homines' (de Nat. Doctr. ii. 28; cf. Gell. Noct. Att. iv. 1. 17)). The religious nature of this store is very plain; in various houses of those of advanced city life and luxurious country villas, the deities of the household had its abode. As the atrium was the centre of the house, so was the hearth (focus) the centre of the atrium—the heath, the natural altar of the dwelling room of man (Aust. p. 214). This was the seat of Vesta, and behind it was the penus, or store-closet, the seat of the Penates. Thus Vesta and the Penates are in the most genuine sense the protecting and nourishing deities of the household. Here, too, in the atrium was the Lararium, or altar of the Lar familiaris, the deity of the land which the family tilled as well as of the house in which they dwelt; and here were instanced the Genius of the Matria, the Genii intercommunitatis, on whom the family depended for its fertility and continuance. A few words about each of these deities or spirits will help to make clear the character of this simple and beautiful religious life. They were all quite distinct conceptions, each in its way helping to uphold the later Greek and Roman syncretism, yet we can feel fairly sure about the essential meaning of each one of them.

i. Vesta was beyond doubt (see above, p. 825) the spirit of the fire on the hearth; she thus represented the most essential part of the domestic economy, the power to keep the body warm and to cook the food—the maintenance of the physical vitality of the family. It has been said, not without reason, that Vesta represents this vitality rather in the abstract, while the other deities are concerned with the actual practice of the cultus. (De Marchi, p. 67, following Hersog, in Rhein. Mus. xiv. 6). Perhaps it would be more exact to describe her as the centre-point round which the others are set; for she was at least as concrete a conception as any of the others, and more so than any of the Penates. Genii intercollegii, such as Vesta and the Lervestans, were of course supposed to be friendly, and allid Vestam quum vivam intellige flammam,' says Ovid, Fasti, vi. 291; cf. J. G. Frazer, O.G.P, pt. 1, The Magic Art, London, 1911, ii. 200 ff. In front of her dwelling—the hearth—was the table at which the family took their meals, with the salt-cellar (saltsalvum), sacred salt cake, baked according to primitive fashion (mola salata; Fowler, p. 110) by the daughters of the family, as for the State worship by the Vestals, and the little sacrificial dish (patella). After the first and chief course of the midday meal silence was enjoined, and an offering of a part of the meal was thrown on to the fire (Serv. Æn. i. 790; Marquardt, iii. 126 note). Thus it is certain that this offering was made to the spirit of the fire (Vesta); whether also originally to the Penates may be doubtful, but so it seems to have been understood in the later times, if Servius is right in stating that the focus was the altar of the di Penates (ad Æn. xi. 211). The Lar was also included in historical times (Ov. Fasti, ii. 633), and the deities of the household were reckoned all together in the offering (so the vulgar dei is perhaps servilely put). Not that the practice of casting it into the fire points to a primitive usage in which Vesta alone was concerned, and supports the view taken above that she was the centre-point of the whole group, and the most essential representative of the life of the family. A very late development (De Marchi, p. 67, tab. iii.) shows Vesta sitting between two Lares, with the ass, her favourite animal, behind her; but this only serves to illustrate the anthropomorphic influence of Greek art on Roman religious life. Cf. also art. Health, Heath-Gods (Roman).
invocation at the lustration of the ashes of the deceased (see §§ 91-111). Nor is it difficult to understand how the Lar of the holding found his way into the house: he became the object of the worship of the whole familia, i.e., the workers on the land, both bond and free, and passed (perhaps as the bond-workers grew more numerous and independent) into the holding of the Penates-Genus, with which, strictly speaking, slaves had nothing to do. It is true that we cannot trace this passage historically, and we know that the Lares of the comitum retained their seat there and remained as Lores capitolares even in the growing city; but we may be sure that the Lares were attached to the land and not, like the Genius, to the person of any man, and, as so attached, their presence in the house can easily be explained in any other way. The arguments for this theory will be found in full in Wissowa's art. 'Lares' in Roscher, in his Rel. und Kulth., p. 167 ff., and in a reply to Samter in A.W. vii. [1904].

4. Genius.—The last of the deities of the household was the Genius of the poster familias, not to be identified with the ancient house deity, the Lar, nor with the Lar familiaris (Censorinus, de Die Natuali, ii. 2); even so late as the Theodosian Code the two are distinguished in the practice of the cult (see Cod. Theod. xvi. 10. 2). The Genius was in primitive conception the generative power of the household—of the man—though it was often represented as an ancient household or family, who (as has been assumed) was originally buried in the house, and continued to reside there. This was the view of F. de Coninques in his remarkable book La Cité antique, and it has of late been maintained by both De Marchi and Coulanges in their works. But archaeological research in Italy has failed to discover any trace of burial in the house, or even within the walls of a settlement (see Fowler, Cir. xi. [1897] 34). At all times the dead had a settlement of their own outside the development of the city, and we think that the Romans ever thought of their duly buried ancestors as having any place in the dwelling of the living. As among other peoples, they may have conceived as having a desire to return to their abode, especially if deprived by some accident of burial rites, but in the trace the great part of the living was to expel them (Fowler, p. 107 ff.). A convincing argument is that the Lares, as has already been mentioned, were never addressed as dii, as the Menes invariably were; i.e., they cannot have been human beings who became divine at death. Of late Wissowa has claimed for the Lare a different origin, and his view, in spite of criticism (e.g. Samter, p. 165 ff.), may be said to hold the field at present. The Lares, he argues, were not originally household gods at all, but deities presiding over the cross-roads, where several such holdings met; there stood the shrine, with as many altars as there were Lares and holdings over which they presided (see Wissowa, p. 167 ff.; art. Cross-Roads [Roman]). Thus they fill a place in the pristine worship which would otherwise be vacant—that of the holding, and its productive power—while the buried ancestors are quite sufficiently represented by di menes, di parentes, etc. Thus, too, it is easy to account for their occurrence in the Arval hymn, one of the oldest. Latin traces we possess (Henzen, p. 26), for they would naturally be objects of invocation at the lustration of the ashes of the deceased (see §§ 91-111). Nor is it difficult to understand how the Lar of the holding found his way into the house: he became the object of the worship of the whole familia, i.e., the workers on the land, both bond and free, and passed (perhaps as the bond-workers grew more numerous and independent) into the holding of the Penates-Genus, with which, strictly speaking, slaves had nothing to do. It is true that we cannot trace this passage historically, and we know that the Lares of the comitum retained their seat there and remained as Lores capitolares even in the growing city; but we may be sure that the Lares were attached to the land and not, like the Genius, to the person of any man, and, as so attached, their presence in the house can easily be explained in any other way. The arguments for this theory will be found in full in Wissowa's art. 'Lares' in Roscher, in his Rel. und Kulth., p. 167 ff., and in a reply to Samter in A.W. vii. [1904].

5. Marriage.—See art. Marriage (Roman).

6. Birth and early years.—If we are to believe Virro as quoted by St. Augustine (de Civ. Dei, iv. 11, 37; cf. Tertull. adv. Nat. ii. 11), the processes of birth and bringing up were under the protection of a multiple of spirit-deities, all of whom should be invoked at the proper time and in the proper terms; but, as has been said above (p. 582), it may be doubted whether these lists were not the invention of a comparatively late age of priestly activity, and whether they remain with any such, or in any other form. The chief deity of birth was Juno Lucina; in the fourth Eclogue of Virgil, which is a prophetic Carmen sung at the actual moment of birth (see Fowler, in J. B. Mayor, Fowler, and R. S. Conway, Virgil's Missaliani Eclogue, 1907), 60 this is the only deity invoked. Immediately after the birth, if the infant were sublatus, i.e. acknowledged by the father and destined to be brought up, we are told by Varro (Aug. de Civ. Dei, vi. 9) of a custom so curious that it may be mentioned here as possibly primitive in its original form and dating from the early agricultural age of Roman life. Three men at night...
booked to the threshold of the house and struck it respectively with a hatchet, a mortar, and a besoum, that 'by these signs of agriculture Silvanus might be prevented from entering'; from these actions arose three deities, Intecidona, Pilumnus, Deverra, by whose guardianship the infant is protected against the power of Silvanus (cf. art. BIRTH
(Greek and Roman), § 2). This idea of the bringing of the first fruits and the song of ! Old and evil spirits may be illustrated from Robertson Smith's Religion of the Semites, lect. iii. We need not follow the infant through the stages of his commitment to the care of other numina; it will be sufficient to observe that he was made one of the deities of this kind, which have come down to us from Varro are doubtless exaggerated, the earliest tender age was, no doubt, nearer the greatest anxiety, and consequently the utmost endeavour to avert evil influences and omens. That this is the meaning of the children's bundle, or amulet, is almost certain, and probably the toga protexa, which was worn by both boys and girls, had an originally religious or quasi-religious meaning (see Fowler, CIR x. 317). But the one really religious ceremony of which we know in the first days of infancy is that which appeared preserved for the seventh and the eighth for girls—on which, as the name implies, the child was purified and adopted into the family and its sacra, and received also its name. After this the boy or girl grew up under the protection of the household gods, and performed various religious and domestic duties. As puberty the boy laid aside the bulla and the protexa; the former was hung on the images of the Lares in later times (Persius, v. 31), while the latter was taken off finally at the festival of the Libitina when the boy went to the Capitol and sacrificed there to Jupiter and to Juventas (De Marchi, p. 176; Fowler, p. 56). The girl when about to be married also laid aside her protexa, with her dolls and other marks of childhood, and, if Wissowa guesses rightly (ABW
vii, 44), offered them to the Lares at the Compitalia. The tender and dangerous age of the child in being then passed, and youth and maiden being endowed with new powers, the peculiar defensive armour of infancy might be dispensed with.

7. Death, burial, and cult of the dead.—As Augus
had the Roman dead body, the dying man had no reckoning to make with heaven, and had no need for the forgiveness of sins in order to depart this life in peace. His responsibility for his actions ceased with this life, and after death he had nothing to fear or to hope from the gods; thus he had no need of any mediating priest in his last moments. The miserable fears which haunted him through life, painted by Lucretius in such glowing colours of contempt, ceased altogether at his death; his peace and comfort in his grave depended on the right legal and religious conduct of his living family, in respect of his proper burial and yearly renewed offerings to the de manes of the family at the common tomb. The house which he had left for the last time, and all who had been in connection with him during his life, after his decease, must be duly purified by lustration, in this case, as in the other, the sprinkling of water, but the true religious rites only began at the grave. It may be observed in passing that both burial and cremation were in use at Rome in historical times, and had been so, as we know from the XII Tables, since at least the 5th cent. B.C.; the religious rites in each case were practically the same; the details of difference in other respects will be found in Marquardt, Privat-
alterthümter, 1. 365 ff.

When the body or ashes had been consigned to the last resting-place, the mourners partook at

the grave of a meal called silicernium, which had a religious character. The meaning and derivation of the word are uncertain, but there seems to be little doubt that it indicates some kind of sacra-
mental meal, first offered to the dead and then partaken of by the survivors (De Marchi, p. 192), since Tertullian (Apol. 13) parallels it with the opulum funeris of which the magistrates and Senate partook in the visible presentment of the three-bodied and the multiplex Capitoline temple (Fowler, p. 218). Thus it would seem to have bound together the living and the manes of the deceased in the same mystical way as deity and worshipper were thought to be connected by a sacrifice, whether or not it amounted to a meal, but consumed. The rites of the grieving continued till the ninth day; on one of these days occurred the feria doenicae, of which the meaning is uncertain, but they may have included, as De Marchi has suggested (p. 196), a sacrifice of sheep to the Lab familiaris of which Cceo speaks in de Legibus, ii. 22, 55. The 'finis fumtce familiae,' or conclusion of the mourning, mentioned in the same passage, is the sacrum novendiale on the ninth day, which consisted of a sacrifice at the grave, and was followed by the cema novendialis, at which the partakers of the meal took the matronas as their mother and celebrated with good cheer the end of their sorrow; in rich families this might again be followed by ludis iunebris novendiales, as Æneas in Æneid, v., after the parentalia, or renewal of these rites in the cult of the dead, refreshed the spirits of his men by all the ceremonies calculated to inspire reverence.

As the dead continued to exist as spirits or deities after due burial, it was necessary to renew every year the rites at the grave which we have described. This took place under the direction of the State on what may be called the Roman All Souls' Days, nine in number, as were those of the Great New-
year (Feb. 13-21, Parentalia; Fowler, p. 336 ff. On Feb. 22 was the family festival of the Caristia, de-
scribed by Ovid (Fasti, ii. 617 f.) as a kind of re-
union of the living members of the family after they had done their duty by the di manes, when all quarrels were forgotten in a general harmony. This took place not at the grave but in the house, and the household gods shared in the sacred meal. Cf. art. DEATH AND DISPOSAL OF THE DEAD (Roman).

8. Agricultural rites.—A word must be said about those religious observances of private life which were so important for the prosperous prosecution of the daily labour of the ordinary Roman. Of such observances in the great city itself we know nothing indeed, and it may be that they were obsolete at a very early period, or were never followed out, as in the leisureed life of the farm; the 'busy idle-
ess' of town life probably had a damaging effect upon simple piety, as has been the case in modern Europe. But of the religious ritual of the farm we fortunately have valuable records in Cato's treatise on agriculture, compiled in the middle of the 2nd cent. B.C.; those records are in all prob-
ability drawn from the books of the Pontifices, and are included by Cato in his work as giving the genuine and correct formulas of invocation to the gods for those about to undertake certain agri-
cultural operations. We have already quoted above, in connexion with sacrificial ritual and prayer; they have been carefully studied of late by De Marchi (p. 128 ff.), and translated by him into Italian, with notes. Here it is possible to give only the general account, and a single speci-
men of invocation.

For the safety of his oxen the farmer is directed (Cato, de Agricultura, 83) to offer to Mars Silvanus in the wood (presumably the woodland where they grazed), and by daylight, for each head of cattle a fixed amount of meal, lard, flesh, and wine. The
offering might be made either by a free man or by a slave, i.e. by the voluitus in the master's absence; but no woman was to take part in it, or even to see the ceremony. The offerings were to be consumed by the persons present (cf. Fowler, p. 194). Again, when the pear-trees were in blossom, another offering, called epiga (cf. de Marchi, p. 139), was made for the oxen, in this case to Jupiter Dapalis (cf. Jupiter Farreus in the rite of confarreatio). The day was to be a holiday for the oxen and the herdsmen, and for those who took part in the rite; and afterwards Jupiter was to be entertained with various kinds of food (Cato, 131 f.); cf. Foskett, p. 218. It would be a holiday when wood was cut, or clearing made, or any digging done in a wood which might be inhabited by some unknown deity, a sacrificial pig had to be made, and the following prayer recited: 'Si dense, sic dura cum sacrum est, ut tibi lubet pio paculo facere illius sacri coercedi [i.e. violating] ergo. Harumque rerum ergo sive ego, sive quis issuo me fecerit, ut id fecerit, recte faciam. Eius rei ergo hoc pace paculo immolanda bonus precere precor, ut ieiunio propter paculum immolationem; harumque rerum ergo maete hoc pace paculo immolanto, est! (Cato, 139 f.; for this kind of paculum cf. Henzen, p. 136 ff.).

The singularly interesting directions for the Iustratio orii have already alluded to and in passing noted (1898). Here also Cato substiutute for it another piece of ritual, to be enacted before the harvest is begun, which is given by Cato in ch. 134. Before the harvest it is necessary to make a sacrifice of a porca procellancia in the following way: sacrifice of a sow and its connection with the cult of the dead. This sow has passed into the common usage of the farm, see Wisowa², p. 193; de Marchi, p. 135, nol. The offering must be made to Ceres before the harvesting of wheat, barley, beans, and rape. Janus, Jupiter, who are to be invoked with incense and wine before the immolation of the sow; and to Janus a sacred cake (strucus) is to be offered with the following prayer: 'O Father Janus, with the offering of this cake I pray thee to be propitious to me, my children, my house, and my familia. This cake I offer to the genius of the household, sent to Jupiter with the same formula of prayer. Next, wine was to be offered to Janus with the words, 'Father Janus, as I have prayed thee good prayers in offering the strucus, so for the same object let this offering of wine succeed'; so also a wine offering was to be made to Jupiter. Then the porca procellancia was to be slain; and when the entrails had been laid bare, another strucus was to be offered to Janus as before, and another fortum to Jupiter, and to each of them an offering of wine. Afterwards both the meat and the wine were to be offered to Ceres.

With this specimen of ritual, which so well illustrates the peculiar character of the Roman religious practice, whether public or private, this article may fitly be concluded. Like all such formulæ, it suggests topics of which are not easy to answer, and which it is not possible to attempt to explain here. But it may serve to remind the reader of what was said at the beginning of this article as to the origin and essential character of the genuine religio of the early Romans, which had its roots in the mental attitude and social powers to which they believed themselves indebted for all success in procuring food and clothing by agricultural labour.

ROSARIES.—I. ORIGIN.—A rosary is a string of knots or beads, designed as an aid to the memory, and, when used in religious exercises, providing a convenient method for counting the recitation of prayers or the repetition of the names and attributes of the Deity. The use of the rosary is very widely spread, being thearest home sacred to be found in Asia, where it can lay claim to a fairly venerable antiquity. In dealing with its origin we can do no more as yet than put forward suggestions.

The use of knots (q.v.) as mnemonic signs is almost universal, and such a simple device may have been invented again and again; its appearance in many parts of the world does not prove that it was invented in one country and transmitted thence to other centres. The highest development of a system of knots as a means of aiding the memory and for keeping records is seen in the American Indians. As an object similar to the rosary used in the rosary used by the Shingon sect of Buddhists in Japan there is a knot formed by the union of two strings which hang from the main string of beads, and it is said to resemble an ancient Chinese character which means 'man,' being one of a considerable number of objects representing one of the many attributes of Buddha.²

The use of knots as mnemonic signs for purely secular purposes still persists in many countries. Among the Indians of Guiana, where the water is often too deep to wade, the women prepare a number of strings, each tied into knots, the number of which correspond to the denomination of that string. The headman of each settlement is presented with one of these strings. Every day's knot is untied, and in this way the hosts show on which day they expect their guests.³ Among the

Wagogo of Central E. Africa the time of a woman's pregnancy is reckoned by knots; at each new moon one knot is untied.

In this country it is a common practice to tie a knot in a handkerchief to signify a new month. The same custom is found in India, the knot being usually tied in the strings of the pujaemana. Such customs are apt in time to disappear with the advance of culture, but the introduction of new uses for them, methods, being retained only for religious purposes. Such a survival of the use of knots for keeping records is seen in some respects in the sthāna, the handkerchief used by the Greek Orthodox Church in Egypt, and in India. These will be noted below under the various headings.

Handkerchief are also of universal use for record-keeping, such as the tally-sticks which were utilized in England and Ireland almost in the recent past; in Ireland in quite recent times. These sticks have been employed to record the number of prayers uttered, and the supplicant would leave such a stick with oratories to be some sacred well. These have been called 'rotive rosaries.'

II. AGE.—The oldest reference to rosaries to be found in the literature of India is in the Jain canon. Here they are referred to as forming one of the aśkharas, or gifts to be given to the of god. Some of the deities are represented as carrying rosaries in their hands. The following passage from the Buddhist 'Forty-two Points of Doctrine,' art. 10, alludes to the rosary being a symbol of virtue, applies himself to the extirpation of all his vices like one who is rolling between his fingers the beads of the chaplet. If he continues taking hold of them one by one, he arrives speedily in extirpating his bad inclinations one by one, a man arrives at perfection.

The propers of use is as a means of promoting contemplation. The rosary differs according to the sect to which the worshipper belongs. The materials of which rosaries are made vary greatly, and each has a specific purpose. The number of beads also varies according to the sect. A worshipper of Śiva is supposed to use a rosary of 32 beads, or double that number; a votary of Śīva, on the other hand, is supposed to use one with 108 beads. This number is also sometimes found on a Śāivite rosary; indeed the beads may run into several hundreds, irrespective of the sect. There are usually one or more terminal beads to each rosary; they are not greatly common with those of the or rosaries.

(a) Materials, etc.—A favourite bead of the Śāivites is that called rudrakṣa, 'eye of the god Rudra (or Śiva). This is generally supposed to come from the Elaeocarpus guineensis. In the Panjāb, however, the 'eye of Rudrākṣa' is applied to the seeds of the jujube-tree and is here attached to the number of facets on the seeds. These slits, running from end to end of each seed, are called 'mouths' (muh). A one-mouthed rudrākṣa is a very valuable amulet, and the owner of such a bead also possesses the goddess Lakṣmī and all kind of blessings. If nothing will tempt the possessor to part with it, it must be stolen from him, and it should be encased in gold and carefully preserved as a family relic. The name is also derived from the Hindī word rodrakṣa that such beads can be obtained, and any price that they demand must be paid by the would-be owner of such a treasure. Rudrākṣa seeds with eleven facets are worn by celibate Yogis, while the married ones wear those with two ; and those with five facets are worn by Yogis in the married state. The rough surface of the rudrākṣa seeds may possibly symbolize the austerities connected with Siva-worship. The seeds, according to a Siva legend, are said to be the tears of Rudra (or Siva) which he let fall in a rage (some say in grief, some in ecstasy) and which crystallized into this form. The five facets are also sometimes thought to stand for the five faces or the five distinct aspects of the god. The worshipers of Śīva, on the right hand, prefer smooth beads, and the beads devoted to Śakta worship are generally round; they are usually one to three inches in diameter, and the laity generally use the rosary when repeating the nāśikār mantras. The materials vary according to the use to which they are put and the wealth of the owner. The poorer ganges generally use rosaries made of cotton shawls and sandal-wood; the rich use beads of red coral, crystal, turmeric, emerald, pearl, silver, and gold. In this sect there are two special uses of the rosary.

(1) Rosaries of five different colours—red, yellow, green, white, and black—are used for the repetition of certain mystical formulas and are especially believed to accomplish the will of the deity. There are, for instance, rosaries of red, or (a) japa-mala, (b) rudrākṣa (a popular or rosary), (c) kācchāni (eating an image), (d) sāhautāttar sūtra, (e) sāhautāttar sūtra, (f) arahatāttar sūtra, (g) japa-mala, (h) japa-mala, (i) japa-mala, (j) japa-mala, (k) japa-mala, (l) japa-mala, (m) japa-mala, (n) japa-mala, (o) japa-mala, (p) japa-mala, (q) japa-mala, (r) japa-mala, (s) japa-mala, (t) japa-mala, (u) japa-mala, (v) japa-mala, (w) japa-mala, (x) japa-mala, (y) japa-mala, (z) japa-mala. The title generally used the rosary when repeating the nāśikār mantras. The materials vary according to the use to which they are put and the wealth of the owner. The poorer ganges generally use rosaries made of cotton shawls and sandal-wood; the rich use beads of red coral, crystal, turmeric, emerald, pearl, silver, and gold. In this sect there are two special uses of the rosary.

(2) Rosaries of these different colours are also used for the repetition of mystical formulas, charms, spells, and incantations, with a view to obtaining certain blessings from the deities. On the other hand, they may be used for harmful purposes—to drive hostile deities from the person of the wearer, to make them ill, to kill them, to subdue them, to obtain their affections, to make them inert, or to summon them.

There are also small rosaries called bohrakhas. These are used when the more costly rosaries with the usual number of beads are not obtainable, or when the user cannot afford to buy the more expensive beads. These bohrakhas generally contain 6, 9, 12, 18, 27, 36, or 54 beads—i.e., any sub-multiple of 108.

Devotees much in importance to the size of the beads—the larger they are, the more effective is the rosary, and the greater the merit attained by the user of it. Monier-Williams gives the following account of the use of such rosaries by an

2 Monier-Williams, Modern Indian and the Indians, p. 108f.
old hermit who was living in the neighbourhood of Kaira in a hut near a temple: 

'He was engaged in his evening religious exercises, and, while sitting on a thorny thorn, his mind dwelling on the sacred rosary, he suddenly gathered up his thoughts and turned towards two birds that were perched on a post of the temple. He noticed a chain of fifteen rough wooden balls, each as big as a child's head. As he gazed at the rosary round his neck, one bead passed into his hands, and whilst he held the several balls in his grasp he repeated, or rather chanted in a low tone, a short prayer. So much was the man impressed with the costliness of the rosary that he afterwards repeated this process of pious manipulation several times before he desisted. The muscular exertion and consequent fatigue must have been great, yet the entire operation was performed with an air of stoical impassiveness. Then the devotee went into another shed, where, on another cross-beam, supported by posts, were strung some heavy logs of hard wood, each weighing about twenty pounds. Having grasped one of these with both hands, he chanted with his face against the side post, and then took the log against the first. Probably the clashing noise thus produced was intended to give increased effectiveness to the recitation of mantras. }

The rosary plays a part in the initiation ceremony when children, at the age of six or seven years, are admitted to the religion of Vîṣṇu. Such a rosary is usually made of tulsi-(tulasi-) wood, and it is passed round the necks of the candidates by the guru, who teaches them one of the sacred formulas, such as 'Homage to the divine son of Vasudeva,' 'Homage to the adorable Rama,' or 'Adorable Krishna is my refuge.'

A high-caste Brahman employs the rosary equally as a means of counting his daily prayers. He uses it to keep his count of the beads, whether they are of metal, wood, or crystal. It is also employed by the jeweller, for counting the beads, and the superior has invested him with another rosary.

Further special uses for the different kinds of beads are given by K. Raghu Nath:

1. If a rosary is used in honour of a goddess the beads should be made of wood, preferably tulsi, and the woman must be careful not to lose them; whereas, if the rosary is made for Hindu use it may be of any kind of wood, excepting iron, as it is believed that the iron will attract evil spirits.

The Sikhs make a rosary of iron beads, some 108 beads in number, of the same kind of which is used by the Sikhs. The Jewellers make rosaries of silver, iron, or copper, and sometimes of mother-of-pearl, being the material most used for rosaries by the Sikhs. The rosaries are frequently used as necklaces and are usually worn on the neck. Sometimes the rosaries are strung on a rigid iron ring, sometimes they are connected by links like the longer rosary mentioned above. The rosary with 27 beads has a particular name (Lohe ká Sinarna), and it forms also a tribal mark.1

A Hindu rosary used by the Brahmins is made of beads of different sizes. It is called 'garur-rosary,' or 'garun-mandana' ('snubler of snakes'). Rosaries of snake-bones are tied to it, and, until it is furnished with two such rosaries, it does not become sanctified. This instrument is occasionally worshipped, and the beads of the rosaries hung on it are often used to cure diseases by being tied on to the wrist of the sick person.2

Some rosaries are made of tulsi beads, and are strung together in groups of ten, with a small bead between each group. They are called 'garun-mandana' ('snubler of snakes'). Rosaries of snake-bones are tied to it, and, until it is furnished with two such rosaries, it does not become sanctified. This instrument is occasionally worshipped, and the beads of the rosaries hung on it are often used to cure diseases by being tied on to the wrist of the sick person.3

Another rosary, used by Hindus who wish to get rid of their superfluous flesh, is made of small, almost black seeds, dry and shrivelled looking, being rather like dried currants in appearance. Doubtless the user hopes that by repeating prayers on it he may obtain a likeness to the seeds, and shrivel up and decrease in size himself. A rosary from the Partabgarh district, which is in the collection at the Pitt-Rivers Museum, Oxford, consists of 213 very small beads, plus the terminal, and is finished with a tassel of pink wool. This rosary is stated to be used to prevent the effect of the 'evil eye.'

2. Buddhist. The Buddhist rosary is probably of Brahman origin, and here again the number of beads on the string is usually 108. This is said to correspond with the number of mental conditions, or sinful inclinations, which are overcome by reciting the beads.

Moreover, 108 Brahmans were summoned at Buddha's birth to foretell his destiny. In Burmá the footsteps of Buddha are said to be 108. Sometimes 108, sometimes 308, beads are strung on (Kâkyû), run into 108 volumes; in China the white pagoda at Peking is encircled by 108 columns, and in the same country

ROSARIES

108 beads form the ordinary punishment for malefactors. A crowd of lohans (disciples of Buddha, or contestants of the devil), observed from 13th to 15th July, 108 welcome fires are lighted on the shores of sea, lake, or river; and 108 rupees are used in the payment of their fines.

Besides the full rosaries of 108 beads, smaller ones are also used, the number of beads representing the chief disciples of Buddha.

(a) India.—In India the Buddhist rosaries do not seem to differ very much from many of those used in the Near East. They are made of more costly materials than others, the more valuable being of turquoise, coral, amber, silver, pearls, or other gems. The poorer people usually have their rosary beads made of wood, pebbles, berries, or bone, and they are often satisfied with only 30 or 40 beads.

The act of telling the beads is called taoi-c'e, which means literally 'to purr' like a cat, the muttering of the prayers being suggestive of this sound. The rosaries have 108 beads on the main string. The reason given for this number is that it ensures the repetition of a sacred spell 108 times. If the rosary the central bead is held in the right hand, the formula 'Anita, Dakka Anatha,' 'All is transitory, painful, and unreal,' is repeated. The monks sometimes wear a rosary called bodhi, with 72 beads. The beads are black and sub-cylindrical in shape, and are said to be made of slips of leaf on which a cleft has appeared. Other beads are rare and leaves are rolled into pellets with the aid of lacquer or varnish. The rosary is not mentioned in the Southern Scriptures as one of the articles necessary for a monk, and it is not so conspicuous among Southern Buddhists as it is among their Northern co-religionists.

(c) Tibet.—The rosary, phreng-ba (pronounced theng-wa, or vulgarly theng-naa), 'a string of beads,' is an essential part of a Lama's dress, and is also worn by most of the laity of both sexes. The act of telling the beads is called teur-wa, which means literally 'to prur' like a cat, the muttering of the prayers being suggestive of this sound. The rosaries have 108 beads on the main string. The reason given for this number is that it ensures the repetition of a sacred spell 108 times. The rosary is breathed upon and a fair long prayer is recited in which the petitioner begs various religious protectors and guardians that 'truth may descend on this lot,' that light may descend on this and the dark and wither the loss of wealth. After the repetition of this prayer 'the rosary is taken in the palm and well mixed between the two resolving pains and the hands clasped thrice.' Then, closing his eyes, the devotee seizes a portion of the rosary between the thumb and finger of each hand, and, after opening his eyes, counts the intervening beads from each end in three. The result depends on whether the remainder is one, two, or three in successive countings.

1. If one number remains, it is not very good, it is middling: 'Legal proceedings will come.'
2. If two numbers remain, it is good: 'Turquoise fountains will spring out and fertilize the grounds, unexpected food will be obtained, and escape is at hand from any danger.'
3. If one number remains, it is bad: 'The rejected one will be devoured and the devils be propitiated, then it will be prevented.'

(d) China.—The full Buddhist rosary in China has the usual number of 108 beads, with three dividing beads of a different size or colour. As in other countries, there are varying variations. There is also a smaller rosary of 18 beads, corresponding to the 18 lohans (chief disciples of Buddha). In some rosaries each of these 18 beads is carved into an image of a lohan. Sometimes the laity wear this smaller rosary at the waist, or it is placed on the bed, and an image of a lohan, name heung-chu, 'fragrant beads.' The Chinese name for rosary is su-chu. The ends of the rosary strings are usually passed through two retaining or terminal beads, one being large and globular in shape, the other small, and the latter of the larger one contains a sacred relic or a charm.
Part of a Chinese official's costume consists of a rosary with 108 beads which are often of large size, with dividing beads. The latter are sometimes made of richly enamelled silver and usually three in number: the division between them being a counter-beads. From the retaining beads sometimes hangs a silk ribbon embroidered with different-coloured glass beads, the patterns being symbolic. Attached to this ribbon there is generally a medallion, and finally an oval bead of some size. One of these oval beads also forms the terminal to each of the three dividing beads, the four being called the "droppers," the "disciple beads," or the "regents of the four heavens." They represent the emperor, father, mother, and Buddha respectively in whose eyes these beads reverberate and obey. These official rosaries are sometimes very costly, and are worn only by dignitaries on state occasions. They are not apparently of religious significance.

As a religious instrument the rosary seems to be chiefly used to count the repetition of set phrases, whereby the devotee stores up merit for himself. If these repetitions are performed at temples, the greater the merit of the votary. The rosary is also used as a means of counting prostrations and prayers. The devotee will prostrate himself and, strike the ground with his forehead, at the same time uttering a formula. At the end of the prostration and repetition a bead is moved along the rosary string which hangs round his neck.

On occasions of sickness and death there is a ceremonial performance with the rosary. The officiant must either be taken from a certain class of Taoist priests, or be a priest of the Buddhist church. On these occasions the priest chants in a monotonous sing-song, certain quotations from the sacred books. Count of these repetitions is kept by means of a rosary, and the benefit and merit obtained by them accrue to those who employ the priests and pay for them.

(3) Korea.—The Buddhist rosaries of Korea have 110 beads, though, according to the classics, the number is 108, the two extra beads being large ones—one at the beginning or head of the rosary usually containing a swastika, the other dividing the beads. The second of these beads is dedicated to a deity. Every bead on the string has its own special name. The devotee, when using the rosary, repeats the "Hail thou jewel in the Lotus!" (Oh mani padme Hüm!), holding each bead till he has counted a certain number. The rosary aside he repeats the following sentences:

"Oh! the thousand myriad miles of emptiness, the place which is the midst of 100,000 myriad quadrillion mountains and valleys, the place which is in the midst of the tens of myriad quadrillion of emptiness, eternal desert where the true Buddha exists. Of Tranquil Peace!" There is also a small rosary which, if used every day in the four positions or states, viz. going forth, remaining at home, sitting, and lying down, enables the votary to see the land of bliss in his own heart.

"Amila will be his Guardian and Protector, and in whatever country he goes he will find a home."

The materials of which the rosaries are made have all their intrinsic value, as may be seen from the following:

"Now you can calculate that in repeating the rosary once you will obtain tenfold the benefit of the rosary if the beads are of gold, and a thousand times the benefit if the beads are of silver, and ten thousand times the benefit if the beads are made of crystal you will obtain blessings ten thousandfold. But if the beads are made of hard rock or hard wood, the rosary will only bring benefits to the one who is repeating it."

The Ch'yei Ssöck classic gives certain rules to be observed in connexion with the rosary:

"When you begin chanting the Rosary repeat Om Akho Sehao ("Hail Aekhobya [a fabulous Buddha], may the race be progressed beyond this world") or Om Vaca Vaca, and after each one repeat Om mani padme Hüm twenty-one times, and, after that, STHO (if the personification of essential bodhi and absolute purity) STHO twenty-one times. Then recite the following poetry:"

The Rosary which I take includes the world of Buddha Of a diameter of hundred dice forming a round and putting the biorn. The Peaceful Sons where non-existence is In the Nest being seen and delivered by Amila."

On the walls of many of the Buddhist temples in Korea may be seen the classic of the rosary. A copy of one of these was obtained by E. B. Landis, who says:

"The date and authorship I do not know, but it is evidently very old, as it contains many Chinese characters that are now practically obsolete. The authorship is attributed to the Emperor Wu of the Chin dynasty, and to blocks cut at Pong Kui Se (The Temple of the Receiving of Benefici) during the reign of the Emperor. The expense incurred in cutting these blocks was paid by a virgin by the name of Pak, who wishes to obtain for herself and parents an abundance of merit."

(f) Japan.—It is in Japan that the Buddhist rosary reaches its most complicated form, each sect having its own special rosary. There is also the one known as the sho-zuku-jin-dzu, or the rosary used by all sects in common.

It consists of 115 beads, divided into two equal parts by two large beads, called the upper parent bead (ben-o-o-ya-rama-jin) and the lower parent bead (chi-o-o-ya-rama-jin). From the upper parent bead hang two strings on which are threaded 111 beads smaller than those on the main string, with terminal beads of elongated form called tsuny-dama (dewdrop beads). They are string in the following way: Just below the upper parent bead on the left pendent string is a solitary bead; below this the strings are knotted. Then, on each string, are five more beads and another knot; again other five beads on each pendant, both of which terminate in a dewdrop bead. The name for these pendant beads is known-ppy (sang-wa-ben-o). The solitary bead at the bottom is the one that is to be held. This bead should be on the left hand, thus ensuring the right signification to the rosary.

From the lower parent bead hang three strings, two with five small beads each and the terminal dewdrop beads. These two strings are called sashida-ten-ten (the four disciples). The third string has ten beads, but is without a dewdrop bead. These are used merely as counters and are called katu-ten-ten. The four dewdrop beads are also called shihan-ten, the four regents who are said to preside over the four quarters of the universe. The first represents the sun and the law of Buddha, and the position of the dewdrop beads is thought to symbolize their actual positions of power and authority, as, according to Buddhism, the whole world is divided among these four over this and all other worlds. Throughout all the Japanese rosaries names of deities or saints are assigned to certain beads.

On the main string of this rosary are dividing beads. At an interval of seven beads on either side of the upper parent bead is a small bead, usually of a different material from the other beads, and again at a further interval of fourteen beads are two more dividing beads, one on each side, similar to the other dividing bead. These beads show where a special invocation should be uttered, the rosary being at the same time raised to the form of a prayer.

The materials of which Japanese rosaries are made vary considerably according to fashion or the taste or wealth of the owner. In former times they were made from the wood of the bodhi-tree (pipal-tree in India), for under its shade Sakyamuni is said to have attained supreme and universal enlightenment. In modern times, however, the little wood probably accounts for the fact that common rosaries are now often made of the wood of the cherry- and plum-trees.

The sho-zuku-jin-dzu is the rosary usually carried by monks and laity of all sects, on all occasions of religious state, on visits of ceremony, at funerals, etc.

Besides the rosaries of the separate sects there are three ceremonials performed for special purposes in which the rosary plays an important part. They are known under the names of kanö, ki-ô, and gomö.

(1) Kanö.—This ceremony is for the recital of "prayers of request," (of a just nature) to a deity who has the power of accomplishing wishes or purposes of human beings. It is a special manipulation of the rosary, which is held by both hands, the petitioner raising it very reverently and slowly to the position intended to be attained. Also during prayer the beads are rubbed up and down between the hands in a more or less energetic motion according to the fervour of the petitioner, causing an unpleasant and grating noise. The members of the orthodox school, however, prefer to keep to the "rosary of ten thousand," considering too extreme an exhibition of this sort to be vulgar.

(2) Ki-ô.—This ceremony is peculiar to the Tendai, Shingon, and Nichiren sects—Ryö-in—or those Buddhist sects which have adopted certain Shinö formulas.

1 All the information on Korean rosaries is obtained from E. B. Landis, in The Korean Repository, vol. ii. no. i.

3 J. Doolittle, Social Life of the Chinese, ii. 386 f.
5 Ib. p. 387.
According to one authority, the rosary in Japan plays an important part in social as well as in religious life. In the late room of the temple there is always a rosary or gosho, a rosary of value, historical or other, much appreciated as an ornament for this room. It is said that rosaries were carried by all the soldiers in the late Russo-Japanese war. The dead also have a rosary slipped on the wrist, which they are buried or cremated with. The larger temples and at all places of popular pilgrimage there are special shops for the sale of rosaries, having as their sign an enormous rosary hung outside. The devotee attach especial value to a rosary that has been consecrated over the sacred flame and incense smoke of a venerable temple.

3. Muhammadan.—The rosary used by followers of Islam generally consists of 99 beads with a terminal bead called the idinm, 'lender.' Its chief use is for counting the recital of the names of Allah, which they indicate at times by repeating the essential name, Allah. This rosary is divided into three parts, 33 beads each, by beads of another material or shape, or by tassels which are often made of gold thread or of bright coloured silks. According to some authorities, there is another variety of the rosary, not often used, which has 101 beads to correspond with the 101 names of the Prophet. A smaller rosary of 33 beads is very commonly used, and the devotee will go round this three times to get the full recitation of the 99 names. In Persia and India the rosary is called tasbih, in Egypt subbaB, from an Arabic verb meaning 'to praise,' 'to exalt.' At the present day it is used chiefly by the older or more devout Muhammadans; among the younger people it is tending to become merely something held in the hand and fingered during devotions.

Tradition says that the Prophet attributed great merit to those who recited the names of God and repeated certain formulas. 'There is no one who repeats the names of God, whover recites them shall enter into Paradise,' and 'Whoever recites this sentence [the tasbih], 'I extol the holiness of God,' and the tahmid, 'God be praised!' a hundred times, morning and evening, shall have all his sins forgiven.'

Umar Ibn Shu‘ab relates that the Prophet said: ‘He who recites “God be praised!” [al Hamdu lil-ha!] a hundred times in the morning and again in the evening evening shall be like a person who has provided one hundred horsesmen for a pilgrimage, or religious war. He will also have the repetition of a sacred formula, that the devotee shall receive rewards equal to the emancipating of ten men from slavery. He shall be rewarded to his account, and one hundred of his sins shall be blotted out, and the words shall be a protection from the devil.'

The date of the introduction of the rosary among Muhammadans is uncertain. It has been often asserted that it was taken over by them in a fully developed form from Buddhism. But tradition and various passages in the early literature strongly indicate that the form of rosary, such as would not have been used if borrowed from a people who had it already in a highly developed form.

Muhammadan tradition points to a very early use of the rosary, dating back even to the time of the Prophet himself. In support of this belief it is related that Muhammad reproached some women for using pebbles in repeating the tasbih, etc., suggesting that they should rather count them on their fingers. Another tradition, collected in the 9th cent. A.D., relates that Abu Abdul Rahman, on visiting a mosque and seeing some women counting the names of Allah on their fingers, said: 'This is an innovation, and Allah and His Prophet will not accept your good works.'

Abdul, son of Khalifah, 'Umar, who died in A.D. 692, on noticing a woman counting the names of Allah, reproved her, saying: 'Do not do that, for this comes from Satan.' The last two quotations seem to show that in Persia or India a method of counting the rosary was resorted to, the practice was still more or less looked down upon by those of rank or education.

The materials of which the rosaries are made are numerous, though black beads are most used. They have their own form and shape, and are usually of a round or oblong form. The Wahabis, who are followers of the reformer Abu al-Wahhab, use their fingers on which to count their repetitions, their founder regarding a more developed form of rosary as an abomination and its use as a practice not sanctioned by the Qur'an. Wooden beads are used by all sects, and beads made of clay from Mecca are highly valued. Pilgrims from this sacred city sometimes bring such rosaries back with them. Date stones are also much used, as are also horn and imitation pearls and coral. Beads made of both from Persia, where Husain was buried, are sacred to the Shi‘ahs and are used by members of this sect only. They are often of a greenish-yellow colour. These beads are believed to turn red on the 9th day of Muharram, the night on which Husain was killed. The beads from India are very much sought after, and are called the seeds of the Cannabis indica. These seeds are black in colour and are inlaid with silver. The terminal to this rosary is a complicated knot in bright coloured silk, the knot being of a form characteristic of the Muhammadan rosaries. This rosary is said to have been made in Mecca.

Another material often used is camel bone. Sometimes these beads are dyed red in honour of Husain, who was slain in his conflict with Yazid, the seventh Khalifah, the red colour representing his blood. Sometimes the beads are dyed green, this being Husain's colour. Hasan, Husain's elder brother, met his death by poisoning. The poison turned his body green after death; hence these beads are in memory of his tragic end. Figurs, on the other hand, prefer glass beads of various colours, and number them 99.

In Egypt on the first night after a burial certain ceremonies take place at the house of the deceased, among them being that of the subbah, or rosary.

3. Id. 348, note 1; Dr. Gaster, on the other hand, has informed the writer of this article that the 99 beads correspond not with 101 names of Allah.
After nightfall a certain number of fajrīm, sometimes as many as 50, assemble, one of them bringing a large rosary of 1000 beads, each bead being about the size of a pigeon’s egg. Certain passages are recited, after which the formula: ‘There is no deity but God’ is repeated 3000 times. Count of these repetitions is kept by one of the fajrīs by means of the rosary. They often recite themselves the whole round of the rosary, the end of each round of the rosary. Certain other sentences are recited as the beads are passed in the circle by the different companions, ‘Have ye transferred (the merit of) what ye have recited to the soul of the deceased?’ They reply, ‘We have transferred peace be on the Apostles, and praise be to God, the Lord of all creatures.’

Thus ends the ceremony of the subhā, which is repeated on the second and third nights if the family can afford it. A similar performance takes place upon news of the death of a near relative is received.

A further interest is attached to this ceremony in Upper Egypt, because a primitive form of rosary is often used on this occasion.

A fajrī will bring a plain cord with him, and, as he recites each formula or passage from the Qur’an, he makes a knot in his cord till he has reached 1000. The merit in this case also is conveyed to the deceased. The cord with its knots is afterwards thrown away.

The rosary is also used in Egypt in what is called making an istikhārāh, ‘application for the favour of Heaven, or for direction in the right course.’ Lane² describes it as follows: ‘Thus far taken, one may say two points of a rosary; after reciting the Patibrōh (1st chapter of the Qur’an) three times, he then counts the beads between these two points, saying, as he passes the first bead through his fingers, [I extol] the perfection of God; in passing the second, ‘Praise be to God’; in passing the third, ‘There is no deity but God,’ repeating these formulae in the same order to the last bead. If the first formula falls to the last bead, the answer is affirmative and favourable; if to the second, indifferent; but, if to the last, it is adverse.’

4. Christian.—The introduction of the rosary among Christians has been attributed to various people, among them being St. Aybert de Crespin, Peter the Hermit, and St. Dominic. The Roman Breviary has the last-named that he was admonished by the Blessed Virgin to preach the rosary as a special remedy against heresy and sin.³ There has been a fairly widely accepted theory that the rosary was introduced into Europe at the time of the Crusades, having been imitated from Middle Eastern research. But later research seems to have found that, though it is possible that such a means of counting prayers may have become more popular at this period, an earlier date should be assigned for its use in Western Europe. It is stated by Wycliffe that the Rosary was brought to this country by a resident of Coventry, wife of Count Leofríc, bequeathed to the monastery which she founded ‘a circle of gems which she had threaded on a string, in order that by fingering them one by one as she successively recited her prayers she might not fall short of the exact number.’ Lady Godiva died before 1070, so that some mnemonic device seems to have been in use prior to the preaching of the Crusades. The case of the Egyptian abbot Paul, who died in 341, is related by Sozomen (c. 400–430) in his Ecclesiastical History,⁴ where it is stated that the said abbot Paul, knowing that means of pebbles gathered in his cloak, dropping one of them at the end of each prayer. Here is seen a much earlier and more primitive system of record-keeping, which suggests that the rosary had evolved in some centuries before it was not been taken over from others, where presumably it was already in a fairly developed form.

By the 13th. cent. the making of paterosters, as the beads were then called, had become a business industry both in Paris and in London. In the former city the workers were divided into four different guilds or companies, each company being distinguished according to the material in which its members worked. In London, at the same period, certain citizens were known as ‘paterosters.’ These craftsmen probably resided in Paternoster Row and Ave Maria Lane, being thus conveniently close to the great devotional centre of London, under the shadow of St. Paul’s cathedral.¹

That the rosary probably arose from a practice in early Christian times of making repeated genuflexions and prostrations, sometimes combined with prayers or sacred formula, has been shown by the last-named authority.² This form of self-discipline was practised in Eastern Europe and in Ireland, spreading from these two widely separated centres over the greater part of Europe. Such a form of asceticism survives in the Greek Church at the present day, as will be seen below.

(a) Roman Catholic.—The complete Roman Catholic rosary of the present day consists of 150 beads, these being divided into decades by fifteen beads of larger size, called ‘gospel beads,’ and sometimes influencing the shape. These beads form the chaplet. A pendant is usually attached consisting of a cross or crucifix, and one large and three smaller beads, the latter being similar to those on the chaplet forming the decades.

This pendant is little used in practice, but the devotee, after making the sign of the cross, generally begins at once to recite the Paternoster, followed by ten Ave and a Gloria. This process is repeated for each decade, the Paternosters being recited on the larger beads, the Aves on the smaller ones. As the 150 Aves correspond to the number of the Psalms, the name Our Lady’s Psalter was given to this devotion from an early period. This is the full Dominican rosary, the institution of which a tradition of the order ascribes to St. Dominic himself.

To each of the fifteen decades is assigned for meditation one of the principal mysteries in the life of Christ or of the Virgin Mary. These fifteen mysteries are divided into three parts, viz. five joyful, five sorrowful, and five glorious mysteries.

The five joyful mysteries are: (1) the Annunciation, (2) the Visitation, (3) the Nativity of the Blessed Virgin, (4) the Presentation of Christ in the Temple, (5) the Finding of the Child Jesus in the Temple.

The five sorrowful mysteries are: (1) the Agony in the Garden, (2) the Scourging, (3) the Crowning with thorns, (4) Jesus carrying His Cross, (5) the Crucifixion.

The five glorious mysteries are: (1) the Ascension, (2) the Descent of the Holy Ghost, (3) the Assumption, (4) the Crowning of the Virgin Mary, (5) the last two mysteries being accepted on the authority of tradition.

In practice the recitation is commonly limited to one of these sets at a time, and the rosary itself usually consists of five decades only and five Paternosters. The fifteen decades may, of course, be said by going round the rosary three times.⁴

There are other special rosaries in use, among them being the following:

The Crown of Jesus, with 33 Paternosters to commemorate the 33 years of Christ’s life on earth, and five Aves in honour of the five wounds of the Lord. This rosary was dedicated by Michael of Florence, in 1526. The beads used must be blessed and indulgenced by a Camaldolese monk or priest with special power given by the Pope.

Chaplet of the Sacred Heart, with five large beads in honour of the Sacred Heart.

¹ Thurston (Journ. Soc. Arts, l. 39) says that there was also in the 14th cent. another Paternoster Lane located beside the Thames in the Vintry ward, close to the church called Paternostor Church, or St. Michael’s the Royal. This quarter of London was then inhabited by Gascon Vinters who brought their goods by ship up the Thames. They would require their own forms of this devotion, and Thurston suggests that French paterosters settled in this locality in order to supply this want.

⁴ Ib. p. 338, pl. 20, fig. 3.
of the five wounds, and 35 small beads in honour of the 35 years of His life.

Chapter of Thanksgiving.

Chapter of Purification.

Chapter of the Seven Dolours, consisting of 49 Aves divided into seven groups of seven by the Virgin Mary. The Seven Dolours are as follows: (1) the prophecy of Simon, (2) the flight into Egypt, (3) the loss of Jesus for three days, (4) the Virginal purity of His Cross, (5) her standing beneath the Cross on Calvary, (6) her receiving beneath the Cross the sacred body of Jesus, (7) her witnessing the burial of her Son.

The Crown of the Twelve Stars, or Rosary of the Immaculate Conception, consists of ten small beads in three sets of four, divided by three larger beads.

The Rosary, and by a Capuchin Friar of Bologna and approved by a Brief of Pope Pius IX. 20th June 1855.

Chapter of the Dead, with 40 small beads, divided into four sets of ten by three larger beads. It is used in honour of the 40 days during which Christ's body lay in the Sepulchre.

The Bridgetine Rosary, with 69 Aves and seven Paternosters. St. Bridget was a Swedish saint, and the 69 small beads in her rosary are the number of the Virgin Mary said to have lived, the seven Paternosters to commemorate her seven sorrows and seven joys.

There are several other varieties of rosaries used by particular religious bodies or for special devotions.

Rosaries are blessed with prayers and holy water by some authorized priest in order to make them "instruments of grace."

The rosary, so soon given to this devotion, seems to be of comparatively late date—not appearing, according to one authority, till the 15th century.

In earlier times other names were applied, such as patrologium, sexta, nuntialis, calculi, etc.

The words of a bead (Anglo-Saxon beodes or bode) meant originally 'a prayer.' In the Vision of Piers Plowman the expression beodes belegyn is found. Cf. Spencer's Faerie Queene:

'And all the day in being good and godly deeds.'

The expression 'a pair of beads,' sometimes met with in early literature, means 'a set of beads. This term is used in the Prologue of Chaucer's Canterbury Tales, where the Priestess carries her beads upon her arm:

'Of smal corall aboute hire arm she bar
A pere of beades, gauded al with grene;
And ther-on hang a brooch of gol ful shene,
Upon wher ther was firste written a crown A.'

'She was apparelled with a crown of jewels.'

'Gauded al with grene' means having the gaudes green. These gaudes were the larger beads.

The beads were sometimes worn by ladies as a girdle. One set of beads belonging to Isabella Hylls, in 1497, is spoken of as 'a payr of bedes of comohn calibre, with gold gauds ovyr gyllt, and a green gyrdyl with boote and penant and foure stinds theirein.'

Early representations of prayer-beads on tombs sometimes exhibit the rosary not as a circle but, especially in the case of men, as a single string of ten beads with the two ends unattached and hanging free. Occasionally the two ends are attached at two different points of a girdle. Such a form is also seen in some old pictures.

In the Middle Ages various objects were sometimes worn in imitation of a rosary, such as signet rings, cameos, and brooches. This led to a certain amount of extravagance, and efforts were made to check it; the price to be given for a rosary was limited, and no one person could possess more than three or four.

In these beaded rings were carried as a sign of penance, this being often done by pilgrims who visited various holy places in Rome, and the wearing of such beads at the girdle became a distinctive sign of membership of a religious confraternity.

Beads were most highly valued if they had originally belonged to a person of renowned sanctity, or if they had touched the relics of some saint. In this case they were believed to possess a special virtue. Eastern Christians especially valued rosaries which had been made in Jerusalem or other sacred spots in Palestine. The materials composing the beads varied, and still vary to a great extent, often depending, as is the case among other religious objects, on the rank of the devotee, some being so valuable that they were left as legacies. Chaplets of wood were used at funerals by poor bedsemen, and in 1651 Lord John Scape willed that 'twenty-four poor men clothed in white gowns and beds, doned with a new set of wooden beads,' should pray (on them) for him at his funeral, with the liberty to 'stand, sit, or kneel' at their pleasure.

The Rosary.—This is a pious exercise founded on the Dominican rosary. It was instituted by Sister Maria Jacottic to whom the Society for the Propagation of the Faith owes its existence. It was approved by Pope Gregory XVI. in 1832 and has since that date been established all over the world. Fifteen persons associates together for the purposes of this devotion. One of their number is elected each month, his duty is to superintend the association. Once every month he selects for himself and for his fellow-members one of the fifteen mysteries of the rosary. Each member recites daily one decade, with the Gloria Patri. Meditating on the mystery allotted to him. The person to whom the first mystery is given recites, in addition to the above, the Creed once and the Ave thrice. At the conclusion of the decade each person recites the following: 'May the Divine Heart of Jesus and the most pure and sacred Heart of Mary, ever known, beloved, and admired, and imitated in all places throughout the world.'

The Feast of the Rosary.—This feast is observed on the 1st Sunday in October, in memory of the battle of Lepanto, which took place on this day in 1571. This battle was won, while the confraternity of Rome were praying the rosary. Thereafter Pius V. ordered an annual commemoration of 'St. Mary of Victory,' and, by bull in 1583, Gregory XIII. set aside this particular Sunday as the Feast of the Rosary of the Blessed Virgin Mary, which was to be observed by all churches throughout the world. Finally, Clement XI., by bull of 3rd Oct. 1710, decreed that the feast should be observed by all churches throughout Christendom.

The rosary in witchcraft.—In S. Italy the rosary, among other things, is used by witches who undertake to break spells. Certain objects are hung under the bed of a man made impotent, and the witch provides herself with a packet of unwashed herbs and a rosary without the medals or other blessed objects. She then tears open the packet and scatters its contents on the ground, meanwhile saying, 'Come to scelgo questo mazza, cosi scelg0 questo c-o.'

Rosary rings.—Another method of count ing prayers is by means of the rosary or decade rings. These rings are worn on the finger and usually have ten beads. The well-known 'ten Aves, with occasionally an eleventh for a Paternoster, and sometimes an additional twelfth' is the repetition of the Creed. The earliest date assigned to these rings by one authority is the 14th century. Such rings were worn by some classes of devotees during the hours devoted to the rosary, so that they should wake during the night, they might repeat...
a certain number of prayers, keeping count by means of the bosses on the ring. 

The Knights of Malta frequently wore chaplet rings, consisting of a rosary chain and a cross. These rings were said to have been invented by them. Their use, in place of the ordinary rosary, was spreading rapidly, till in 1536 the matter was referred to the tribunal of penitentiaries by Pope Gregory XVI. This tribunal then decided that such rings could not be blessed 'with the appropriate indulgences.'

(b) Orthodox Churches. — In both Greek and Slavic monasteries part of the investiture of the Little Habit and the Great Habit is a knotted cord, which is bestowed ceremonially upon the monk or nun. The Superior takes the veresitas (knotted cord) in his left hand, and says: 'Take, Brother N., the sword of the Spirit, which is the word of God, for continual prayer to Jesus; for thou must always have the Name of the Lord Jesus in mind, in heart, and on thy lips, ever saying: 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner.' Let us all say: 'Lord have mercy,' 'And, blessing the Veresitas with his right hand, he prostrates it to the Candidate; while the Brothers sing thrice: 'Lord have mercy.' And he, taking the Veresitas, kisses it and the right hand of the Superior.'

The knotted cord, already pointed out, is possibly a very primitive form of rosary, and, in this case, it is seen surviving in a highly ceremonial function.

The *komvoschion* (cedarwood) of Athens, the Russians give it the old Slavic name of veresitas ("string"). In popular language it bears the name *testovka* because of its resemblance to a ladder (ladders). There is also a string of beads called *komvoschion* (cedarwood) by the Greeks. This form is not approved as a religious appliance, it being used by eclectastics and laity alike merely as an ornament or as something to hold in the hand.

The *komvoschion* used by the monks on Mount Athos at the present day has 100 knots, divided by three beads of large size into four equal parts. It has a pendant with three more knots, and terminates with a small cross-shaped tassel. This rosary is divided by the *komvoschion* (cedarwood) of the highest grade, called *skhimaunik* in the Slavic monasteries) to keep count of a definite number of prostrations every day, viz. 12 x 100 prostrations down to the ground, and in the evening 300 more, meanwhile repeating the following prayer: 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner.' Through the intercessions of thine all-pure Mother and of all thy Saints, have mercy and deliver us.' Sometimes these prostrations are imposed on a monk as a penance, in which case the accompanying prayer is: 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner.' The form and number may vary in character thus: ten great metanoi (down to the ground), thirty little metanoi (down to the hips), and the prayer: 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner,' repeated sixty times. This has to be done five times a day. The *komvoschion* is also used for counting any kind of prayers or devotional exercises.

The reason assigned for the adoption of the number 100 X 3 is as follows:

The number 

| of the Psalms and Little Doxologies said at the Canonical Hours. The whole Psalter is divided into 20 portions, each of which is a kathisma (strophes, seat), and it is followed by a recess. Each kathisma consists of three parts, each part ending with the Little Doxology ("Glory be," etc.) and the doxological Alleluia. For the sake of these unable to read, or (especially) to teach, individual sections are added. Each kathisma, one of the following prayers might be said 300 times, and a man might have said over 1,000 times, 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner." Or 'Lord Jesus Christ, for the sake of Theotokos, have mercy upon me, a sinner.' In other words, to be told to chant the Little Doxology of the kathisma, i.e., for each of the three parts of the portion of the Psalms ending with the "Glory be," etc., and the doxological Alleluia, each of which will be merely intended to represent the ending of the three parts of the kathisma, and no prayer is connected with it."

---

2 Kurz, p. 35.
5 Ib. p. 155.
6 Ib. p. 154 f.
7 Ib. p. 150 f.
8 This form of *komvoschion* is used by Hellenic monks in Greece, Turkey, and the East generally, as well as on Mount Athos.
9 Among the Indians the monks who sung the knotted cord used is the old Slavic veresitas. It has 105 knots or beads, which are separated into unequal groups by larger beads. The groups of beads are as follows: 17 + 33 + 40 + 12, and an additional small bead at the end. In the Slavic veresitas the lower beads are fastened together with three flat triangles, inscribed and ornamented. Sometimes these rosaries are made of little rolls of leather chain-stitched together, divided into groups by larger roles. The terminals are also of leather, triangular in shape, inscribed in Church Slavic (ancient Slavic) with the words 'Jesus Christ, have mercy upon me, a sinner.' This kind of rosary calls to mind the popular name for it, viz. *testovka*, as it certainly might be thought to resemble a ladder in shape. This rosary is also used for counting a large number of prostrations.
10 For instance, if a monk is prevented from saying the Typica (the selection of Psalms sung at certain offices), he must instead 700 metanoi; he must count 500 instead of Hesperinos (Vespers), 200 in place of Apostlepion (Compline), and 500 in place of Orthros (Laud.).

The use of the *komvoschion* or veresitas is a purely monastic or ascetic devotion; it is not indulged in by the Orthodox laity, though the laity of the Russian sects called Old Believers have adopted it. Whenever this devotion is seen in use among the Uniates outside the monasteries, it has been copied from the rosary as used among the laity in the West.

The rosary as a charm. — In certain parts of Poland, namely, in the districts of Piotrow, Wiesiostocho and Vlock, the following custom is in use to keep off lightning:

During a storm a rosary—either a genuine one made of cedarwood from the Holy Land or one made in imitation—is carried round the house three times, together with a little bell called 'the bell of Loreto' (associated with the Holy Mother of Loreto in Italy) and sometimes also a lighted candle, blessed on Candlemas Day (2nd Feb.). The bell is rung, and the rosary is used with the words 'God save us' at the large beads and 'Holy Mother, be our mediator' at the small ones.

(c) Coptic. — The rosaries used by the Copts in Egypt have 41 beads, or sometimes 81. They are used for counting a similar number of repetitions of the 'Kyrie eleison.' This petition is repeated in Arabic or Coptic, with the addition, at the end, of a short prayer. In these they resort to what is, presumably, a more primitive method of keeping record of their prayers, and count on their fingers.

5 Jewish. — Among the Jews the rosary has lost all religious importance, having been taken over by them from the Turks and Greeks. They use it merely as a pastime on the Sabbaths and holy days. No manual labour being permitted on those days, they occupy themselves with passing the beads through their fingers. These rosaries sometimes have 32 beads, sometimes 30.

4 The writer of this article is indebted to Mrs. Czaplicka for this information.
5 Lane, Modern Egyptians, p. 541.
6 Dr. Gaster has suggested to the writer of this article that there may be a kabbalistic reason for the number 32. It is the mystical number for the 'ways of wisdom' by which God created the world. They stand at the beginning of the so-called Book of Creation, and they play an important role in the kabbalistic literature. It may be that this has influenced the number of beads on the smaller rosaries.
ROSICRUCIANS

WINIFRED S., BLACKMAN.

ROSICRUCIANS — When considering the history of the Rosicrucians, we have to bear in mind that members of that body were, and are, pledged to secrecy, and that the paucity of records is in a proof of their sincerity and devotion. But it is permissible to give some data of the history of the Society since its foundation about the year 1420.

Christian Rosencreuz was born in the year 1478. His parents were noble, and he was educated at a monastery. His education being completed, he travelled in the East, and on his return, he founded the fraternity with him as companion and guide a certain P.A.L., who, how ever, died on reaching Cyprus. After a delay caused by this untimely event, Rosencreuz proceeded on his travels alone, and, on reaching Damascus, he founded a lodge of the hands of others. To wise men with whom he continued his studies, and from whom he derived much information respecting their philosophy and science. Thence he journeyed to Egypt, to Fez, and to Spain, gathering in each place a store of learning which he used in the development of the fraternity which afterwards bore his name. In the year 1413 he reached Austria, and after five years' preparation, during which he collated his knowledge, he chose three companions, Fratres G., I.A. (who, it was noted, was not a German), and I.O. to them he imparted his philosophy and principles in the philosophy and science of his travels, which included religion, philosophy, and the science of medicine. These four were the original members of the Society of the Rose and Cross. Their communications with each other were made by means of a magical alphabet, language, and code which was recorded in the books of M (Magus), Aziomata, tote Mundie, and Protheus are known. They built from their own designs a home for the fraternity, which they named 'Domus Sancti Spiritus,' and a few years later increased their number by the creation of a second circle consisting of four other fratres, namely R.C. (a cousin of Rosencreuz), B. (a draughtsman and painter), G.G., and P.D., who was appointed secretary, thus completing the scheme of work. Their declared object, as narrated in their writings, was to unite with the religious or political actions of States, to improve mankind by the discovery of the true philosophy. While two of the fraters were always with the founder, the others went about doing good works, relieving the poor and attending to the sick. Thus the Rosicrucian philosophy has composed of students of religion, philosophy, and medicine, who also practised acts of beneficence.

They were bound by six rules: (1) to profess nothing, but to cure the sick, and that freely; (2) to wear only the dress of the country in which they were; (3) to assemble at the Domus Sancti Spiritus once a year on a certain day (the festival C.C.), or send a reason for absence; (4) each frater to select a proper person to succeed him; (5) letters C.R. to be their seal, mark, and character; (6) to maintain the secrecy of the fraternity for at least 100 years.

It was Frater I.O. who, having learned kabbalistic, doctor, and a labor of the book he visited England, and laid the foundation of the Rosicrucian system which has ever since existed in this country. He was it who cured the young Earl of Norfolk of leprosy, and he was the first of the original members to die.

In the year 1647 Rosencreuz wrote an interesting and curious tractate entitled Chymische Hochzeit, which was published at a later period; and in 1648 the founder of the fraternity died and was buried in a vault of seven sides decorated with symbols, which had been erected about eight years previously for his resting-place. The body was embalmed and placed in this specially prepared tomb, which was then closed, and upon the door was fixed a brazen plate upon which was engraved an inscription of a prophetic exclamation of his own, that in 120 years after his death his tomb should be re opened and all his doctrines, in a modified form, once more made available, and that not only to a few, but to the learned in general.

Frater D. was chosen as the successor of the founder, and after his death Frater A., at an unknown date, became Frater N., and he succeeded Frater N., who in 1604 disclosed the entrance to the vault and caused it to be opened. In it was found the body carefully preserved under an altar; in the right hand was the parchment roll called the book T (Testamentum); there were also found copies of other valuable books of the fraternity—a Vita, and an Itinerarium of the founder, together with certain songs (mantras), mirrors, bells, lamps, etc. On a brass tablet were engraved the names of all the brethren who up to the time of the founder's death had been members of the fraternity.

In 1610 a notable named Haselmeyer wrote that, while staying in the Tyrol, he had seen a copy in MS of the history called Fama Fraternitatis; the name of its author is not known, but four years later this Fama was printed, and at various times reprinted. The notice of the foundation of the Rosicrucian fraternity was re-issued at Frankfort-on-the-Main in 1615, together with an addition called Confessio Fraternitatis. The authorship of these tracts has been variously attributed to Johann Valentin Andreae, or to Jacob Boehme (who died in 1637), to the mystic Giles Guttman, and to a comparatively little known writer, one Tauler. Although these works gave to the world a knowledge of the existence of the Rosicrucian fraternity, it is probable that they were not written by any one with a real personal knowledge of the affairs of the brotherhood; neither is there any evidence that they were authorized; but, although they lack literary ability, they may be accepted as founded on facts obtained from current conceptions of the work of the fraternity, inasmuch as the necessity for strict secrecy had to some extent abated; for between the death of Rosencreuz in 1484 and the opening of the tomb in 1604 the Protestant Reformation had been accomplished by Martin Luther and his coadjutors about the year 1530.

An Epitome of the God-illuminated Brotherhood of the R.C., issued at Danzig in 1615, and written by Julius Sperber, rendered high praise to the learning of the fraternity, while the Chymische Hochzeit Christiani Rosenkreuz, claimed by Andreae to be his own work was published at Strassburg in 1616, and an English translation, under the title The Chemical Wedding, was issued in the year 1690 by R. Foxcroft, Fellow of King's College, Cambridge.
The publication of these works caused a great sensation among the learned in Europe; they were widely criticized, notably by such men as Libavius and Menapius; those anxious to be admitted to the fraternity were loud in their praise, while others, having failed in their attempts to secure reception, denounced the brotherhood unparaphringly.

Michael Maier (1568–1622), a notable philosopher and Rosicrucian Magnus, the author of many learned works describing the Rosicrucian system, visited England and admitted Robert Fludd to the Society of Robert Fludd (1574), a noted English anatomist, who, after the death of his master, entered the House, Bearstead, Kent, in 1574, and was the son of Sir Thomas Fludd, Treasurer of War to Queen Elizabeth. For many years he practised medicine in the city of London, and on his death was buried in Bearstead church, where there is a monument to his memory with a long inscription recording his many virtues. Near the house of his birth are the rose farm and other gardens where he cultivated the plants used in his pharmacy. He was the Magnus in this country, and during his life wrote many learned works on kabbalistic theosophy and Rosicrucian mysticism. In 1610 Ashmole, William Lloyd, Apologia Compendiaria pro fraternitate de Rosae Crucis (Leyden, 1616), Tractatus Apologeticus, integrata Societatis de Rosae Crucis defendentes (Leyden, 1617), and Summanna Bonum (Frankfort, 1629), in which groups in Sweden, France, England (1665), philosopher and poet. Among his published works are Two Treatises: the Nature of Bodies . . . the Nature of Man's Soul (Paris, 1644), books on medicine and the cure of wounds by sympathetic magic. The jewel and chain of his office as chief of the English Rosicrucians is in the possession of one of his descendants in the south of England. Francis Bacon, Lord Verulam (1561–1626), was influenced by his friend Robert Fludd and became a Rosicrucian.

It is believed that Elias Ashmole (1617–92), the antiquary and astrologer, who was a Rosicrucian, was associated with the introduction of kabbalistic theosophy into the Masonic body, and that his influence is felt in modern speculative freemasonry. Towards the end of his life he derived much occult knowledge from William Backhouse, a Rosicrucian of renown and a chemist. In 1638 Ashmole, William Lloyd, Apologia Compendiaria pro fraternitate de Rosae Crucis (Leyden, 1616), Tractatus Apologeticus, integrata Societatis de Rosae Crucis defendentes (Leyden, 1617), and Summanna Bonum (Frankfort, 1629), in which groups in Sweden, France, England (1665), philosopher and poet. Among his published works are Two Treatises: the Nature of Bodies . . . the Nature of Man's Soul (Paris, 1644), books on medicine and the cure of wounds by sympathetic magic. The jewel and chain of his office as chief of the English Rosicrucians is in the possession of one of his descendants in the south of England. Francis Bacon, Lord Verulam (1561–1626), was influenced by his friend Robert Fludd and became a Rosicrucian.

Thomas Vaughan (1622–66), twin brother of Henry Vaughan, 'Silurist,' was a celebrated mystic; under the name of Eugenius Philalethes he published an English version of the Fama Fraternitatis (1552). In this he was associated with Sir Robert Moray, the first president of the Royal Society. In 1710 an adept named Sigismund Richter published, under the pseudonym 'Sincerus Renatus,' a work entitled Die Wahrhaftige und Vollkommene Beschreibung der Kabbala. Kreuzen, giving 52 rules of the Rosicrucian fraternity of that period. In 1777 the Reformed Rite of the Brethren of the Rose and Golden Cross was established.

Many important works were published during the succeeding years, among them a theological book, with coloured emblematic plates, at Altona, Geheime Figuren der Rosenkreuzer aus dem 16ten und 17ten Jahrhundert (this work, issued in 1793, continued the German text of the Aurora Svevaunium Rosicrucianum, originally printed in 1621, together with The Golden Tractate of the Philosopher's Stone and the original Prayer of a Rosicrucian). A portion of this volume, translated into English by Franz Hartmann, a member of the German fraternity, was published in 1857.

In 1866 the strands of the Rosicrucian rope were gathered together, when, under the direction of W. W. W. Westcott, the 'Societas Rosicruciana in Anglia' was founded, consolidating the system and erasing some false impressions that had been created during the past century. At the present time duly authorized Rosicrucian colleges are at work in England, British India, Australia, New Zealand, S. Africa, and S. America, all under the authority of the English body; and there are daughter colleges in the United States of America working in complete harmony with the parent body. The Continental Rosicrucian system was reorganized in 1890, and its branches were very active up to the outbreak of the Great War in 1914. This body insists upon complete privacy, and its members are required to acknowledge their status; but they had been, until the war, very active in good works, especially in carrying on investigations into the uses of vegetable drugs and the relief of disease by means of coloured lights and by hypnotic processes; there are numerous physicians using these means, which are freely supplied, but these doctors are not necessarily pledged members of the fraternity.

As in the earliest times the Rosicrucians not only studied, but went about ministering to those in distress, so the fraternities of today are concerned with the study of the mysteries of life and death, and with their manufacture upon the old lines. They believe that this world and indeed the whole universe is permeated with the essence of the Creator, that every rock is instinct with life, that every plant and every thing is a part of this, this, the mastery of which is derived from the Master Mind that caused it to exist, and that each living thing moves, acts, and thinks in accordance with the supreme design by which all things were made, by which all things exist, and by which they will continue to function till the end of time. At no period did the Rosicrucians declare the transmutation of metals to be a part of their practice, nor did they ever promise indefinite prolongation of life by mysterious drugs, but they did speak of these in parables with the full and complete knowledge that all things are possible, and that, with the forcing of their control, they could do even these. They were content, however, to act and to trust to the future, when the minds of men having been cleansed, the redemption and absorption should be accomplished.

ROTHE.—I. Life.—Richard Rothe was born in Posen on 30th Jan. 1799. His father, a man of striking character, held an important official position under the Prussian Government, and was powerfully influenced by that idea of the State which subsequently found expression in the works of Gustav Freytag. His mother, the daughter of Hofrath Müller in Liegnitz, was a woman of considerable intellectual culture and of a deeply religious nature. Soon after the birth of Richard, their only child, the parents removed to Stettin, and a few years later to Breslau, in Silesia, with whom Rothe in early youth was chiefly associated. As the delicate child, of a shy and retiring disposition, he occupied himself up to the age of eight largely with picture-books and stories of travel, whereby his imaginations were awakened and nurtured.

A tendency towards mysticism early exhibited itself, and the Bible, as soon as he was able to read it, made a deep impression upon him. At the age of ten he was sent to the reformed Friedrichsgymnasium in Breslau and at once proved himself to be a pupil of great industry and perseverance. His knowledge of Schiller, Goethe, Jean Paul, the two Schlegels, Tieck, and Fontené, although, when he reached the age of sixteen, Novalis became his favourite author.

In April 1817 he entered the University of Heidelberg as a theological student. Heidelberg was at that time at the height of its fame as a seat of learning. Hegel had settled there the year before as Professor of Philosophy, only, however, to migrate to Berlin in Jan. 1818. Rothe attended Hegel's lectures on Logic and Metaphysics, which, he writes, in his autobiography, was chiefly associated with the idea of the Holy Scriptures, for a number of his auditors complained of them, he hopes will not remain unintelligible to him. Karl Daub, the 'Talleyrand of German thought,' who was Professor Ordinarius of Theology and a speculative thinker of unusual insight and power, became the teacher to whom Rothe owed his greatest debt.

Daub, he writes to his father, ‘is a man of whom not only Heidelberg but our whole German Fatherland can be proud. I hesitate not to say that he is the first of all living academical teachers. The enthusiasm with which he is here spoken of is absolutely universal, as also is the love of him on the part of students of all Faculties.’

Daub was attempting to work out a philosophy of religion along the lines of the idealism of Schelling and Hegel, and one can understand the fascination that a mind of his bent must have had for the young Rothe. He was quick to enter upon the new movement. Yet the pupil was not a blind hero-worshipper. Towards the end of his student life in Heidelberg he expresses dissent from certain of Daub's contentions. Probably he had come to desire the more profound tendency in his teacher of thinking in the lines of Schleiermacher and Hegel, and his later narratives embodiements of metaphysical ideas. Daub, he complains, yields too much to the philosopher, more than the theologian ought to yield, and when the philosopher has been allowed to have his way he only laughs at the theologian and then disarms him.

After Daub the man who chiefly succeeded in winning Rothe's affection was Abegg, a lecturer on New Testament Exegesis—a man, he writes, ‘in whom Christ is formed, as the Scripture puts it, who is penetrated through and through with all that is most fundamental and eternal in Christianity, who loves with Christian eyes.' 'To me,' he declared in 1840, speaking of Abegg, of all men on earth, he set the 99% of overwhelming certainty upon the essence and reality of Christian devotion. Not only in the class-room did Abegg inspire the young student; Abegg's simple homilies from the pulpit during no weekday were to him marks of genuine religious experience, seemed to him tokens of the truth. The five semesters spent in Heidelberg were undoubtedly fruitful in every respect. It was here that his mind was moulded; it was here that the interests were engendered which were to be his throughout life. Just before leaving Rothe preached, at a little village in the neighbourhood, called Mauer, his first sermon—a sermon, he tells his father, with which he was utterly discontented, in which he made himself a laughing-stock; but by diligent practice that one could ever expect to succeed in giving true and unweakened expression to the life which lives in us.

For the winter-semester of 1819 Rothe went to Berlin. The Theological Faculty of the then recently founded University had at its head a man of world-wide reputation—Schleiermacher, Neander, and Liske. And, in the Philosophical Faculty, Hegel had commenced the work which made him the acknowledged leader of philosophical thought in Germany. Taking back upon that period, Rothe wrote in 1802:

1. A new birth of the German people through the power of the gospel that had again become living, a new formation of its entire life.

Yet at the time, and after his Heidelberg experience, he never felt at home in Berlin. He heard Schleiermacher's lectures, delivered for the first time that semester, on das Leben Jes; but they gave him the impression that the last man was troubling himself with artificially constructed difficulties. Schleiermacher's sermons, too, he contrasts unfavourably with those of his beloved Abegg; they lacked, to his mind, the inner spiritual grasp of the Heidelberg preacher, and from them he gained little inspiration, although he admires their ingenuity and scholarly character. He gives his father an interesting account of Schleiermacher's seminar. The work was done mainly by essays written by the students, one of which was discussed at each of the weekly gatherings.

To Rothe there had been assigned the theme of determining whether in the reported sayings of Christ traces could be found of His having possessed knowledge of the OT Apocrypha and of His having devoted special attention thereto. They gave him the impression that the last man was not dealing with a problem of that sort, a host of prior questions would have to be answered, for the answering of which the necessary historical data were incompletely wanting. In regard to Neander, who was lecturing on the history of dogma, the young man was impressed, although his expectations had not deceived him.

1. Nippold, Richard Rothe, i. 43.
2. Ibid. p. 153.
3. Nippold, Richard Rothe, i. 112.
4. Ibid. p. 455 f. He is a wonderful man,' he writes, 'externally altogether dried up, but internally fresh and vigorous. He is not without genuine Christian life, although it does not dawn on him forth with joyfully, but only gleams through sadly as the moon between graves.'

And he draws a woeful picture of his aching fingers trying to take down the prodigiously rapid dicta-
tion which the learned theologian was giving to his class.

'Happy is all I still feel myself,' he tells his father, amongst the old Heidelberg acquaintances, and the well-known, though not exactly melodious, voice of Hegel is for my ear a delicious music from the banks of the Danube.1

Hegel was lecturing five times a week on Naturrecht, but had started by dismissing the term as wholly unsuitable because of its implication of a so-called state of nature, and was giving in fact in Rodolphi— an account, namely, of the immanent determinations of the Spirit from the point of view of its necessary development in the form of the State. A second semester was spent in Berlin, during which Schleiermacher was lecturing on Ethics, Neander on Church History, and Marcinko began, in Heubner, because his life-long yearning for release from the Prussian capital. A considerable number of relatives and family acquaintances resided there, and a good deal of his time had to be spent in visiting.

'It's no wonder that people of the world get inwardly stalled, for when we have so much to do with outward things we become in fact heathens, and our pure human conceptions grow over weaker.'

Probably it was recoil from what seemed to him the prevailing worldliness of the Lutheran churchgoers that led to his interesting himself at this time in the Pietist movement, then in its earlier and healthier phase. His letters show that his religious nature was craving for a deeper earnestness of heart and higher inspiration, and more genuinely personal devotion. And he found a companionable feeling among the devotees of the revival movement.

On 6th Nov. 1820 Rothe entered the theological seminary at Wittenberg, then under the super-intendence of Karl Ludwig Nitzsche, 'an old and genial man, of unusually kindly nature, who is full of love for his work.'2 Here he was plunged into a course of preparation for the practical work of the ministry—Bible study with a view to homiletical application, the composition of sermons and of sermon-schemes to be criticized by his teachers, preaching to rural congregations in the district, and visiting people in their homes. Rothe threw himself con amore into the work, and yet found time for the studies for which his university training equipped him. He taught the younger teachers at the seminary he was at once drawn to H. L. Henbner, a man of singular simplicity of character, with a wealth of ideas and an insight into the means of applying them such as he had not met with since the days when he had sat at the feet of Altvater.—

His friendship with Henbner, and it was largely due to his influence that Rothe was persuaded, at first very much against his inclination, to keep in view the possibility of devoting himself to an academic career. In March 1821, a fellow-student at Berlin, Rudolf Stier, entered the seminary, and he was in large measure instrumental in inducing Rothe, already tending in that direction, to espouse warmly for the time being the Pietist propaganda. In his letters home of this period Rothe relates the circumstances, he did not want to return to the prevalent ecclesiasticism, with its dreary orthodox propositions and verbal formularies. He goes to a church on Easter Sunday and cannot rid himself of the feeling that he is in a Greek temple. Over the altar-table he finds the words 'Friede, Hoffnung, Ruhe und Eintracht alien guten Menschen inscribed, and they strike him as more fitted for a hall of English deists than for a Christian house of God.

Returning to his parents' house at Breslau in Oct. 1822, he remained there about six months,

1 Nippold, Richard Rothe, I. 155.

During his licentiate period. In Breslau he had much intercourse with the awakened J. G. Scheibel, Henrik Steffens, Julius Müller among them—who helped to strengthen his belief in Spener's proposal for restoring the life of the Church. These friends met together frequently for devotional reading and prayer; and, in letters to Stier, Rothe describes in the buffet that he was thus obtaining in his spiritual needs. His days were fully occupied; he was busily engaged with laborious researches into the development of early Christian doctrine, and in addition he was preaching regularly in the place of a pastor who was ill.

On 29th July 1823 he received an invitation from the Government to undertake the work of chaplain to the Prussian embassy in Rome, of which Baron Bunsen was at that time the head. After anxious reflection Rothe accepted the offer, recognizing that it afforded opportunities for carrying on the historical inquiries to which he felt himself specially called. He was ordained in Berlin on 12th Oct.; and a month later he married Louise von Briicke, to whom he had become engaged while in Wittenberg—one of whose sisters was the wife of Richard Haenel and Heinrich August Hahn. It was a happy marriage, and he had by his side henceforth a true helper in all his aims and endeavours. Early in Jan. 1824 he arrived with his wife in Rome, and entered at once upon the duties of his office.

"A little flower which I have to shepherd presents," he writes, "a peculiar appearance. Externally it is composed of a few so-called upper-class people and a not unimportant number of priests."3

With characteristic zeal he plunged into the work, organizing week-day evening services, and lecturing on various phases of Church History and on the origin and growth of Christian institutions. He preached regularly on Sunday, and of his great power and influence in the pulpit there is abundant testimony. He combined in his utterances a simplicity and a depth of spiritual experience that speedily made their appeal to and touched the hearts of his hearers. Bunsen was at once attracted to the young chaplain, and a warm friendship sprang up between the two men. Bunsen's own studies in the field had been extensive, and he was then engaged in an attempt to bring about the compilation of a liturgy that should be for the evangelical churches of Germany what the Book of Common Prayer was for the Anglican Church. Full of activity as the year was himself to literary work, he then appeared his theological studies and to lay the foundations for his work on the early Christian Church.

Under the many influences of the city his religious views gained in catholicity and broadness; he became convinced that Christian faith could fulfill its mission only by feeling itself at one with reason and with the history of the world.

Towards the end of 1827 Rothe received, partly through the aid of Bunsen, the offer of a professorship of Church History in the theological seminary at Wittenberg; and, after visiting Naples and Florence, he started for Germany in April 1828. His lectures in the seminary were on the history and constitution of the early Christian Church, and also on selected sermons of ancient and modern times. Besides lecturing, he superintended much of the practical work of the college, and preached frequently. In 1831 he became second director, and, in the following year, ophorus, of the seminary. He was thus brought into close personal touch with the students, and their affection for him was unbounded. During these years he completed the great work of which he had dreamed in 1836 his commentary on Rom. 5: 12-21; and in the
following year the first volume of his great undertaking entitling Die Anfangs der christlichen Kirche und ihrer Verfassung. During this Wittenberg period Rothe found himself diverging more and more from the ways of thought represented by the Pietists, and, when the two books just mentioned appeared, his secession from Pietism was an accomplished fact. He sympathizing with the religious tendencies of the Pietists, he was alienated by their narrow attitude to historical investigation and speculative reflection.

A new theological seminary was founded in Heidelberg in 1837, and Rothe was chosen to be its first director. The institution started with only fourteen students, and Rothe was discouraged by the absence of any religious interest in the congregations of the district no less than by the prevalent civic inertie among the clergy themselves. He speedily, however, made his presence felt in the circle of the younger theologians, and the influence that he exerted as University Preacher was profound and wide-spread. He concentrated his attention now more than he had done hitherto upon the fundamental principles of religious theology and, with this in mind, he wrote his two volumes of the Theologische Ethik, which he recognized to be his main contribution to theological science. The third volume appeared in 1848. In the summer of the year 1848 he was called at the age of forty under the oath to fulfill the duties of Rector of the University.

On 22nd Nov. he delivered his rectoral address Ueber die Aussichten der Universitaeten aus dem Standpunkte der Gegenwart, in which he vindicated the necessity of exact and methodical scientific investigation in the interest of the religious tendencies of the past thirty or forty years, whilst emphasizing the dangers attending increasing specialization of losing sight of the ideal of science as a whole.

Rothe accepted in 1849 a call to one of the theological chairs in the University of Bonn, and he was also appointed University Preacher. He had Dorner and Bleek as his colleagues, and the Theological Faculty rapidly increased in numbers; Rothe's lectures on the life of Christ and on ethics awakened the keenest interest. He made few disciples, but the principle that belongs to every man who can succeed in doing. His influence was of a deeper and more enduring kind—that of a man who was constantly feeling his way along the thorny path of speculative theology. He was present at the Synod of 1850 in Dinsburg; and he continued to be largely occupied with ecclesiastical matters.

Five years' residence in Bonn Rothe returned in 1854 to Heidelberg as Professor of Theology in the University. He took part in the General Synod of 1855, at which important issues came up for decision as regards the Belkenmissefrage and the Ketzchumsfrage, and with reference to both he stood for the position of freedom and liberty of thought. The following years, though full of activity, were saddened by the long and disappointing illness of his wife.

After her death he was filled with a consciousness of the needs of the age in respect to religion; and he threw himself with great earnestness into several ecclesiastical questions. He took a prominent part in the General Synod of 1861 at Karlsruhe and became a member of the Oberkirchennath. He was largely instrumental in founding the Protestantverein, which held its first meeting at Eisenach in June 1865. The aims of the Verein were these: that the Church should frankly recognize the culture and science of the time; that perfect freedom should be accorded to both clergy and laity to search for and to publish the truth in entire independence of external authority, that the clergy and the laity should stand upon an equal and spiritual equality, that the laity should have a greater share in Church matters, and that a National Church should be established upon the basis of universal suffrage. Rothe read an introductory paper on the means by which the estranged members of the Church could be reclaimed. He urged that the Church becomes useless as soon as she loses the moral power to win and keep the hearts of her members, that she had lost this power by opposing modern progress, and could regain it only by becoming progressive.

The last few years of his life were spent in going over once more the ground of his Theologische Ethik, but he succeeded in rewriting only the first two volumes. Although his health had been gradually failing, he continued lecturing until a month before his death. He died, after a severe illness, on 20th Aug. 1867.

2. Writings.—As a theologian, Rothe may be said to belong to the so-called right wing of the Hegelian school, although no doubt he was largely influenced by Schelling's later writings. The bent of his mind is shown in the first volume of his two volumes of the Theologische Ethik, which he recognized to be his main contribution to theological science. The third volume appeared in 1848. In the summer of the year 1848 he was called at the age of forty under the oath to fulfill the duties of Rector of the University.

ROTHE

861

Roth, as Harnack expresses it,1 belongs the undiminished credit of thoroughly realizing the significance of nationality in Church History, and to him also we owe the first scientific conception of Catholicism. One characteristic feature of Roth's speculative thought is the way in which the Anfang—you may think, the State and in civilization rather than in the Church that the ideal of Christianity will ultimately find realization.

Roth's chief claim, however, to a place in the history of theological science rests undoubtedly upon his Theologische Ethik, the first edition of which appeared in three volumes (1845-48), and the second edition in five volumes (1867-71), the last three of the latter being edited and published after his death by Heinrich Holtzmann. This work is the result of a prolonged effort on the part of a comprehensive and logical mind to think out a system of speculative theology that should furnish a rational basis for the religious life of a Christian community. The fundamental ideas are not, indeed, new. No one who is familiar with Danil's Philosophische und theologische Vorlesungen (ed. P. C. Markeinecke and T. W. Dittenberger, 7 vols., Berlin, 1838-44), which unfortunately are now but little known, can fail to discern the extent of Roth's indebtedness to his old teacher. And, in fact, the two subdivisions of a section of the book indicate the many other writers to whom he was under obligations. In the earlier and more metaphysical sections Schelling is the thinker who is most frequently alluded to, but to Fichte and Hegel there are also numerous references. Lotze's Mikrokosmos yields him many apt quotations, while Fechner, Weisse, and the younger Fichte are often mentioned. None the less the work as a whole bears the impress of an independent and honest inquirer, of a vigorous intellect wrestling with the greatest problem of human reflection.

The author starts by making a sharp distinction between speculative thinking and thinking that takes the form of empirical contemplation. The latter must always be directed upon an outer object which has no reality for the subject of this object is interpreted. It is reflexion upon the given object, not self-thinking of it. Speculative thinking, on the other hand, is self-thinking in the strictest sense of the term. It begins with what is purely a priori and proceeds by following the self-thinking man of the Unconditioned, to know, and to determine out of itself new notions. There cannot be, therefore, single, isolated speculations, but only one organic whole of speculation, a speculative system. The success of thought, so conceived, depends upon the fact that the human thinker is a microcosm—that in him the whole of the rest of creation is, so to speak, recapitulated. When, however, speculative thought has completed its task of construction, it must turn its attention to the empirically given facts and ascertain whether the speculative reason is in accordance with this fact. If it is, the system in question will of necessity collapse, and the effort must be commenced afresh with the resolve to carry it through with more rigid dialectical caution and conscientiousness. All the same, the thinker will remain the microcosm, the universe of his thought, as though there were no world around him and nothing in his experience except thought.

Now, in the devout or religious man, according to the measure in which his devoutness is living and healthy, there is immediately contained in his thought as presupposed the notion of being determined by God. The religious man's feeling of self is at the same time a feeling of God, and he cannot come to a distinct and clear thought of self without coming to the thought of God. In him, that is to say, the consciousness of self is as such the consciousness of God. There is thus provided for the devout subject a twofold point of departure for his speculative thinking—the subject of a priori and the method of speculative inquiry. His thinking can proceed either from the consciousness of self as an a priori fact or from the consciousness of God; and, according as he follows the one or the other of these paths, his speculative thought will take an absolutely different direction. The former will be that of philosophical speculation, the latter of religions—or, in so far as it is scientifically pursued, of theological speculation. However near these two may approach each other in certain respects, they will in form inevitably deviate from one another; each will construe what it has to deal with purely a priori, but philosophical speculation will think and conceive its subject-matter by means of the notion of the human self, theological speculation by means of the notion of God. Theological speculation is in essence nothing else than an attempt to express in conceptual form the immediately certain content of the devout consciousness, the content of its feeling of the divine. It falls into two main divisions—(a) theology in the strict sense, and (b) cosmology, which again falls into the two subdivisions of physics and ethics. The body of Roth's treatise is, of course, concerned with the last-named.

The starting-point of theological speculation is, then, the fact that the religious man in thinking of himself thinks likewise, in and through the self, of God. The primordial form of the religious consciousness is doubtless feeling, the basis of the thought of God is the Gottsehnung, just as the basis of the thought of self is the Ichsehnung. But the primary step in reflective knowledge is to translate this feeling of God into the form of a concept, to express it in a perfectly clear and distinct idea, which shall completely and exhaustively represent it. And the thought in question can be formulated, in its most abstract and elementary aspect, as the thought of the Absolute Realization. As absolute realization is the condition or, whatever else there may be, it is conditioned by Him and does not condition Him. He is numerically one—containing within Himself all that there is of being. Moreover, as being absolute in an absolute way, or the absolutely right, He is the absolutely good Being, or the absolute Good. For the Good is that which is truly perfect, truly eternal and self-dependent. If, however, God as the Absolute is to be really thought by us, it can be only through the application of that category by means of which alone thought is possible—the category, namely, of ground and consequent.

And, since in thinking of the Absolute we are thinking of an existing, and not merely of an ideal, reality, the category of ground and consequent assumes in this application the form of cause and effect. Absolute Good is, therefore, a cause only as causa sui, as the simply self-determined. This implies, further, that in God there is absolute and harmonious union of necessity and freedom; as self-determining, that is to say, God is a living activity.

The concept of pure being is as such the concept of absolute negativity; it is for our thinking purely negative; yet in and for itself it is none the less the most positive of all concepts, only under the form of absolute negativity. It is negative, not in the sense of nullity, but in the sense of the absolutely not-this-or-that (das Nichtetcwes). Herein two moments are included; God is the fullness of all being, while the being of this or that appertains to Him only in a negative significance.

Now, what is contained in Him only negatively is contained in Him not as posited, not as existent or actual, but only as possible; in Him is to be found the totality of all possible realities, yet such totality can be expressed only as possibility. The thought of real possibility is equivalent, however, to the thought of pure potency or pure power; and any other essence causality, which cannot be otherwise conceived than as a bringing forth of effects, i.e., as creative (wirksame). God, in other words, as absolute potency or power, must be thought of as issuing forth from mere potency or power, and as issuing forth from His absolute life. The absolute life must be a process of self-realization. Again, self-realization presupposes that the ideal and the real are recognized and distinguished; God, that is to say, must be acting a spirit, the Absolute Spirit. And the notion of God as spirit implies that everything real had for its presupposition an ideal substance—a thought alone can become and be real. The timeless development of God as spirit includes within itself a twofold immanent development—one on the one hand, God becomes conscious of Himself, subjectifies Himself, proceeds with the self-activity. On the other hand, God determines Himself in and through the divine nature which furnishes the means or instrument of His self-activity. But these two immanent processes in God—determination of Himself as personality and act of thought—are necessarily one and the same, as can be thought of only in correlation. God then, as personality posits a nature as His objective counterpart; but this nature is originally ideal, a world of thoughts. Its contents are not originally in Him as operating entities that are raised from possibility to actuality by His self-activity. And the results of His activity are moral results; His determinations are at the same time commands. As self-determining, God is completely master of His own will; and His will is necessarily at the same time an act of thinking—a thinking, namely, of that which He wills, although the converse is not true, for God is under no necessity to will whatsoever He thinks.

In that God determines Himself to absolute personality He necessarily sets over against Himself the thought of an Other which is all that He is not. Yet He is under no necessity to posite this thought; the fact that He does not forgo the power of positing it is due to His perfection—a perfection which requires that He should realize Himself in and through that which is other than Himself. Thus we reach the notion of creation; God posits, namely, as real a sphere of being opposed to His own, and yet in union therewith, in order to have His own being expressed or manifested in His Other, the world. In what precisely this act of creating consists—that, namely, is thereby added to possibility that it should attain this level of actuality—Rothe is as little able as Leibniz, faced with a similar problem, to say. He confines himself to maintaining that the divine causality in producing the world is not active as an entirety, but divides its activity—in other words, the act of creating this world—into two parts: the formative thought, as primitive and unfinished product, a product which could only successively be brought to perfection. The primordial act of creation is the contraposing of God by a non-ego; and what is thus contraposed must be the thought opposed to spirit—namely, pure matter, in the notion of which is implied infinite divisibility. Pure matter is not, however, nature; and the divine creation evinces itself, therefore, as a continuous process, proceeding from one stage of material forms to another—bringing forth a graduated scale of existences that together constitute an organic whole. Rothe tries to trace the evolution from pure matter, which is virtually identical with space, first of mechanical nature, consisting of atoms conceived as centres of force, then of the chemical properties of these constituents, later of mineral products, and finally of vegetable and animal organisms. Until the world soul differentiates itself from the body as having the relation of subject to itself as object.

The gradual process of creation takes, in short, the aspect of a continuous incarnation of the divine Spirit within His non-ego, or matter, a process of transformation of the primordial matter into spiritual form until the former is transubstantiated into the latter. It is, therefore, the opposite of spirit, and to transform it into an organ of its own life.

It is no proof of God's omnipotence that He creates pure matter; the proof rather consists in His doing away with matter merely as such.  

The progressive creation is just the mode, and the only possible mode, of bringing about that consummation. But creation is creation only in so far as there is exhibited in it no sudden bound, only in so far as each of its links evinces itself as a real development from the preceding links of the chain. Herein is to be discerned the reason of the incompleteness of each successive stage of the world's evolution, which is not the result of creating a universe, but the manner in which it is created. The relation of the terms of the various degrees of creation is such that the one degree necessarily and necessarily to the next degree, the two terms being the act of creating and the created universe, that which to the human consciousness wears the aspect of evil, is to be traced back in the last resort to matter—that matter which is not yet transmuted, not yet done away with merely as such. Moreover, inasmuch as creation is a process of evolution, the one term represents the dissolution of the universe previous the lower, there must always remain, in every epoch of the world's history, a residuum of matter, which is the organ of the soul, as Pfeiderer calls it. The consequence is that the consummation of one epoch of creation requires that another epoch supervenes, and the world-evolution must be thought of as an endless series of stages following each other in time.

The natural man is conceived by both to have been developed according to the natural laws of animal evolution. In the animal sphere there is no definite contrast between the soul, which emerges out of and rises above matter, and nature, which is in direct union with it. The soul of the animal is entirely under the sway of nature, although even in the animal the merely physical has been transmuted to the extent of exhibiting the power which we call instinct. But with the appearance of human personality a new order of created being enters the world. Matter has given birth to a new species of existence in which it is transcended, to a creature whose essence and principle are its direct opposite. Looked at from the genetic point of view, the finite personality is the product of material evolution; considered in and for itself, it is just as certainly not material. That the finite spirit could not be created directly, but only through aid of the creature itself, only through the non-spiritual creature coming to posit itself as spiritual—all this appertains to the essence of spirit as self-determining. The true power of God as self-determining is that to determine itself to be so. It follows, therefore, that the creature to whom it belongs cannot have been endowed at its creation with this self-determining power, but can only have been created indirectly—by the creation, namely, of a material world soul so scientifically organized as to be able to transubstantiate itself from materiality into spirituality. As a self-determining personality, man acquires the status of a free agent. He is at once a thinking being, whose thoughts find everywhere objects corresponding to them, and a volitional

being, whose autonomous acts find realization in the outward world. A finite spiritual ego or person thus has it for his function to become, in a literal sense, a co-worker with God in the eternal process of creative-manifestation, not getting rid of matter in so far as it is the mere opposite of spirit. 

The process of creation finds, then, its continuation in the human world through the self-determination of finite persons. Hence it is that the creation-process in man necessarily assumes a new character. Man cannot live even the animal life except as a moral life. The formal principle of moral action may be expressed as the elevation of human personality out of its natural state of bondage or external determination to full freedom in itself; the material principle of moral action may be expressed as the appropriation of the natural environment to subserve the ends of personality. Three special features of the moral life call for detailed treatment in any scientific account of its essence and contents: (a) the results or products to be produced by self-determination; (b) the forces which constitute self-determination; and (c) the modes of activity which emenate from self-determination. The science of ethics will consequently be divided into a General Ethics and a Pflichtenlehre, i.e., it is only through following these three correlative branches of inquiry that a comprehensive science of the moral is possible. Of the three the first is the logically prior, for apart from the notion of the moral Good neither a system of virtues nor a system of duties can be constructed.

Since moral action is in itself a continuation of the divine creative action, it follows, according to Rousseau, that the moral life and the religious life really coincide, and, when normal, are identical. The object of both is the realization of the highest good—i.e., the absolute communion of man, individually and socially, with God, and, by means thereof, the perfected Kingdom of God on earth. Only in so far as the world is made the theatre of moral purpose is the truly religious life conceivable apart from that. It is an essential component of Religion, in order that it may become truth and reality, demands morality as its fulfillment, as the only concrete way in which the idea of fellowship with God can be realized; morality, in order that it may complete religion, in order that it completely fulfill the idea of religion, in the light of which alone it can comprehend its own idea in all its breadth and depth. In the moral process of human evolution the religious process is included as a necessary factor; the perfect development of human personality can be no other than its absolute determination by God, and consequently its perfect consciousness of God. When, then, mankind reaches its full moral stature, the antithesis between the religious and the moral will have disappeared; the moral life will be the religious life, and vice versa. The Church as the community of the devout is the State, must, accordingly, be regarded as a transitory institution; the full realization of the Church's aim can never be reached in abstract severance from the social organism as a whole. Ultimately the Christianized State, embodying, as it will, all the functions of the human spirit, will absorb the Church into itself; in so far as the Church fulfils its mission, it will tend more and more to fall away as a Church and to be the cause of its own dissolution. Its work, as a Church, will be accomplished when the social life, having advanced to a form of worship higher than it can awaken—that, namely, of a religiously moral community.

Five years after Rousseau's death a collection of isolated and miscellaneous reflections which he left had in various notebooks was published by his pupil, F. Nippold, of Bern, under the title of Stille Stunden. The volume is a rich storehouse of penetrating thoughts and suggestive ideas. One of these aphorisms sums up in a few words the burden of much of Rothe's teaching. "In this world," he says, "all Good, even the noblest and fairest—such as have been above a man's power to sustain them, or which he has to consume with pain and convert into pure spirit."  

G. DAWES HICKS.

ROUSSEAU.—1. Life.—Jean Jacques Rousseau was born on 28th June 1712, in Geneva. His father was Protestant by tradition: his ancestors had migrated from Paris to Geneva nearly 300 years before his birth, and they adopted the Protestant form of religion from the time of its first beginnings in Europe. His mother was of a well-to-do family, and the birth of her son cost her her life. The boy was thus left to the care of his father, Isaac Rousseau, a watchmaker, who was, as his son tells us, of an ardent and sensitive nature. He was early made to feel the influences of an emotional kind which affected his whole life. His father and he spent nights in reading romantic literature to one another, and exciting their sensibilities in a way which must have surprised their more stolid Genevanese compatriots. After having hastily made their way through certain romantic works of fiction which were inherited from the dead wife and mother, they tackled more serious literature, including a number of classical works of history; and, while still a young boy, became absorbed in a study of Plutarch, who remained all his life a favourite author. Unfortunately, when about ten or twelve years of age, his happy time with his father and a devoted aunt came to an end. The father, who was probably passionate and unresistant, grieved his son deeply, who thinking himself aggrieved, resolved to leave Geneva rather than suffer under what he conceived to be unjust laws. Consequently the lad was placed by an uncle at a school kept by a pastor in the village of Boissy. At this school there awoke within the boy a sensual consciousness which affected his outlook on life to the end. He tells the whole circumstances in his Confessions in a way which alike astonishes and disgusts a modern reader. In this
extraordinary book, published in his later years, we have a soul laying bare its inmost feelings, faults, and experiences, and the result in Rousseau's case is astounding. At Boissy, also, he experienced the first taste of the disagreeable art of being accused of a petty misdemeanour of which he was not guilty. This early experience made him intensely sensitive throughout his life to wrongful suffering by others. After leaving Boissy he returned to his uncle in Geneva for a few months, and enjoyed a happy out-of-door life with a young cousin. About 1725 (though this does not tally with his own account) the lad was placed in a notary's office, and, when dismissed from it, he was apprenticed to an engraver. The latter proved to be a brutal master who by his culls and blows constrained his apprentice to engage in many reprehensible practices. At the age of sixteen he took the law into his own hands and ran away—a step which, he says, completely altered the whole course of his life. Had he remained where he was born, he might, he considered, have become a peaceful Christian citizen, and now came his wanderings into strange lands and devious courses. He made his way into Savoy, where the faith and politics of the people were very different from those of the republic of his birth, and in the course of the summer he was exercised the deepest influence upon his outlook and character. It must, however, be allowed that he had already cut himself adrift from his family ties and caused himself to be regarded as somewhat of an alien.

At once he came into contact with the rector of Conflignon in Savoy, who was able to make him an apparent convert to Roman Catholicism without much difficulty, after giving him an excellent dinner. He was then sent to a Madame de Waren of Annecy, a young woman considered zealous in her faith, from whom he went to a monastery in Turin, where, after a certain show of protestation, he was formally received into the bosom of the Church. Once satisfactorily converted, he was (in 1728) thrust out to find his way for himself with only twenty francs in his pocket. After some days he was admitted into the house of the Comtesse de Vercelli, who died three months after he entered her service. After her death a piece of ribbon was missing, which Rousseau had stolen. He basely put the blame on a young girl in the house, and persisted in his accusation, when he was found out and the cause of the theft overwhelmed him with remorse on Rousseau's part, which haunted him to the end of his life. We must, however, recollect that the whole story is told by himself, and that he may more than likely have morbidly exaggerated both the crime and its effects.

After further efforts in service his youthful restlessness took him back over the mountains, this time with a young companion as destitute as himself, and at length he once more reached Annecy where, Messrs. de Waren, his friends, still lived there. With this strange figure he took up his abode; indeed, from 1729 to 1738 he was more or less in close touch with her. His friendship for this woman was of a curiously sensuous and mysterious kind. He called her 'Maman,' but for two or three years he was like a young woman of eighty. He had married early, disagreed with his husband, and become a convert to Roman Catholicism, thereby securing a small pension from the king of Sardinia, Victor Amadeus. Rousseau learned much at this time, and lived in an ecstasy of happiness with the beautiful and learned Baroness de Gence, a relation of the Baron de Vassan, an unlettered serving-girl in the small Hôtel St. Quentin at which he lived. This strange union at least gave satisfaction to Rousseau, since he did not ask for more than sympathy and cared little for permanent companionship of an intellectual sort. An event occurred in 1738 which is stated to have caused the utmost sorrow to his friend Madame de Waren, viz. the birth of a son, known in 1762, their relations changed, as Thérèse's sentiments towards him altered altogether, and Rousseau wrote piteously of his grief on this account. The woman appears to have naturally enough treated the subject of her offspring, for, much against his wish, she was exposed in the box for receiving foundlings, without any reason being given except that the father was in straits for money. At least certain specious
arguments in defence of his conduct were not developed till later, when Rousseau pretended that he suffered the deprivation of the joys of fatherhood in order that his children might be brought up in a healthy and simple life. We are glad to know that remorse came in the end. The pair were not actually married until 1768, when a certain form was gone through.

Rousseau spent twelve years in Paris— from 1744 to 1756—and it was during this time that his children were born and deserted. It was at this time that he was put to writing in Paris, and his life was by no means easy. In 1747, against the advice of Mme. d'Houdetot and of Diderot, he undertook the defence of the Hocques—a work which, according to the endeavours of the Philosophers, was to have been the first part of his Confessions—that extraordinary revelation of a man consumed with egotism, undisciplined, and living on the feelings of the moment, which yet produces in the reader a sense of reality such as few autobiographies have ever been able to inspire. Finally he fled to France in a condition almost distraught. Mirabeau (the father of the more famous statesman) and then the prince of Conti gave him hospitality, and he composed the second part of the Confessions, while also pursuing botanical studies, during the year 1766. Again he fled, this time to Grenoble and other places. At length in 1770 he settled in Paris, where he remained for the last eight years of his life. He had been temporarily estranged from the unfortunate Thérèse, but became reconciled again, and he occupied himself in copying music and writing his Dialogues; indeed, he seems to have lived those last years more peacefully than any that went before, despite constant and uncalmed quarrels with his friends. He was extremely poor, and would not draw upon the pension granted him by George III. of England. The last months of his life were miserable. He would not accept of help, was subject to delusions, and now pretended to Thérèse; some suspected suicide when the end came on 2nd July 1778. His remains were in the Panthéon.

1. Works.—The first of the Discourse was written for a prize offered in 1749 by the Academy of Dijon on the question of whether the progress of the sciences has contributed to the improvement or to the corruption of manners. Rousseau was on his way to visit Diderot, when in prison because of his Lettre sur les aveugles, when he was seized with an inspiration to enter the competition and deliver himself of his opinions. The paradox of the answer which he designed enthralled him. It has been said that he had set himself to prove good by nature and that by institutions only is he made vile. This original contention really proved to be the basis of the writer's later work; it proved also to be the expression of ideas which had been the most prominent of all Rousseau's—about the origin of France, for it was laid hold of as though it were a new gospel opened up before them and indicating the beginning of a new epoch in history. It seemed, indeed, to bring fresh possibilities into the life of every citizen. Rousseau now devoted himself to the composition of a new work, the subject being the origin of inequality among men and whether it is authorized by natural law. This essay, though unsuccessful in gaining the

Thérèse joined him, and he there came into touch with Gibbon and Boswell. Rousseau entered upon controversial correspondence at this time with great effect. In 1764 appeared his famous Lettres de la montagne, wherein he fully proved the iniquity of his treatment by the republic of Geneva. These Lettres were publicly burned by the Parliament of Paris. The Church at Neuchâtel turned against him, and he was persecuted to such an extent that he fled to an island in the Lake of Bienna. He was not suffered to remain there, but was brought to Strasburg, to which he was not permitted to return, and finally accepted an invitation to make his home in England. Hume brought him to London in Jan. 1766; in London, as in Paris, he had a great reception.

In March he settled in the Peak of Derbyshire (at Wotton) with Thérèse. It was cold, and Rousseau had nothing to do, and he soon broke into a quarrel with Hume, accusing him of every kind of perfidy. Hume was, not unnaturally, indignant at this ingratitude, and the quarrel became a vehement one, in which many literary men engaged. Rousseau himself became morbid, and his friends, especially Mme. de Warens, now sunk in poverty and misery. To her he showed kindness, even going so far as to offer her a home, but he always blamed himself for not having done more to relieve her unhappy lot. His visit to Geneva caused him to adopt the Protestant faith, and made him the beneficiary of citizenship. At the same time he was much interested in the religious discussions of the day, which centred in the Deistic position. He did not remain in Geneva, but went to a cottage near Montmorency; and there he was joined by Mme. d'Épinay, and accepted only when he felt sure that he could do so without sacrificing his independence. His choice of this 'Hermitage' was a great surprise to his friends in Paris who did not love solitude, but, once his mind was made up, it was not suffered to be undone. This was the time (the spring of 1756) when plans of future work pressed upon his mind. He made a vain endeavour to edit the papers of the Abbé de Saint-Pierre, and this abortive effort was followed by an unhomely condition of sensuous excitement which came in the autumn of 1756 and lasted until 1757. He went back to Geneva, to the great joy of Mme. d'Épinay, his benefactress, and moved to Mont Louis, in the neighbourhood of Montmorency. While there, he became incensed at an article on Geneva written by d'Aumont in the Encyclopédie expressing regret that the project of a new Hôtel de Régime had failed. This expression of opinion was indeed attributed to Voltaire, who had not been permitted to have comedies played in the town. This was the origin of the Lettre à d'Aumont sur les spectacles. The work was an immense success, but it lost Rousseau Voltaire's friendship for ever. At this time there were also breaches with Grimm and Diderot as well as with Mme. d'Épinay, Grimm's mistress, which entailed much bitterness and ill-feeling. But it was also a time of great productivity on Rousseau's part. Le nouvelle Héloïse, written mainly at the Hermitage, was to show society, in 1760, and the Contrat social and Emile in 1762. Rousseau dwelt in his new home in tolerable contentment, and he had many devoted friends among the great, despite his strange temper and physical colouring.

All kinds of difficulties in those days confronted a would-be author before his books could be duly printed and circulated. In 1762 Emile was condemned to be burned and its author to be imprisoned. Flight was the only mode of escape, and the future beside him only to the chimney of Berne. But again he had to depart. Frederick II. of Prussia had the credit of allowing him to take refuge in his territories of Neuchâtel, where
RUKHARS, SUKHARS, UKHARS

prize, proved almost as successful as the first. By these two essays the world came to realize that Rousseau's novel was being perceived as if it were an
artificial age was called upon to return to simplicity and truth. To us the argument seems shallow, and we feel that a little thought would show, for instance, the value of acquiring new knowledge in a social sense as well as in a material. Still, it is clear that Rousseau never had that it was one of the which the nation felt in need. Men longed to return (or thought they did) to the ancient times when humanity was rude and unlettered but natural and unspoiled by the arts of civilized life. From this time onwards the writer of the **Discourses** was a famous man, even though his fame might partly be accounted for because he was the preacher of the paradox that a barbarian was superior to a European of modern days. He established the predominance of feeling over the patient investigation of fact—a doctrine that brought fresh life while it brought fresh dangers to his own and other countries.

**La nouvelle Héloïse** is a love story of a highly emotional kind—the story of a tutor enamoured of his too attractive pupil. To the modern reader this story sounds silly, but as ever were concerned, it seems tame, in spite of a sensuousness which repels though it does not, now at least, corrupt. The episodary form in which it is written is tedious to those who have come to expect swift action, and to believe in a forced and stiff. But when it was published the interest in the tale knew no bounds, and the effect produced by it on an emotional public was incalculable both in Germany and in France. The second part of the book, in which the happiness of the noted ended, was just as much applauded as the first.

The **Contrat social** opens with the famous words, 'Man is born free, and everywhere he is in chains,' and strikes the keynote of the rebellious spirit that animated men of a rebellious age. To Rousseau it was not a time for careful analysis of facts or investigation of the growth of custom, nor had he the necessary knowledge to enable him to do this. To him it was essential that the 'state of nature' should be declared to be the true state of freedom—the freedom which is based on reason. He might desire virtue which he knew that this state of natural freedom has ever been realized, and whether man can be independent of the environment in which he is born. The time was ripe for his doctrines, crude as they might seem, and they laid a solid base upon which all the developments of the scientific investigation of fact could have done. Therefore this became one of the most notable and influential books of the period.

**Emile** was virtually a treatise on education set forth in the story of a youth brought up on ideal lines. The theme is an ancient one, but is dealt with in a way that brought conviction and enthusiasm to a generation which was awakening to new ideas in regard to the upbringing of the young. France has ever since Rousseau's time been alive to the essential unity of the family; and to this is probably why his doctrine which emphasised the relationship between the parent and the child. Rousseau brings his readers back to Nature and her teaching, makes the mother realize her primary duties to her offspring, and feel that it is her pleasure as well as her duty to help her child's education. The **Emile** of the original sin had no attraction for Rousseau. The child was born into the world prepared to be good and happy and healthy, and it was the parents' duty to allow him to attain these ends. We must sweep away the artificial restrictions of an artificial society in which parent and the development of the best in a man. Rousseau applied his theories even to the simplest matters of food and clothing. In fact, he was the forerunner of many of the modern views of infant nurture, and he deserves much credit for awakening the world to the desirability of natural methods of upbringing and instruction based on the development of the reasoning faculties. It is only in respect of the upbringing of women that he theories are almost Oriental in their obscurantism.

The **Confessions** is perhaps the best known of Rousseau's works and the most extraordinary. Jules Lemaitre says of the writer that he was a creature of nerves and weakness, passion and reason, sadness and delight. He describes the unhappy qualities that Rousseau possessed. Lemaitre recognizes the good side that is always present, and bears no hatred to his person. He is right in saying that Rousseau is the most 'subjective' of all writers, since all his writings are but betrayals of himself. And it was a strange undisciplined soul that he revealed to that brilliant collection of famous men and women who received his outpourings with mingled admiration and derision. Probably these outpourings were in their way sincere, though in detail they are not at all

RUKHARS, SUKHARS, UKHARS.—These are all Saiva mendicants or Yogīs (g.v.), occasionally found wandering over N. India. They are said to be branches of the Anglahar or Oghār sect of Yogīs founded in Gujarāt by Yogī Gopala Rāmachānt (g.v.). The line was continued by Yogī Gorākhnath (g.v.), who founded two branches of the sect, named respectively Rākhar, Bhākhar, Kākhar, and Gūdār, of whom the first two are those most commonly met with. They are ordinary Yogīs, and belong to the sect of the Rākhar Brahmāins only in apparel and appurtenances. Thus the Rākhar and Sūkhar wear earrings in both ears—the former of copper or pewter and the latter of rudraksh (olive-nut) seeds—whereas the Gūdār wear a ring in only one ear and a flat copper plate bearing the footprint of Gorākhnath in the other. Bhākhar and

RUSSIAN CHURCH.—I. HISTORIC.

The history of the Russian Church falls into four periods, the character of each being defined by its chief events.

1. Primitive period and down to the Mongol invasion (1st to 10th cent., A.D. 988–1327).—Nestor, in his Chronicle, gives an ancient tradition, rejected by modern historians, that the first Christians, that is to say, the first baptisms, did not take place until St. Andrew, as he spread the gospel along the north-eastern shore of the Black Sea, came to the hills above the Dnepr upon which Kiev has been built, by which up to this time the 10th century, when our modern Russian Russia had come back to the time of the apostles. According to this, St. Andrew, as he spread the gospel, was forced to the banks of the Dnepr upon which Kiev has been built by the inhabitants of a country which had not yet been brought into the limits of the land that is now Russia, but it is unlikely that they took root at that distant time. More favourable conditions for the spread of the gospel in Russia came with the establishment of Slavic tribes, for the whole period of which we cannot exactly define. The Slavs had long been well acquainted with Greece, whether they went as traders or mercenaries, and there they not infrequently adopted Christianity. In the middle of the 9th cent. the south and southeast were already converted, the Caucaic and Dnieper, the inhabitants of which were called the "apostles of the Slavs," SS. Cyril and Methodius. About the same time Prince Rurik (862–879), invited from among the Varangians, laid at Novgorod the foundation of the Russian State, decreed by Providence to profit more than any other Slavic land by the labours of SS. Cyril and Methodius. Of the Russian princes, the Varangians Askold and Dir, the earliest to rule in Kiev (862–882), were the first to fall under the influence of Christianity, and after their death against Constantinople, which accepted the holy faith. Under Prince Oleg (879–912) there were about the same number of Christians among the Russians, and under his successor Igor (913–945), in the treaty with the Greeks concluded at Kiev in 944, the Russians are already divided into baptized and unbaptized, in the agreement of the time the agreement by swearing before the idol of Perun, the baptized swore by the Holy Cross and the Gospels. Igor's widow, Princess Olga (945–969), herself desired to be baptized, and in 955, when she was 67, was baptized, which convinced to Constantinople and Thessalonica, according to the Churches of Russia and Christianity. Many of her following were baptized along with her. On her return to Kiev Princess Olga (baptized as Eleusa) journeyed through the towns and villages and preached the faith, shining like the moon in the night in the darkness of the heathenism around her. She tried to persuade her son, Prince Svyatoslav (946–973), to accept Christianity, but in vain. Her grandson, Svyatoslav's son, Prince Vladimir (973–1015), accepted the faith in 987. In 988 he decreed that Christianity began to spread to the other towns of Russia. The first metropolitan of Kiev, Michael (+991), began by baptizing the people in the towns and villages round about Kiev; afterwards, with bishops and Dobrynya Nikitich, he preached in the towns of Kiev (N.E. Moscow), and the surrounding districts, and baptized no small number. Vladimir himself visited Volhynia to preach the faith, and even had several princes of the Rama Bulgars and the Pechenegs baptized at Kiev. Vladimir's sons sent to the various principalities, also spread the new faith among the people under their rule. So, during the reign of Vladimir, Christianity spread to the feudal centres of Muron, Polotsk, Vladimir-in-Volhynia, Smolensk, Tsykov, Lutsk, Tmnatarakan (opposite Kurch), etc. For his zeal in spreading the faith of Christ Prince Vladimir received the epithet of isospostolos and was canonized by the Russian Church.

Under Vladimir's successors the Christian faith continued to spread. The reasons, however, were mainly not so much geographical as it was by the fact that in Russia the message was delivered in a Slavic tongue akin to the people's own.

After Vladimir's baptism Christianity became in the full sense of the word the ruling religion in Russia. Accordingly, even in his time there followed the establishment of a special law for the existence of which all the conditions were present. At the same time the relations of the Russian Church to the Greek Mother-Church and also its internal local relations to the State and the community began to be defined. In relation to the Greek Church the idea of a metropolitan as a special metropolitan see, forming part of the patriarchate of Constantinople and consequently subject to the patriarch's authority. The attempts of Roman Catholic scholars to prove that originally the Russian Church was subject to the pope, are absolutely futile. At the head of the Russian Church stood the metropolitan. The whole time of the tenure of St. Michael, the first metropolitan, was taken up in simply spreading the elements of Christianity, so that the Russian Church did not achieve an equality in the eyes of the metropolitans made before the end of the 10th cent., and that was achieved by his successor Leonitus (+1008). In 992 he divided the Church into dioceses (Novgorod, Chernigov, Vladimir-in-Volhynia, Polotsk, Turov, Belgorod, Kostov, and Tmnatarakan), and appointed the first diocesan bishops. Their own see the early metropolitans fixed at Periaslav (S.E. of Kiev), and afterwards, under Prince Yaroslav (1017–54), they transferred their place of abode to Kiev. The Russian metropolitans were chosen and consecrated at Constantinople by the patriarch himself with the consent of the majority of the first rulers of the Russian Church were Greeks. But the metropolitan of Russia, though chosen from among the Greeks, was by no means so dependent on the patriarch as were the other Greek metropolitans. In consequence of the fact that the Russian principality was independent of the Greek Empire, the metropolitan of Russia enjoyed special dignity and almost complete independence of the patriarch; he was in the position of an exarch rather than a sort of bishop, and the dependence of the Russian metropolitan upon the patriarch of Constantinople meant no more than that he was chosen and consecrated by the latter and was bound as far as possible to attend the patriarchal synods. Within the Russian Church the metropolitan had an independent jurisdiction.
over ecclesiastical affairs, exercised either directly or
with a synod of his suffragans, which he often
convened at Kiev. His decisions were recognized
as final, and recourse to the patriarchal court at
Constantinople was very rare—only in specially
important cases. The link between the Russian
monasteries of Kiev and the metropolitan and
bishops amounted to this, that the patriarch was
prayed for by name in the Russian service, that contribu-
tions were often sent from Russia for the needs of the
Greek Church, and that there were founded in Russia
central monasteries such as Pechera, which stood
under the direct jurisdiction of the patriarch. These
relations continued till half-way through the 15th
century. From the very first days of its existence,
however, the Russian Church showed a tendency
to complete independence of the patriarch of
Constantinople. This appeared in attempts to
elect the metropolitans from among native Russians
and to enthrone them in Russia. In the period
before the Mongols two cases are known of such
election and enthronization of Russian—born
metropolitans—Hilarion in the middle of the 13th
century, and his successor a hundred years later
(1147); and these were among the best bishops of
the Russian Church.

In his relation to the bishops the Russian metro-
politan was the elder, counsellor, and guide. He
appointed the bishops, summoned them to synods,
judged them in cases of ecclesiastical and civil,
and sometimes, for instance, in cases of their
labours, and made arrangements concerning the Church as
a whole.

The metropolitan of Russia stood in the same rela-
tion towards the grand princes as in which the
patriarch of Constantinople stood to the emperor. He
was not only the protector of the Church and
her interests, the supreme teacher of the faith and
religion, but also the guide in many civil affairs.
As he always lived near the grand prince, he
naturally supported him in his struggle against
the vassal princes, and thereby contributed to the
strengthening of his authority and the unification
of the nation. Being a Greek, he knew the Byzan-
tine laws and customs and thus was enabled to
help the grand prince in organizing the life of the
Russian State. Furthermore, in accordance with the
customs of the Greek Church and the Councils
of Princes Vladimir and Yaroslav, the metropolitan
was the champion of all the oppressed, the protector
of the sick, of widows and orphans, of liberated
slaves or prisoners of war who had returned to the
fatherland, and such like. But, although he held so high a place, the metropolitan remained
duly conscious of the limits of his rights and obliga-
tions. Accordingly, the Russian Church never
saw such conflicts between the ecclesiastical and
the civil powers as the Western Church shows.

The most eminent metropolitans before the
subjugation by the Mongols were St. Michael
(+901), the first metropolitan of the Russian
Church, who laboured zealously to spread Chris-
tianity through the land and encouraged learning,
and St. Hilarion (1051–53), remarkable for his
ascetic life and love of Bible instruction.
The most important event in the Russian Church
during Hilarion’s episcopate was the foundation in
1051 of the Pechera Lavra (monastery) at Kiev by
Antony (+1073) and Theodosius (+1104). As Kiev
was then the chief city in Russia, so its
Pechera monastery became the centre of a large
number of other monasteries and gained enormous
influence on the general trend of religious life.
From it the ascetic outlook spread through Russian
society. From it were taken the abbeys for other
monasteries in Russia. More than fifty of its monks were raised to bishops’ sees.
The men whom it sent out spread abroad its piety,
spirit, rule of life, and the writings of its ascetics.

To it gathered those who desired religious instruc-
tion. In it were collected the monuments of eccle-
siastical literature; here, too, was begun the
Russian Chronicle.

After the Pechera monastery there arose monas-
teries in other places. They were the chief points
for the concentration and diffusion of piety in the
land, which had indeed been converted, but was
far from having cut itself loose from survivals of
paganism. Outside the walls of the monastery
rude passions had full play; within the monastery
the spirit ruled, where the spirit ruled, the spirit
raged. The world could not free itself from the
spiritual realm. The Pechera monastery was still
a centre of spiritual life and influence, a place of
monasticism, a centre of spiritual life and
influence, a place of
influence, a place of
influence, a place of
influence, a place of
Russian Church.

Jona's was promised the succession to the metropolitan see only after the death of Isidore. Isidore, on his return from the Council of Florence, met with a most hostile reception in Moscow in 1441, and in the same year fled to Rome. But, even after this, Jonas remained only a bishop and was not enronned as metropolitan till 1448.

The enthronement of Jonas as metropolitan at the wish of the grand prince Vasily Vladimirovich (1425-62) was performed at Moscow by a synod of Russian bishops. This event was of great importance as a long step on the road to the Russian Church's gaining complete independence of the Patriarch of Constantinople. Jonas, the new metropolitan of Moscow, was in that capacity the spiritual head of the Russians and the successor of Moses, the old metropolitan of the Moscow city, who in 1320 had consecrated the bishop Simeon as the first metropolitan of Moscow.

The final partition of the Church into two provinces took place in the time of Jonas. Isidore, who had fled to Rome, would not give up his pretensions to the Russian Church and wished to take away from Jonas at least the south-western dioceses which were under the rule of the Polish king Kazimir (1440-92), a zealous Catholic. His attempts were not successful, it is true; but through his influence the Constantinopolitan patriarch, Gregory Mannas, who had been deprived of his see for his independent attitude, was consecrated as the metropolitan of Lithuania a pupil of Isidore, by name Gregory († 1472). After this the council of Russian bishops held in Moscow in 1490 acknowledged the final division of the Russian Church into two provinces—Moscow and Kiev.

3. From the division into two provinces to the establishment of the Holy Synod (1646-1721).—(a) The province of Moscow.—In the middle of the 15th cent. Russia was divided into two political aggregations—the eastern, under the rule of the Moscow autocrats, and the western, under the Lithuano-Polish government.

The Moscow province, under the protection of an Orthodox government, advanced both spiritually and in externals. With regard to spiritual things, it successfully overcame the heresy of the Judaisers which troubled it during the latter half of the 16th cent., and in the 16th cent. took up the important task of correcting various abuses which had crept into the divine service and into Church life as a whole. Externally it continued to extend its boundaries and to adorn itself with outward magnificence, and at the end of the 16th cent. it rose to the dignity of an independent patriarchate.

The Judaizing heresy, besides its bad consequences, had its good side. The struggle with the heresy raised various questions as to the abuses at that time rife in the Church and occasioned attempts to remove them. These abuses dated from early times, being due to insufficent education, but they had greatly increased owing to the disorders of the feudal period and the weight of the Mongol yoke. The rule of the Czars, which had begun when the Russians had retained various pagan usages, together with the holy books they used to read, tended to disregard the canons and superstitions; many of them visited wizards for divination and took part in pagan festivities. The carelessness and ignorance of scribes had introduced into the Scriptures and liturgical books many false readings and doubtful expressions with
ambiguous or even heretical meanings; into the rites of the Church there had crept many innovations unknown to the Greek Church, such as the singing of "Alleluias" (instead of threnos), the circulation of processions "with the sun" (from east to west), and the use of only two fingers in making the sign of the Cross. The rectification of these abuses had long been aimed at by the metropolitans Nikon, Philaret III, Peter, Alexander Jones, and others. For this twofold purpose, at the beginning of the 16th cent., there was summoned to Moscow from the Vatopedi monastery on Mount Athos Maximos the Greek († 1536), a pious and learned monk, who worked hard on the translation of the Holy Scriptures from Greek into Slavic and the correction of the Russian liturgical books. Later, in 1551, there was summoned to Moscow the so-called Stoglaz ('Hundred Chapter') Council, and from its time care was devoted to the settling right of various faults in the religious and ecclesiastical life of Russian society, not only of individuals but of the whole Church. An event of great importance for this period was the foundation by Sergius († 1501) of the Trinity monastery (Troitse-Sergiev Lavra) near Moscow. This had the same significance for N. Russia as the Pechora at Kiev had for the south. The other abbeys of the time were Solovets, Volokolamsk, and that on the river Sora; these were the refuges of asceticism and of piety and the nurseries of Christian education for all Russia. The Russian monasticism of the time showed two special types—practical and political, under the headship of Joseph of Volok († 1515), who defended the holding of landed property by monasteries; the other critical and ascetic, led by Nihus Sorski († 1608)—so called after the cell which he founded on the river Sok. The contest between these two points of view kept cropping up in connexion with all sorts of questions and found its way into all departments of the Church and community. After various discussions the former school triumphed, and in 1560 it was actually tyrannized by a尊严 at Moscow. In 1561 the grand prince Ivan III. Vasilievich (1462-1505) threw off the Tatar yoke; more and more of the Russian land was united under the power of the Moscow princes, and in 1547 they assumed the title of "Tsar of Russia" to strengthen their power not only in civil but in ecclesiastical affairs. In their use of this power some of the Moscow tsars, especially Ivan IV. Vasilievich (the Terrible, 1533-84), reached the limits of despotism. In the second half of the 16th cent. the Moscow State entered upon an aggressive movement towards the east and subdued the kingdoms of Kazan (1552) and Astrakhan (1556). These conquests had a most important effect upon the Church, as they opened the way to the preaching of Christianity among the Musalmans and pagan tribes inhabiting those kingdoms. The most remarkable men produced by the Church at this time were the metropolitan Macarius (1542-63), who compiled the famous Menaion, St. Philip (1566-89), who fearlessly rebuked Ivan the Terrible, and Guri (1555-63), the first archbishop of Kazan, who illuminated that part of the country with the light of the Church faith.

Since the time of the metropolitan Jonas the Russian Church had in practice lived its own life, independently of the Greek patriarch; the only evidence of its ties with the Greek Church was the all which it rendered to the Orthodox Church, and in 1581 it was suffering under the rule of the Turks. The Russian metropolitan, however, continued to be nominally dependent on the patriarch. At the end of the 16th cent. even this seemed out of place, since Russia had become a mighty power, while the patriarch was a subject of the Turkish sultan.

Tsr Theodore Ivanovich (1584-98) accordingly formed a desire to establish for Moscow a patriarchal see of its own. In 1587 the Patriarch of Constantinople, who had come to Moscow in 1588, fulfilled Theodore Ivanovich's desire, and in January 1589 consecrated as patriarch the then metropolitan of Moscow, Job (1589-1603). Two years later (1591) the Eastern patriarchs were given an instrument of confirmation and gave him precedence next after the patriarch of Jerusalem.

The establishment of the patriarchate produced no essential changes in the rights of the ruling bishop of the Russian Church. The difference came merely to this, that whereas he had been governing his Church independently and enjoying within it rights identical with those of the ruling bishops of the Eastern Church, he was now put on a level with them in his title and hierarchic precedence. In his administrative encouragement the patriarch employed more pomp and magnificence than before.

The raising of the ruling bishop of the Church to the rank of patriarch was only in accordance with the Church's dignity and magnificence. Unfortunately the tenure of this rank was short. The last convocation was held in 1666. It was one of the most remarkable and the most protracted of all convened in the State. This prevented them from leading the Church along the normal road of gradual advance. On the other hand, the patriarchs at that time saved Moscovite Russia from what seemed to be inevitable destruction. In 1568 Tsar Theodore Ivanovich died without issue. His death cut off the ancient Russian dynasty of princes and tsars of the house of Rurik, and there followed the so-called 'Troubles.' The 'Troubles' were specially rife after the appearance of the first pretendent, pseudo-Demetrius († 1598), who was a tool of the Poles, Jesuits, and Roman Catholic propaganda, and therefore as serious a menace to the Orthodox Church as to the State; he threatened both the political independence of Moscovite Russia and Orthodoxy. Having accepted Roman Catholicism himself, pseudo-Demetrius energetically prepared, with the help of the Poles, to bring Russia over to Latinism. It was the patriarch Job who came forward in this anxious time as the champion of the independence of the Russian Church and the inviolability of pristine Russian Orthodox Orthodoxy. With firm and ardent zeal Job defied the usurper, whose partisans, when they took Moscow in 1605, unfrocked him and banished him to the Staritski monastery, where he died in 1607.

After a certain Ignatius, a Greek inclined to Roman Catholicism (1605-06, † 1640), had occupied the patriarchal throne for a short time, Hermogenes (Germogen) became patriarch (1606-12). During the 'Troubles' he stood fast for Orthodoxy and was an 'unshakable pillar' of Church and State. When, after the deposition of Vasily Ivanovich Shuysky (1606-10), a mission was sent to the Polish king Sigismund III. (1587-1632) to invite his son Wladyslaw to be tsar, Hermogenes insisted that in all negotiations concerning Wladyslaw the envoys should lay down as an indispensable condition that he should be an Orthodox tsar. Hermogenes also took an active part in raising the so-called first land-levy (1610-11) to oppose the Poles. For this some of the Moscow nobles, partisans of the Poles, shut him into a cold, damp cellar of the Church monastery (in the Moscow Kremlin) and he died of starvation. In 1913, in view of his martyr-death and of the miraculous healings which had taken place through the intermediation of his prayers, Hermogenes was canonized by the Russian Church under the name of Ermogen.
The inviolability of Orthodoxy and the independence of the State were also championed by other representatives of the Church—metropolitans, bishops, and ordinary priests. The religious and patriotic achievements of the monasteries, especially the Troitse-Sergieva Lavra, were also notable at this time. The latter was besieged for sixteen months from September 1608 by a Polish army of 80,000 men. The defenders in this famous siege numbered in all only 2500, some of whom scarcely knew the art of war.

The first patriarch after the 'Troubles Times' was Philaret Nikitich (1619-33), the father of the newly elected tsar Michael Fedorovich (1613-45). It was during his tenure of the patriarchate that the patriarchal power attained its highest development. The patriarch now shared with his son the title of 'Great Lord' (Gosudar). All acts of the supreme power ran in the name of both 'Great Lords': to both reports were addressed; to both foreign ambassadors were accredited. The Church attained complete independence in its affairs. Under Philaret the ecclesiastical courts had respect for no persons, however mighty. In 1625 the patriarch obtained from the tsar the grant of a charter under which all the clergy of his diocese, the monasteries and churches, with their servants and possessions, obtained the full jurisdiction of the patriarch. At the same time the patriarch arrayed himself in imperial state and thereby added majesty to his office. Philaret also devoted no little attention to the organization of the Church.

After Philaret the patriarchal throne was occupied by Joseph I. (1634-40) and Joseph (1642-52). Under them the patriarchal power noticeably weakened, but under the patriarch Nicon (1632-66) it shone forth once more in all its brilliance and splendour. In both articles of faith and dogmatical systems, Alexis Mikhailovich (1645-76) and the patriarch Nicon through almost all the time that the latter ruled the Church. Without the patriarch no political decision was made; during the tsar's absence from Moscow at the Polish wars (1654-35) the patriarch had little left to deal with the affairs of the State. But the high position to which Nicon had attained and certain peculiarities of his character brought about the formation of a strong party opposed to him, consisting of nobles and many others, mostly persons who were old and had little left to deal with in the Russian liturgical books and the various abuses in ritual had already been clearly pointed out by Maximus the Greek, and also by the Stoglay Council. All admitted the necessity for correction, and throughout the whole period, from the Stoglay Council to Nicon, there had been a series of attempts at emendation—with little success, inasmuch as the actual method of emendation had been faulty. The correction had been carried out according to old Russian texts, themselves erroneous, and ranging from the original to the most recent. Under Nicon the correction of the books was carried out by experts working with Greek and Slavice MSS, and constituted an epoch in the history of the regulation of Church order in Russia. Lithuanian liturgics, churches, and ritual included emending either the text of the service-books or the ritual ordering of the services. But this great historic achievement of Nicon aroused the bitter hatred of his contemporaries. Consequently, when in 1658 a difference arose between Nicon and Tsar Alexis Mikhailovich, the latter, in order to gain the throne and retired to the Monastery of the Resurrection. Meanwhile the movement against Nicon's innovations spread and embraced many people in all ranks of society—from peasants to influential noblemen. To restrain false teachers and to prevent the further spread of false teaching, Alexis Mikhailovich summoned in 1666 the so-called 'Great Council' (1666-67) of Russian bishops with the participation of the patriarchs of Alexandria and Antioch. This Council began by considering the case of the patriarch Nicon, and, after examining various charges against him, condemned him and deprived him of the patriarchate. Nevertheless, when Nicon died in 1681, Alexis Mikhailovich ordered him to be buried with patriarchal rites, and within a year, the ban from the Eastern patriarchs freeing him from the Council's condemnation and restoring him to the rank of patriarch. The Council went on to examine the corrections made in the service-books and ritual during Nicon's patriarchate, entirely approved them, and condemned their chief opponents, certain of whom made public repentance and received absolution, while the unrepentant were anathematized and banished to distant exile. The chief schismatic teachers, Avvakum, Lazar, and Theodore, were later, in 1681, burnt upon a pyre. So appeared in the Russian Church the schism of the Old Believers, who subsequently divided into two sects, the Popovtsy (with priests) and the Bezpopovtsy (priestless), and these again split into a large number of sects and schools. Taking its rise from the tsar's order to the patriarch to correct the service-book and from faith in the saving power of the rite in itself without any understanding of its sense and meaning, the schism is in its essence faith in ritual, jealously guarding from changes both the old texts in the Church books and rites. Of the particular points upon which the tenets of the Old Believers differ from those of the Orthodox the most important are: (1) services must be conducted according to the old books published before the time of Nicon; (2) the eighth article of Creed must be read: 'And in the Holy Ghost the true Lord and Giver of Life'; (3) 'Alleluia!' must be said twice and not thrice; (4) Church processions must go with the sun, not against it; (5) the sign of the cross must be made with two, not three, fingers; (6) the only cross to be honoured is the wooden one, in passages, in which the title and the slanting foot-rest have become extra cross pieces; (7) the name of Jesus Christ must be written and pronounced Jesus, and not Yesus; (8) the liturgy must be celebrated with seven proskynes instead of five. After its establishment in the Church the schism at once began to be persecuted by the ecclesiastical and civil governments and took up a hostile position towards both Church and State. Hiding from persecution, the Old Believers filled all the forests of inner Russia with their secret cells. The spread of the sect was still further helped by the strict measures taken against it. Only in 1905 did the sectaries gain the right to religious freedom.

1) Cf. art. Sects. Russian.

(b) The metropolita'n province of Kiev.—Whilst the province of Moscow enjoyed political independence, the province of Kiev was under the suppression of a Roman Catholic power.

The Polish-Lithuanian Government found it inconvenient that its orthodox subjects should gravitate towards Moscow; so it endeavoured to prevent the spread of ideas and the recognition of Moscow as the special centre of political life in N. Russia; and, even before it had become Roman Catholic, it had striven energetically towards an ecclesiastical separation from Moscow. But from the time of the grand prince Yagello (1377–1386–1434), during which Lithuanian power was under a Royal Lithuanian Government (1386), the position of Orthodoxy in those parts became yet more disadvantageous. In spite of the fact that the greater part of the Lithuanian principality
RUSSIAN CHURCH

consisted of lands inhabited by Orthodox Russians, and that all the notables of the Russian regions held to the Orthodox confession, Yagello made several attempts to spread Roman Catholicism in Lithuania. These attempts completely failed, and even led to Lithuania's absolutely breaking away from Poland and joining the Union of Lublin (1392–1430); nevertheless they went on with more or less energy according to circumstances. The prudent Vitovt, understanding how predominantly important the Orthodox population was for the Lithuanian State, did not rashly cut them off, but devoted himself towards cutting off the Orthodox Church in Lithuania from the province of Moscow—a project realized in 1459 under Yagello's son, Kazimir (1440–92). The separation of S.W. Russia from the power of the metropolitans of Moscow was a definite step towards the establishment of religious union between the divers confessions of the Lithuanian population. After this separation the Orthodox Church in the Polish-Lithuanian State found itself in a most dangerous position—isolated, deprived of all outside support, face to face with stimulation from the Lithuanian Orthodox clergy, oppressed the Orthodox in every way. But the persecution cost Lithuania very dear. Many notable Orthodox families and even whole towns adhered to the Union of Lublin and moved to Moscow. Alexander's successor, Sigismund (1500–48), treated the Orthodox with more tolerance. Profiting by this, the Orthodox bishops of Lithuania held a council at Vilna in 1509, at which they promulgated certain canons, intended to restrict arbitrary lay interference in the affairs of the Church. The next king, Sigismund II (1548–72), under the influence of a Protestant chancellor of Lithuania, Nicolas Radziwill (†1583), also refrained from persecuting the Orthodox for their faith; but, being in need of money, plundered the Orthodox churches and imposed excessive taxes upon the people. Under this king also the forerunners of new misfortunes for the Orthodox Church appeared—the Union of Lublin (1569), which joined the two States of Lithuania and Poland, the coming of the Jesuits, and, soon after, the ecclesiastical Union of Brest (1595).

In spite of the wiles of the Jesuits and the pressure of the Roman Catholic Government, the Orthodox Church in its own districts of Poland and Lithuania held firm to its old faith, and with its foes it was actively supported by the Eastern patriarchs, by the best representatives of Russian society of the time, and by the Orthodox Church brotherhoods. The patriarchs, either in person or through their exarchs, righted abuses in the Church, appointed metropolitans and bishops, blessed and encouraged the champions of Orthodoxy. The best representatives of Russian society, such as Princes Andrew Kurbski (†1383) and Constantine Ostrozhski (†1608), and the Orthodox bishops, especially those of Amberberg and Vilna, took part in electing the clergy, looked after Church courts and government, helped the clergy to root out disorders in the Church, defended its interests with the Government, set up schools, printing-presses, and almshouses, and collected money and goods. Unfortunately these activities, advantageous though they were to the Church, found no favour with certain of the Orthodox bishops, as they encroached upon their independence. Hence ensued frequent collisions between the bishops and the representatives of the secular power, and these the Jesuits were quick to use for their own ends. At their instigation in 1591 certain of the south-western bishops secretly laid a petition before King Sigismund III., asking that the South-Western Church should become subject to the papal see as a Uniate Church. Next, in 1595, Bishops Cyril Terlecki (†1607) and Hypatius Pacieiz (†1613) set out for Rome, where Pope Clement viii. (1592–1605) met them with great joy, and on 12 Jan., 1605, declared the Union of the South-Western Russian Church with the Roman Church. In 1596 there was held at Brest-Litovsk a council of local bishops to which the patriarch of Constantinople sent exarchs, Nicholas of Tyr, and Cyril of Rahoza, afterwards patriarch (1612–58, with interruptions). The purpose was to promulgate the completion of the Union, but strong opposition to it arose among the Orthodox. From the very beginning the council was divided. The Orthodox, as they had no church at their command, met in a private house. They excommunicated both the metropolitan Michael Rahoza (†1599) and the bishops who had joined the Union. The Uniates answered in like manner, and afterwards executed a deed of submission to Rome. So the Union was produced by force, and not by consent. Many of the Uniates had remained faithful to Orthodoxy were deprived of their sees; the priests were driven out of their parishes; the brotherhoods were declared assemblies of insurgents; townsmen were restricted in the exercise of trade and handicraft; peasants were prevented from performing their customary duties; the churches were leased to Jews. The effect of these restrictions was to lessen the number of Orthodox bishops, and the Orthodox were compelled willy-nilly to have recourse to Uniate priests for the performance of occasional offices. But the Uniates themselves were in no better case. They were looked down upon by both Roman Catholics and Orthodox. So matters stood under Sigismund III. His successor, Wladyslaw IV. (1632–48), though well disposed to the Orthodox, could not help them, as he had not the power to make headway against the turbulence of the nobles and the fanatism of the Roman Catholic clergy.

When it became clear that the State of Poland and Lithuania either would not or could not satisfy the just aspirations of its Orthodox populations, the defence of Orthodoxy was placed in the hands of the Cossacks of that region. One after another came Cossack insurrections. These were unsuccessful and merely served as new excuses for persecuting the Orthodox; but their failure made the champions of Orthodoxy turn to Moscow for defense. In 1654 the little Russian metropolis of Peter Mohila (1626–38), who rendered great services to the Orthodox Church. He championed both Orthodox persons and the rights of
Church institutions many times before the Polish-Lithuanian Government; he laboured for the restoration of monuments of ecclesiastical antiquity, richly adorned the Pechora Lavra, and restored from almost complete ruin the cathedral of St. Sophia at Kiev and other churches recovered from the hands of the Uniates. He also wrote and published works in defence of Orthodoxy, corrected the service-books, and laboured to spread education in the Orthodox Church. His most important educational work was his remodelling of the Clerical Academy, to give on the model of a liberal and humane education and his improvement of the instruction given in it.

From that time dates a special theological tendency in the Kiev Academy, the mark of which was the influence of Roman Catholicism and the Scholastic philosophy.

4. From the foundation of the Holy Synod to the present time (1721-1917).—Among the most important reforms due to Peter the Great (1682-1725), the transformer of Russia, is the change in the supreme administration of the Church. In his task of organizing the life of the State and the Church, which was so extraordinary, Peter made straight for his aim, with no regard to the feelings of the old school. From the first, he recognized that the Church and its clergy had a great influence on every part of the people's life; on the other hand, he saw that among the clergy his reforms met with little sympathy. Starting from these premises, he came to the conclusion that, to secure success, he must change the form of the supreme administration of the Church and for the rule of one man substitute that of a college, or board. Accordingly, when in 1700 the patriarch Adrian (1690-1700) died, Peter refrained from nominating a successor to him and assigned his duties to the metropolitan of Kyiv, Stephen Yavorski (1712), with the title of locum tenens of the patriarchal see. This manner of administering the Church continued until 1721, when the ecclesiastical administration came up for reform. In 1718 Peter the Great had promulgated an edict for the foundation of a 'clerical (spiritual) college,' and entrusted to Theophan Prokopovich, bishop of Pskov († 1736), the work of drawing up a scheme for its governance, the so-called Clerical Regulations (Dukhovnoye Reglament). In 1720 the Body was established at Kiev. The College itself was solemnly opened under the name of the 'Most Holy Governing Synod.' In 1723 the Eastern patriarchs sent a deed of confirmation to the synod, and in it they named it their 'Brother in Christ,' and allowed it the rights and authority of a patriarch.

By the Clerical Regulations the synod took its place in the general system of higher administration; its members took an oath of allegiance to the emperor and bound themselves to observe all the interests of the State. The synod was at first composed of seventeen members, four presidents, Theodosius Yanovski (archbishop of Novgorod, deprived of his see in 1725) and Theophan Prokopovich; four counsellors; and four assessors. Besides the representatives of the superior clergy there were appointed to the synod, in the first instance, members of the secular clergy. In its rights it was held equal to the senate and in the same manner was directly subject to the emperor, represented in the synod by the chief procurator (Ober-Procurre), a layman, who watched the progress of business, and held up unsatisfied judgments, reporting upon them to the emperor. The synod was given the right to promulgate new laws touching the Orthodox Church and its members. It was also its duty to see to the purity of the faith and the due celebration of public worship, to root out superstition, heresies, and schisms, to test reports as to saints (whom it was proposed to canonize), to certify miraculousIconst and reliics, to examine books on religious subjects, to survey the building of churches and monasteries, and to care for the religious education of the people and the material support of the churches. The composition of the synod, its rights and duties, as laid down in the Clerical Regulations, have remained in the main unchanged until the time of its abolition.

After the reign of Peter the position of the Russian Church throughout the 18th cent. was very difficult, especially during the reign of the empress Anna Ioannovna (1730-41), when great influence over Russia was gained by the Germans. Under Catherine II. (1762-96) a secularization of Church property took place (1764). It was opposed by Arsenius Matseevich, metropolitan of Rostov, who died in the fortress of Revel (1772). At the beginning of the 19th cent., under Alexander I. (1801-25), a mystic movement spread in Russia and the synod was suppressed on the 22nd March 1817. But the end of Alexander's reign the mystic tendency gave place to a more practical policy.

The most important facts of the synod period in the history of the Russian Church have been the establishment of clerical and parish schools, the foundation of missions and of the Edinovorie ('One Faith,' a compromise to bring back the Old Believers), the reorganization of the Uniates, the restoration of the activity of Church brotherhoods, and the foundation of church and parish wardships (popechitelstvo). The necessity of educating the clergy became evident from the time of Peter the Great's reforms. In his need of enlightened bishops Peter first of all directed his attention to the Moscow Academy, which had formerly been the only source of clerical education for the north of Russia, and reorganized it after the pattern of the Kiev Academv, giving it a Latin instead of its former Graco-Slavic tendency. He also improved the financial condition of the Kiev Academy. Next he required the bishops to establish, in connexion with their sees, clerical schools with primary and secondary courses, also organized with a Latin tendency. On these lines clerical schools were established at Kiev and in other sees, after the pattern of the S. Russian schools; and, in spite of lack of funds, they increased in number. At the end of the century there were in Russia three clerical academies (Kiev, Moscow, and Petrograd), 36 seminaries, and 115 clerical schools. From these there went forth a succession of remarkable bishops, ecclesiastics, and writers. In 1808 at the command of Alexander I. the clerical educational institutions were reconstituted and divided into four grades: (1) academies for higher education; (2) seminaries (one in each diocese) for secondary education; (3) parochial schools for primary education, opened in towns and villages. In 1814 new regulations for the clerical schools were promulgated, according to which they were organized as schools for the clerical caste, with clerical form of education and instruction. In 1867-69 and in 1884 the regulations underwent certain changes dictated by experience: these were directed towards improving the material position and regularizing the organization of the schools. At present these institutions are governed by the educational committee of the Holy Synod, established in 1867. Since 1843 schools have been opened for girls of the clerical caste. In 1884 a scheme for church schools in parishes was started,
for the education of the people in the Orthodox faith. These are divided into primary schools (for reading and writing, one-class and two-class schools, and in the schools), which give elementary instruction, and teachers' schools (secondary and training schools), which train teachers for the primary schools. These are all governed by the school council of the Holy Synod, established in 1839.

Until the 18th cent., the missionary activity of the Church corresponded closely with the expansion of the State. Its central and northern provinces had been illumined by the light of Christ's faith in the first centuries after the formation of the State; into its distant provinces, into the regions of the Caucauses and Siberia—Christianity penetrated later. Before the time of Peter the Great missionary activity lacked adequate financial support and had no regular organization. Consequently it could not have any very great success. On the north, Russian fringes of the Russian Church, the number of Christians was insignificant compared with that of the Muhammadans and pagans. But since Peter's time the spread of the gospel among the tribes has been more rapid. Peter himself, though he believed in toleration, supplied funds for the mission, and encouraged converts by various civil privileges. Missionary work was promoted by the empresses Elisabeth (1741–61) and Catherine II., and by the succeeding emperors. The work of spreading Christianity among the non-Russian tribes was specially advanced in the 18th cent, by Tyron, metropolitan of Kazan (+ 1724), Philotheus Leshechinski, metropolitan of Tobolsk (+1727), St. Innocent, bishop of Irkutsk (+ 1731), and in the 19th cent. by Macarius Glukharev (+ 1847) and Innocent Veniaminov (+ 1879). Since 1707 this work has been the care of the Orthodox Missionary Society, which manages nine Siberian missions. In 1913 it was founded a mission council of the Holy Synod, to act as the central authority for the missionary activity of the Church. The Clerical Academy at Kazan provided a separate department in 1854 for the special preparation of missionaries. From Siberia the preaching of the gospel made its way to China and Japan. In Japan the work of the mission was established on firm foundations by the labours of Niedas, the remarkable archbishop of Japan (+ 1708). Japan is also an Orthodox Russian mission in N. America.

The Edinoverie ('One Faith') was established in the Church in order to combat the schism. It first began in 1783, when certain schismatics living about Starodub in the government of Chernigov sent a petition to the synod expressing their readiness to join the Orthodox Russian Church on the following conditions: (1) that the synod should raise the curse laid by the 'Great Synod' of Moscow (1667) upon the use of two fingers in the sign of the cross and upon the other schismatic customs; (2) that the synod should give to the patriarch of Moscow the right to consecrate priests after the ancient rite; (3) that both the bishop and the priests should celebrate the services according to the old books; (4) that the synod should grant them some holy oil (sanire) as before, and its income. But they were not content to shave their beards or wear European clothes. The desires expressed by the schismatics were recognized by the synod as permissible, except the assigning to them of a special bishop. In 1800 the schismatics who entered into communion with the Orthodox Church on the above conditions received the name of Edinoveries.

The reconciliation of the Uniates to the Orthodox Church began in the latter part of the 18th cent., and was completed only at the end of the 19th. After the establishment of the Union at the Council of Brest-Litovsk (1596) the position of Orthodoxy in the west of Russia had become very difficult, and in course of time the Orthodox Russians were driven to seek to join the Uniates, and the Uniates to approximate more and more to the Roman Catholics. By the middle of the 18th cent. of the four Orthodox Russian dioceses in W. Russia only one—that of Mohilev, or White Russia ( kasakas left) this position. The Orthodox Russians of the south-west found an active defender in George Koniskii (+ 1795), bishop of White Russia, who impelled the empress Catherine II. to come forward as the protector of the Orthodox population of Poland, among whom a movement against the Union arose. Many of the Uniates returned to the bosom of the Orthodox Church. When the three partitions of Poland had successively taken place (1772, 1793, 1795), about two million Uniates, freed from Polish rule, returned to Orthodoxy (1794–96) and made up what is now the diocese of Minsk. A second mass movement of W. Russian Uniates joining the Orthodox Church took place in 1839; from that time the only Uniates left were in the Lublin and Siedlice governments of Poland; in 1875 these finally came over to Orthodoxy.

The Orthodox Church, which existed in ancient Russia, and afterwards, in the 15th and 16th centuries, were so specially important in S.W. Russia, had in the 18th cent. fallen into utter decay, and this continued till the middle of the 19th century. Only in 1861, when 'fundamental rule' for the establishment of Orthodox Church brotherhoods' were laid down, did they begin to be restored and to spread throughout Russia. At the present time they exist in almost all dioceses. In the same year, in order to improve church organization, a special Synod of Bishops was made, and a new institution was established, that of church and parish wardships (popечительства), which now exist in connection with most churches.

In the last two centuries, as in earlier times, the Russian Church has produced a line of witnesses to faith and piety, who have been numbered in the canon of the holy saints of God. Such are St. Theodosius, archbishop of Chernigov (+ 1696); Pitirim, bishop of Tambov (+ 1688); Mitrophan, bishop of Voronezh (+ 1703); Demetrius, metropolitan of Rostov (+ 1709); Ioann Maximovich, metropolitan of Tobolsk (+ 1728); Philaret of Irkutsk (+ 1731); Ioasaph, bishop of Belgorod (+ 1754); Tychon, bishop of Voronezh (+ 1783); Seraphim of Sarov (+ 1833). In the spheres of ecclesiastical activity and religious education during the 18th and 19th centuries distinguished names are: Stephen Yavorski, metropolitan of Ryazan (+ 1722), the first president of the Holy Synod; Theophan Prokopovich, archbishop of Novgorod (+ 1756); Plato Levshin, metropolitan of Moscow (+ 1812); Eugene Bolkhotyovitch, metropolitan of Kiev (+ 1837); Innocent, archbishop of Khuers (+ 1867); Philaret Gumilevski, archbishop of Chernigov (+ 1866); Philaret Drosov, metropolitan of Moscow (+ 1867); Macarius Bulgakov, metropolitan of Moscow (+ 1882); Silvester, bishop of Kanov (1908). In religious education a high place belongs to the ecclesiastical educational institutions of V. Klyuevich (+ 1911), E. Golubinski (+ 1912), N. Glukhovski, and others. The political reforms which took place in the Russian Empire in 1905 had also their effect upon Church life. The interests of the Orthodox Church were most nearly affected by the decree of religious tolerance issued in that year. By it subjects of the Russian Empire were granted the right freely to go over from Orthodoxy to other confessions. As a result, under the influence of Russian Catholic and Protestant propaganda, especially in the western provinces, there fell
away from the Orthodox Church several hundred thousand members. At the same time the question arose of the necessity of reforming the organization of the Russian Church and of summoning a council of the whole Church with that purpose. In order to do the preliminary work, a special 'pre-
consultative diocese' was created, and afterwards changed into a 'pre-council'.

In connexion with this consultation there must be mentioned a reform in the Church a command given by the emperor Nicolas II. in 1916 to the secular bishops, and afterwards to the clergy of the priests, and four laymen to the deanery synod; each deanery sent two priests and three laymen to the diocesan convocation; each diocese sent two priests and three laymen to the council, making 320 in all. The clergy of churches of Japan, America and Georgia, and four laymen from the Russian Empire, were also taken by the State and granted to peasants; it is, however, intended that compensation be paid.

A council of the whole Church held in Moscow on 3rd Sept. 1916. Elections had been held in June and July. All adults over 25 years of age took part in it. A special point in the agenda was the sending of reports to the emperor on affairs touching the internal organization of Church life and the essence of Church government, the reports should be made in the presence of the senior member of the Holy Synod in order that each point should be duly considered from the point of view of canon law.

It is too soon (Dec. 1917) to see what will be the effect of the Russian revolution upon the Church. There is little doubt that its special privileges will be taken away, and it will be disestablished. Also the privilege of the Church to be taken by the State and granted to peasants; it is, however, intended that compensation be paid.

RYSBURGERS (OR COLLEGIANTS).

Rysburg, a hamlet on the Old Rhine, six miles below Leeuwarden, was the meeting place of a group of laymen who separated from the Dutch Reformed Church after the Synod of Dort. Similar societies for Bible study were soon formed in many towns of Holland and Germany, and became known generally as Collegia. The Collegia diminished in numbers in the 18th cent., and the Revolution gave them the death-blow.

1. Origin.—The movement was essentially an assertion of the priesthood of all believers, taking shape positively in combined and systematic societies of Evangelicals, and negatively in a repudiation of all ecclesiastical office. It was doubly due to Dirk Valkertszoon Coornhert (1522–00), a notary of Haarlem, who won distinction as engraver, poet, statesman, philosopher, and translator, and to Dekker, his pupil, who was inclined to bow to the judgment of clerical theologians. In particular he criticized the famous Heidelberg Catechism with its views on predestination. A young minister of Amsterdam, Jacobus Arminius, was asked to convince him of his errors, but Coornhertly him over, and thus initiated a general leveling of the ministry through the work of Arminius at Leyden, which culminated in the disruption of 1619.¹

Coornhert had also inherited a love of the vernacular Bible, which had been felt two centuries earlier by Gerard Groe of Groe, the author of the Common Life (q.v.) not only opposed to ecclesiasticism and mendicity; they devoted themselves to charity, and to education on the basis of the Dutch Bible. A barrier in one of their houses, Enzing, when issuing a fresh Latin version of the NT, expressed in its title the hope that others would do for their own people what he was thus doing for the literary world. The hope had hardly been fulfilled in Holland, and only poor versions were available, based on the Vulgate or Luther. Coornhert therefore began a new paraphrase into living, unconventional language: and, as he is acknowledged to have lifted a mere dialect to the level of a literary tongue, creating modern Dutch, he would probably have been the Tyndale of his country, had he lived. He also sketched out a plan of Bible study for groups of people, not dependent on a set sermon, and thus he laid a second train.

The match was put to both by the Synod of Dort, which not only ignored the Remonstrants against persecution, but started the local synods on inquisitions into the doctrines held by pastors and professors, demanding subscription to the Five Points of Calvin, and taking up the five theses of the Roman Catholic Church. The Remonstrants, on the other hand, were more inclined to acquiesce than the priests ejected by Elizabeth; but, until they drew together at Antwerp and systematically mapped out the field for a new organization, their lay sympathizers were thus thrown on their own resources. Conventicles arose again as in the days of Alva, and it was from one of these that the Rysburg congregation originated.

In this village lived four brothers van der Konde, whose father, though but a shoemaker, had educated his large family so well that all were good linguists; a fifth brother, who was professor of Hebrew at Leyden, was ejected at this crisis. Although there was a church in the village, Gysbert van der Konde, a minister of the Church at Warmond, a small town to the north of the village, when the minister there was ejected, Gysbert gathered those of like mind to a conventicle in an apple-orchard. This suited so well that, when the Antwerp committee sent other ministers, he discussed the points of difference with them, and in 1606, the Rysburgers, consisting of two brothers and two sisters, took the lead, helped especially by a fisherman and by Jan Batten, a Leyden man.

They were soon joined by a far more important adherent, who left a deep impress on their minds. Jan Evertszoon Coebergen had been minister at Alkmaar, his birthplace, but, having sided with the Remonstrants, he was banished on 12th March 1618 (or 1619). His forefathers had been in Poland, and were familiar with the discussions provoked there by the appearance of certain Socinian and other Italians; his own views were at least tinted with their characteristic theology. But something more superficial attracted greater attention at the time—his reproduction of their practice, the immersion of believers. He was baptized thus at Rysburg in 1620, and it was commented on as an innovation in Holland. Next year the Poles offered him the rectorship of the university of Rakow, and, though he did not accept, the incident increased his reputation and led him to wider spheres of work. He founded similar societies at Haarlem, Amsterdam, Norden, and Leuwarden, while Dirk Raedelszoon Campbysen established another at Rotterdam, and the movement attained more than local importance.

2. Development.—Thus, within three years, the Synod of Dort had broken up all outward unity by an attempt to coerc e it. Of earlier communions, Roman Catholicism had become negligible within the United Provinces; and the earliest reformers, the Doopsgezinden, or Anabaptists, had become relatively insignificant since Menno Simons had recalled them to the principle of non-resistance. In the times of Alva, the fighting Lutherans and Calvinists came to the front, and the Synod of Dort made it clear that the latter weighed heavier in the balance. The Remonstrants, however, unlike the contemporary Puritans in England, declined to submit, and defiantly organized a rival series of congregations;
thus it appeared as if there would be a variegated fringe of dissent, for the Doopsgezinde themselves were in at least two groups, the Flemings and the Waterlanders. Since these were all averse to Calvinism, negotiations were set afoot to check the divisive forces and to amalgamate into a sort of United Free Church. But the Doopsgezinde intrant ministers believed strongly in the necessity of the pastoral office, whereas Coornhert's writings had aroused in many breasts the feeling that all Christians were priests. Hence in town after town similar societies originated, though with frequent disclaimers of any intention to found a new communion; all were welcomed to the meetings who desired to know the mind of the Spirit, and gave evidence of His working in their lives, even if they chose to remain in any other external fellowship.

At this juncture a new edition of Coornhert's works appeared, and crystallized the movement. His ideas seems to have been suggested by events at Zürich, but had been clarified by developments in England, where the need for better knowledge of the Bible had been widely felt under Elizabeth. The necessity for providing sermons in place of the Masses, for repeating the service of familiar official homilies, but also to the need for training preachers. Since no provision was made for this at the universities or in special seminaries, regular meetings were promoted by some bishops, when these happened to be in the town, or when a preacher was passing by. Several were welcomed, and synods at Wesel, Emden, and Dort had approved, so that similar meetings were held in the great towns for a generation. Coornhert therefore saw a plan actually in use, to which he gave a most important turn. He proposed that such meetings should not be confined to, or be led by, ministers, but should be open to all.

The suggestion was now taken up in earnest, and, while there was much local variety, meetings were generally held twice a week, and lists of texts were prepared to be studied at home, and these were discussed at meetings held on Sunday and Wednesday. Exposition was varied by exhortation and prayer, and a solo was often a lament or invocation. A reaction from the Doopsgeziden came in their attachment to congregational singing, and, while the Calvinist psalms were not favoured, another deposed minister led the way with paraphrases and original poems, till a large selection of hymns was compiled and passed into general use.

The meetings were usually held in private houses, and attendance was compatible with membership in some definite communion. In Amsterdam the numbers were so great that the largest meeting-house of the Doopsgeziden was too small, and the ministers of the Unitarian party attended to improve themselves. Men and women were encouraged to take an active part, especially in the Bible conference. University students from Leyden were often seen at Rynsburg, and it appears that the Rynsburg Collegiants were not without a friendly reception. B꽃schedel, walking over from Deendegeest that he might hear how peasants and artisans dealt with the Bible. The great cities of Rotterdam and Amsterdam were naturally the chief centres, but the history has been recovered of other important societies, at Leyden, Haarlem, Hoorn, Rhenen, Woorner, Zaanland, Alkmaar, Harlingen, Gronw, Knyve, and Groningen.

Nor was the movement limited to the Netherlands. Coornhert had lived for many years in Cleves, and before 1651 Hilarius Frache of Breslau knew of a society near Liegnitz in Silesia. Extension in Germany was due to Philipp Jakob Frankfort, the friend of the Elector Palatine, who gathered in his own house all who would listen to expositions of the NT and discuss them; and for such meetings he borrowed the name 'Collegia pietatis.' Nine years later, in a preface to Arndt's sermons, he made six proposals for reform, beginning with a study of the Bible in private meetings and a fuller recognition of the universal Christian priesthood by the activity of the laity. These proposals were republished separately in 1678 as Pia Desideria, and inaugurated a new movement known in Germany as the Pietists. In Saxony he found a wider sphere for his work, and from his influence arose Collegia liblica' in many places. Several young men trained by him at Frankfort became pastors or professors, and before long Halle was a centre of the German movement; here arose a university center with poorly supported theological and philanthropic institutions of many kinds. From the orphanage went forth a godson of Spener, Count Zinzendorf, who revived the old Moravian Church, and inaugurated Protestant foreign missions.

A study of the German Collegiants has been made by Theodor Sippell of Schweinsberg, who finds that they were rather more rigid than the Dutch: they abjured ordinary churches, held private synods, and kept all their services in their own homes, rejected baptism on the ground that John the Baptist foretold that the baptism of the Holy Spirit would replace water baptism, and were similarly literal in their refusal to take oaths, go to law, hold office, or enlist. Sippell also suggests that the Seekers of Westmorland and Bristol, about 1650, were derived from the Collegiants. Despite the similarity, no external evidence of any connexion is offered, whether by a book or by a man. On the contrary, the Friends, who did absorb close to Leyden, of the Seekers, had no connexion with the Collegiants in Holland as early as 1656, and George Fox betrays no sense of indebtedness; even his references in his correspondence and journals are not always sympathetic, and he passed through Leyden without turning aside to see Rynsburg.

It has also been said that the English Baptists derived their immersion from the Collegiants; but this is an over-statement. A single group of London Particular Baptists did in 1641 send one of their number to Holland, where he was baptized by Jan Batten, then head of a congregation in Amsterdam, a fact not found in Collegiant or kindred literature. Before that date not only had Roger Williams and Ezekiel Holliman baptized one another, but William Kiffin seems to have been baptized in England independently. And, when discussion was opened in Amsterdam in 1656, it had originated in many ways, many Baptists holding to the dictum of a generation earlier that 'sacrience was Antichrist's chief hold.' It might have been expected that a movement of this kind, which had sprung up in Leyden in 1619, would have had some contact with the church of

John Robinson, and that the parallel societies would have attracted attention from Sidiach Sinther Whittington, Willem Hersey, Heremans Homan, roughs in Rotterdam, if not from John Paget in Amsterdam. But the Collegiants were in revolt against Calvinism, and their deliberate ignoring of the ministerial office was hardly to be matched even among the Brownists. Their latest historian is that it was because the body of believers was the origin or in later times, with either Puritans or Separatists. The main thread of their development is to be followed in the Netherlands.

When the university of Raker was closed, many Polish teachers sought refuge in Holland, and to the alarm of the Calvinists. An edict of the States General was secured to limit their influence, and they found that the Collegiant gatherings were almost the only religious meetings which they might attend. They naturally made an impression on the character of Amsterdam, and the Collegiant movement in suspicion, till it became necessary to stipulate that those who frequented the conferences should acknowledge Christ as the Son of God.

The general tone being anti-Calvinist, the same excellent expositions were to be heard at their meetings, as by Laurens Klinkhamer, Abram Galenus, C. and M. van Diepenbroek, and Jacob van Rooyenstein, that many attended who hardly considered themselves members. Moshevers aher that adherents were to be found in most of the chief places of the country.

An important influence entered their circles about this time, that of Spinoza (q.v.). The young Jew had learned Latin from a physician in Amsterdam who had some connexion with them; and when he was excommunicated, he took refuge with another family. His home was the centre of a band of young thinkers. In this period he elaborated his first book, the Short Treatise on God, man, and well being. In 1660 his host moved to Rynsburg itself, and here he worked out his Ethics in correspondence with his friends at Amsterdam, chief of whom was Jan Rievartzoon, the Collegiant bookseller. He left the village in 1663, but continued the correspondence, so that his ideas filtered into the Amsterdam meeting; when the Tractus Theologico-Politicus was published, it was canvassed by them, and a vigorous controversy began two years later between Johannes Bredenburg and Francis Kuyper. His posthumous works were actually edited in their Amsterdam headquarters, and were published by Rievartzoon and the villages of Holland, and at Rynsburg itself a second meeting-house was erected. When, however, both leaders had passed away, the division healed itself as the century closed.

3. Salvation-A. Noah's flood— decided fossilizing the set in. There was still an insistence, in words, on the absence of all officers and on the duty of all to take part in the meetings; but at the chief centres the Bible study was transferred to the Saturday, and a rota of speakers was drawn up for at certain points. The original state of affairs was a brief pause at the close of the address, nominally for any one else to speak.

The question of celebrating Lord's Supper was answered in various ways. Very general reluctance was felt to participate at any ordinary church. Some preferred to regard it as a purely domestic ceremony, but, when the larger societies acquired premises of their own, and no longer met in private homes, the character was inevitably obscured. Indeed, about 1700, all Sunday morning was devoted at Amsterdam, and doubtless at other places, to a combined service somewhat on these lines. The worshippers sat in pairs around a hall, all facing inwards, a table occupying the centre. The president for the day gave an introductory address, disclaiming all authority and eliminating the brotherhood of all, reminding his hearers also that they met to illustrate brotherhood not only between those present but between all believers. After silent prayer he invited all who wished to take their seats at the table, while a solo was sung. He recited the words of institution, and passed the plates to right and left, each helping himself. They ate simultaneously, and the leader gave a few words of exhortation. After silent prayer, the last-named who the women came to the table, and the leader himself sat down to partake with the last sitting. A thanksgiving by him, and a hymn by all, closed the service. It will be seen that this method, despite the initial disclaimer, kept one man unnecessarily to the front, with the service; all others lifted up their voices separately were the soloist— often a professional—and the treasurer, who announced for what purpose the alms were desired.

Another striking feature of the Collegiant worship was designed to unify the movement and keep in the various societies in touch with one another. In and in August conventions were held, both at Leenwarden in Friesland and at Rynsburg in S. Holland; these lasted usually four days. To accommodate the visitors, several buildings arose at Rynsburg, though it was within easy reach of Leyden; it had a large meeting-house; the Mow Cop exerts on the Primitive Methodists or Keswick on members of many communions. The old flax-house was first disused in favour of a regular meeting-house; then arose another at the time of the Bredenburg quarrel; next came a Great House for visitors, supplemented presently by a Little House. A tract of land belonging to an abbey was leased and laid out as a park, with a grove of trees. It is not clear how these buildings were used for the greater part of the year, for the legal adherents were so few that the Amsterdam society assumed the trust early in the 18th century.

A still rarer act of worship was the baptism of any who desired thus to confess their faith. In early rarer, this day took place at irregular intervals, in the brook near the village. But in 1736 a baptistry was erected in this opening, and the societies divided into two groups, and at Rynsburg itself a second meeting-house was erected. When, however, both leaders had passed away, the division healed itself as the century closed.

See arts. BROWNSH, CONSPERATIONISM.
song, prayer, and thanksgiving. It must be emphasized that such a service was held only at Leeuwarden and at Rynsburg, and was exceptional even there. No baptism is recorded from 1738 to 1742, and, in the whole period of seventy-five years for which the registers of Rynsburg survive, only 116 entries are made. Another point illustrated by this register is the growing officialism; in all this period only seven men are entered as lapses. Here, then, are many signs of waning zeal, such as indeed affected most religious bodies at the time. But, while the societies of Germany were revivified by the missionary zeal of Zinzendorf, and in England John Wesley was firing others with enthusiasm for home evangelization, the Collegiants proper were becoming more and more stereotyped. Moreover, instead of launching out in any new direction, they turned their eyes backward and began to write their own history, while hitherto they had been content with two criticisms on a prejudiced account given by Paschier de Fijne in 1671, and incorporated by Brandt in his general History of the Reformation... in the Low Countries.

As in Germany, they were philanthropic. A burgomaster of Amsterdam gave his house, the Orange-Apple, to the local society. It was used as an orphanage, while the Sunday meetings were held in the hall. Presently it was rebuilt, and it became the most important of their edifices. The combination of purposes was characteristic, and other similar institutions arose. Besides the weekly alms, offerings were taken at the conventions, and the figures show that 1728-33 was the high-water period, though 1742 saw the largest collection—400 florins at the August gathering.

By this time, whatever their generosity, they were decidedly decaying, and only eighteen places of worship were open next year. The contrast between wealth and low vitality was enhanced when in 1780 a legacy of 13,000 florins was left to the great orphanage, while the last convention met at Rynsburg on 27th May 1787. In the revolutionary era the societies ceased to meet, and John Rippen, when making a laborious journey into the religious condition of Holland in 1790, failed to hear of them at all. The latest to hold on was at Zaandam, but this collapsed by 1810. The meeting-houses were disposed of one by one to provide funds for the orphans, and by 1828 these last relics of the corporate life had passed into other hands.

The Collegiants had always declared that they were no sect, and they had no ecclesiastical organization, whether of a single society or for the Conventions; therefore there were no minutes of meetings. Similarly there were no creed or other formal documents. The literary remains are chiefly Bible expositions, and even these seem to date rather from the earlier period. The best collection is probably in the Amsterdam library of the Doopsgezinden, with whom their relations were always cordial.

LITERATURE.—Paschier de Fijne, Kort verhaal, Waarzaad, 1671; substance in G. Brandt, The Hist. of the Reformation... in the Low Countries, 1838. Leeuwarden, 1758; S. F. W. T. WHITLEY.

SAADYA.—See SEADIAH.

SABÆANS.—A century ago Arabia Felix was an unknown land. There were but a few references to it in the OT, classical geographers had a little to say, and Arab historians told wonderful stories of it. That was all. To-day, after a hundred years of discovery and the self-sacrifice of a few explorers, it has played the sphinx. A few phrases in the Bible have been set in a new light, the Greek and Roman tales have proved well founded, and the Arab traditions have been largely discredited. One or two, like Hāmidāni, could spell out the inscriptions, but all that is valuable in their stories is in a few names and some references to the latest history. This has come from the discovery of the S. Arabian inscriptions and some monuments of its civilization.

1. History of discovery.—In 1811 Ulrich Jaspersen brought to Europe five copies of inscriptions, but they were so full of mistakes that only one was of any use. In 1835 J. R. Wellsted and in 1838 C. Cruttenden brought home other texts. Then L. Arnaud made his adventurous trip to Marib, bringing back over 50 texts (1843). On this basis E. de Goeje, W. Gessner, and E. Osiander deciphered the alphabet and laid the foundation of all future study. J. Halévy's journey to Negran in 1869 as a Jew from Jerusalem was made at great personal risk; indeed, his safety lay chiefly in the contempt which an Arab felt for killing a Jew. He gathered copies

of nearly 600 inscriptions, and, though much of his work has been superseded, yet it made an epoch in the study of the Yemen. S. Langer gave his life in the search (1883-1913) from that year on have provided the originals or facsimiles of 2000 texts, though most are still unpublished. His services were great; they should have been greater. Since then activity has been limited to the interpretation of texts already known.

2. Language.—The inscriptions are in a S. Semitic language and are written with an alphabet of 29 letters—the 28 of Arabic plus the amplech of N. Semitic. The alphabet is closely related to the Phoenician. Some letters are very like: 23p and 7; others are turned round or even upside down: 3 and 2; while others are slightly altered: 7 and 2. Which is the more original has not been decided. An attempt has been made to derive this alphabet from the Greek. It would be almost conclusive, were not time and space against it. 3 and 2 are more like the Aramaic forms. Of the letters not found in the Phoenician 7 is formed from 2 and 2 from 1. The old Ethiopic alphabet differs very slightly from the S. Arabian; some letters are clearly younger forms, while others are possibly older. So it appears that both descended from a common ancestor. The writing usually runs from right to left, but in some inscriptions, which from internal evidence and by analogy seem to be the oldest, it is boustrophedon. The oldest forms of 2 and 2 are circular, and 7 is either an oblique angle or the form of 2. Later forms become cursive and more complex. These changes have nothing to do with the elegancies of form shown by the most artistic monuments.

1 PSBA xxix. (1907) 123.
The inscriptions are mostly on stone, usually engraved, sometimes in relief, sometimes in hollow-script. They are painted—evident sign of haste. Many bronze tablets have been found with writing in relief, and all sorts of articles—alabaster bowls, statues, etc.—are painted. The language is closely akin to Arabic, especially in grammar, though the vocabulary has much in common with other Semitic languages. It is in common with all early Semitic alphabets—no exact knowledge of the structure of the language. Many old terms are possible to reconstruct, in the middle of words and more freely at the end. Corresponding to it in Arabic, a final s or s as the inde- terminable point of the syllable is expressed by a doublet, or a plural. Two or more nouns are used, and two construct states can depend on one governing noun. The construct depending on a sentence is very common.

There are at least two clearly defined dialects. Minean is much less regular in its writing. It is used in the names of persons and things, and is inserted between a noun and its suffix. The root consonant of the third persons pronoun and the prepositional are always in. There are many differences in vocabulary. In Sabean n is the root of the third personal pronoun and the prefix of the causal stem are y. Weimar, 1955, p. 222, a pitifully small form of the Minean inscription. It has been localized in many places, and this reference is doubtful. In the OT various names occur—even, even, even, being closely connected, may be best explained as a doublet of even, being a fairly exact rendering of the Minean title, and the sibilant has undergone the usual change. It is very doubtful if the Mineans are mentioned in the OT, and so far they have not been found in the Assyrian texts, though Ashurbanipal (c. 645 B.C.) conquered Abyatheh, king of the Arals. Abyatheh is possibly a Minean king, though not on Minean monuments. In 733 Tidath, Pileser III. refers to Tima and Khish. In 715 Sargon names Samsi, queen of Abi, and Ithana the Sabean. So it is assumed that the people were then living in the Near East, and later they migrated southwards. They that as it may, the Mineans and Sabaeans of history were settled in the Yemen. This district was important because it was on the trade route from India and the East. Its kings ruled their wealth to the customs which they levied perhaps more than to the products of their own land.

The names of about 30 kings of Mine are found on the monuments, but, though the order of their reigns has been to some extent fixed, nothing known to settle the time limits of the kingdom. A son of a king of Mine was king of Hadramaut, and had 193 points to close intercourse between the two countries. Their relations with Saba were not always harmonious. More is known of their activity. They were a peaceful folk and their business enterprise was wide-spread. At el-Ula in Arabia, a king of Mine is shown on the caravan route to Gaza, and it has left inscriptions extending over a long period. A serraphurgus was found in Egypt with the epitaph of an Arabian agent in the incense traffic, and in the island of Delos an altar dedicated to Wadd. Controversy still rages over the origin of the Minean alphabet, or whether it was earlier or contemporary with the Sabean. Epigraphic considerations suggest that it was at least no earlier. Strabo's authority is quite familiar with the Mineans and regards them as one of the nations of the Yemen. On the other hand it is argued that for several hundred years they held a commanding position in S. Arabia, and yet they are never mentioned—above all, in Assyrian records. Therefore their power must have come to an end before the arm of Assyria reached so far. But it has been mentioned in the official history of a Minean king. Saba is occasionally mentioned in Minean inscriptions, but Mine are never in the Sabean; therefore Mine was finished as a kingdom. The earlier and later character of the records and their predominantly religious contents, the argument from silence is risky. The attempt to put Mine before Saba, beginning 1400 B.C. or earlier—may be due to the legendary wealth of Arabia Felix; the existence of two states also cannot be reconciled with the tales of the land of gold and incense.

The history of Saba is clearer; about 50 rulers are known, who fall into three classes: (1) 15 are called mukarrlrib (vocalization uncertain) and are obvious the earliest; the title means 'priest' and is parallel to the title miswad borne by some kings of Mine; (2) 17 kings of Saba followed, and then (3) 26 kings of Saba and Raidan (dhu Ra'adun). Perhaps the mukarrls were vassals of Mine. They dwelt in Sidr, their family fortress; when they took the title of king from Bani Marib, the town famed in Arab story for its great dam, the ruin of which coincided with the fall of the kingdom. We do not know when Saba rose to power; it may have been c. 800 B.C. Some of the later monuments are dated according to an era of their own. One from Aden speaks of the period that occurred from events that are known from other sources to have happened A.D. 525. That puts the first year of the Sabean era in 115 or 114 B.C. It is only a guess, though plausible, that this is the year of the upheaval in the state when the new title 'King of Saba and Raidan' appears. The period that ended about this time was that of Saba's glory. To this we owe the references in the prophets to the omnipresent activity of Sabaean merchants. Then the legend of Sabaean wealth arose, and the Queen of Sheba—a gross anachronism—reflects popular ideas on the remote country. Contemporary with Saba were kings of Hadramaut. One inscription reads: 1 'Ishah Yahidh and his brother Ya'zl Bayin the two kings of Saba and Raidan, sons of Fara' king of Saba,' which suggests that the change of name is of some extent fixed, but the change of title was peaceable and due solely to internal causes, possibly the need of being nearer the sea, the new trade route. Raidan is the Arabic Zafar, near Yerim. Or, if Ishah is the Daras of Strabo, the result of Galus's expedition. About this time Aden was destroyed, and Manza, on the Red Sea, took its place for a time. Some think that this change was caused or accompanied by the rise of the race of

1 CIS 334: 'Sha'a Autar king of Saba and Raidan son of Albad Ninhin king of Saba.' Probably this was a customary abbreviation of the second title.
Himyar. Others put the rise of Himyar in the 1st century A.D. The author of the *Periplulas Harmis Erythræarum* (c. A.D. 77), calls Salaph the capital of Kharibat, king of the Homerites and Sabaïtes. Homerites corresponds to Himyar of the inscriptions, Hamer of the Ethiopians. Himyar is occasionally mentioned on the older monuments. The name was taken by the Arabs to cover the whole country and history because it was the nearest and best known to them. In 27 B.C. fell the famous expedition of Zelus Gallus, the only time when Rome tried to conquer the Yemen. He reached Nejarin and the Jaf, destroyed Nesa (Nesam, called the Habbah of Axum), and sank in the sea. Yet Salaph's greatest glory was past. What Alexander had tried to do the Ptolemies accomplished. They opened the sea route to India; so Saba, deprived of its customs duties, fell slow]ly into decay. Arab story has condensed the work of years—perhaps of centuries—into one event, the fall of the dam of Marib, though this was as much the result as the cause of the disappearance of Saba.

Here may be mentioned two other names known to the classics; the Gebasa and the Kattabani. Katarah was the name by which it is known in high rank to the Himyarite and Sabaean kings. They then became independent; a mukarrib is mentioned, and one king apparently became lord of all Arabia, as Evagrius Porphyritus tells us. Priscus knew of the Himyarites when he described some of the incense-bearing districts and in later times held the same views. These views were as long as Thamus and Okeies (near Saik, their capital). They used the Minaean dialect on their monuments.

The Abyssinians now play a part in the history of S. Arabia. Glaser believes that they dwelt originally east of Hadramaut and migrated in historical times, as the Sabaean mercenaries did, under the name of the Saba, and the title of the wars with the Abyssinians. On the authority of unpublished texts he says that there was in 75 B.C. an alliance of Saba and Habashat (Abyssinians) against Himyar and Hadramaut. There are difficulties in this view; perhaps the Habashat are the Egyptians, and the last known king of Saba and Raya'd was alive in A.D. 281. Then came foreign domination, for on the Axum monuments (middle of 4th cent.) the Abyssinian claims to be, according to the Greek text, king of the Axumites, Romeribis, Rada'n, Ethiopians, Saba' yan, and the like, and he is called Seer by the king of Axum, Hamer, Raya'd, Saba, and Selinik (2). Then in 378 native rulers, of whom nine are known, again appear with the title, 'king of Saba, Raya'd, Hadramaut, and Yemenat.' Arabia has now sunk to the ideas in its tendencies, but remained faithful to his overlord in Africa. An inscription bearing his name and the date 543 tells of its turbulent subjects and of a breach of the dam at Marib. This inscription unique because it invokes Salaph of the Merciful One and His Messiah and the Holy Spirit instead of the national gods. In 575 the Persians were called in, and S. Arabia was more or less a Persian province till the coming of Islam.

4. Religion.—As most of the monuments are only inscribed with names of gods we know them. They fall into two classes, and each people had its own favourites. The Minaeans honoured Wadd, 'Athtar, Nikrab, and in a lower degree Shams. According to Glaser, Katabani worshiped 'Athtar, Ana't, Ashr, and Shams; Hadramaut served 'Athtar, Sin, Khal, and Shams; and Saba recognized 'Athtar, Hanbas, Almaqah, and Shams Hanbas—the dier—is said to be the moon as the cause of ebb-tide. What Almaqah was doubtful. He was a specially Sabean deity. He may be a form of one of these gods. There is nothing against this, for 'Athtar is often named twice in one invocation. He is also mentioned by Almaqah. The judgment must be suspended. Some of these deities are clearly celestial—Sin and Shams; and 'Athtar, though masculine, is one with Ishtar (Venus). Arab authors tell of the star-worship of their forefathers. 'Anm is said to be the moon. While there are the chief gods, there are other forms of them: 'Athtar Sharran, the eastern or rising, and 'Athtar Dhu Qabül, a title for which the meaning 'setting' has been suggested, but has found no favour. There are also other forms of 'Athtar in which the god is qualified by names familiar to all men. The apparent conflict must be suspended. In the same way Shams, which is feminine, appears in many forms; she is Dhat Nashq, Dhat Bar'aan, Dhat Hima, etc. Nikrab is assumed to be the god of hate and war—the counterpart of Wadd, the god of friendship. His name is associated with the Arabic *kwrha*. One dedication may be quoted:

'To 'Athtar Sharran and 'Athtar Dhu Qabül and Wadd and Nikrab the gods of Mū'in and Yathil and all the gods of their house and of all the gods of sea and land and east and west and the kings of Ma'in.'

In the other class is Ta'shab, the god of the clan Rya'm, whose temple, Ta'ar, on Mt. Itwa, was a place of pilgrimage. He seems never to have reached full divine rank, but must be regarded as the patron of his worshippers. Possibly he is a development of tree-worship, as Hā'ir may be a stone-cult. In the same way the tribe of Hamdan was specially devoted to Shams and Amur to Dhu Samawi, who may be the lord of heaven and who was worshipped in Haran. His name does not occur in Minaean texts. There are many other gods, but they are only names. In addition to Wadd, who is sometimes described as Sharran, Arabic tradition tells of Uzza, Yaghuθ, and Nasr, who also have positions on the monuments. As this cannot be ruled out in the form N-s-w-r. The modern Jinn finds its prototype in the spirits of wells and watercourses, m-n-d-h. It is not clear whether we should speak of a S. Arabian pantheon. Shams does appear as Umm'athtar, and there is an inscription which may support the hypothesis. TN is not found apart from these two indications, the gods stand alone.

Proper names are instructive; many contain divine names. The general Semitic II is most common, though 'Athtar, Wadd, and others occur.

2. The change of guttural can be paralleled.
Various terms of relationship appear: Ab, Dad, and Akh. Those names that contain Wadd, 'Amm, Khal, might be desecrated, but, provided the gods are meant. Then in place of the divine name an abstract appears — righteousness, protection, salvation, or fear. In place of a god or his quality there often stands the name — Summah, the 'name is exalted.' From such names we learn that gods are represented in concrete form, that he blesses, commands, or saves men who are in some sort his kin. In S. Arabian the is the common noun meaning 'god'; it occurs very seldom in proper names. is very common in proper names; it appears nearly twice as a proper noun and sometimes as a common noun. The popular favourite, Almaquh, never forms part of a proper name. So it appears that II went out of fashion as an object of worship, though habit remembered him in names. In Gn 102 Almodad is a son of Joktan.

'Atthar Sharqan was the guardian of temples and tombs; to him men pray that sacrilegious hands may not be laid on their offerings, though they make no gifts to him. In the lists of gods who are invoked the names of men (especially kings) are often inserted, and there are many references to other persons. It is probable that they were not anything but a memorial feast, and these facts point to some sort of apotheosis or ancestor-worship.

The month of fathers' points to the same conclusion.

The temple was sacred to 'Atthar, and the bull's head was the symbol of the crescent moon. It appears in all manner of forms, from realistic representations of the animal to a conventional object where only the horns are recognizable. Other symbols that may have a religious meaning are the sphinx and the date-palm in fruit. This is often pictured naturally, but sometimes the stem is a truncated cone recalling the pyramid that stands between the horns on the bull's head or that — in conventional designs — supports the horn.

Worship took place in temples that had names of their own. The god took a title from his temple; Almaquh is lord of Awamm. That outside Mariab was an open space shaped like an ellipse surrounded by a wall. Various obelisks formed part of the equipment. It is not clear if there was any system of courts and altars. The middle was the centre of worship. In other places there was a number of obelisks before the gate. Apart from makirrib and misved, several words denote 'priest'; the commonest is . It is usually determined by the name of a god or temple. In one place the chief of a tribe is also its priest, and sometimes the eponym was also. There are many inscriptions in which a man devotes himself, his children, his servants, and goods to some god; perhaps this happened when he was made priest. These men may be the 'people of 'Atthar,' the 'servants of Wadd,' who are often mentioned. The word is usually joined with Wadd; the root means 'to help.' In el-Ula occur the title and its feminine. Arabic suggests that these persons correspond to the N. Semitic gidelhim, which is the name received by the 'Atthar.' Nothing certain can be said about the functions of the priests. Another form of dedication is that in which a man dedicates some other person to the service of a god; these may be gidelhim. The birds are so often played, especially in large numbers; and incense played a great part in the worship. This is evident from the number of altars of incense that have been found and the various names in use for them. A special priest seems to have been in charge of the incense. It has short hair and arms like a god, with fetters in animals in gratitude for favours received or to secure desired benefits. These may be the bronze figures of animals, four or five inches high, that have been discovered. Nothing is heard of images of the gods. Pilgrimage has already been mentioned in connection with Ta'lab. The month of pilgrimage, apparently in the autumn. Their ideas on ceremonial purity were similar to those of other Semitic peoples; but the Minean texts dealing with ritual are obscure and still unestablished. Titles are often mentioned, and perhaps firstfruits, though the word usually has a more general sense.

5. Civilization.—The wealth and luxury of the Yemen were proverbial among the Greeks and Romans, and their tales had a solid foundation. The monuments show the stools, chairs, and couches of which they speak, and tell of gold (gilded?) statues. The buildings and inscriptions that cover the country tell of its wealth, and show that the people were skilled masons. They must have been capable engineers to build the dam at Marib and the city of Marib and its environs. The temples were not so advanced; for the finest lettering accompanies rude carving. The bas-reliefs are lively and show observation, but the execution is rough and clumsy. They succeeded better in sculpture in the round, but there is always the suspicion that such figures may have been models; indeed, the Periplus speaks of an import of statuary from Egypt. A pair of eyes — that degenerate into circles — on a tombstone betrays Egyptian influence. Their work in metal was of a much higher level; and, indeed, the Periplus speaks of a workshop in the numbers and for the first time, but we know nothing of it. The expedition of Gallus may have had something to do with this change. Many coins bear the letter X, possibly a mint mark — Nejran? Various inscriptions and monograms occur. To these remarks there is one exception — an Attic tetradrachm with the head of Hercules and the lion's skin and, reverse, a seated figure with the lower limbs draped; the right hand holds a flower, and the hair hangs in curls, while the face is shaven; the name is and , and it stands in the field. The type which served as model came into use about 300 B.C. The head of the god is hardly distinguishable from Greek work and displays the skill and imitative power of the metal-workers. Bright Hellenistic coins are found, but none are of Greek origin. One of the most remarkable is a tetradrachm in late Hebrew the means 'equalled four denarii.'

The year was solar, and in early times each was named after an eponym, though this custom was dropped with the introduction of the Sabean era. Many names of months were transferred to the Sun, but none agree with those of Arab tradition; hence some may be duplicates. Their order is unknown. Some are derived from the seasons, while others are religious, as the months of pilgrimage and of the religious year. There seems to have been a spring festival of interest the festivals that are being celebrated at the present time. Of the 1 Description in Nielsen, Die altaraabische Mondreligion, p. 106. 2 Os. 90. 3 J. ASR II. [1845] pl. v.
calendar, but they are still too problematical to be mentioned here.

Strabo¹ says that the Mineans practised polyandry, but this is borne out by the Sabaoth. In Sabaoth, the same names in a group refer to the same persons. Elsewhere three men have a son in common. It is quite common to find father and son associated as kings of one state; this probably meant the recognition of the son as heir apparent, and their heirs were in line and sharing the title. Governors (kabir) are named, as the governor of Muṣri,² and the chiefs of the tribes were important people. The government was usually a federal and the line between vassalage and independence was not always sharp. There are several S. Leiden families who own the right to gather the gum. They are hereditary holders of this privilege.

During the harvest they had to separate themselves from women and funerals, and by these religious precautions they improved the crops. There are several S. Arabian names for these aromatic gums, but some still wait identification. The incense was produced in Sabaoth and the Sabaothi, where the priests took a tith of it for the god. Then only could it be put on the market. It had to be carried through the land of the Gezirate, who took their toll. It is suggested that Gabûn comes from the root meaning ‘to collect.’

It is customary to translate the words of S. Arabia borrowed on every hand, yet they were not slavish imitators. The name Arabia Felix seems to have been better merited than such titles generally are.

SABAOTH (Babylonian).—1. The Babylonian sabu.—The word ‘SABAOTH’ has not yet been found in Assyro-Babylonian, though the noun formed from its root, gdôn, occurs not infrequently in both singular and plural. The meaning of gdôn is ‘man,’ ‘soldier,’ and in the plural ‘army,’ ‘host,’ agreeing in some respects with the Hebrew cognate. It is nearly a name of the sun-god, but in the form bêl gdôn, but this has not yet been found. In many historical texts gdôn is replaced by its synonym ummanu (plural, ummanatû, expressed by the same ideograph, so that it is sometimes uncertain which word is intended). The Sumerian equivalent of gdôn is erô.

2. Sù and its Semitic equivalent.—For the meaning ‘hosts,’ the equivalent word seems to be kishtatu (kis Dunn, ‘to be strong,’ ‘numerous’), in Sumerian Sù. In many cases, however, some such rendering as ‘host,’ ‘universe,’ would be preferable, if, in translating, ‘Sû’ or ‘Sù’ with the appearance the character Sù, like that for Utu, the sun-god, was originally the picture of a circle. This implies that it was intended to express the circle of the earth or the horizon of heaven. Other synonymous signs for Sû are, of two wedges derived from a curve probably originally representing the vault of heaven, and kis, a character seemingly used on account of its pronunciation. With the determinative prefix for ‘god,’ ù was one of the ideographs for Merodach, of the people of Sû. Kishtatu is also expressed by the double square or enclosure nínig, meaning a collection of things.

3. Sû in the Babylonian lists of gods.—But the usage of the inscription gives information of a more interesting nature, the most important being the evidence of the ideas of gods and the Semitic legends of the creation. According to a list in Cuneiform Texts from Babylonian Tablets, xxiv. 1, the earliest deities were the two Ana, male and female personifications of the heavens. These occur afterwards as An-ki, ‘heaven and earth,’ and as An-ki and Nin-urna, the two Ana (Anu and Anatu) as deities of fruitfulness. Sixth in the list is An-šar-gal, ‘Anu,’ the heavens, as ‘the great host,’ whilst the seventh is An-ki-šar-gal, ‘Anu and Anatu as deities of the great host of earth.’ The eighth and ninth lines have the name Sû and Nin-šar, containing the earliest use of the Semitic Semitic idea of the root Sû with a development of the idea, as these words apparently mean ‘host of heaven’ and ‘host of earth’—divine personifications who appear in the Semitic creation-story as having been proposed after the Sû—ki Sû, as a substitute for a god, and in which the legend Anu, the god of the heavens, is represented as Anšar’s son. Later, in the same text, Anšar sends forth in turn Anu, En, and Merodach, to fight Tiamat (Tinwath), the dragon of chaos. The next divine couple, in the list of gods, whose names contain the Sumerian equivalent of Sabaoth consists of En-šar and Nin-šar, the ‘lord of the host’ and the ‘lady of the host.’ This makes a total of six couples, the seventh being represented by the Sumer.-Akkadian Duri and Duri, perhaps ‘Age and ‘Eternity,’ the two non-concrete forms or counterparts of a god and goddess, whose number is changed into infinite time. Concerning the Babylonians we cannot speak with certainty, but the Sumerians at least seem to have realized, at quite an early date, how multitudinous were the characters, and how they had evidently also formed the theory that the gods dwelling in the heavens (and this would include their divine servants and the angels) were at least equally so. As a confirmation of this, the British Museum tablet K.2109 gives (text, 3, 4), as a synonym of Dû, the ‘great gods,’ the reduplicate word Sû-baño, ‘the very numerous,’ or (as the prefix for divinity shows that we should translate) ‘the divine host.’

¹ See ERE iv. 1299.
SABBATH (Primitive) 885

4. Anu and his divine partners.—Naturally it was the really 'great' gods who exercised rule in heaven, where all divine beings obeyed them. In agreement with this, the account of the attack of the evil spirits upon the moon (this was supposed to be the cause of our satellite's eclipses) speaks of Sin, Samas, and Istar having been set to rule the vault (šimmû) of heaven, and 'with Anu they shared the dominion of the host of heaven' (Sum. kis ana. Sem. kishā šamù, kis here replacing the seemingly more correct šar). Here, again, Anu appears as the god of the heaven-host; but it is to be noted that, when Marduk became king of the gods, power over the host was conferred on him, and, as stated in a well-known hymn to that deity, 1 'the Igigi of the host of heaven and earth' (ligigī šakhitā šamū d’ēritī) were said to wait upon his command. It was for 'the host of heaven and earth' that the new moon shone (uzkarm annum ina šumī ti ēritī šabāni), 'this crescent among the host of heaven and earth was created'; in Sum. 'this crescent of the heaven-host [and] the earth-host,' and in Akkadian WAI li 60, line 32, as patron of a city which is doubtful, but which is possibly the Rabbi of line 30. If this means 'the city of the host,' it may be supposed that the 'host of heaven' was worshipped there.

5. The god Ašur as the leader of the Assyrian host.—It is to be noted that, in his abstract of Babylonian cosmology, although Damascius 2 gives the feminine principle preceding Ea and Damkē as Kissarē, the masculine companion of the same is not, as would be expected from the Babylonian, Anarē, but Assōrē (Arēsarē). Now, as the name of the god Ašur is most commonly written with the characters An-šar, there is but little doubt that the Assyrian name had influenced the pronunciation, and changed it, even in Babylonia. Whatever may have been the original root of Ašur, therefore, the Assyrians had applied the name of the god to the compound group An-šar, and the Babylonian god of the host (of heaven and earth) became the god of the armies of Assyria. He is represented, in the sculptures of Ašur-nasir-apli, and wherever within the winged disk, flying in the air above the army, and drawing the bow against the foe. 3 We have here, apparently, an Assyrian parallel to the Hebrew 'Lord of Hosts, God of the armies of Israel.'

6. Sar = kisšati in the titles of the kings.—As a title of the kings of Assyria, Sar kisšati, 'king of the host' (of people or of nations), is fairly common. In Assur-nasir-pîrî I. (c. 1530 B.C.) bore it, and it seems to have been also adopted, more or less regularly, by his successors. In Babylonian Man-î-atun (c. 2700 B.C.) calls himself inugal kis, which, in its common acceptance, would be equivalent to sar kisšati; but kis may stand for the city of Kis, over which he ruled (though it is difficult to understand, in such a carefully- engraved text, how the determinative suffix could have been omitted). Perhaps the modesty of certain Babylonian kings did not permit of their using the sar which accompanies divine names. Among the later Babylonian rulers who used the title 'king of the host' (of men) were Nebuchadrezzar the Great and Cyrus. It is mainly the German Assyriologists who have discussed the meaning of the phrase sar kisšati. H. Winckler thought that it indicated 'king of a fixed definite territory.' C. P. Tiele was of opinion that it indicated 'something like world- lordship.' Leopold Messerschmidt suggested that sar kisšati and 'king of the four regions' signify the possession of two territories, and were not mere titles. F. Hommel holds similar views to the above. C. F. Lehmann-Haupt renders sar kisšati (so. nisī) as 'king of the totality of nations.' H. V. Hilprecht is of opinion that the title was first used by the kings of Kîš, and was due to word-play (see above).

To all appearance the Assyro-Babylonian idea of the host of heaven was that it consisted of all the divinities whom they regarded as dwelling in and beneath the sky; and the stars and heavenly bodies in general, identified, as they were, with the gods, were included therein. The host of the earth apparently included, in its widest sense, everything in the world which the god had created. In its narrowest sense, however, the latter stood either for all mankind or for the nations under the Babylonian or Assyrian kings, wherever they had made their rule effective.

Muhammadan (G. MARGOLIOUTH), p. 893.

The observance of rest-days forms a fairly common custom in the lower culture, if exception to be made of the Australian, Melanesian, and American areas. But the rest-day among so-called primitive peoples is as a rule not periodic in character, nor is it related to a deity and employed for religious services. Furthermore, it is usually marked by various regulations which can only be described as superstitions. All public gatherings may be discontinued, the house or the village closed against strangers, lights extinguished, songs, dances, and loud noises forbidden, and abstinence from food and sexual intercourse required. The day of rest then presents itself as a day of complete quiescence.

3 A. H. Layard, Nineveh and its Remains, London, 1849, ii. 418, Monuments of Nineveh, 1st ser., do. 1849, pl. 13, etc.

5 T. G. PINCHES.
All these negative regulations find their clearest expression in the tabus which have been studied, first among the natives of Polynesia, then in some other parts of the aboriginal world, and finally among peoples of archaic civilization. Tabu, indeed, is a wide-spread institution, and evidence for its existence steadily accumulates with the progress of ethnological research. 1 A tabu may be defined as a negative regulation or prohibition which is supported by supernatural sanctions. The penalty meted out to the tabu-breaker is generally death or some physical ailment such as insanity, but the priest and king, who belong to a superior order of beings, are sacrosanct or holy. These characteristics are easily regarded as infectious, as capable of transmission, not only by physical contact, but also by sight, smell, and proximity. Hence they are the basis of a variety of prohibitions whereby the dangerous person or thing is removed to a safe distance, or is carefully isolated, or is subjected to a variety of insulating regulations. The entire community is interested in such proceedings, and observance of them may be maintained without rigid quarantine. When this happens, a period of abstinence, merging into quiescence, will be considered the surest means of avoiding spiritual dangers which threaten each and every member of the body politic. Moreover, when the impending danger is specifically attributed to the action of spirits or of gods, the observance of the rest-day readily develops into a method of propitiating, and even of honouring, the supernatural powers. The two conceptions of abstinence and propitiation are not, indeed, always sharply distinguishable in communities such as Polynesia, and with advancing culture they tend to become more and more closely conjoined.

It is not improbable that some of the communal regulations observed in connexion with primitive sabbaths have been modelled on the tabus observed by single persons and household groups at such critical seasons as birth, puberty, marriage, and death. Comparative studies have indicated how numerous are the prohibitions which attach to these occasions, and it is reasonable to suppose that, with the deepening sense of social solidarity, observance once confined to the individual only to his immediate connexions, would often pass over into rites performed by the community at large. However this may be, primitive sabbaths certainly present themselves as public ordinances which bear an obvious resemblance to the entire sabbath institution.

2. Sabbaths at critical epochs.—A survey of many rude societies shows that any time of special significance, inaugurating a new era or marking the transition from one state to another, any time of storm and stress, any epoch when untoward events have occurred or are expected to occur, may be invested with tabus designed to meet the emergency in the communal life and to ward off the threatened danger or disaster. Throughout Polynesia, in Indonesia, and in certain parts of S.E. Asia there exists, or until recently existed, an extensive body of communal sabbaths, whose purpose appears to have been entirely prophylactic and protective. In that part of the world periods of abstinence and quiescence are imposed because of such unusual, and therefore critical, events as a conflagration, an epidemic sickness, or an earthquake; after a death; at the changes of the moon; in the end of one and the beginning of a new year; during a period devoted to the banning of ghosts and demons; and in connexion with such important undertakings as the commencement of a war, seed-planting and harvest, and the celebration of a solemn religious ceremony. The procedure in such cases is this: If the man who offended is the tabu in his own family, the religious ceremony is changed to itself to a number of negative regulations, imposing idleness, fasting, and continence upon all its members.

These sabbaths at critical epochs formerly constituted a noteworthy feature of Polynesian life, especially in old Hawaii, where the institution of tabu perhaps reached its acme of development. Their observance varied according as they were common or strict. When a common season prevailed, the men were required only to abstain from their usual duties and to attend at the temple, to be silent, and to observe silence. When a strict period was determined, the persons who so offended were either isolated or all the people were put into a state of abstinence and quiescence. In the month of October, there were tabus to be observed during the celebration of the festival called the Day of the Dead. When the aforesaid period of thirty days had expired, the religious ceremony was resumed, and the sabbath was at an end. The people were now required to converse with each other, to eat and drink, and to engage in every species of occupation, so that the people could thus return to a normal state of body and mind. Hence the tabus which were observed during this period were not, as was the case in other seasons, regarded as infectious, and were not, therefore, communicated to others by mere contact.

Communal tabus of the strict type that has been described were observed by the Hawaiian Islanders on a variety of occasions, particularly when a chief temple was consecrated and when the New Year's festival was celebrated. The Hawaiian religious system also included a remarkable approximation to the institution of a weekly sabbath. At every lunar month there were four tabus periods, dedicated separately to the four great gods of the native pantheon. The first was that of Ku, from the third to the sixth night; the second, that of Hina, at full moon, including the fourteenth and fifteenth nights; the third, that of Kalon, on the twenty-fourth and twenty-fifth nights; and the fourth, that of Kane, on the twenty-seventh and twenty-eighth nights. During these tabus periods a devout king generally remained in the temple, busy with prayer and sacrifice; women were forbidden to enter canoes, and sexual intercourse was prohibited.

3. Seasons of communal abstinence and quiescence were enforced in the Society and Marquesas Islands in connexion with the bonito fishing, and in New Zealand at the time of planting the kumara, or sweet potato. 4 In the Tonga Islands, when the sacrifice of firstfruits occurred, all work was forbidden, and even any one's appearance out of doors, with the exception of the consecrated person who was interdicted. 5 The natives of Samoa, who possessed a remarkably complex pantheon of divinities with animal and vegetable attributes,
were obliged to suspend work on certain occasions devoted to their worship.1 During December, when the god Ratu-mai-Mbaliu was supposed to visit the Fiji Islands, a sabbatical period ensued.

Throughout that month it is taboo to beat the drum, to sound the conch-shell, to dance, to plant, to fight, or to sing at sea. ... At the end of the month the priests sounded the consecrated shell and gave the good news from village to village, and pleasure and toil are again free to the inhabitants.2

The scanty records of aboriginal Polynesian society also contain some passing references to the observance of communal sabbaths on certain occasions when the social consciousness had been deeply moved by untoward and disastrous events.

In the island of Futuna 'they go so far as to tape the day, etc., to interdict all work in order to please the gods, or to avert the hurricanes.'3

In Hawaii a tabued period was declared during the sickness of a chief.4 In Samoa the death of a chief of high rank was followed by the suspension of all work in the settlement for a period of from ten to thirty days, until the funeral ceremonies were performed.5 On the island of Yap, one of the Carolines, two aged wizards, before whom all important questions come for decision, have the power to pronounce a sabbatical period. The periods of seclusion have been known to last for six months. The critical epochs, when such interdicts are imposed, occur at a time of drought, famine, or sickness, after the death of a chief or famous man, and before a fishing expedition. To short, any mobile event is thus celebrated, and, in fact, there is always a tabu in full swing somewhere or other, to the great disgust of the traders, who only see in these holydays an excuse for idling, drunkenness, and delackery.6

Seasons of communal abstinence are not found in Australia, and only faint indications of them exist within the Melanesian area. In New Guinea a few instances have been noted, all within the British possessions there. On the other hand, the Indonesian tribes of Borneo, including the Kayans, the Sea Dayaks, and the Land Dayaks, keep many sabbaths in connexion with agricultural operations and other critical events. The Besaussians disclose a fairly consistent effort to adjust the length of the communal tabu to the importance of the event which it commemorates. Thus, house-building imposes a shorter season of abstinence than does planting or sowing; a single death will suspend the observance for three days, but the death of a great chief will keep the tabu by the inhabitants for only one day; but an epidemic sickness may necessitate a three days' rest, as among the Sea Dayaks, or even an eight days' rest, as among the Land Dayaks. The restrictions themselves appear to be substantially the same in all instances.

The inhabitants 'remain in their houses, in order to eat, drink, and sleep, but their eating must be moderate and often consists of nothing but rice and salt. They under interdict may not bathe, touch fire, or employ themselves about their ordinary occupations.'7

To these prohibitions should be added that of sexual intercourse, a tabu specifically mentioned for the Bornean tribe,8 and probably found among others.

Communal sabbaths appear to be unknown to the nomadic hunting tribes which occupy the interior parts of Borneo and probably represent an acquired habit among the aborigines under certain circumstances.

8 R. S. Douglass, in Smithsonian Museum Journal, i. (1911) 146ff.

SABBATH (Primitive) 887

Consideration must therefore be an Indonesian importation into Borneo—a conclusion which is strengthened by the fact that similar observances are to be found among the Indian inhabitants of the Nicobars, Bali, Nias, the Mentawi Islands, Formosa, and the Philippine Archipelago. A typical instance is afforded by the inhabitants of the Pagi Islands, which form the southern extension of the Mentawi group. These people worship the evil spirits which manifest their power in thunder and lightning, earthquakes, tornadoes, and floods. When confronted by some real or imaginary danger, they shut themselves up in their villages and exclude all strangers. During this period of seclusion they may neither give nor receive anything, they must refrain from eating certain articles of food, and they may not engage in trade.1 Another authority points out that, while all crises in the communal life of the natives are thus kept as periods of restriction, yet in some cases the rest-days have become joyous festivals and holidays.2

Assuming, with modern ethnographers, that the Indonesian peoples represent an admixture in various proportions of primitive Indian and Sino-Tibetan blood, one may discover that in certain parts of S.E. Asia, and notably among the Tibeto-Burman tribes of Assam and Buruia, communal sabbaths form a characteristic feature of the native culture. The word genna, which the Nagas of Manipur apply to anything tabooed or forbidden, also signifies the village rest-days imposed in connexion with the rice cultivation, after the occurrence of unusual phenomena, such as earthquakes, eclipses of the sun or moon, and the appearance of comets, the destruction of a settlement by fire, and the outbreak of epidemic sickness.4 Indeed, as an early writer remarks, there 'is no end to the reasons on which a keenie must or may be declared, and as it consists of a general holiday when no work is done, this Sabbath appears to be rather a popular institution.'4

The genna custom seems to have attained its most complicated and grotesque development among the Nagas, but it is found among other peoples of Assam and may be traced in various parts of Burma.

The close resemblances which exist between these sabbatical observances in S.E. Asia, Indonesia, and Polynesia, and prohibitions which are here in the presence of an institution which has been gradually diffused from its Asiatic home over the Indian Archipelago and thence into the islands of the Pacific. But it will not do to infer that the conceptions which in this part of the world have generated the tabued day are therefore local and confined. On the contrary, they underlie a wide range of social phenomena.

There are few superstitions with a wider prevalence among the lower races than that which requires the suspension of ordinary occupations for a day. The prohibition which at this time usually forms only one of a number of regulations, which also impose partial or complete abstinence from food and place a ban on loud talking, singing, and the wearing of ornaments and gay clothing. The exceptional period is sought partly in animistic conceptions: the survivors ought to avoid all conspicuous activity, if they would not attract the unwelcome attention of the gods. But a more common belief is that in the pollution of death—a belief which leads to

1 P. A. M. Hiernon and R. Stecque, Zeitsehrift für Indische Taht, Land-, und Volkskunde, iii. (1855) 3391.
2 A. Assm. in Ze. xxi. (1906) 555ff.
many regulations as to the proper treatment of a corpse, of undertakers, of the dead man’s family and friends, and of mourners generally. The polluting power of death extends to everything in its presence; hence the obvious conclusion that little or nothing should be done by the survivors, at any rate till after the funeral. These tabus are often confined to the family or to the relatives of the dead and bear only a secondary relation to some solidarity is strong, the notion of abstinence at so critical a season may be extended to the entire community.

An inquiry into the geographical diffusion of this superstition shows it to be not unknown in Borneo, Micronesia, New Guinea, Labrador, and some other parts of the Oceanic area. It is discoverable in Assam, Burma, various parts of India, and Tibet. Africa from north to south offers many instances of communal tabus following a death and imposing abstinence from work. In the New World the Eskimo tribes from Bering Strait possess the custom in a marked degree. It is also found among some of the Asiatic Eskimo, thus strengthening the argument for the transmission of cultural elements betwixt W. America and N. E. Asia. Since these tabued days are only one of the instances of related peoples, who, as far as our knowledge reaches, have never been in cultural contact, it may be concluded that the beliefs underlying the superstition have not been narrowly limited, but belong to a wider system of thought.

3. Sabbatarian aspects of religious festivals.

The fact that most religious festivals are observed as holidays, when men give up secular occupations and devote themselves to joyful worship and relaxation of all kinds, should not lead to the assumption that all tabus have been dictated by native or related peoples, who, as far as our knowledge reaches, have never been in cultural contact, it may be concluded that the beliefs underlying the superstition have not been narrowly limited, but belong to a wider system of thought.

The rest is a measure of protection and propitiation, quite as much as the fasts, the sacrifices, and the prayers by which it may be attended. Where ideas of this nature prevail, all labour is tabued.

As savagery gives place to barbarism and from savagery to polytheism, the massacre, the vague and indeterminate, tends to differentiate into the twin concepts of impurity and holiness. To the primitive mind the sanctity which attaches to the priest or king, to such objects of special reverence as bull-roarers, idols, and altars, and also to certain places and shrines is sufficiently material to be transmissible and to be capable of infecting with its mysterious qualities whatever is done at a particular time. The notion of the transmissibility of holiness may seem of itself to furnish a sufficient reason for abstaining from ordinary occupations on a sacred day. In practice, however, this idea appears to mingle quite inextricably with the opposite too much related conception that what is holy can be contaminated by contact with the secular and the profane. Furthermore, when holy days come to be dedicated, we find that the deities, who at such times are believed to be present among their worshippers, it is easy to see how the belief arises that a god is pleased and flattered by the enforced idleness of his devotees. Abstaining from work then takes its place among other rites as a recognized way of expressing the proper reverence for the divinity; while, conversely, to labour on his holy day implies a disrespectful attitude towards him.

The consecration of a particular day to a divinity is a common feature of polytheistic cults. Had we definite information concerning the origin and development of the great deities of the higher religions, it would probably appear that in most instances their connexion with particular days is secondary rather than a primary formation. In other words, a period dedicated to a god, and observed by his worshippers with abstinence from labour, may once have been a season of tabu for the deity and may still be so, though the nature of some instances of tabued days which developed into holy days may be noted. Thus, in the comparatively well-developed religious system of the Hawaiians, the New Year’s festival was consecrated to the god Lono; but the same festival in Fiji was not associated with any religious idea. The four periods in the Hawaiian lunar month, which were dedicated to the great gods of the native pantheon, must be considered to have had no original connexion with any divinity, for among the Dayak tribes of Borneo there are numerous tabus attached to the sacred days of the moon and imposing communal abstinence. The Bontoc Igorot, a non-Christian folk of N. Luzon, observe a sabbath which occurs, on an average, about every ten days during the year. It is dedicated to Lumawig, the only god throughout the Bontoc culture area. Examinations of the institution exhibits a tendency, doubtless directed by the Igorot priesthood, to calendarize seasons of tabu at definite and regular intervals. Its dedication to Lumawig is probably only a natural outcome of the pre-eminence assigned to that supreme god, who stands out in such bold relief against the host of ancestral spirits, gods, and goddesses of the Igorot world. Some of the Dravidian peoples of India hold festivals in honour of their local deities, when labour is usually suspended. Mother Earth, an object of much devotion in Bengal, is worshipped at the end of the hot season. The goddess generally manifests herself as the sovereign source of all things, but sometimes she brings disease and hence requires a propitiatory festival. At this time all ploughing, sowing, and other work cease, and Bengal widows refrain from eating cooked rice. A similar sabbath in honour of Mother Earth is very strictly observed in the various tribes of the north-west coast of W. Africa, we find on the Slave Coast an annual All Souls’ festival kept as a period of abstinence. The festival is held in honour of Egungun, a god who is supposed to have arisen from the dead, and after whom a powerful secret society has been named. A similar ceremony, imposing a cessation of work for eight days, is observed by the Gold Coast tribes, who, however, have not dedicated it to a god. These instances, which do not exhaust the evidence, illustrate the passage of the tabued day into the god’s sacred day.

4. Sabbatarian aspects of market-days. — Rest-days, more or less regular in occurrence and following at short intervals after periods of continuous labour, are frequently observed by primitive agriculturists. Sabbaths of this sort appear to be known to the aboriginal stock of many peoples or among nomadic pastoral tribes. A wandering hunter requires no regular day of rest, since his life passes in alternations of continuous labour, while following the chase, and of almost uninterrupted idleness after a successful hunt. For the sheepman there can be no relaxation of the diurnal duties, for the cattle must be driven to

1 A. E. Jenks, The Bontoc Igorot (Ethnological Survey Publications), Manila, 1905, i. 299 ff.
pasture every morning; they must be watched and watered; and at night they must be milked.

Again, the shepherd, compared with the farmer, scarcely needs a regular rest-day; his occupation requires so little continuous exertion that he can pursue it all the year round, without much influence upon his health. A farmer, however, is benefited by a period of rest occurring more or less regularly; and, though agricultural pursuits are dependent upon the seasons and the weather, he is usually able to post-pone his work for a brief period with impunity.

It is certain, therefore, that the change from pastoral to agricultural life would itself be sufficient to call into existence the institution of periodic rest-days. It seems true, however, that the connexion of the rest-days with the farmer's pursuits is due to the obvious fact that a regular sabbath implies a settled life, a fairly well-developed form of social organization, and something approaching a calendar system.

The greater number of periodic rest-days observed by agricultural peoples in the lower stages of culture are associated with the market or market-day. Days on which markets regularly take place are not infrequently characterized by sabbatarian regulations. Such market-days have a wide diffusion. Markets every fifth day are found in various parts of New Guinea, in Celebes, and Java, and, among the Borneo natives of Tongking, Siam, and Burma. Throughout the central parts of Africa, from the British and German possessions in the east to those of the Portuguese and French in the west, there are numerous market-places where neighbouring communities meet regularly to exchange the products of their labors. Usually every fourth day is a market-day and is observed by the cessation of ordinary occupations. A similar custom exists among the peoples on both banks of the lower Congo. The market is a well-developed institution among the semi-civilized negroes about the Gulf of Guinea. Here we find market-weeks varying from three to ten days in length. One week-day is usually reserved for the market and is often regarded as the appropriate time for abstaining from toil, including labour, as well as sexual intercourse, sports, and amusements of all sorts.

Such seems to be the character of most of the market-days found in S.E. Asia and the adjacent islands, as well as in some parts of Africa. In the Congo region, however, the market-day sometimes bears an unlucky character, and a distinct tendency exists to attach various restrictions to it. In the Guinean region the market-day often (though not always) coincides with the general day of rest observed by an entire community. As such it is deemed a god and is observed. This extensive development of sabbatarian regulations appears to be confined to Africa.

5. Unlucky days as sabbaths.—The observance of unlucky days is a familiar phenomenon in primitive peoples and archaic civilizations. Under the attenuated form of a survival the superstition still lingers in civilized lands. The precautions which characterize these days—not to engage in various activities, not to eat specified articles of food, not to engage in sexual intercourse, not to travel, not to buy or sell—illustrate clearly enough the general likeness between periods tabu and periods deemed unlucky.

A common source of the belief in unlucky days is to be sought in the erroneous association of ideas. If an unfortunate event has taken place on a certain day, the notion easily arises that all actions performed on the recurrence of the day will have a similarly unfortunate issue. Among the Kaffirs of W. Africa, e.g., the most unlucky day is the anniversary of the Saturday on which Osa Tutu was slain in ambush near Acronanti in 1731.

The observation of natural phenomena often accounts for the unlucky character assigned to certain superstitions. The tendency is, for instance, to regard the unemployment of the market with the superstitious belief that the unemployed are the spirits of unlucky days. Among the Tujeran, a nautical superstition that the wind will not blow at the time of the full moon is to be explained from the observation of the effect of the moon upon the ocean. In the equatorial region the wind often ceases for several days after the new moon. This cessation of the wind was observed, and the effect of the moon upon the wind was inferred. If this effect is supposed to be produced by the moon itself, the more distant the full moon, the less is it likely to blow; hence, the full moon is considered unlucky.

Among many peoples in the lower culture the time of new moon and full moon, much less commonly of each half moon, is a season of restriction and abstinence. The lunar day is sometimes a holy day dedicated to a god, who may be identified with the moon itself. Other instances of the superstition are to be correlated with the general course of religious development, involving, as it does, the emergence of polytheistic cults and the institutionalization of the ritual. But under more primitive conditions the lunar day is an unlucky (or tabbed) day, quite independent of any association with a deity. The existence of these lunar tabus in Polynesia, Indonesia, and Africa, to say nothing of the survivals of them in Asiatic and European lands, throws light on the origin of the Hebrew Sabbath and its assumed Babylonian original.

The observance of unlucky days has undoubtedly retarded human progress. They hinder individual initiative and tend to prevent the undertaking of lengthy enterprises which may be interrupted by the recurrence of an unfavorable period. Their extensive development compels industrial, political, and social conditions where, as in modern Ashanti and ancient Rome, assemblies could not be held, or courts of justice stand open, or armies engage the enemy, when the unlucky day came round. It is equally obvious that all such beliefs play into the hands of the astrologer and magician, and thus tend further to strengthen the chains with which superstition fetters its votaries.

LITERATURE.—The authorities are quoted in the article. For a much fuller discussion of the subject, see Hutton Webster, Rest Days, New York, 1916, esp. chs. I—v., ix.

HUTTON WEBSTER.

SABBATH (Babylonian).—Notwithstanding that the Sabbath, as we know it, is a specifically Hebrew institution, there is every probability that it had its origin in Babylon. In that country, however, it was not the seven-day week used at the present day, but the seven-day week, owing to the Creator having rested from His work on that day (Gen 2), but was due to the festival of the full moon on the 15th

2 E. Thurston, Omens and Superstitions of S. India, London, 1912, p. 44.
day of the month, when the earth's satellite 'rested' for a while at the height of his brilliancy. 

The Akkadian (Semitic Babylonian) word for 'sabbath' and its origin.—The word by which the Babylonian Sabbath is designated is the somewhat rare term  Ngô-tu or  Ngô-tu, long known to Assyriologists, and early recognized as the probable origin of the English word Sabbath (Hebrew 'Shabbath'). The word was derived not only from the Sumerian še-bat, a compound meaning 'mid-rest' or 'heart-rest' ('day, heart; bat, to reach the end'), but also from the Semitic Babylonians paraphrased as inn niš tiłbī, 'day of rest of the heart' ('day of mid-repose'), in WAI ii. 32, 16ob. That this was not the designation of the last day of the seven-day week, however, is shown by the fragment published in WAI iii. 36, no. 4, l. 27, completed by the duplicate in PSBA xxvi. [1904] pl. xxvii. pp. 51-56, where it is explained as the 15th day of the month, when the moon was more or less at the full.

2. The moon's 'mid-rest' in the creation-story. 

The reason of the adoption of the 15th day of the month had been explained to the Semitists of the seven-day week of the Babylonian calendar System. The moon's seventh day is seen to be the mid-rest of the creation. The Semitic Babylonians paraphrased the Sumerian ū-ḫul-gallûn, the day of rest of the heart, as  개념 tiłbī, 'day of rest of the heart' ('day of mid-repose'), in WAI ii. 32, 16ob. That this was not the designation of the last day of the seven-day week, however, is shown by the fragment published in WAI iii. 36, no. 4, l. 27, completed by the duplicate in PSBA xxvi. [1904] pl. xxvii. pp. 51-56, where it is explained as the 15th day of the month, when the moon was more or less at the full.

3. The Babylonian Sabbath and the seven-day week.—This is the week with which we are so well acquainted, and which Christians have adopted from the Hebrews, merely changing the day of rest from the seventh to the first day. Here, however, ša-bat and  Ngô-tu, its derivative, were used from the seventh day of the Babylonians, but another word was used which they evidently considered more proper, namely ū-ḫul-gallûn, from the Sumerian ū-ḫul-gal-ga, which they translated as ṣuī līmu, 'evil day.' This was the 17th, 24th, 21st, and 28th days of every month, so that, as the Babylonian months had 29 or 30 days each, every month consisted of three weeks of seven days each, and one of nine or ten days, according to the length of the month. Two reasons may be suggested for the adoption of this seven-day period (1) the seven-day period is the ordinary Jewish period of rest and (2) that the fact that the period of a hintation may be divided, roughly, into four sections of seven days each. The following is the paragraph given by the Semitists for the observance of the seventh day of the month as a sabbath:

The day is a holy day (abies) of the king and Zerubbabel, an acceptable day, an evil day (ū-ḫul-gallûn). The shepherd of the great tribes (ū-bībīt) shall not eat salted meat cooked over the embers, he shall not change his body-clothing, he shall not be clothing in white, he shall not offer a sacrifice. The king shall not ride in a chariot, he shall not speak to the titans. The sabbath shall not make a wish.

To this the hemerologist for the intercalary Elul adds:

in the night the king shall bring his offering into the presence of Merodach and infants, he shall make the sacrifice. The raising of his hand (in prayer) is acceptable with the god.

The entries for the other weekly days neši fortress are the same, except that the 14th was dedicated to Nin-lila and Nergal, to whom the king brought offerings and sacrifices at night-time; the 21st was the day of votive offering to Sin (the moon-god) and Samaš (the sun-god), when, but king made his offering to Samaš and 'the Lady of the lands,' to Sin and Mah, Merodach's spouse, whilst the 25th was the day of Af (goddess of the deep and of unfathomable wisdom) and the 'rest-day' (Sumerian ē-nām, Semitic (ū-bībī), of Nergal, the god of war, disease, and death. On the 25th the king made his offerings to Ėča and Mah.

The contract-tablets seem to indicate that trading and mercantile transactions, including those requiring legal advice and composition, were continued by the king and his attendants on all the other days of the week, even the 'unallowable' days just as on any other week-day, though oracles or omens may have been consulted beforehand. The directions given in the hemerologist, therefore, refer only to the persons and officials named—the high-priest (who apparently occupied his spiritual functions), the king, the chief priest, and the physician (all of them, probably, in what the Babylonians would have regarded as 'sacred orders'). As the next phrase [that concerning the making of a wish] is in general terms, this alone seems to refer to the ordinary week-day. Then nightfall the king was apparently removed, for sacrifices and prayer were then allowed to be offered.

Of special interest in connexion with the seven-week period is the 19th, day of the month, which was a 'week of weeks' from the first day of the period. This, like the others, was an ū-ḫul-gallûn; but it had a special designation, namely ūm tiłbī, explained as ūm ūgallī, 'day of anger' (ib or iba in Sumerian means 'anger'; hence this rendering). It may therefore be supposed that the preparations for the sabbath were especially strengthened on that of the week of weeks. This great day was dedicated to Guila, or Bau, the goddess of healing, and the evening sacrifices were for En-urtu (formerly read Ninip), who, in Babylonian mythology, is associated with her.

The weekly Sabbath in the inscriptions.—This is revealed only, and that dimly, in certain lists of offerings found at Warka (the Erech of Gn 10:10). These tablets, which are of late date, are best represented by the series in A. T. Clay, 'Babylonian Texts.' The texts which they bear were recorded in tabular form, and were used for the records of sacrifices and slaughter. On the 7th, 14th, 21st, and 28th days of the months to which the tablets refer a sacrificial kid (or lamb) was to be offered, though the dates are not always constant. Thus in Chisler of the 5th year of Cyrus, when the month had only 29 days, the fourth sacrificial days are as indicated here; in Tétab (also 29 days) of the accession-year of Cambyses the first three dates only occur, that of the 23rd being omitted; in Tétab (30 days) of the 1st year of Cambyses the sacrificial kid of the 6th and that of the 14th are recorded, two kids for unindicated dates being set down for the latter part of the month; in Tétab
SABBATH (Jewish)—$\textup{a}$ A. B. 1. A Sabbath is still far from clear whether or not the Hebrew Sabbath was a derivative from Babylonian. But, whatever its origin, it became one of the most specifically Hebraic institutions. So much was this the case that the day was regarded as a symbol of the close relation between Israel and the people's God. In reviewing the history of Israel from the day when the people was chosen (20), presents the message: 'Hallow my sabbaths,' a sign between me and them, that they might know that I am the Lord that sanctify them' (20). The same conception is repeated in the covering case of the 5th. Ex 31:13. Israel hallowed the Sabbath as a sign of the people's sanctification by God. In part the sign implies the marking off of Israel from the rest of the world—a conception which finds expression in the Book of Jubilees, in the early Midrash, and in the liturgy of the Synagogue. But more prominently the distinction is less of Israel than of the day. 2. And the Creator of all things blessed this day which he had created for a blessing and a sanctification and a glory above all days. 3. Hence the greatest and holiest epitome of the Sabbath is 'holy.' The two ideas are closely interwoven. The observance of the Sabbath constitutes a sign at once of Israel's and of God's fidelity to the covenant. In the epigrammatic phrase of a popular Sabbath table-hymn composed by Abraham Ibn Ezra (12th cent.), 'I keep the Sabbath, God keeps me: it is an eternal sign between Him and me.' In part, again, the sign was associated with the Creation (as in the Deaconage in Ex 31) and in Gn 2:5; thus the observance of the Sabbath gives evidence of a belief in Him who spoke and the world was. And the same sign was historical. This is shown in the association of the Sabbath with the experiences of Israel in Egypt. Perhaps nothing in the Hebrew Bible is more beautiful than the use made of Israel's sufferings in Egypt. They are to be motive for kindness to the stranger (Lv 19:9), and are to prompt the Israelite to give rest to his servants on the Sabbath (see the Deaconage inDt 5). 2. Sanctification.—All these aspects of the Sabbath—see Gregory, as 'sacred, of His love as Redeemer from Egyptian bondage, and of the choice of Israel—are summed up in the liturgical Kiddush, or sanctification, prescribed for use in the home (and also in the synagogue) on the Friday eve. After quoting Gn 1:28-2, the Kiddush runs thus: 'Blessed art thou, O Lord our God, King of the universe, who creates the fruit of the vine. Blessed art thou, O Lord our God, King of the universe, who hast sanctified us by thy commandments and hast taken pleasure in us, and in love and favour hast given us thy holy Sabbath as an inheritance, a memorial of the creation—that day being also the first of the holy convocations, in remembrance of the departure from Egypt. For thou hast chosen us and sanctified us, and hast given us thy holy Sabbath as an inheritance. Blessed art thou, O Lord, who hallowest the Sabbath. Blessed art thou, O Lord our God, King of the universe, who bringest forth bread from the earth.' 3. Eschatology.—The sign is also eschatological. Jubilees, the identity between heaven and earth with regard to the Sabbath of the world to come. The same idea is preserved in the Talmud. The earthly Sabbath points forward to the Sabbath in another world, a world which is entirely Sabbath. So with the liturgy. In the grace after meals for this Sabbath of the world to come, 'May God, merciful let us inherit the day which shall be wholly a Sabbath and rest in the life everlasting.' And, just as this thought worked forwards to the world to come, so it worked backwards to the patriarchal age. In the Apocalypse of Baruch we read: 'The unwritten law was named amongst them (Abraham, Isaac, and Jacob), and the works of the commandments were fulfilled, and the coming judgment was then generated, and hope of the world that was to be renewed was then built up, and the promise of the life that should come hereafter was implanted.' Jubilees, too, is animated with the same desire to include those who lived before the Law in the observance of its behests. The same thought is found in the Talmud. Again, it will be best to quote a passage from the Talmud (to which the passage cited above) sums up so much of Jewish thought regarding the Sabbath that it will save much exposition. The quotation that follows is from the Sabbath afternoon service: 'Thou art One and thy name is One, and who is like thy people Israel, an unique nation on the earth? Glorious greatness and a crown of salvation, even the day of rest and holiness, thou hast given unto thy people. Abraham was glad, Isaac rejoiced, Jacob and his sons rested therein: a rest vouchsafed in generous love, a true and faultless rest, a rest in peace and tranquillity, in quietude and safety, a perfect rest wherein thou delightest. Let thy children perceive and know that this their rest is from thee, and by their rest may they hallow thy name. Our God and God of our fathers, accept our rest; sanctify us by thy commandments, and grant our portion in thy Law; and let us, hidden with thy salvation, purify our hearts to serve thee in truth; and in thy love and favour, O Lord our God, let us inherit thy holy Sabbath; and Israel, who hallowed thee hereafter. Blessed art thou, O Lord, who hallowest the Sabbath.' 4. Rest.—On the physical side, the predominant feature of the Sabbath was naturally, as the name signifies, rest. As a sort of 'Citation,' to use the term 'labour,' but there are incidental references to the prohibition of gathering sticks (Nu 15), kindling fire (Ex 35:1), cooking and baking (Lev 26), travelling (Lev 25), bearing burdens, and conducting business (Am 8, 21), etc., etc. The Sabbath, as a sort of 'Citation,' to use the term 'labour,' but there are incidental references to the prohibition of gathering sticks (Nu 15), kindling fire (Ex 35:1), cooking and baking (Lev 26), travelling (Lev 25), bearing burdens, and conducting business (Am 8, 21), etc., etc.
The Sabbath (Jewish)

Jer 17:2, Neh 13:19). The Mishnah defines the main 39 categories of forbidden work; these were added others which, though not included in these categories, were liable to result in a breach of the Sabbath laws. The criticism of these Sabbath laws is too familiar to need discussion; undoubtedly there was an excessive tendency to develop too strict a code of regulations. The Sabbath was a day of rest, of happiness, but it is not so certain that the consequence was a sacrifice of spirit to letter. It must here suffice to indicate that no Sabbatical regulation was, in Rabbinic law, permitted to stand in the way of saving life in cases of illness or danger. The Law, it was held, was given to the people by God to enable them to live by it (Lv 18:10); hence the Sabbath must not be pleaded as a reason for permitting man to die thereon. Perhaps the most perverse attack on the Sabbath as a day of rest is found in some of the Greek and Latin authors. This type of attack culminates in Seneca. To Seneca the Jewish Sabbath is a worthless institution:

'To remain idle every seventh day is to lose a seventh part of life, while many pressing interests suffer by this idleness.'

The difficulty of maintaining a genuine Sabbath has been a matter of controversy for centuries. The desirability of life, has always been felt. In modern times, economic reasons have led to many new anxieties, for which a solution has not yet been found. To revert to the old difficulties, the Maccabees, after experiencing the danger of refusing to light the Sabbath candles, did not take advantage of the refusal, discriminated between offensive and defensive warfare. Josephus shows that mean advantage was taken by Pompey of this discrimination:

'Pompey utilized the seventh days, on which the Jews abstain from all sorts of work for religious worship, and raised his soldiers from lighting on these days for the Jews only acted on the offensive on Sabbath days.'

On the whole, the Rabbinic laws as to the permissible and the forbidden succeeded in avoiding the two extremes. This is seen when the Rabbinic system is compared with that of the Karaites (q.v.). Anan, the founder of the sect, insisted on sitting in darkness on Friday nights (Ex 35:3), and forbade his adherents to leave the house on Sabbath, except to attend public worship (16:1-21). The Pentateuch, as read by the Maccabees, and the Sabbath, 7. Rabbinic custom permitted movement within limits, and also not merely allowed but ordained that lights be kindled before sunset. Great relief was obtained also by employing (under rigid restrictions, however) the principle of ex post facto, known from a legalistic attitude, led to certain 'legal fictions'; but on the whole it had the advantage that, by reducing the exceptions to code, it effected the maintenance of the general principle of rest.

5. Joyousness.—The idea that the Sabbath was felt as a burden has no foundation whatever. Once for all this misconception was dispelled by S. Schechter in his Studies in Judaism.10 The Sabbath was given in love; it was a 'good gift'; it was a day of happiness or delight.

Many of the blessings of the Sabbath by the meals, beautiful garments; delight your soul with pleasure and I will reward you (for this very pleasure) an idea based on Is 55:2.

12 Midrash to Ps 92.

The liturgy speaks of the Sabbath as a hallowed and blessed day which 'in holiness giveth rest unto a people sated with delights.' The three Sabbath meals were a religious duty.2 It was a day of happiness in the home, inaugurated by a sanctification and closed by a ceremony (habitatah). This was a day of rejoicing. The Sabbath was a day of rest, a day of happiness, and also of work, and of joyousness. The mystical came in to help. Typified as the Bride, the Sabbath was greeted with a wonderful chorus of welcome.

6. Worship.—Domestic joys were supplemented by special synagogal services, by the reading of the Bible and the religious literature. The majority of Jewish congregations retain the Babylonian custom in accordance with which the whole of the Pentateuch is read through once a year. In a few congregations and Pharisees, the whole of the Pentateuch (a triennial cycle) has been re-

25 This day is for Israel light and rejoicing, A Sabbath of rest.
The most remarkable phrase in this hymn is contained in the second verse, which introduces, with lyric pathos, the idea of the over-soul, which resides in man during the Sabbath.1 The hymn is probably of the 13th century.

7. Modern conditions. Reference has been made to the national synagogues ruled by modern economic pressure. Myriads of Jews continue to observe the Saturday Sabbath, despite all difficulties and commercial losses. Many, however, are induced, either by laxity or by the exigencies of labour conditions, to be absent Sunday. The Sabbath spirit has not been any serious movement to transfer the Sabbath from Saturday to Sunday. The question was raised in the early part of the 19th cent., when the liberal movement was organized.2 It was, however, soon realized that it would not be possible to retain the Sabbath atmosphere if the day were violently changed, unless the alteration were effected with a unanimity which obviously could not be attained.

The fact that the Jewish Sabbath begins on Friday evening has been of considerable value in conserving the Sabbath spirit even Sunday. The Home-rites and the sentiments of the Sabbath have been thereby retained in cases where work is done on the following morning. In many congregations in America and on the Continent there are special Friday night services in the synagogue, which holds its chief (though not its only) Sabbath service on Sunday afternoon. These methods have not solved the problem, but they have mitigated it. Throughout modern times the spiritual elements of the Sabbath have been recognized as more on Sundays than Saturday. There has been no cessation of labour. In various parts of America special Sunday services are held, but these are not treated as Sabbath services.

The objection to instrumental music was not exclusively Sabbathical. Music ceased at Jewish worship after the destruction of the Temple, as a token of mourning. Gradually, however, it crept into use again, especially at weddings, and nowadays orthodox synagogues (which refuse to build organs as permanent structures) often admit instrumental music at weddings and at some other functions on week-days. The reason for the objection is partly that the innovation has the appearance of imitation from paganism, and objection was taken to mixed choirs,3 on other grounds, but this objection no longer holds uniformly with orthodox congregations. Nowadays, with regard to instrumental music, the strongest opposition is due to Sabbatical considerations, for playing on an instrument is not cinematically to be a Sabbath violation. But neither economic nor liturgical problems have destroyed the essential import of the Sabbath. For, all difficulties notwithstanding, the Sabbath retains some of its beneficent influence as a day of spiritual and domestic tranquillity and happiness.

LITERATURE.—See the works quoted throughout.

1. A. Reuah.

SABBATH (Muhammadan).—Among the Muhammadans Fridays is called by the name of jum’ah, ‘day of assembly,’ takes the place of the Christian Sunday and the Jewish Sabbath. They are not, indeed, enjoined to treat it as a day of complete rest from work or business, but its special sanctity is emphatically marked by the particular observances that are introduced into it. There is a strict rule of attendance at the mosque, incumbent on all male adults among freemen,1 in order to be present at its recital.

The outstanding feature of this service is the khutbah, or sermon, which is ordered to precede the common salat, or prayer, of two rak’ahs, or prostrations, though it is, by way of performing a specially meritorious act, itself usually preceded by another salat of two rak’ahs. From Qur’an, lix., it follows that the practice of holding a service of special obligation on Fridays dates from the time of Muhammad himself, or more accurately from the time of his stay at Medina; but there were naturally developments and diversities of practice at successive periods in later times. There is thus a difference of opinion among the Muhammadans as to what actual sects with the impression that the attendance must number at least 40, whilst others declare that it is only necessary for the service to be held in a community of some size. Also, the divines, again, hold that, except in cases of necessity, the Friday service should not be held in more than one mosque in the same place, whilst others would not subject the faithful to such a limitation.

In the time of Muhammad the khutbah, of course, consisted of the Prophet’s own utterances or revelations, which may be presumed to have been later incorporated in the Qur’an, but the later khutbah, which was in subsequent times (as it is now) preceded by the salat (or cry of the mu’addin: ‘Allah ubary! ‘God is great!’) is generally of a much less weighty order and of varying quality. The rules laid down are that it must be in Arabic, and must include prayers for Muhammad, for the Companions, and, in one form or another, for the sovereign, but its composition and contents are, for the rest, left to the ability and discretion of the preacher.

The only passage in the Qur’an in which the yaum ul-jumah is referred to runs as follows:

1. O ye, who believe! when ye are summoned to prayer on the day of assembly, hasten to the commemoration of God, and quit merchandise. . . . And when the prayer is ended, then disperse yourselves abroad and go in quest of the bounty of God. . . . But when they get a sight of traffic or sport, they disperse after it, and leave thee alone.2

According to the plain sense (idealized, however, by a specially pious mode of interpretation) of the passage, traffic or business is prohibited only at prayer time, and not after or before salat; and we are incidentally presented with a realistic picture of the Prophet being sometimes left standing alone in the mimbar, or pulpit, of his masjid when his Medinese followers happened to catch sight of sport or a trading caravans, etc. However, being devoid of embellishments and divine sanction of a particularly flattering kind for

1. This limitation of the rule reminds one of the Talmudic declaration that women, slaves, and boys under the age of three are exempt from attendance at the Friday mosque. See on the practice of putting on phylacteries (Olmahh, Brakhot, ill. 3). It should in addition be observed that Muhammadan law also exempts persons who are not legally resident in a locality from attendance at the mosque on Friday.

2. Qarim, 9-11.
Muhammad's day of assembly. In the Mishkāt al-Masābīḥ (see Literature below) the excellence of the day are, on the Prophet's authority, summed up as follows:

'The best day on which the sun appears is Friday; for on this day Allah descended on that day, in the words of the Prophet,' taken word for word, and turned out from it also on this day [this hardly a recommendation, however]; and the day of resurrection will not be on any day but Friday.'

Again:

'When Friday comes, angels stand at the door of the Masjid, and write the names of all those who come first,' etc.2

It is also declared that there is a certain hour on Friday on which any Muslim asking a favour of God will receive it, and that, on the other hand, Muhammad prayed, 'that God may put a seal on the heart of any Muslim who, through negligence, omits the prayers of three Fridays.'

The prosaic fact seems to be that Friday was used as a day of assembly of some kind long before the Prophet's time, and the name of the day was reported to have been given it by one of Muhammad's ancestors. It is, indeed, conceivable, and may even be regarded as probable, that, if the Prophet had succeeded in attaching a great number of Jews to his cause, he might have made the Sabbath the sacred weekly day for his followers. In the first instance, events having made this impossible, and the Christian Sunday being per se excluded from his scheme of ordinances, he naturally settled on the old day of assembly, and the name al-jumā'ah thus superseded the former general designation of sabā'īn (Tahāwī, which stamped the day as merely the eve or preparation of the day following. The attitude taken up by Muhammad towards the Sabbath itself may be regarded as clearly shown in Qur'ān, xvi. 125, where it is declared that 'the Sabbath was ordained by God to the children of Israel to be a day of repose, it which is by a tradition explained to mean that Moses himself had wished to set aside Friday as the sacred day, but that the Jews insisted on keeping the Sabbath-day, because on that day God rested from the work of creation,' for which reason they ordained this day to be a day of rest. But the Sabbath, if not the day of rest, is, in one sense, a good and a bad. In the first place, it is used to denote the existence in the Christian Church of a ministry consisting of certain persons set apart or ordained by the authority of the Church to minister the things of God to their fellow-men, and to be the executive instruments in the divine covenant of sacramental graces. On the other hand, it is used in the sense of an assumption and claim on the part of the clergy to an undue power and authority over the laity.3

This existence of a priesthood is found in religion from the very earliest period of the history of mankind, and there is practically no ancient form of religion in which the priest does not appear in some aspect or other. The priest is the individual who is in some way inspired or illumined by the divine spirit, and is hence considered to act as the interpreter of God and the will of God to his fellow-men. He it is, moreover, who on behalf of his fellow-men presents their offerings to God in such a way and with such forms and rituals as will render them acceptable to God. Thus he is in a sense the guide and the means by which his fellows find access or approach to God, and as such is naturally their adviser and teacher in spiritual things (see art. PRIEST, PRIESTHOOD).

The conception of a ministry endowed with certain sacred or priestly powers is found very early in the history of the Christian Church. Christianity was the fulfilment of Judaism, and in Judaism there was an elaborate priestly system and system of sacrifices. Christianity did not claim to replace Judaism, but rather to fulfil it. The sacrifices were the dramatization, the means of expiation, the perfect sacrifice of Christ — a sacrifice so complete and perfect and efficacious for all time for the sins of all mankind, past, present, and future, that it need

1 Brereth Rabbōh, ch. x., near end. 2 EOP, s.v.
never, nor can it ever, be repeated. Christ is the perfect priest offering the one perfect sacrifice of Himself to the Eternal Father, the intercessor and advocate of all the race of men, the means of perfect and complete access to God.

But Christianity is not merely the fulfilment of Judaism; it is much more. It is the fulfilment and satisfaction of all the aspirations of mankind after God. These aspirations and longings for the truth were manifesting themselves in many ways at the time of the development of the Church. Heathenism was agape with the desire for truth, and the old materialism of religion no longer satisfied a world that was beginning to realize clearly that matter was not all. New religions sprang up on every side, cults, mysteries, offerings, to those who sought, the knowledge of God and justification from sin. Even the old material conception of the gods began to receive a spiritual interpretation.

Thus both Judaism and all that was good in heathenism found their goal and fulfillment in Christianity, and the sacrifices of Judaism and the initiations of heathenism in the perfect offering for the sins of the whole world presented to the Eternal Father in the divinely-appointed commemoration of the One Sacrifice in the Christian mysteries, which were a recognition of the high-priestly worship of the Christian Church and the means by which the efficacy of the act of redemption was applied to the souls of men in gifts of sacramental grace.

In the earliest days of the Church there is a noticeable absence of any analogy between the methods of the old and the ministration of the new dispensation. The danger of Jewish formalism in the infant Church was considerable. Still less is there any sign of any acknowledgment of the existence of even a partial apprehension of truth in the religious systems of the heathen world. Nevertheless St. Paul does use technical terms when he speaks of himself as 'the minister of Jesus Christ, the sacrificing priest of the gospel of God, that the offering of the Gentiles might be made acceptable' (Rv 15), where he is using technical sacrificial words, 

In the same way he uses the terminology of the Greek mysteries in the words 'perfect' (τελειός), 'sealing' (σφαρσὶς[σφαίρας]), 'learned the secret' (μυστήριον), and his technical use of the words is recognized and imitated by Ignatius when he speaks of the Ephebeans as being 'initiated into the mysteries of the gospel with the blessed Paul.'

Even in the Epistle to the Hebrews we find no sign as yet of the idea of a Christian priesthood offering a Christian sacrifice. The author of the Epistle confines himself to the theme that in Christ are summed up the perfection of priesthood and the finality of sacrifice. He comes near to the definite conception of the Eucharist as in some sense a sacrifice in close connexion with the sacrifice of Christ, when he says 'We have an altar, whereof they have no right to eat which serve not the altar.'

By him therefore let us offer the sacrifice of praise to God continually, that is, the fruit of our lips, giving thanks to his name' (13th.)

In the NT, then, we find that the Church is conceived of as consisting of a priestly people with a ministration in the person of the sacerdotal character of the priest. In the West in particular the civilization of old Rome, with its wonderful legal system, which became the inheritance of the new nations of Europe, tended to define more and more the doctrines and practices of the Church and the duties and functions of the ministry. From the 6th to the 9th cent. there was an active development of liturgy and ritual, all of course accentuating more and more the distinction between cleric and layman. Moreover, the task which the Church had to face during this period ever more and more enhanced the sacerdotal character of the ministry in the direction of increasing the prestige and authority of the clergy over the mass of the people. The Church was called upon to evangelize new and barbarian peoples, Gothic and Frank and Burgundian, and the importance of their converts rendered it necessary to present the faith to them in its simplest form, and hence the duties of worship and practice, the teaching of the sacraments and penance, were
SACERDOTALISM

reduced to simple rules and systematized as much as possible, while for their part the new converts adapted their old belief in magic and the virtue of charms to the mysterious awfulness of the holy sacraments; the substitution of the people, the low state of morality, and the intervention of penance led to less and less frequency of communion till, with the requirement of confession in the case of all of adult age, communion was rarely made more frequently than once a year. Thus, as the duty of worship at the Mass took the place of the duty of weekly communion, and in the popular mind the Mass was regarded as a repetition of the sacrifice of Calvary. Hence came the scandals that at times the Church was frequently the object of ridicule. The sacerdotal theory of the priesthood was then at its highest for some three centuries before the Reformation, and the priesthood, with the powers of remitting or retaining, was believed to hold in its hands the salvation or damnation of the soul.

The Reformation (q.v.) was the outcome on the whole of a great advance in the education generally of the people. Knowledge was no longer confined to the clergy, and with it spread the knowledge of men of intelligence rebelled against the old formalism of religion, and against a conception of the doctrine of opus operum in the sacraments that more or less relieved the individual of any responsibility, and overshadowed the teaching of the Church that the reception of the virtue of the sacraments depended upon the proper disposition of the recipient. Thus the Reformation was against sacerdotalism in the sense of an assumption of authority on the part of the priesthood to undertake the whole charge and responsibility of the souls of the people. In England the Reformation was a reformation only, while elsewhere it destroyed the Church in the old sense of the word. It is made clear in the preface to the ordinance rites of the English Church, in the retaining of the three principal sacraments, and the mixture of the forms with which these orders are conferred, that the Church claims to be the old historic Church and no new invention, regarding herself as united with the Church of the apostles by the unbroken line of succession of her bishops, and one with it in doctrine and practice. The great defenders of the English Church against the assaults of Romanism have always strenuously taken this line, and have appealed to the Ordinal as proving the truth of their position. Thus, while the Reformation in England was a reformation proper, it purged the Church of many old superstitions. The whole status of the clergy was affected, and the restoration to the individual of the sense of personal responsibility lessened immensely the authority of the priesthood over the individual. But, on the other hand, the ministry of the Church retained a definite sacerdotal aspect. Confession was retained and the power of priestly absolution; only it was not required as essential generally. This was maintained generally by the great divines of the 17th century. The sacramental sacrifices were maintained in the sense of its being a commemorative sacrifice. In such a sense even Cranmer admitted that the Eucharist was a sacrifice. And in his first Answer to Cardinal Perron's Reply:

'The Eucharist ever was, and by us is considered, both as a Sacrament, and as a Sacrifice.'

A long list of names might be quoted in support of this view of the Eucharistic sacrifice—Cranmer, Andrews, Overall, Montagu, Cosin, Sparrow, Jeremy Taylor, Waterland, and many others. Jeremy Taylor explains thus:

'As Christ, in virtue of His sacrifice on the Cross, intercedes for us with His Father, so does the minister of Christ's priesthood here; and the virtue of the Eucharistic sacrifice is salutary and effectual to all the needs of the Church, both for things temporal and eternal.'

And, indeed, the teaching of the Church of England is clearly enough shown in the prayer of oblation in the Holy Communion:

'We thy humble servants entirely desire thy fatherly goodness mercifully to accept this our sacrifice of praise and thanksgiving; most humbly beseeching thee to grant, that by the merits and death of thy Son Jesus Christ, and through faith in his blood, we and all thy whole Church may obtain remission of our sins, and all other benefits of his passion. And although we be unworthy, through our manifold sins, to offer unto thee any sacrifice, yet we beseech thee to accept this our bounden duty and service.'

The controversy resuming on the Oxford Movement brought these matters very much to the front, and the word 'sacerdotalism' came into existence. The Church at this time was living on its past. The only theology was that of the great writers of bygone generations. The meaning of the Church's forms and its ceremonies, of its theory of orders, of the doctrine of the sacraments, was very little apprehended by the majority of the people. Perhaps one of the greatest difficulties of the time lay in the absence of any official body of theology. This was one of the great losses consequent on the Reformation, and on the scrapping of the old scholastic theology, with all its clearly defined technical terms, and substituting nothing in its place, with the exception of leaving a certain amount of the old technical language enshrined in the forms of the Book of Common Prayer. The Oxford Movement, therefore, was simply a restatement of what the Prayer Book contains, re-asserting the sacerdotal character of the priesthood as exercised in the celebration of the sacraments, especially in the Holy Communion and the Ministry of Ordination. The controversies arising merged acutely for a generation, chiefly over the use of technical words and phrases, and then gradually subsided, leaving their mark unmistakably on the Church.

Thus the 'sacerdotalism' of the Church of England is moderate and reasonable. The ministry exists, and always has existed, for the bringing of the sacramental means of grace to the people of Christ. The priest is the minister or steward of Christ authoritatively appointed to his office by Christ's Church, and he is in this way the divinely-constituted administrator of the Sacrament of the Eucharist, the sacerdos servorum, the servant of his fellow-servants, ministering to them in the orderly manner prescribed by the Church, the gifts given by God for the nourishment and health of their souls.

R. M. WOOLLEY.

---

SACRAMENTS (Primitive and Ethnic).

In early Christian usage the word *sacramentum*, though applied especially to Baptism and the Eucharist, was widely used as the name of any ritual observance among Christians, as well as of any sacred thing. In this wide sense sacraments may be said to exist in ethnic religions. Washings or baptisms, ceremonial name-giving, initiations, anointings, and many other rites have a sacramental aspect in this sense of the word.

These and other rites have already been fully considered under separate headings. This article is devoted to inquiring how far rites of actual sacramental communion—viewing the word 'sacrament' in a narrow, yet popular, sense—exist among savages and in the higher ethnic religions. Many of the usual examples of this cited by various authorities are to be regarded as inferences rather than explicit facts. Thus, even where the worshippers feast on the remains of a sacrifice, it is doubtful whether this is to be looked upon as more than a meal eaten in common with the god. He, being satisfied with his share of the feast, as it were, invites his worshippers to eat with him. The idea that sacrifice originated from a meal on a divine being or a totem cannot be sustained. It is likely, a ceremonial meal, though eating through with the victim, is far from being clearly expressed, and is rather an inference from a given rite. Sacrifice is first the food of the gods, by which they are nourished, strengthened, and made benevolent to men. If now worshippers partake of this food, they are eating with and, we may suppose them to be similarly nourished and strengthened. There certainly could not have been at first the sacramental eating of a divinity incarnate in the sacrificial victim. That came later, and perhaps only secondarily. Even if the animal is offered, or if, being usually eaten, is first sacrificially slain and its blood offered to the god, no more than a common meal with the god need be generally inferred. In the latter case the animal is sacrificially slain on the principle that man should always give something of his own to the gods—the same principle as is seen in the offering of firstfruits (q.v.).

The theory of Hubert and Mauss—that sacrifice consists in establishing a communication between the sacred world and the profane world by means of a victim, i.e., in something destroyed in the course of the ceremony, and that the moral state of the person who performs this religious act or of certain things in which he is interested is thus modified—rests on the Brahmanic interpretation of Vedic sacrifices, and can be sustained only with difficulty. If the theory were true, then the victim would always be sacrosanct, filled with the spirit of the divine world, and therefore to eat of it would be a sacrificial act, and to eat the flesh with divine vigour. But this 'sacralization' is not proved for sacrifice generally, either savage or civilized.

1. Theories of the origin of sacrifice are apt to lay too much stress upon occasional rites, out of harmony with the ordinary and usual rites which are known to us in detail. The real meaning of these occasional rites is often unknown or is the guess of a scholar or mystic; they are sometimes described by a late classical author.

2 See art. ANONIMUS, BAPTISM, INITIATION, NAMES.

5 The last is forcibly expressed by the Limboos of Parxjeeling, who, when they eat flesh with the eater, say that they dedicate the life-breath to the gods, the flesh to themselves (J. S. Campbell, *Fés*, new ser., vii. [1899] 155).

SACRAMENTS (Primitive and Ethnic).—In

SACRAMENTS (Primitive and Ethnic).—In

Christian—

- Hindu.—See 'Primitive and Ethnic.'
- Parsi.—See 'Primitive and Ethnic.'

An example of this is found in the Bouphonia (below, § 3[b]). At the same time rites of quite different import are usually classed together, and similar reasons for the slaying and eating of the victim is assigned to instances where it is out of place.

1. The basis of the principle of sacramental communion.—As already shown in the art. CANONICALISM (vol. iii, p. 197), the eating of food, with its result of strengthening or refreshing the body, easily suggested the idea that any special qualities in the animal, or even the man, from whom the food was prepared—strength, courage, wisdom, etc., as well as the contrary qualities (hence toasts on such foods as might transmit these)—could be conveyed to the eater. To this, the belief in magic made men assume that, as far as the transmission of such qualities was concerned, a part was as valuable as the whole. Food might also become a vehicle of qualities pertaining to the animal or plant that had been killed or eaten in contact. This is the basis of the idea of sacramental communion with deity in a more or less material sense, as apart from the idea of food eaten symbolizing a virtue or grace spiritually received. The flesh of an animal regarded as the incarnation of a deity, and the like, the relation to the eater as well as to the animal rituals, the meal eaten in common with the god, etc., and we may suppose them to be similarly nourished and strengthened. There certainly could not have been at first the sacramental eating of a divinity incarnate in the sacrificial victim. That came later, and perhaps only secondarily. Even if the animal is offered, or if, being usually eaten, is first sacrificially slain and its blood offered to the god, no more than a common meal with the god need be generally inferred. In the latter case the animal is sacrificially slain on the principle that man should always give something of his own to the gods—the same principle as is seen in the offering of firstfruits (q.v.).

2. Was the sacrificial meal also sacramental?—The meal upon sacrificial food cannot now be regarded as the survival or the equivalent of eating a totem animal in a sacramental mystery (below, § 4). Nor is the conception of kinship between victim and worshippers more than an inference. The sacrificial meal, eaten as in Israel at the holy place, was one in which men and god shared. There was communion between them just as the eating of food at any time strengthened the bond between table companions. Beyond that we can hardly go. Sacrifice was primarily a feeding of a god, who either ate the actual food or was regaled by the blood, or by its odour, or even by its essence. In the latter instance, where most of the flesh still remained, it was natural that it should be consumed by the worshippers. How far it was regarded as hallowed or even as a vehicle of divine qualities, because part of it had been consumed by a god or offered on an altar, is largely a matter of conjecture. This sacrificial meal is a common aspect of sacrificial rites both in the lower cultures and in higher religions as far back as these can be traced.

In Fiji 'native belief apporions the soul [of the offering] to the gods, who are feeding on it, and being enormous eaters; the substance is consumed by the worshippers.'

In Israel one large class of sacrifices was eaten by the worshippers, after having formed a repast for the divinity. In Babylonia the elements of sacrifice were the foods with the eater, the meal eaten in common with the gods and the like. In these sacrifices the victims were not apparently regarded as sacrificial, and the officiants ate the remains without appearing to experience the least terror, and without taking extra precautions. In Greece, in the...
case of those offerings not wholly made over to divinities, the priests had their share of the sacrifice, and the worshippers feasted on the remains.

This is seen, e.g., in Homer, who describes the prayers, the slain animals, the plating, the cooking of selected portions, and the joyous feast which followed. 1

In Roman sacrificial rites the general rule was that, after the offering of the exta to the god, the remainder of the victim was then considered not sacred, and was eaten by the priest or his retainers, or on official occasions by the senators and magistrates. Sacrifice was the offering of a repeat to the gods, in which men had a share. 2

Tontaut insists that the theory of W. R. Smith and others of a human god, victor, and worshippers, renewed through eating the victim—of a sacrificial communion—is not discoverable in the Roman sacrificial ritual. 3

In Egypt, however, the remains of the sacrifice were simply eaten by the officers and servants of the temple and by the worshippers. They spread a banquet of what remains of the victims. 4 According to Foucart, there is no trace in Egyptian texts concerning sacrifice of sacramental communion or of a meal of communion, and this is true of the sacrificial meal, and he speaks of 'l'absence radicale, t'etre en une ligne d'un seul auteur, d'une allusion au sacrifice communi de la victime en Egypte.' 5

Vedic sacrifices were intended as food for hungry gods, who were rendered miserable by hunger, and the gods ate first, leaving the remains to be eaten by those who offered them.

Oldenberg says that 'it is impossible to discover in the ceremonials of the Veda the word or formula which accompanied them, the least allusion to any method of regarding the repeat on the sacrifice as a repeat of communion (outside of a meeting of kin).'

Whatever later priestly theories arose regarding sacrifice, the early view remains fairly constant, and in modern Hindu and Dravidian ritual the remains of the sacrifice are commonly eaten by the worshippers. But in the cult of Kṛṣṇa the cooked food offered to the god is eaten by the priests or distributed to the worshippers, who eagerly receive it as holy or divine nutriment. 6 Here a more sacramental view appears. Finally, among the Teutons the evidence is summed up by Grimm as follows. Human food is agreeable to the gods, which is why it is in the nature of the sacrifice. At the same time sacrifice is a banquet: an appointed portion of the victim is placed before the god; the rest is cut up, distributed, and consumed in the assembly. The people thus become partakers in the holy offering, and the god is regarded as the one who has allotted or provided it.

To these examples must be added those in which the victim is a human being, and a cannibalistic feast on his flesh follows. Here there is no true sacrament, save where the victim is regarded as representing or incarnating a divinity, as in Mexico and in Dionysiac rites in Crete. 7

Thus the widest evidence of sacrificial rites, apart from all modern theory, is that in a large proportion of sacrifices the worshippers enjoyed a sacrificial repast, and joined in eating with the god. That probably indicated fellowship with the god or promoted it still further. But how far it was also regarded as a sacramental eating, in the sense that divine virtue passed over to the eater, is a matter of conjecture. Dr. Crooke has admitted that here are the elements out of which a sacramental ritual might easily arise.

The idea that gods and men shared in a sacrificial meal is illustrated in the Roman Mass, which is often compared to the banquet at which Christ was believed in the person of a sacerdotal papyri in which a person invites guests to dine with him at the table of a god (the lord Sarapis) on a certain date. 8 Sarapis was here the real host, his servant St. Paul's sacramental language, this may be the source of what he says regarding the impossibility of partaking at once of the table of the Lord and of the table of demons (some meat which has formed part of a sacrifice). He regards that act as 'having communion with demons' (1 Cor 10 16), because the meat is eaten consciously as a thing sacrificed to idols (10 19 and cf. 8). Thus because he regarded the act of eating as an act of communion with the god—probably the view then current in the eastern Mediterranean area. This communion, however, was nothing more than the relationship existing between a host and guests at any meal—a token of fellowship with him on the part of those who recognize the deity. In such sacramental meals, in the words of the Clementine Recognitions, the eater is 'a guest of demons' and has been tabernacled with them, or 'was so fashioned in his mind.' How far this idea of fellowship or communion with a god in and through sacrificial meals existed elsewhere is a question, but then ages it is natural to analogies to that of the feasts with the dead—common meals at which dead and living were present.

E. E. R. Smith, 9 When an animal was regarded as sacred—one devoted to the service of a god, or his representative or symbol, or even his incarnation, or as itself divine—it was nevertheless sometimes sacrificed to him, the reasons for this sacrifice not being the same in all cases. It is important to bear the latter fact in mind. But, in so far as the animal is sacred and the flesh is eaten, there is here a sacramental eating, depending upon the degree of sacredness of the animal. Where the animal is divine or a divine incarnation, there would be an actual eating of the god's flesh. In the case of animals sacrificed to a god, because for the time sacred to him, but we are here contemplating the case of animals more peculiarly sacred. The ceremonial slaying of such animals is perhaps the origin of those so-called mystic sacrifices in which certain animals, more particularly those animals that were sacred for common use, were immolated and sometimes ceremonially eaten. Where such eating took place, its purpose was probably sacramental: it was to obtain some benefit not to be obtained in any other way, e.g., the health and life of a god. The examples cited by W. R. Smith, 10 here, though his theory of their connexion with earlier totem sacraments has not been verified. The instances range from savagery up to comparatively high levels of civilization.

(3) Certain Hebrews in pre-Exilic days seem to have adopted curious rites from their pagan neighbours or revived earlier rites of their own. Among these was the sacrifice of the swine, the mouse, and the 'abomination.' These animals were sacred, yet they were actually eaten at this rite after some preliminary rites of preparation and purification. After sanctifying and purifying themselves, the worshippers are said to have eaten swine's flesh, the mouse, the 'abomination,' while 'broth of abominable things' was in their vessels, no doubt a symbol of their religious colour. (Is 66 3 4.) Doubtless these animals were sacred to certain divinities, and this, rather than their 'unclean' character, aroused the prophet's indignation. The result of the eating was the assertion of a peculiar holiness. Similarly, at a later time the Samaritans may have revived some of these practices.
once a year. Among the ancient Peruvians, after a three days' fast, the festival of the sun at the summer solstice was observed. Fire was kindled by means of a concave mirror reflecting the sun's rays. Then flammans, the animals sacred to the sun, were sacrificed, and of these a burnt-offering was made to the sun and his gods. 'These, in the case of other deities, was eaten at a banquet by the Inca and his lords, and distributed to the people. The flesh was eaten along with sacred cakes prepared by the virgins of the sun, and with grains of corn soaked in maize. In the latter part of this feast the Spaniards detected a Satanic counterfeit of the Eucharist. 1

(b) Some animal victims may be regarded as divine incarnations. The people of the district of Huancan (Peru) were found by the Inca Pachacutec to have this belief. They might have a doubtful existence temporarily in animal or even human form. In the frenzied observance of the cult the myth of Dionysos pursued by the Titans, assuming different forms, and finally in bull shape being rent asunder by the oxen, was reproduced in ritual. An ox, a goat, or sometimes even a boy, representing or incarnating the god, was rent by the maddened worshippers, and the raw flesh was devoured. By such a sacramental feast, and probably also by stimulants, the celebrant of the meal of raw flesh 2 was made one with the god. He became teos
dos, and was inspired to new ecstasy, or teoswagados, and to act not possible under normal conditions. 3

Arnobius says: 'In order that you may show yourselves full of majesty and divinity, you mingle with gore the lips of flesh of a people slain, or one slain, or two slain. Then these, that those initiated into the Dionysiac mysteries ate raw flesh, and that this symbolized Dionysos' being rent by the Titans. 4

In this savage sacrifice, which, though not widely practiced by them, might well be taken as typical of a religious rite at a certain stage, there appears the dim craving of the soul for union with deity. When the ritual was transferred to Greece and there tamed and transformed, far how this sacramental act continued to exist in Chios and Tenedos at a late date. 5 Its existence in the Dionysiac-Orphic brotherhoods cannot be proved.

In the Eucharist at the Diplopia, on the Acropolis there is one of those mysterious and sporadic attempts to be taken as typical and made the basis of a large amount of the rite. The rite is described by Pausanias and Polypheus.

Of a number of oxen led up to the altar the one which ate wheat and barley lying upon it was slain by a priest, who was regarded as the murderer of the ox, and finally the blame was laid on the axe or knife. Of those who afterwards flayed the ox and cut it up, it was thought that they divided the flesh with hay, and yoked it to a plough. The rite was traced back to a slaying by Sopatros of an ox, which had eaten his cereal offerings in remorse he fed. Death followed, and an oracle announced that the murderer must be punished and the dead raised up. It would also be better for them if, at the same sacrifice in which the ox died, all should taste of its flesh. The priest was told to make the rite as a sacrifice to the citizens, that an ox must be slain, and that all must help him. This was agreed to, and the ritual of the Eucharist was founded. 6

W. R. Smith regards this rite as a survival of those times when all pastoral animals were sacred and regarded as kindred of Zeus, and his use as a sacrifice by the Greeks of one of them, even ritually, was murder (bouleofate), and to eat the flesh was a sacramental rite. These ideas had been derived from earlier beliefs, with some modifications. He himself held that the rite is partly followed by L. R. Farnell. 7 J. G. Frazer finds in the rite an example of slaying an animal representing the corn-field—the ox which was sacrificed was viewed as the corn-deity taking possession of his own. 8

It seems probable that the rite to the Bouleofate is lost. Among savage pastoral tribes who regard their cattle as sacred the occasional slaying of them is regarded as murder. The eating of the flesh by the slayers has thus a sacramental aspect, in whatever manner the animal was sacred, whether in itself or as representing or incarnating a spirit or god.

(c) W. R. Smith's theory of the slaying of pastoral animals in cases where such animals are seldom or never killed, viz. that the animals are kinsmen to the tribe or group, is hardly borne out by instances from actual pastoral tribes.

With the Todas the lives of the people are devoted to the tending of their herds and flocks. The Todas divide their classes—(1) ordinary buffalo, with no special ritual connected with its occurrence in sacrifices; (2) sacred buffalo of various grades of sanctity, with herdsmen regarded as priests, and dairies for the churning of milk which are regarded as shrines. In the case of the latter the ordinary operations of the dairy have taken on a ritual, each dairy of each class having its own peculiarities and complexities of ritual. Both ordinary and sacred buffaloes are the property not of the clan, but of families or individuals, in that division of the Todas known as Teivatio. Male buffaloes have little or no sanctity even when born of the most sacred cows, and these in fact are mateled with ordinary bulls. Buffaloes were created by one of the chief Toda gods, On, and his wife. On's buffaloes were the ancestors of the sacred animals, those created by his wife by means of ordinary buffaloes. Sacred cows and sacred buffaloes are regarded in some measure as the property of the people, but, after undergoing certain ritual operations, counteracting possible danger, the milk of even sacred buffaloes, converted into butter, is used even by the least respectable Todas. At one feast people of the clan and of other clans may partake of the milk of sacred buffaloes, which is not ordinarily regarded in this society as sacred. In the religious ceremonies of communion 'with the divine by eating and drinking the divine.' 9 Although the buffalo is not ordinarily eaten, there is a custom called taramathumathi ('male buffalo we kill') in which a male buffalo calf is slain and eaten, whenever a suitable one is available. At the ti dairy the rites take place three yearly. The other animal called patukum nook, or dairymian of the village, who must be of the same clan as those performing the sacrifice. The animal is killed by striking with a club made of the wood of the sacred ti-tree. The flesh is roasted on a sacred fire made by friction. Of this the patukumnook eats the tail, and the others present may eat any portion. Certain parts must not be eaten by women. The remainder of the feast is carried to the village and may be eaten by any one. In the same way the milk of the ti is sacrificed. In this is killed the male ti, another animal called the patol (or priest of this ultra-sacred dairy), certain other parts by him and the koilumnook (assistant). Some parts, again, may be eaten by the priests and privileged visitors (miidini). The ti. Other parts are taken to the outskirts of the priests' encampments, and greased and piled up. The significance of the ceremony is unknown; the male buffalo is not sacrilegious in the sense in which the female sacred buffalo is. From the prayer used before the slaying of the animal Rivers conjectures that the purpose of the rite is the general welfare of the buffaloes, and this is a thought which, if the flesh is eaten, the Todas may have preferred.

to use for this purpose less sacred animals out of fear of evil consequences.\footnote{1} There does not appear to be any clear evidence of kinship with their buffaloes among the Todes.\footnote{2} Nor does there appear to be a sacramental eating of the animal in the sense of eating a victim regarded as divine.\footnote{3}

The explanation of the Todes is correct, we may see an analogy to it in the custom of pastoral tribes in the Caucasus who, when obliged to sell their herds to strangers, avert the danger which such sacrilege incurs by consecrating one of the herd, slaying it, and solemnly eating the meat, afterwards treating the bones with all due respect.\footnote{3}

The eating of the raw flesh of a heifer sacrificed to the spirit of the Nile by heads of clans among the Agaee and the eating of half-fresh flesh of a camel by the clan or tent-group among the Arabs of the Siimitic peninsula when other food failed are very vaguely sacramental.\footnote{3}

(d) The last group of rites described perhaps shows that at one time all killing of animals was regarded as an act to be gone about circumspectly, for although each, if not divine or even sacred, have power greater than man's, either in life or after death. Hence, too, innumerable rites of propitiation in connexion with the slaying even of wild animals, by way of averting their vengeance or that of members of the same species. These sometimes even extend to the animals, in which propitiation, prayer, ritual slaughter, and ritual eating all have a part. But the slaying is not sacrificial, and the whole rite is perhaps analogous to the solemn eating of firstfruits (below, § 5) before all the harvest becomes available for common use. In the whole rite is most marked in the Ainu bear festival.

With the Ainu, Glyak, and other peoples of N. Asia the bear is regarded with respect, if not as divine, but as a consecrated one who is kept in captivity with every evidence of respect; then it is ritually slain with propitiations and apologetic explanations and prayers. Offerings are made to the dead bear. Its blood is drunk by the men present to obtain its courage and other virtues, and part of its flesh, having been offered in "a cup of offering to its head," is solemnly eaten by all present. Then all join in eating the rest of the flesh. The liver is said by a 17th cent. authority to be eaten as a prophylactic against diseases.\footnote{4} The prayers show that the bear is expected to return to life so as to be slain anew, and in Saghalien the killing is for the purpose of sending messages to the forest-god by means of the bear.\footnote{5} The solemn eating of the bear by all is obviously meant as a prophylactic rite which will make possible the common eating of bear's flesh by all who have thus had communion with the bear.

4. The totem sacrament. — The theory of a general, though occasional, sacrifice and sacramental eating of a totem animal or plant by the men of a totem clan is now generally abandoned for lack of evidence.\footnote{6} With its abandonment the explanation of all solemn eating of a slain or sacrificed animal as due to an earlier totem sacrament must also be given up. Among all actual totem peoples the ceremonial eating of a totem has been found in three instances only, and Frazer points out that in one of these (Arunta) the object of the eating is not mystical communion with a deity, but to ensure the supply of food for others not of that totem. It is magical, not religious, and the animals in question are not regarded as divine.\footnote{7}

The Arunta once freely ate their totems, and even now there is no absolute restriction by which a man may not eat of his totem, excepting the animals of the whole tribe. Besides permission to eat sparingly of his totem at all times, each man at the initiation ceremonies, in which the increase of the totem animal or plant, must eat of his totem, in order that the totem species may be increased for the benefit of fellow-members of other totem groups. Without this eating the magical increase ceremonies would not be complete. Members of the totem group now refrain from eating their totem for fear of the herd, which is also forbidden. When such happens, members of other groups may not eat until the members of this group have eaten sparingly of their totem within the camp. This second ceremonial同期eating in the case of firstfruits by certain persons before all can eat freely. This second ceremonial is obligatory; non-eating would result in the omission of the totem.

The second instance is from Benin. Some families of the Ilimi, at the burial ceremonies, make soup from their totem and offer it in sacrifice to the dead man. This portion may also be put to the lips of members of the family and then thrown away. The rest is thrown away or eaten by the family or strangers. Obviously some benefit to dead and living is here expected.\footnote{8}

The third instance is from Assam, where the Kacharis were formerly divided in totem clans. The totemic ceremonial eating of a revered animal or plant has been noted. The Leech folk hold the leech in high regard and do not kill it. But once in a lifetime the Leech folk must chew a leech with vegetables. The Jute folk must also chew a leech at great religious ceremonies.\footnote{9}

In none of these instances is the totem worshipped as a divinity, and they are all contrary to general practice. The totemic ceremonial eating will bear various shades of meaning according as the firstfruits are looked upon merely as set apart from ordinary usage, or as sacrificial food, or as actually containing or being a spirit or god.

5. Firstfruits eaten ritually or sacramentally. — This has already been fully discussed. But it is obvious that the totem sacramental will bear various shades of meaning according as the firstfruits are looked upon merely as set apart from ordinary usage, or as sacrificial food, or as actually containing or being a spirit or god.

6. Ceremonial eating of images of dough or other substances. — In cases where the image is described as the god and is eaten there is clearly some idea of sacramental communion. The best instance of this is found in the ancient Mexican religion, where the solemn eating was called teopitullo, god is eaten.\footnote{10} Sometimes the Huichol Indians of Mexico made an image of dates kneaded with butter and sour milk and ate it.\footnote{11} Communion with a deity by means of swallowing part of the image is also found among the Malas of S. India and among the Huichol Indians of Mexico.\footnote{12} These and similar instances may be connected with the offering of totemic animals as a sacrifice (though not always eating) of cakes in the form of or stamped with the effigy of a divinity.\footnote{13} These may also be connected with the offering and eating of firstfruits made into a cake or even baked in human form (probably representing the corn-spirit, as the Frazer theory) and sacramentally eaten.

The sacramental aspect of eating such dough images is well shown by Acosta's description of the Mexican eating of the image of Huizaca, the corn-spirit, who is eaten by the poor man, tears, fears, and reverence as it was an admirable thing, saying that they did eat the flesh and bones of God, wherewith they were grieved.\footnote{14}

7. Swallowing sacred substances.—Under this heading may be grouped a variety of rites with a sacramental aspect. As an example from a low level of culture the following case from the Gold Coast may be taken. If the members of a family were about to separate, the hosts were dipped in a powder, and after having mixed it with a liquid, gave the draught to each member of the family. By this means they were still bound together. In the ceremonies of the various fraternities among the Zuñi Indians the drinking of the sacred drink is a part of the initiation. The sacrament is effective by the consecration. The consecration is accompanied with prayers to the gods, the dropping of fetishes into the water, prayer invoking the presence of the gods, etc. The altar and the worshippers are sprinkled with the water, and the males present receive a drink of it; on the next night of the ceremonies male and female members drink it; and on the fourth evening the novices receive it. Plant medicines, each the property and food of a god, are used in other fraternities in a kind of sacramental magic—to assure drinking of the sacred drink. The draught of barley, groats, water, and pennyroyal leaves drunk by the mourning Demeter after her nine days’ fast.* If the emendation by Lobbeck of the text in which Clement of Alexandria describes this rite is correct, possibly sacred bread or cake was also given to the initiates. In India the water in which a sacred image has been washed is drunk as holy water. The drinking of the haoma in Zarathustrian religion and its supposed effects on the partaker have also been fully described in Zend. Haoma is also given to the worshipper in a last sacrament, or ἀφάγακος ἀναραλς. Its counterpart in Vedae and later Indian religion is soma (q.v.), both having been originally one. Soma was the drink of the gods, and a draught of immortality both for them and for men. It also symbolized the physical and moral ills and gave wisdom. This drink of the gods could also be prepared for men on earth, just as haoma was. The drink made the worshipper a new man; the draught of the gods flowed in his veins, purifying and sanctifying him. The nectar of the Greeks is a similar drink of immortality; and it is probable that primitive intoxicants, because of the elation caused by them, were regarded as the drink of the gods, conferring immortality and other desirable qualities on them, like Gobbiu’s ‘ail of immortality’ in the Babylonian period. In the mythology ‘food of life’ and ‘water of life’ were the property of the gods, giving immortality, as is seen in the myth of Adapa. The refreshing powers of water caused it also to be regarded mythically, and in the other world it had magical immortality powers. Thamyris used to throw water in the temple of Apollo, so that the god could not hear the notes he played. On the way to paradise the dead drank of the ‘water of soleace’, which caused the grief of the ghost and the mourners on earth to be assuaged. So at a far higher level, in Orphic-Pythagorean circles, the dead drank ‘cool water flowing from the Lake of Memory’, and thereafter had lordship among the other heroes.†

The idea of the Tree of Life and its effects in Hebrew, early Christian, and Gnostic mythologies may be compared with the ideas here set forth in classical Egypt analogous ideas, though of a curious kind, are found. A funerary rite consisted in the dead king slaying and devouring the gods to obtain their powers and to become eternal in the sky. By drinking the milk of a goddess a mortal might acquire immortality.‡

8. Sacraments in mystery religions.—It is possible that the conceptions discussed in the last section underlie such sacramental rites as may be found in mystery-religions, though here we must beware of reading too much between the lines of the scanty evidence that has been offered to us. (a) In the Eleusinia certain acts of a sacramental character had a place. What that place was and what precise meaning was attached to them are largely matters of conjecture. As a preparation for the mysteries, the candidates had to be free from current sins, and the purity of heart and life was necessary. Ceremonial purifications were also used, and before entering the sacred enclosure at night the μυστήριον fasted. Apart from other things done or seen, they partook of a cup of κοράνα—a thick gruel of barley, groats, water, resembling the draught of barley, groats, water, and pennyroyal leaves drunk by the mourning Demeter after her nine days’ fast.† If the emendation by Lobbeck of the text in which Clement of Alexandria describes this rite is correct, possibly sacred bread or cake was also given to the initiates. The unemended text suggests the handling (ὑπεραναραλς) of a sacred object rather than the tasting of sacred food. What did this drinking and eating mean to the worshippers? Some inquirers have seen in it a sacramental communion with Demeter, in her passion—a infusion of her life into the worshipper. The secret of Eleusis has been well kept, and these views are quite hypothetical. But the whole group of rites, including this ‘sacrament,’ was certainly regarded as beneficial and assuring immortality. The μυστήριον were thrice-blessed and believed that divinity was present with them. These effects were probably not attached to the sacramental rite only. (b) In the mysteries of Attis, besides the smearing of the lips of the μυστήριον with holy oil and the uttering of the words, ‘Be assured, O μυστήριον, the god has been saved: thus for you there shall be salvation from ills,’ at some point in the ritual, they ate and drank sacred food according to a formula preserved by Clement and Firmians of Thessalonica. This formula is of the inner part of a temple a man about to die (symbolically or ritually) was admitted and said:

* I have eaten out of the τυπάνομαν, I have drunk from the cymbal; I am an initiate of Attis.§
† Clement gives the formula as:

† I have eaten from the τυπάνομαν, I have drunk from the cymbal; I have eaten the keres (a tray with cups); I have gone beneath the postas.¶

Tympanum and cymbal figured in the myth of Attis. Here again the purpose of the rite is obscure, though some writers boldly maintain that it was to bring the μυστήριον into closer communion with the god. Dieterich thinks that the initiate, about to die a symbolic death, was reborn through the sacramental food, for Firmicus goes on to commend the true food of life—the Christian Eucharist—as conferring immortality, whereas ‘thou hast eaten poison and drunk the cup of death.’∥

SACRAMENTS (Christian, Eastern)

In Mithraism there was some form of sacrament, as the words of Justin Martyr and Tertullian show. Justin says that bread and a cup of water were set forth with certain words of blessing in the sacred rites. Tertullian says that Mithra signs his soldiers in their foreheads, celebrates an oblivation of bread and water, as other writers do. Both Fathers looked upon this sacrament and other rites as a parody of Christian rites suggested by demons. It is not at all improbable that the sacramental rite was adopted as an imitation of the Eucharist. Pliny, however, states that the Eucharist in Mithraism on which reliance from Konjica (Bośni) this sacrament is supposed to be represented. Two figures, one holding a drinking-horn, recline at a table, in front of which is a tripod holding small loaves of bread. On either side stand human figures, one a horseman with masks representing a lion and a raven, and a fourth mutilated figure. The Persian holds aloft a drinking-horn. Is this the rite to which Justin refers? If it is, it tells us nothing of its meaning, and Pfeiffer's assertion that the standing figures represent the nature of Mithra's rite under different circumstances, and now that they have thus "put on" the god, is somewhat extravagant. The figures seem to be initiates of the different degrees, and there is no evidence that the sacrament was a mystic communion with Mithras, as some writers have also asserted. The likeness which the Fathers saw between this rite and the Eucharist leaves its actual purpose doubtful, and we can only regard it as a rite of communion in a somewhat vague sense, like most of such rites in the mysteries. Compont interprets it as a bas-relief to the neophyte force to combat evil spirits and conferring on him, as on his god, a glorious immortality. There is certainly no proof that the rite had any connexion with the slaying of a bull, so often represented in Mithraic bas-reliefs, or with the other details of the bull Hadhayas, by Soshyant at the last day, from the fat of which, mixed with the juice of white kōma, a drink would be prepared which would assure immortality to all men.

In the god of Samothrace, as a recently discovered but incomplete inscription shows, some rite of eating and drinking occurred. The priest 'broke the cake and poured forth the cup for the μόρια. The inscription has been restored in this sense, and, if it is correct, some sacramental act seems to be suggested.

For sacraments in Mandæan see ECE viii. 374, 397, and further, A. J. H. W. Brandt, Die mandäische Religion, Leipzig, 1889, pp. 167 f., 228 f.

In this connexion it should be noted that the phrases expressing mystic union, desired or realized, with a god, in the so-called Mithraic Liturgy ('Renain with me in my soul'), in the London Papyrus ('Come to me, Lord Hermes, as lutes into the wombs of women'), and in the Leyden Papyrus ('For Thou art I, and I am Thou'), as interpreted by Diethrich, have no connexion with a sacramental meal.

Did these sacramental rites in the mystery religions impart new life and immortality? Quite possibly they were thought to do so. Plutarch says that the oracles of the god Amphion looked beyond the mere feast and had a good hope and that the belief that God was present with them, and that He accepted their service graciously. Much of this may have been present in the mysteries also. Considering, however, that we know so little of the nature of the Mithraic, or Olympian, or Mysteries, rite, it is ludicrous to find several writers regard-

SACRAMENTS (Christian, Eastern).—The doctrine of the Holy Orthodox Eastern Church concerning the 'mysteries' (i.e. the sacraments) is officially stated in (1) The Orthodox Confession of Faith, composed by Peter Mogila, metropolitan of Kiev (1623-47), and (2) the Acts of the Synod of Jerusalem of 1672. In these documents the Orthodox sacramental system has been defined, in opposition to that of the Reformed Churches, in terms more in harmony with those of contemporary Roman Catholicism than with those of the early Eastern Fathers.

A mystery is defined as 'a rite, which under some visible form (έδώς) is the cause of, and conveys to the soul of a faithful man, the invisible grace of the Holy Spirit, the Mysteries of which, to whom each of the faithful receives divine grace. Mysteries were instituted to be 'badges (σημαδια) of the true sons of God,' 'sure signs (σημεῖα) of our faith, and indubitable remedies (λαβάρια) against sin.'

Three things are necessary in a mystery: (a) its proper effect (έδώς)—e.g., water in baptism; (b) a properly ordained priest (λεπτός) or bishop; (c) the invocation (σφιήσις) of the Holy Spirit, with the form of words, 'whereby the Priest consecrates the Mystery. The Mysteries are not always religious, to whom each of the faithful receives divine grace. Mysteries were instituted to be 'badges (σημαδια) of the true sons of God,' 'sure signs (σημεῖα) of our faith, and indubitable remedies (λαβάρια) against sin.'

1 Baptism is administered by triple immersion in pure water, in the name of the Father and of the Holy Spirit, normally by a priest, but in cases of necessity by any Orthodox person. Those to be baptized must either themselves or, if infants, by an Orthodox sponsor renounce the devil and all his works and confess the (Nicene) Creed. The fruits of baptism are the abolition of all sin previously contracted, original and actual, with its penalties, regeneration or renewal into a state of complete purification (τέλεια κάλαπαρεν) and original justification, and conferring of the indeclinable 'character' of members of Christ's Body and immortality.

2. Chism (το μέτω του χριστιανου).—The baptized

1 See questions xviii.—xxi. of pt. i. of Ορθόδοξος διαλόγος της Ελληνικής διαπολιτικής εκκλησίας της Δωρικής, in E. J. Kimmel, Monumenta Fidei Ecclesiae Orientalis, pt. i. pp. 169-197. The Greek translation of Mogila's Russian Confession was authorized by the four Eastern patriarchs at Constantinople in 1648 as "faithfully following the Dogmas of Christ's Church, and according to the Holy Scriptures.
2 See Synodus Hierosolymitana adversus Calvinistos, in Kimmel, pt. i. pp. 398, 494-496, 448-456 (= Deiathes Conciliare, 1537, 1602, 1557). This Synod holds a position in the Eastern Church similar to that of the Council of Trent in the Roman. Its main concern was to mathematically Cyril Lucar's Russian Confession to bring the Orthodox theology into harmony with the Reformed.
3 Orthodox Confession, p. 170. The references throughout are to Kimmel's Monumenta, i. 16, p. 171. 6 Ib. p. 455. 6 Ib. p. 175. 16 Ib. pp. 172-178, 452-456.
SACRAMENTS (Christian, Western)

are at once anointed with chrism (a mixture of oil, balsam, and ointments) consecrated by a bishop, and applied by a priest to the brow, eyes, nostrils, mouth, and ears, with the words, 'The Seal of the Holy Spirit.' Amen. This mystery is the equivalent of the Western 'confirmation,' and is held to effect participation in the Holy Spirit, and increase and confirmation (βεβαιώσεως) in grace. Lk 2:21 is the authority quoted for its institution by Christ. 

1. The priest who consecrates (συνεκπάσμα) excels all other mysteries. It can be celebrated only by a lawful (νόμως) priest, and on an altar (θυσιαστήριον) or consecrated cloth (αὐτοκτόνοι). Leavened bread is used and pure wine, mingled with water during the rite. At the time of consecration the priest must intend that the substance (σῶμα) of the bread and wine be changed into the substance (σῶμα) of the true Body and Blood of Christ, by the operation of the Holy Spirit, expressly invoked by him for this definite purpose. This invocation immediately (παρεσθέω) effects a 'change of substance' (μεταστάσεως), apart from the use of the elements, for consecration after only the forms (ἐνώπ) of the bread and wine remain; 'truly and in reality and in substance' (νυμφία καὶ πραγματικόν καὶ οὐσίαν) the bread and wine become the very Body and Blood of Christ, 3 a mystery is the laying on of hands (τῆς ἐκ πράγμα παρόν), and it is right 'to worship and adore (χαρακτῖμον) the Holy Eucharist even as our Saviour Himself.' 4 The Eucharist is an 'unbloody sacrifice' (ἀνάλογος θυσίας), propitiatory (παντευκρινή), offered on behalf of all the faithful, living and departed. 2 The Holy Community is given to the faithful under both kinds—to the clergy separately, to the laity by means of intention. Newly-baptized infants are communicated immediately after receiving the chlamis. The fruits of this mystery are the remission of the sins of the living and death of Christ, propitiation for sins, defence against temptations, and the indwelling of Christ in the faithful. Preparation for communion consists of confession, fasting, and reconciliation with all men. 5

2. Priesthood (ερωμενή) is (a) 'spiritual,' which is shared by all believers (cf. 1 P 2:9, Re 5:10, Ro 12:3); and (b) 'sacramental' (μυστηρίως). The latter can be conferred only by bishops who have received authority for that purpose from the Apostles in unbroken succession. The 'matter' of this consecration is the laying on of hands, the 'form' (χέρων, χειροστία), the formula the invocation of the Holy Spirit, with express mention of the function for which ordination is conferred. The functions of the higher 'orders' (τάκτης) include those of the lower. A bishop, after his election has been confirmed by the bishops of the patriarchate or province, must be ordained by at least three other bishops. The episcopate is necessary for the very existence of the Church; without a bishop the Church could not be governed; he is his Church's representation of the risen and living image of God upon earth. 7 He alone can ordain priests, confers the lower orders, and consecrates the chlamis. Priests can administer all the mysteries except priesthood; their chief functions are to consecrate and offer the Eucharist, and, if authorized thereto by the bishop, preach and absolve penitents. 1 There are also deacons, sub-deacons, readers, exorcists, door-keepers, singers, light-bearers. 5 The fruit of ordination is authority (ἐξουσία) and grace to perform the functions of the order. 3

5. Penitence (μετάνοια) consists of oral confession to an Orthodox priest, who assesses penance and pronounces absolution; in doing so he declares himself a sinner and God the Pardoner. This is the unique form of penance for Orthodox Christian, truly sorry for his sins, purposeful of amendment, and prepared to carry out the penance imposed. Confession should be made at least once, but normally four times, a year. In practice it is frequently of a very formal nature. 4

6. Honourable marriage (ὁ γάμος γέμως).—This mystery is in the first place celebrated by the mutual consent of a man and a woman (there being no impediment), but is not considered by the Church to be a true (δικός) marriage unless they manifest their consent in the Church and there, and, having joined hands, promise to be faithful to each other till death. The civil law of the Eastern Empire permitted divorce a vincula, and the Eastern Church permits such divorce not only for adultery, but for high treason, insanity, leprosy, and other causes. The innocent party may re-nau; no one may obtain a divorce more than once. 4

7. Unction (τὸ ἐλαχάλοιον), instituted by Christ (Mt 6:7) for the sick, is administered only by a priest, with pure oil, a prayer setting forth its efficacy being said during or after its application. The priest is not, as among the Latins, reserved for those in extremis, but is administered with a view to the recovery of the sick person. Its recipient must first have confessed to a priest. 6

Of the seven mysteries the Eastern Orthodox Church affirms that they are 'effectual instruments of grace to the initiated, of necessity' (ἐπιστομον προτοτοκία τοῖς μονοένων χάραξις εἰς ἀνάρχες), which amounts to a declaration that they are efficacious ex opere operato. Each of the mysteries is administered with all rites and ceremonies of the Church, and the liturgical form which accompanies them must be observed, but these are not regarded as necessary to their efficacy, but may vary in different parts of the Church, provided the essentials, as stated, are maintained. The sacramental system in the separated Monophysite and Nestorian Churches is the same as that of the Orthodox in principle and in practice; there are, however, considerable variations in the liturgical formulation of the mysteries and in their accompanying ceremonies, nor has their sacramental doctrine been so definitely formulated.

R. G. Parsons

SACRAMENTS (Christian, Western).—The word sacramentum first appears in Christian use as the accepted equivalent of the Greek συμμαινώ, standing uniformly for it in the O.L. of the canonical books. There is nothing in the known classical use of the word to account for this. It is nowhere found in two senses: (1) of the pledge or security deposited in public keeping by the parties engaged

1 Orthdox Confession, pp. 175-179, 419.
2 P. 180.
3 Pp. 126 and 183. Although the mode of this change is not defined (ib. p. 401), it is stated to be 'not typi- cal, not consubstantial, not by virtue of abounding grace (νοῦς χάριτος ὑποβολολογίως), i.e. the Calvinist doctrine (p. 461, 2), nor by 'imagination' (κατὰ διαμνησίαν). i.e. the Roman Church (p. 459), but in such wise that the Body and Blood of Christ are given to 'the mouth and stomach' of both faithful and unfaithful receivers (p. 455). The verbs ἁρματισθαι, καταδήλουσθαι, are used to describe the change (p. 457).
5 P. 154.
6 Pp. 437, 442, 438.
in a lawsuit, and hence of a lawsuit in general; (2) of the oath taken by Roman soldiers to their emperor, and thence loosely of any oath. Both senses had some effect on the development of Christian doctrine, but they do not account for the additional use of sacramentum as a religious collocation.

It is probable that there was a popular sense of the word which has left no trace in extant literature apart from Christian writers. If so, it must be determined by the earliest Christian use.

Here it is necessary to refer to the letter of Pliny 1 regarding the Christians of his province. He observed that they assembled for worship, pursued sacra sacra, non in seculis aliquod obstrin- gere, sed ne furia, ne irnotcia, ne adulteria committerent, ne idoneo temporibus spectaret, ne sincerum appellari should. He evidently understood the word of a pledge or oath, but his description does not answer to anything known in Christian origins, and it is certain that he misunderstood the information given him. What is interesting is the use of the word sacra- mentum. It has been used either by the Christians examined, if they spoke Latin, or by an interpreter. In the latter case it will be an example of the popular sense here assumed.

What that sense was may be gathered from Tertullian, de Precr. 20, where he speaks of the unity of Christians:

1 Dum est illius communicatio pacis, et appellatio fraternitatis, et controversia hospitalitas: quae in re non alia ratio regit quàm unitas. 2

Here sacramentum can be nothing less than the whole Christian religion. 3 The word seems to signify any kind of religious institution, general or particular. Thus for St. Cyprian the Church is 'sacramentum unitatis.' By insisting on the like- ness of the 'sacramentum divinum' to the Mithraic and other mysteries, Tertullian 4 recalls the Greek original and shows that he considered the word a just translation. It is possible that St. Thomas Aquinas, in his etymological guess relating sacramentum to sacrae exactly as sacramenta to sacra, lighted upon the true development of the word.

Another sense emerges when Tertullian calls the types of the OT 'figuram sacramenta.' 5 With this we may compare Cyprian's saying about the seamless robe: 6 'Sacramento ustita et signo declarando ecclesiae unitatem.' 7

When Tertullian says 'Vocat sancus ad millimetum Dei uidi ismune, cum in sacramenti usbe respondiens,' 8 he has in mind the military oath, and perhaps plays consciously upon the like- ness of the 'sacramentum' of baptism to the soldier's enrollment. Cullum of Illis, in the Council convened by Cyprian for the phrase 'sacramentum divinum,' 9 recovers the Greek original and shows that he considered the word a just translation. It is possible that St. Thomas Aquinas, in his etymological guess relating sacramentum to sacrae exactly as sacramenta to sacra, lighted upon the true development of the word.

Cyprian's collocation of sacramentum and signum suggests a current use of the word which may enable us to establish more precisely its equivalence to _sacramentum_. The legal deposit or security of a lawsuit had a symbolic value as well as its real value, representing the whole matter in dispute. It may have been called sacramentum for this reason, or, on the other hand, that word may have acquired the generic sense of a symbol from this specific use. There is no direct evidence for either construction. The religious formalities and sanctions of Roman jurisprudence, which involved this use of a word evidently of sacred associations, would facilitate its retransfer to religious uses with a new sense thus acquired. It would then stand for any kind of religious symbolism, and in particular, the notion of the mystery of _sacramentum_. The word is certainly implied when St. Augustine says that signs or symbolic actions, 'cum ad res diuinem pertinent, sacramenta appellantur.' 10

1 Ep. 96.
2 Cf. his reference (de Res. Carn. 23) to St. Paul's knowledge of 'omnia sacramenta' (1 Cor 15), and to the Christian understanding of the 'sacramentum Dei' (c. Marc. III. 16).

of_272_. 'Esta dicuntur sacramenta, quia in eis alud uidetur, aluid intelligitur,' 1 like an appeal to the common understanding; and in the same connexion he renews the identification of _mystertium_ and sacramentum, saying, 'Mystertium est illud sacramentum ... positio sancta,' 2 that is to say, 'the mystery or sacrament of what you yourselves are,' namely, the Body of Christ. In _De Civ._, _Dei_, x. 5, he seems to be defining sacramentum:

1 Sacrificium iubileum ineffabile sacrificium sacramenti, id est sacramentum._

But he probably did not intend a formal definition, any more than when he called sacraments 'signa cus veritatis.' 3 His constant recurrence to this idea, however, prepared the way for the formal definition which Isidore of Seville propounded towards the end of the 7th century:

'sacramentum est in aliqua celebratione, cum res gesta sit, ut aliquid signiicari intellegatur quod sancta acceptione est._

Augustine used the word in its widest extension of meaning, as did Leo the Great, 4 but he moved in the direction of making it more specific, as when he spoke of the 'panea sacramenta suberberima' of the gospel, 5 or contrasted the manifold rites of the OT with the few of the NT, saying:

'sacramenta sunt, quae sacrum populi ... praetextantium, significationes praestantis, societatem nosi populi collimant._

This implies the same limitation which the word _sacramentum_ imports into Isidore's definition. The movement was slow. It is noteworthy that Isidore himself could still speak of 'sacramentum Trinitatis.' 6 But the tendency was to restrict the use of the word to some action, _res gesta_, done with symbolic significance as a rite of the Church.

The fact that St. Jerome contemporaneously substituted _mystertium_ for _sacramentum_ in many passages of his revised version of the Scriptures does not seem to have any bearing on the movement for he evidently did not distinguish the words on any principle. They were still true equivalents. He retained sacramentum in the following texts: _v. 171_ 5:6, _Te__ 19, _Wis_ 22, _Ep_ 129-90, _v. 19_ 31, _Rev_ 195. The whole range of meaning which _sacramentum_ has here is included.

The importance of the symbolic sense has a consequence. The compendious definition 'signum rei sacrae' involves the distinction between _signum_ and _res_, which is decisive for the meaning of _sacramentum_ and _res_, which is decisive for the meaning of _sacramentum_ and _res_. Augustine, and acquires great importance in the system of theology ultimately elaborated from his teaching. At times he makes the distinction very sharp. The _signum_ is visible, or presented to other senses than sight; the _res_ is invisible. He makes use of two kinds of _signum_—those which are _naturalia_, as the track of an animal or smoke showing where there is fire, and those which are _data_, or merely conventional; 7 and sacraments are evidently of the latter kind, so that _signum_ and _res_ are arbitrarily conjoined. Elsewhere he observes that in the case of such conventions the sign may be identified with _sustinere personam_ the thing signified, as when St. Paul says 'That rock was Christ,' 8 but only by a figure of speech. This of _signum_ in general; in a passage often quoted he says much more: 'Si sacramenta quandam simulidinem eram rerum quorum sacramenta sunt non haberent, cumno sacramenta non esset. Ex hac autem simulidinem plerumque etiam ignarem rerum nomina accepimus. Sint ergo secundum quaedam modum sacramentum corporis Christi corpus Christi est, sacramentum sanctissinii Christi sanctii Christi est, ipsa sacramentum sibi sibc est.'

1 Si sacramenta quandam simulidinem eram rerum quorum sacramenta sunt non haberent, cumno sacramenta non esset. Ex hac autem simulidinem plerumque etiam ignarem rerum nomina accepimus. Sint ergo secundum quaedam modum sacramentum corporis Christi corpus Christi est, sacramentum sanctissinii Christi sanctii Christi est, ipsa sacramentum sibi sibc est.

But this must be read with the context. He has been asked how an infant brought to baptism can be said to have faith; he replies that the child has _fides_ because he has the _facultas_ to know. He goes on to say that this is sufficient for salvation.
tion if subsequent sin does not undo what is done. He has said immediately before:

- *Nonne semel inimicato est Christus in selpio, et tamen in sacramento non solum per omnes Paschae sollemnitates sed omni die populus in Deo, ut ipse mentitur qui interro- gate, quid non administret sacramentum.*

This crucial passage therefore sets up something more than a typical or figurative relation between *signum* and *res*, and from this beginning proceeded the theology of the School.

The word *sacramentum* is narrowed only to the case where there is a sensible sign of an intelligible reality. But Augustine did much more than impress on the word this connotation. His elaborated doctrine of grace, and his insistence on the connection of this with the sacraments, specifically with baptism, afforded ground for a narrower distinction. His statements must be read with care. When he says *Sacramenta Noni Testamenti dant salutem; sacramenta Veteris Testamenti promiserant Salvatorem,* he probably means the whole content of the faith. His conception of the working of grace made it impossible for him to tie this absolutely to particular rites or ordinances, and he was constantly enlarging on the futility of such a notion, but he was equally clear that certain sacraments had the conveyance of grace to the soul. It followed that certain ordinances might be distinguished as so used, and this distinction became the basis of the subsequent doctrine of the sacraments.

It is noteworthy that in the case of marriage, the *sacramentum* of Eph. 5:6. does not seem to have recognized any conveyance of saving grace. The *bona instruitur* were *pros, fides, et sacramentum, but by sacramentum he seems to have meant only its symbol of Christ and the Church, in consequence of which marriage became (a) indissoluble, as it would not by natural law *nisi simul ut malum*; and quoddam sacramentum adhibetur; (b) and (c) so sacred that the liberties taken even by virtuous pagans, such as Cato, were insupportable.

It was not, however, until the 12th cent. that the doctrine was formulated. Even then Hugh of St. Victor's spoke of sacraments with the older generality, enumerating no fewer than 30 in particular. In his date William of Champeaux, the author of *Sententiarum* of Peter Lombard, which speedily became a textbook of the Schools and so acquired an importance disproportionate to its merits. He distinguished seven sacraments specifically conferring grace: Baptism, Penance, Extreme Unction, Order, and Marriage. The various grounds given by his commentators for this limitation and enumeration indicate that it was in fact arbitrary.

St. Thomas Aquinas seems to state the whole truth when he propounds, as the reason for maintaining it, the fact *quod communitur ordinariam sub omnibus sacramentis, sicut prius dictum est.*

In the *Summa c. Gentiles,* iv. 55., Aquinas develops an analogy with nature. Corporal life has three essential needs: birth, food, and clothing. To which correspond *Confirmation, and the Eucharist; and one per accidens in case of need, i.e., healing, to which answer Penitential and Extreme Unction.*

There are further required a source and an ordering of life, parents and governors, which are provided in the system of the Church by the sacraments of Order, supplying spiritual needs alone, and of Marriage, supplying both spiritual and corporal needs. Other acts also are more even forced and artificial. Some better varieties are collected in *Summa Thol. iii. lxxv. 2."

Yet this septenary system, however ill-founded it may seem, bore the test of criticism as understood in the Schools of the Middle Ages; and its general acceptance by the Greeks, who were not much disposed to borrow doctrine from Latins, seems to indicate that it was either drawn from a wider tradition or based on a larger sense of fitness than appears on the surface. It is not pretended that the number is anywhere found expressed earlier than the 12th cent., when Otto of Bamberg introduced it into a catechistical instruction for his Pomeranian converts (c. 1127), but he propounds it as an accepted tradition. Shortly after him Hugh of St. Victor, the chief disciple of Lombard, explicitly, distinguishes the *septem principala sacramenta,* which were later set in a category apart.

Contemporary with them was Gregory of Bergamo, who has the same classification in his treatise *de Veritate Corporis Christi.* A scheme recognized by the meaning of the word cent. forward as a novelty, though it can be traced no higher. This must be remembered when the general adoption of the scheme is attributed with good reason to the influence of Peter Lombard and his commentators in the schools of theology. From the 13th cent. onwards the seven sacraments were mentioned with more or less of dogmatic assertion by numerous minor councils, by the General Council of Constance, and notably in the *Decretum* of Eugenius III., and in the *Summa Th. M. Div.,* which followed almost verbally the *Opusculum Quintum* of Thomas Aquinas. Finally the Council of Trent condemned under anathema any who should say *sacramenta nune legis non fuisse omnia a Jesu Christo Domino nostro instituta, et case plura vel paucores quam septem.*

There is a subordinate classification of *sacramenta mortuorum,* which confer first grace (Baptism and Penance), and *sacramenta vivorum,* which confer special graces on persons in the state of grace.

This more precise teaching, which had been gradually gaining ground, is in evident conflict with the language of the Fathers and of many of the Schools. The Council of Trent, and in particular with the statement of St. Bernard that the washing of feet is a sacrament for the remission of venial sins. He says emphatically that our Lord's action was done *pro sacramento, non pro solo exemplo.*

If we avoid this difficulty, theologians have generally argued that sacraments are spoken of either *sensu generico* or *sensu proprio.* A sacrament *proprie dictum* is one of the seven, and it is argued, not very successfully, that Bernard himself observed this distinction and used the word in the generic sense. The distinction first appears in Peter Lombard's definition:

*Sacramentum proprie dictum, quod sua signum est gratiae Dei, et immissibilis gratiae forma, ut ipsum imaginem gerat et causam existit.*

The weakness of the distinction lies in the implication that the name originally belonged to the ordinances thus specified, and was then extended in a loose sense to others, which is an exact inversion of the historic movement. The difficulty is thinly disguised by the practice, common to theologians, of calling other ordinances resembling the proper sacraments by the name of *sacramentalia.* Such are the anointing of kings, the clothing and consecration of nuns, and various benedictions.

The several sacraments being treated in this work under their proper heads, it is sufficient here to speak in general terms of what is common to them.

1. Institution.—According to the Tridentine definition, all sacraments were instituted by our Lord Jesus Christ. This follows from the limitation of the term confining it to ordinances by which grace is conferred. Thomas Aquinas carefully distinguishes between the divine nature, which is the source of grace, and the humanity of our Lord, by which the gift is mediated to us, the
SACRAMENTS (Christian, Western)

Sacraments being by His authority an extension of this mediation, though *ipsae potest effective sacramentorum sine exteriori sacramento conferre.*

He has been closely followed by all theologians, but obvious lack of evidence in the case of some sacraments has led to a distinction between immediate institution by our Lord and institution by others acting on His authority. St. John Bonaventura argued that Confirmation and Extreme Unction were thus instituted by the Apostles. Alexander of Hales went so far as to ascribe the origin of Confirmation to a council of the church; but he declared that the notion has been adopted since the Council of Trent by almost all commentators; some assert that immediate institution by our Lord while on earth, and the committal of the institution to the written or unwritten tradition of the Church, are defined as *de jure* by the Council; others say that it certainly follows from the words of the Council, but is not expressly defined; others deny the necessity of this consequence, but will not venture to call the conclusion in doubt; Franzelin and other moderns find it hard to believe that the Council anathematized the teaching of St. Bonaventura. It is determined as a historic question of such dubiety, but nevertheless maintain on *a priori* grounds the narrowest interpretation of the definition. In the Pontifical Letter *Laudemii*i of 1907 Pius x. condemned various propositions calling in question the immediate institution of the sacraments by Christ Himself.

## Ordering.

The institution of the sacraments by our Lord being assumed, it seems to follow that some conditions of their valid administration are justly neglected, those conditions must be jealously guarded. Hence comes the theological notion of the ‘substance’ of the sacraments which the Church has no power to vary.

The decree of the Council of Trent invalidating marriages contracted without the presence of the priest was opposed on this ground. If the consent of the parties was sufficient, as had always been held, to constitute a valid marriage, to vary this rule would be to touch the substance of the sacrament. The objection is overruled by the fine distinction that the effect of the decree parties is not the substance of the sacrament.

The same consideration imposes the rule of tuturity. Where there is any possibility of doubt as to the content of the substance of a sacrament, nothing must be neglected which there is even slender ground for supposing necessary. The safer course of including it must be generally followed in practice. The facetious substancia of a sacrament are conveniently summarized under three heads: the minister, the intention of the minister, the matter and form. The intention of the minister has been treated elsewhere (art. INTENTION [Theological]); the other two heads can be more simply examined here.

### (a) Minister.

Since in a sacrament there is always something done, a doer is required; and, since it is to be done by the appointment of Christ, it is important to ascertain who has authority to act. Apart from the Ignatian insistence on the part of the bishop in the Eucharist, which might be treated as mere matter of discipline, the earliest question raised on this head appears in the baptismal controversy of the 3rd century. Cyprian maintained with logical consistency that Baptism, being a sacrament effectually administered, in the Church, could be administered only by the Church. Narrowly defining the Church, he denied that heretics or schismatics could baptize. In other words, the minister of the sacrament must be a Catholic Christian. Arguing thus, he defended the practice of his predecessor Agrippinus, and apparently of all the African bishops, who rebaptized all heretics coming to them. Stephen of Rome maintained that this was an innovation, meeting it with the peremptory demand, ‘*Quid actum est, illud confero!*’

The historic question is not easily determined. There had probably been a long-standing divergence of practice. Cyprian was supported by Firmilian of Cesarea and other Easterns; the Donatists inherited his contention, and pressed it; but Augustine intimated that this was to be taken traditionally. The Carolingian council, fortified by conciliar decisions, was already exclusively held among Catholics before the date of his birth, A.D. 553. This conclusion about Baptism carried with it a like consequence in regard to other sacraments, and the Council of Nicaea agreed to receive Novatian bishops as validly ordained.

In the Western church, however, disputes about the validity of schismatical ordinations long continued, as witness the history of St. Wilfrid in England, and otherecclesiastics. The matter was not finally disposed of till the last case led to the establishment of the judgment in favour of such ordinations secured by the influence of St. Dunstan.

During the later middle ages the contention of the Donatists was revived in a new form by the Puritans sects to which the practical corruptions of the church gave rise. The power of ministering the sacraments was restricted to them by men of openly virtuous life. In the profession of faith imposed on the Waldensians by Innocent III. this opinion is easily repudiated. It reappeared in the teaching of Wyclif, was condemned by John xxii. in his constitution against the fraticelli, and by the Council of constance in dealing with the Hussite teaching.

The common teaching of theologians as against these errors is that a sacrament has its effect from God and from the institution of Christ, and not from anything which the minister himself contributes, his action being purely ministerial. When he performs what is required of him in this immediate connexion, the act is complete. The doctrine is safeguarded by the assertion that a sacrament is effective *ex opere operato*. The phrase first becomes conspicuous in the treatise *De Sacro Altarum Myst.* of Innocent III., who seems to have been taught it by his master Pierre of Poitiers in the school of Paris. He fixes the meaning precisely:

*Quamuis opus operans aliquando sit immundum, semper tamen opus operato est.*

*The opus operans is the personal action of the minister; opus operatum is the sacramental effect produced by this action. The distinction was repeated by William of Aucerre and by Alexander of Hales, but was not yet fully established in use when Aquinas wrote his commentary on the Sentences, for he there says only that it was employed *a quibusdam.*’ He also varied the sense of the distinction as used by his predecessors, making *opus operans* equivalent to *unus sacramentum.* Later theologians have preferred the form *opus operantia,* which fixes the meaning more exactly on the personal action of the minister or the recipient. The other member of the distinction is perfectly stable; *opus operatum* is the thing done according to the institution of Christ, and having its effect therefore defined only by the Council of Trent that by the sacraments of the New Law grace is conferred *ex opere operato.*

It will be convenient to mention here the doctrine of  **obzer**. The word dates from Augustine, with whom it is correctly understood.
Boniface on the baptism of infants, wrote that the child ‘etiam fidei nundum habet in cognitione, non ei tamem obiem contrae cognitionem oppositae, unde sacramentum eius accepit tamen, si esset hic a membranis, et a fide, which in the case of an adult might annul the saving effect of the sacrament. The argument has been extended to the baptized in genera. An obieet raised (distinguished from a defect such as lack of necessary intention, or a personal incapacity for sacramental reception) as a case of a sacrament is in this case understood to be valid; it implies character, if it is one of those having that effect; it may ultimately confer grace by reiviviscence when the obieet is removed; but the soul cannot be blessed with gracing from the immediate operation. The obieet is a state of soul actively repugnant to the working of grace. A favourably constructed argument in such a way that the infusion of grace will be due to the operation of the recipient, as it ovspere operante; a passive disposition suffices for adults as the recipient; the active operation of the recipient is needed for its removal, since the hindering state of soul cannot be changed without his will. The Council of Trent antemtelized ‘si quis dixert, sacramentum non legis . . . gratis ipsum non ponentibus obieet non confers.'

So far it is seen only that neither orthodoxy nor personal sanctity is requisite in the minister of a sacrament, nor ease of reception, while such indications are found in earlier times, appears definitely in the Respenns To Bulgari of Nicolaus 1. The pope considers two cases. The first (ch. 14) is that of a pretended priest who had baptized many converts; the answer is that personal qualification is lacking, his ordination to be reekipt. The second (ch. 104) is that of a Jew—whether Christian or unbeliever was not ascertained—who also had baptized many. In respect of these the pope answers:

1 Deem nomine Sancte Trinitatis, vel tamen in nomine Christi situm in Actibus Apostolorum legimus, baptizati sunt (unum quippe idemque est, vel sancti ex opistit Ambrosius), esse debent capitandos.

Yet he directs inquiry whether the man were a Christian or not, for what purpose is not clear, concluding with a citation from Augustine:

1 Baptismus Christo baptisatum, sanctis hominum, sines dantis, sine accipientibus, sine violae.

This halting treatment suggests that he was not sure of his ground, lacking definite precedents; but his practical ruling in favour of baptism administered by any layman, or even of the hands of the faithful, was the starting-point of a doctrine that became firmly established in the schools of theology.

It follows that any human being is capable of acting as minister of a sacrament. Parity of reasoning might extend this to infants; but other sacraments equally with Baptism, but the inference has not been drawn; the practice of the Church, supported by more or less weighty argument, has restricted the administration of other sacraments to particularly qualified persons. To determine who is an ‘idolens minister,' one must refer to the theology of the several sacraments.

(b) Matter and form.—A sacrament being a sensible sign of grace, it is obvious that something visible or audible or tangible, and so forth, is requisite; and this something must be determined by the Church. The Councils of Jerusalem, Ephesus, and Chalcedon debated the question whether such determination may be generic, or must be specific. If generic, it may then be left to the Church to determine specifically what shall be used, and this may even be done in various ways in the several parts of the Church; if specific, no variation is possible. In the case of Baptism specific determination is universally accepted; baptism must be by water in the name of the Holy Trinity. Yet even here the teaching of Nicolaus 1, quoted above, may raise a doubt; hence in nomine Christi 1 may raise a doubt; and it is perhaps only on tutorist grounds that the normal formula can be treated as indispensable.

1 The same expression as used by Stephen 1. (Cyp. Ep. 10) possibly meant ‘Christian Baptism.' In general, for the use of the Creed as form of baptism in the 3rd cent., see P. E. Brightman, Essay on the Early History of the Church and Ministry (1916), p. 544 ff. 2 In Joh, 50.

2 Ses. xiv. 2.
Abraham was justified by his faith before the institution of the sacrament. How did baptism differ from this? Augustine replied that circumcision was a sacrament or sign of a Deliverer to come, by faith in whom the people of God so marked were justified; but the Deliverer, being certain, is the sacrament. But to explain a sacrament in the way of innationem hominis. He adds that even before circumcision there was presumably some sacramental justification ad innovationem latent in the working of God. From this distinction there proceeded with increasing precision a doctrine almost unique in the whole history of the Church. As the sacraments of the OT were ineffective signs or symbols of a work of grace wrought independently of them, while the sacraments of the NT were instruments for the doing of that work.

Earlier expositions of this doctrine had been very crude. According to Tertullian, there was a usus sanctificandi in the water of baptism by descent of the Holy Spirit. Augustine's studies in the doctrine of grace led to refinements which sometimes seem to reduce a sacrament to the standing rubric or act given, drawn from one use of the word at supra, or of a condition sine qua non; but the later theology followed the current of his thought, and was expressly concerned with the exclusion of these minimizing conceptions. A sacrament was taken to be an ictus causae of grace; it is an irruption of grace, the infusion of grace, but is not even instrumentally a cause of that infusion. In his later works he abandoned this distinction, adopting a theory of sacramental operation which seems to exclude his previous negations. In Summa, III, xii. 5, he contrasts the human hand as instrumentum coniunctum with a stick as instrumentum separatum, both being operated by the principal cause, which is the man. So in the operation of grace God is the principal cause, the humanity of Christ is the cause, but the sacrament is instrumentum separatum; but it is evident that the same effect is produced whether the instrumentum separatum be used or not. Therefore he concludes:

'Quaestiones ecclesiae specialiter habent virtutem ex passione Christi, causs virtutis quoad modo nobis capaciatur per sacramento sacramentorum.'

Among the later Scholastics those who adhered to the earlier teaching of Aquinas attributed the dispositive effect of the sacraments to a physical causation (Cajetan being apparently the first to use this phrase) which could not reasonably be extended to the actual infusion of grace. Those who adhered to his later teaching, on the other hand, extended the notion of physical causation to the infusion of grace. His argument is that every creature of God has a natural adaptability to any end which the Creator may appoint (potentia naturalis), and that this potentiality becomes active in the sacraments, by the supernatural natural appointment of God, to the production of supernatural grace. Among his followers the severe Thomist Drouin attributes the nature of physical causation in the sacraments 'utrum aliquam dignitatem acceptum in eis agens, quam propriam noeqne influens sacramentales effectus in susceptiendum corda insimilarem.' This opinion, after giving way for some time before the teaching of Drouin and Cajetan, has been revived in the American CE, e.g. 'Sacr.,' on the other hand Billot has moved in the contrary direction, reducing the effect of sacramental causation to the creation of a title to grace, e.g. 'Sacraments,' approximating to the first position of Aquinas.

The indelible effect of a sacrament as imposing character, and the vexed question of the reviviscence of grace in those who have received it without the necessary disposition for its salutary working, concerns the specific theology of those sacraments which have this effect, viz. Baptism, Confirmation, and Holy Orders.

With the doctrine of sacramental causation is intimately connected the phrase continere gratiam, current from the time of its use by Hugh of St. Victor. The Council of Trent anathematized 'si quis dixerit, sacramentum contineat, quod habeat aliquam dignitatem, quam sequitur sacramentum, quam significat.' The phrase cannot safely be rendered by the English word 'contain,' which seems to be used only in a spatial or quasi-spatial sense and in the sense of restraint. Neither sense is apt here; the grace signified is not tied restrictively to the sacrament, nor is there any spatial connexion, except so far as the sacrament operates at a certain place on persons there present. Grace is in the sacraments, says Aquinas, only as signified by them ('si eunt in signum'), or as an effect is present at a place 'ut simile in vasa,' except only as a vessel may be considered an instrument of conveyance. It should be observed that the Tridentine canon sets continere gratiam in contrast with the notion that sacraments are signs tantum externa acceptae per fidem gratiae md instituti. The sense of continere here is that of immediate and continuous connexion, the connexion being specifically causal. It is a conception which falls in more easily with the theory of physical causation than with that of moral causation; for it is not inconsistent with the latter, and is in fact held to be the necessary consequence of the Tridentine definition. According to either theory, the causal connexion is unaffected by the occurrence of an obex, which interrupts the flow of the content of the sacrament to the soul of the recipient, but does not reduce it to a nullity.

LITERATURE.—In addition to the works mentioned throughout, the following are of first-rate importance: T. de V. G. Cajetan (the first of the modern school), Commentary on Summa Theol., pt. iii., contained in the Leontine ed. of St. Thomas Aquinas, Rome, 1888; F. Suarez, 'De Sacramentis in Generis,' in Opera, Venice, 1745–57, xviii.; R. F. R. Bellarmine, 'De Sacramentis,' in Disputatio de controversia Fidei, Cologne, 1617, iii.; F. de Lugo, 'De Sacramentis in Generis,' in Opera, Venice, 1687, iv.; J. Billot, 'De Sacramentis,' in Prolectiones Theologicae, Paris, 1750–55, 300; C. R. Billant, Summa Sancti Thomae, Liége, 1746–51 (containing a more spirited criticism, from the latitude and brevity of the former, abridged in Summa Summa, Ghent, 1763). G. Perrone, Protectores Theologiae, Rome, 1550–49 (a full course at the Collegium Romanaus, once of great vogue, but superseded by Franzelin); J. A. Möhler, Symbolik, Mainz, 1812, tr. J. B. Behrstock, Symbols, London, 1805; F. Pichon, Examen et Sacramentorum in theo 1725; J. B. Franzelín, Tractatus de sacramentis, Rome, 1726, 2nd ed. (the work by Franzelin before the Thomist revival under Leo xiii.); L. Billot, De Ecclesiae Sacramentis, Rome, 1807 (the chief exponent of the new Thomism at the Collegium Romanum).

T. A. Lacey.
SACRAMENTS (Christian, Lutheran).

The doctrine of the sacraments, as understood and taught in the Lutheran Church, is a practical application of the doctrine of justification by faith. In the Reformation period, the new Church of the North occupied with a thorough criticism of the definition, not only of 'justification,' but also of such closely related terms as 'grace' and 'faith,' so they inevitably led also to a radical change in the conception of 'sacrament.'

Recognizing the fact that the term in its ecclesiastical sense is not Scriptural, and that therefore considerable latitude could be allowed in its signification, the Lutheran Reformers were concerned only that a unique place should be assigned to the signs of the divine grace, and that no rites, however useful in their place, that have not been instituted by divine authority for the same purpose as these two ordinances should be elevated to the same rank. The term sacramentum in the Vulgate, equivalent of the Greek σώματα (in such places as Dr 21, 22, 121), designates what is in general secret and mysterious, and, because of being so, awakens wonder and inquiry that can be answered only by supernatural revelation. As such, it is applied to only the NT sacraments (I Ti 3, Col 17, Eph 12, 33, 59). In Patristic use it was generally applied to any 'sacred sign' or 'a visible seal (signaculum) of invisible divine things,' 'a symbol of a sacred thing and a visible form of invisible grace.' The term was at times restricted to baptism, and as far as the very early date its pertinency to Baptism and the Lord's Supper, above all other rites, was generally recognized. The Reformers found in the Decree of Florence (1439), designating the number viz. Baptism, Confirmation, the Eucharist, Penance, Ordination, Matrimony, and Extreme Unction; and at Augsburg they were forced by the criticism of art. xiii. of the Augsburg Confession, on the part of the authors of the Confutation, to define clearly their position as to the number. This discussion involved a fixing of the definition. Prior to this Luther had, years before, in his private writings, freely criticized the teaching hitherto current. Of fundamental importance is his Treatise on the New Testament (1520); but he expresses himself at greater length in the Preface to the German Apology, written the same year—a trenchant criticism of the entire medieval sacramental system.

1 must deny,' he says, 'that there are seven sacraments, and for the present hold to but three—baptism, penance, and bread. . . . To be sure, if I desired to use the term in the scriptural sense, I should allow but a single sacrament, with three sacramental signs.' Then, he adds in conclusion: 'There are, strictly speaking, but two sacraments, baptism and bread; for only in these two do we find both the divinely instituted sign and the promise of the forgiveness of sins.'

Melancthon, in the Loci Communes (1521), simply re-echoes these statements:

'What others call sacraments we call signs, or, if you please, sacramental signs. For Paul calls Christ Himself the Sacrament who ordains the grace, and who annexeeth you, you may call them seals, and thus more nearly express the force of the sacraments. Two signs have been instituted by Christ in the Gospel, viz. baptism and the participation of the Lord's Table.'

Accordingly, the Apology (1531) proposes the definition: 'Sacrifices are rites which have the command of God, and to which the promise of grace has been added,' i.e. the promise of the gratuitous forgiveness of sins for Christ's sake, or the gospel. It also became a prominent feature of the Lutheran conception of a sacrament to emphasize the fact that the use of grace is individualized in the administration of the sacrament.

'Christ causes the promise of the Gospel to be offered not only in general, but through the sacraments, under the seals of the promises. He seals and thereby especially confirms the certainty of the Gospel to every believer.'

Thus the sacrament is not only a visible word, but it is the visible word individualized. The efficacy of the sacrament is not sown in the faith, therefore, neither in the character nor in the intention nor in the regular ordination of its ministers, nor in the element received, nor in the sacramental transfiguration itself, but solely in the word of divine grace which it applies.'

The sacrament, being not man's but God's act, cannot profit as an act of obedience on the part of man. Man's part in it is entirely receptive. Most important is the distinction between a sacrament and a sacrifice.

A sacrament is a ceremony or work, in which God presents to us, as that which the promise annexed to the ceremony offers, as baptism is a work, not which we offer to God, but in which God baptizes us, the minister places seals on us, on the contrary, is a ceremony or work which we render acceptable to God.'

This position Luther most strenuously maintained against the extreme of Romanism on the one hand, which changed the Lord's Supper into a propitiatory sacrifice in the Mass, and of the radical reaction against Rome on the other, which regarded it as only a Eucharistic sacrifice.

'We should not pretend to give God something in the sacrament, when it is He who therein gives us all things. 3

Nor have they profit as works wrought for men by a priest. With the greatest decision the Reformers repudiated the Scholastic doctrine that a sacrament performs something, except when the recipients intentionally oppose an obstacle (such as a mortal sin, or the purpose to commit sin) to its efficacy. Against such a mechanical theory the value of the sacrament was placed solely in its communicative word of grace, to be apprehended by the intelligence of the subject, and appropriated by faith. The best known of all Luther's books, the Small Catechism, says:

'It is not the water that produces these effects, but the Word of God which accompanies and is connected with the water, and our faith which relies on the Word of God connected with the water'; and 'The eating and drinking do not produce these great effects, but the words which stand here, 'Given and shed for you for the remission of sins'.' He who believes these words has what they set forth, namely the remission of sins'; and, to quote from his Apology on the NT, 'Sacrament without testament is the case without the jewel.'

The mechanical theory of the sacrament broke down with the scholastic theory of justification. This failure in the recognized of the Pauline doctrine of justification as an act of God with reference to man, and regarded it, on the other hand, as wrought within man, in a continuous, gradual process, by the infusion of grace, through the sacraments. But, according to the NT, grace, in the proper sense, is no quality inhering in man, or communicable to man, but a disposition of God toward man, i.e. God's favour shown man without merit on man's part. The grace of God reaches man through a promise, and that promise is apprehended only by faith. Nor is justification a process wrought within man, but a simple and complete act of God, without stages or degrees. Sanctification, or the process by which man grows in all the gifts of grace, is one thing; justification, by which God places man in a new relation with God Himself, involves the highest degrees of faith by which the promise is apprehended; but, wherever justification is present, it is always of the same value, namely that of the complete obedience of Christ; and this is the gift offered in the sacraments.

Nor is this merely enunciated theory of

1 Formula of Concord, p. 656 (quotations from the Confession of the Lutheran Church are from the Eng. tr. of Book of Concord, Philadelphia, 1819).

2 Apology, 262, 12.

3 Luther, Treatise on the NT.
the sacraments in any way contradicted by difficulties connected with the explanation of the agency of the Holy Spirit in infant baptism upon the baptized infant or part of the child baptized. For, even with respect to adults, the work of regeneration always remains a mystery (Jn 3); and, however emphatically Luther connects regeneration and baptism, nevertheless the ground and motive of infant baptism of the Word and faith may be wrought in an unconscious child, but that Christ's command concerning it may be obeyed.

'Everything depends upon the word and command of God. We bring the child in the purpose and hope that it may believe, and He may give grace to it; but we do not baptize it upon that, but solely upon the command of God. It is very certain that the promise of God becomes also to little children; therefore, it is necessary to baptize little children, that the promise of salvation may be applied to them, according to Mt 28. Just as there is salvation offered to all, men, women, and children, so baptism is offered to all—men, women, children, infants. It clearly follows, therefore, that infants are to be baptized, because with baptism salvation is offered.'

'Through baptism is offered the grace of God, and children, being offered to God through baptism, are received into grace.

Where, then, God thus offers His grace, it is believed that He provides also a certain measure of receptivity for it, even although we cannot define either method or measure. All explanations attempted are pure hypotheses and not articulated with the evangelical condition standards according to which a universal principle concerning the sacraments may be deduced, particularly if such principle antagonize what is no hypothesis. It is enough to know that the word of grace is offered in baptism, and that, and remains efficacious until we pass from this estate of misery to eternal glory; and to this promise faith is to recur throughout all subsequent periods of life. The stress, however, lies always not on the faith of the recipient, but on the surety of the promise made to the individual; such a person is justified not because of his faith, but because of the grace of God and the merit of Christ that his faith apprehends.

For a proper estimate of the office of the sacraments, a consideration of the doctrine of the Word of God as taught by Luther is also important. In his judgment the Word is no mere directory, informing men of the way of life; besides being such, it brings the very life whereof it teaches. The activity of the Holy Spirit is not supplementary to the Word; nor is there any individual Word without a Word, no word without preaching, and announced in the sacraments. The outward Word, which is heard and read, is the true means through which the Holy Spirit works. Outward and inner Word, if distinguished, are only two sides or relations of one and the same thing. Nor are the means of grace institutions by which man approaches God; they are institutions by which God comes to man (Ro 10:13–15). Strictly speaking, there is but one means of grace, viz. the Word, and that, too, the Word of the gospel. Hence the Word in two forms, we speak, in the wider sense, of both Word and sacraments as the means of grace.

The grace, therefore, offered and received in the sacraments in no way differs from that offered and received in hearing and reading the Word. The promise is the same as that which is offered in the Word without the sacraments. The necessity of the Word is absolute; without it there is no salvation; that of the sacraments is relative. We are bound to them because God has instituted and administered them.

Nevertheless, since the testimony is far more important than the sacrament, so the words are far more important than the signs. For the signs might be lacking, if one only have the words, and the sacrament be saved without sacrament, yet not without testament.

The relative necessity of sacraments arises out of a gracious accommodation of God to the weakness of man's faith.

Some human non tantum per se non nostrit promissionem de gratia, sicut philosophi, verumtamen quando illa verbo nostri resolutor, . . . etc.

Faith contributes nothing, therefore, to the efficacy of the sacraments, since all their power comes from the Holy Spirit in and through the Word of the promise, where they apply. Their virtue is objective, dependent alone on their divine inspiration; but faith is the organ by which the promise is received. God's Word is living and powerful, whether I receive it or not; but it is so in me only as by faith it enters and controls my heart. A sacrament is received by faith when the Word attached to the sacrament has entrance. Even though at the time of the administration faith should be absent, the promise is there for appropriation and saving application, at whatever time thereafter the one to whom the sacrament has been given reads it in God in repentance and faith.

Most important therefore is it that in the administration the words of each sacrament should have the central place, and that the attention of those receiving it be not diverted by a multitude of ceremonies that dazzle the eye from the simple word of the gospel, which is the proper sacrament to apply and on which all else should be focused. Still greater is the loss where the words are omitted, as, in the Roman Mass, 'given and shed for you for the remission of sins' fell out, or where they are recited in a language unknown to the people, or in low and subdued tones that cannot reach them, even though they understand the language. For how can faith be enkindled by the Word when hidden under an unintelligible form? As the gospel is the power of God to save those who believe, so the power inhering in the syllables, but from the revelation of God's will which it brings to man's intellect and heart, so also with the sacraments. Luther's object in the reformation of the Mass was, first of all, that the promise and pledge of the sacrament should reach every mind, and, through the mind, touch every heart of those participating.

Nor is the change in the ministers of the sacraments made by the Lutheran Reformation to be overlooked; for the authority to administer them was not limited to a priestly self-perpetuating order within the Church, both because a sacrament is a sacrifice and because such authority is vested in the entire Church and dare not be usurped by any part.

'For whereas the Church is, there is the authority to administer the Gospel. Wherefore it is necessary for the Church to retain the authority to call, elect, and ordain ministers. Ministers are the executives of the Church, and in discharging functions which God has entrusted to the Church they are no less the representatives of God; and the Church is where two or three are gathered in Christ's name.

In rejecting the errors of the medieval Church, the Lutheran Church has also been careful to guard against exaggerations arising from a more radical reaction against Roman Catholicism. While there is, indeed, a sense in which sacraments

are 'marks of Christian profession among men,' this pertains rather to their use than to the sacramental themselves. For, as they are God's and not man's work, they are 'rather signs and testimonies of the will of God toward us, instituted to awaken and confirm faith.' Man's profession of faith is not a sacramental but a sacrificial act, in response to God's action. For, generally he is not simply 'symbols of Christian fellowship,' although this fellowship also is attested in our use of the sacrament (1 Co 10:17). Nor are they allegories either of divine grace or of Christian virtues, or mere testimonies of a grace previously bestowed. Christian conversion cannot be administered within a few days after the birth of the child. The meaning and efficacy of baptism receive particular recognition and emphasis in the rite of confirmation, which is so far removed from the Roman sacrament known by that name as to constitute an entirely different ceremony. The Reformers urged not only that the so-called sacrament of confirmation was without divine institution, but that it derogated from the recognition of the efficacy of baptism, since it was extolled as containing and sacramentalizing that which baptism furnished only a preparatory grace. Accordingly, confirmation fell into almost entire disuse among Lutherans, until, since its gradual reintroduction in another sense by Spener (1635-1703), it is to-day universally observed by them, as an edifying ecclesiastical rite, in which the contents and claims of the divine covenant made in baptism are recalled to those who are about to receive the Lord's Supper for the first time, while they, on their part, solemnly declare that they realize not only baptism's covenant when administered, but also what it means at all times, since it is the formal affirmation in mature life of their full understanding and believing acceptance of what was done for them in their infancy.

Baptism is never to be repeated—not because of the Roman figurative or any character indissolubilis, but because baptism is a perpetual covenant on God's part, and by repentance we are daily to return to our baptism.

For though we were a hundred times put under the water, it was without our control. We returned to it, not because of any marks of Christian profession among men; for those are not signs of Christian profession, but only marks of the same.
SACRAMENTS (Christian, Reformed).

Calvin not only encountered this subject as a locus communis of theology, handling it in the fourth book of the Institutes (chs. xiv.–xix.), that on the Church, and not only had he, as a reformer, to assail it as part and parcel of the sacerdotal system which he was out to overthrow, but he was brought into close contact with it as part of his own labour, as a mere incident which formed part of his day's work. When he first emerged on the scene, Protestantism was being vexed and weakened with a controversy between the followers of Luther and those of Zwingli over the sacraments, and it concerned him vitally to clear away what we can bring to the altar is a broken and empty heart. All confessional services, whether public or private, that are in use have as their end the promotion of such spirit in all who would partake.

He is truly worthy and well-prepared who believes these words: 'Given, and shed for you, for the remission of sins.' But he who does not believe these words, or who doubts, is unworthy and unfit; for the words: 'for you' require truly believing hearts.

Holding, further, that 'the communion of the unworthy' (1 Co 11:27) cannot refer to the weak in faith (since it was just for such that it was especially instituted) or to believers coming to the sacrament without proper self-examination (since the communicant must be prepared to apply to those who are in Christ [Ro 8:9]), and having in mind the judgment announced in 1 Co 11:25, the Lutheran takes great care to guard against any thoughtless approach, out of mere habit, or from any motive other than a longing for the spiritual benefit offered to faith in the sacramental Word. This is the explanation of the provision described in the Augsburg Confession:

'it is not usual to give the body of the Lord, except to them that have been previously examined and absolved.'

The withholding of the cup from the leit—what has been an acknowledged departure from apostolic usage—being recognized as a mutilation of the sacrament, was promptly resolved as the principle of the Reformation were applied to a revision of the liturgy.

Attention should be called to the fact that the Lutheran conception of the sacraments was a gradual growth. As in every formative movement, there are stages through which it passed before it reached consistent expression. In the Lutheran Confessions and the more mature treatises of Luther the sources are found for learning the reasons of an attack on those known as Lutherans individual opinions, in various lands and ages, show decided variations, as one or the other extreme of either ecclesiasticism or radical subjectivism has had influence.

LITERATURE.—The primary sources of information are the Confessions of the Lutheran Church (see Harmonised Confessions), and the works of J. T. Müller, Die symbolischen Bücher der evang.-Luther. Kirche, 4 vols., 1847, and his later work, Die Blütende Bildung der Lutheraner, 1 vols., 1902, and J. G. Jaffé, Geschichte des christlichen Glaubens, 1805; and the writings of Luther (see edit. M. von Hase and H. E. Böckler, Luther's Briefwechsel and H. F. Brunswik, 1834–60) and the numerous Church Orders of the 16th cent., as found in the collections of A. L. Richter (2 vols., Weimar, 1846 and E. Sehling (6 vols., Leipzig, 1904–13). The secondary sources are the dogmatics of the purer period, especially Martin Chemnitz, Examen Concilii Tridentini and his Disputationes theologicae, 1640–53, and Jacobo (in German) gives Latin accurate scientific expression than any of his successors to the positions of Luther. HENRY E. JACOBS.

SACRAMENTS (Christian, Reformed).—The proper participation for the Lord's Supper is occupied also with the same words. Through them the sense of need is awakened, that they who hunger and thirst after righteousness may be filled. The imagination that one may be rendered worthy of its reception on the ground of character or a good purpose, or through the regimen of ascetic exercises, or by the purifying effects of either bodily or mental pain, only increases unworthiness. Confession of sins is of no benefit if it be thought that the confession itself restores guilt and gives a better title for approach. As Luther says, "We are not to bring away what we can bring to the altar is a broken and empty heart. All confessional services, whether public or private, that are in use have as their end the promotion of such spirit in all who would partake."

3 Art. xxv.
here never is a sacrament without an antecedent promise, the sacrament being added as a kind of appendix, with the view of confirming and sealing the promise.1 This is not for the sake of establishing the truth, which needs no confirmation except from itself, but it is a concession to human weakness, to facilitate our apprehension of the truth.

This is commonly expressed by saying that a sacrament contains a visible sign.2 The phrase has, indeed, been misapplied, the word being understood of the mattering by the priest in a tongue unknown to the multitude.

Very different is the doctrine of Augustine concerning the sacramental word: "Let the sign be added to the element. For whence can there be so much virtue in water as to touch the body and cleanse the heart, unless it be given by the agency of the word, and this not because it is said, but because it is believed?" 3 Therefore, when we hear mention made of the sacramental word, let us understand the assurance anointed by the minister, the words being

"By this sign shall ye know us."

This view of the sacrament as 'a visible word'—to quote another phrase of Augustine—it might be objected that the sacrament was a superfluity, since the true will of God was sufficiently known through the Word, and the sacrament could make us no wiser. But to this the reply is made:

'The seals which are affixed to diplomats, and other public documents, are used by themselves, insomuch as they are affixed to no purpose if nothing were written on the parchment, and yet this does not prevent them from sealing and attesting the contents. Likewise, the sacraments bring with them the clearest promises, and, when compared with the word, have this peculiarity, that they represent to our minds, and are an additional argument for its truth. 4

He goes on to give other illustrations of the virtue of signs or seals with a liveliness of imagination for which he would hardly have received credit, and with the result of demonstrating that the clarifying or confirming of faith is no superfluity.

'It had been better for the objectors to pray, with the apostles, "Lord, increase our faith." 5 Let them explain what kind of faith they mean, who said, "Lord, I believe; help thou mine unbelief." 6

It is no disparagement to the Holy Spirit to assign to the sacraments this office of increasing and confirming faith; for they are only the instrumentality through which He acts.

'The sacraments duly perform their office only when accompanied by the Minister, the spiritual Master, whose energy alone penetrates the heart, stirs up the affections, and procures access for the same reason that we serve under his standard. As the toga distinguished the Romans from the Greeks, who wore the pallium; and as the different orders of Romans were distinguished from each other by peculiar insignias—e.g., the senatorial from the equestrian by purple, and crescent from the plebeian from the plebian by a ring—so we have our symbols to distinguish us from the profane. 7

God sees the means and instruments which he sees to be expedient, in order that all things may be subservient to his glory, he being the Lord and disposer of all. 8

At this point the author refers, in rather a tone of depreciation, to the importance attached by some to the meaning of sacra mentum in the sense of the soldier's oath of loyalty, sworn in Roman times in the Campus Martius before setting forth on a campaign.

"So by our signs we acknowledge Christ to be our commander, who serves under his standard. As the toga distinguished the Romans from the Greeks, who wore the pallium; and as the different orders of Romans were distinguished from each other by peculiar insignias—e.g., the senatorial from the equestrian by purple, and crescent from the plebeian from the plebian by a ring, so we have our symbols to distinguish us from the profane. 9

Such similitudes he does not reject, but, in obvious allusion to the Zwinglians, he condemns those by whom that which they signify is made the first, and indeed the only thing. A little later he

SACRAMENTS (Christian, Reformed)

In the OT, especially circumcision, the view being taken that these set forth Christ just as certainly as do the sacraments of the NT, the only defect in their way of presenting Him arising from the fact that He was then enveloped in the mist of futurity, whereas now He stands in the clear light of history.

It has been taken for granted throughout this whole chapter that the sacraments of the OT are only two, Baptism and the Lord's Supper; but, after these two have been thoroughly explained in chs. xv.-xviii., the author returns in ch. xix. to a discussion of the pseudo-sacraments, and he considers them as Confirmation, Penance, Extreme Unction, Orders, and Marriage.

In the same way as in the Anglican Church not a few have been disposed to show a partiality for the first of these, as being, if not exactly the model of the two undoubted sacraments, at least near it, Calvin, while deprecating the chism and the notion that only a bishop is equal to the performance of the ordinance, acknowledges that admission to the membership of the Church is an occasion of great importance which must be dignified by such a ceremony as the laying on of hands, though he does not allow that this rises to the rank of a sacrament. But his tone in dealing with the rest of the so-called sacraments is

\[\text{Institutes, bk. iv, ch. xiv, § 16.}\]

1 Institut., bk. iv, ch. xiv, § 10. 2 In Johann. Hom. 26.
extremely severe; and, to account for this, we must remember the height to which in the Church before the Reformation the multiplication of ceremom had attained, and also the edifying glance, e.g., into Hamilton’s Catechism—a vadecum with which the clergy were supplied for the performance of their functions by an archbishop of St. Andrews just before the Reformation—will show that the simple rite of baptism had been observed with much variety of ceremony, some of them perhaps beautiful, but others the reverse, and some very obscure. The people were supposed to understand these, but the clergy themselves did not always understand them, and this was the reason for the simplicity of the Scottish instru-

sions. Calvin makes fun of the variety of meanings attributed to the ceremony of the tonsure, and any one who turns to A Catholic Dictionary will discover how utterly at a loss the most scholarly are even at the present day to explain a practice so common. But, indeed, it is the Mass itself that is the greatest of all combinations of symbolism. Nothing could be more unlike the simple, domestic observance of the first Lord’s Supper than is the performance of a Mass in a great cathedral; and Calvin was doing an un-

speaking service in insisting that he was intended that the original mode of administering the sacrament was the best model for all time.

John Knox was, if not in scholarship, at least in spirit, the best disciple of Calvin; and his state-

ment, in the old Scots Confession of 1560, though

brief, is important. ‘I confess that there is a be-

ning instead of ending, with the sacraments of the OT; it is much more vigorous than Calvin could afford to be in representing the shortcomings of the Zwinglians; and—best of all—it states with

warmth and fulness the positive element which was always lacking in the Zwinglian creed, namely,

that, besides the commemoration of the past and the profession of loyalty for the future, there is in the sacrament a transaction here and now between the Saviour and the communicant, each giving himself to the other and receiving the other as an

everlasting possession.

‘As the Father is under the Law, besidesthe verity of the sacrifices, had two chief Sacraments, to wit, Circumcision and the Passover, and consequent thereon, the Masons, and not reputed for God’s people; so [do] we acknowledge and confess that we, in the time of the Evangel, have two chief Sacraments, to wit, Baptism and the Lord’s Supper, and commanded to be used of all those that will be reputed members of his body, to wit, Baptism and the Supper, or Table of the Lord Jesus, as the Commission of his blood and bleode. And these sacraments (aswell of the Auld as of the New Testament) war institut of God, not onely to make any visible difference betwixt his people and those that war with-

out his league; but also to exercise the faith of his children; and by participations of the same sacraments, to seal in their hearts the assurance of his promises, and of that most blessed conjunction, union, and societie, whiche the Elcet have with their Lord Christ Jesus.’

At a time when the use of the seven sacraments is being commended to the Church of England by one so highly placed and much esteemed as Bishop Gore the words of the Thirty-nine Articles have special importance:

‘There are seven sacraments ordained of Christ our Lord in the Gospel, that is to say, Baptism and the Supper of the Lord. These five, commonly called Sacraments, that is to say, Con-

firmation, Matrimonium, and Extreme Unction, are not to be counted for Sacraments of the Gospel, being such as have grown partly of the corrupt following of the Apostles, partly of the policy of the ages; but they have not like nature of Sacraments with Baptism and the Lord’s Supper, for that they have not any visible sign or ceremony emend of God.’

In the Heidelberg Catechism the question ‘What are the Sacraments?’ is answered as follows:

‘They are visible, holy signs and seals, appointed of God for this end, that by the use thereof He may the more fully declare

and seal to us the promise of the Gospel; namely, that He grants us out of free grace the forgiveness of sins and everlasting life, for the sake of the one sacrifice of Christ accomplished on the Cross.’

The workmanship of the Westminster Assembly of Divines on this subject is careful and learned in all the documents, but it is especially delineated in the Shorter Catechism, where the three following questions and answers form an almost perfect summary of Reformed doctrine:

How do the sacraments become effectual means of salva-

tion?
The sacraments become effectual means of salvation, not from any virtue in them, or in him that doth administer them; but only by the haunt of Christ, and by the working of His Spirit in them by faith receive them.

What is a sacrament?
A sacrament is a holy ordinance instituted by Christ; where-
in, by sensible signs, Christ and the benefits of the new covenant are represented, sealed, and applied to believers.

Which are the sacraments of the New Testament?
The sacraments of the New Testament are Baptism and the Lord’s Supper.

There was never any serious difference of opinion in the Reformed Church itself in the post-Reformation period, unless it was in the transactions leading up to the Synod of Dort, when the Arminians were accused of minimizing the value of sacraments; but, the contest with both Roman Catholics and Lutherans still continuing, the affirmations and the denial of the Reformed Church did become more and more informed and distinct; and so both the statement and the defence of the Reformed position became more and more easy. Hence works of recent date afford clear and thorough knowledge of the matter, and most can perhaps compete with that of Charles Hodge in his Systematic Theology (3 vols., Edinburgh, 1872–73), where the discussion is included under ‘Soteriology.’

The sacraments are expounded by Hodge under five heads— their nature, their number, their efficacy, their necessity, and their validity. In investigating their nature he imposes on himself as the true method ‘to take those ordinances which by common consent are admitted to be sacraments, and by analyzing them determine what are their essential elements or characteristics,’ and then ‘exclude from the category all other ordinances, human or divine, in which those characteristics are not found.’ As for their number, Calvin had been able to prove that Augustine, though himself fond of significant numbers, said not a word about the number seven; but his knowledge did not enable him to arrive at the true number. On the contrary, is able to show that, so far from this number being primitive or scriptural, it was not current before the 12th century. What is said on the efficacy of the sacraments is practically an exposition of the questions of the Shorter Catechism quoted above. The necessity is what is called a necessitas pro epi; i.e., the use of sacraments is necessary because it is commanded by God—but it is not a sine qua non, because the same blessings which are communicated through the sacraments can be obtained without them. The argument was conveyed through them that may not be conveyed through other channels, especially the Word of God.

Under his last head— their validity — Hodge takes up an interesting question, namely, whether the sacrament of baptism can be administered by any but lawfully ordained ministers. In ordinary circumstances it is unusually and wrong that they be administered otherwise; but in special circumstances is the presence of such an administrator imperative.

SACRAMENTS (Christian, Reformed) 915

Christ? Are not the bread and wine to them the symbols of his body and blood? If faith be in exercise, may they not receive those symbols to their spiritual nourishment and growth in grace? Again, if baptism be a washing with water in the name of the Holy Trinity, to signify and seal our engrafting into Christ, does it cease to be, or to signify this if not administered by an ordained minister? Does the man thus baptized make a profession of his faith in Christ? and does he not thereby become a member of that great body which confesses Him before men? Can it, therefore, be any more invalid than the Gospel, when preached by a layman? 1

The liberalism alleged has doubtless been learnt in the United States through the exigencies of ecclesiastical life on the frontiers in the Far West; but the learned and orthodox author conveniently forgets that this view is flatly contradictory of the Confession of Faith. Indeed, in the First Book of Discipline the administration of the sacraments by any but lawfully ordained ministers is declared to be worthy of death.

A few years ago, in the Presbyterian Church of England, the question was raised whether elders, being ordained men, might officiate at the distribution of the communion elements in missions connected with city churches where the services of a minister could not be easily secured as frequently as might be necessary; and, after protracted discussion, the Synod, in 1867, decided in the negative.

Since, in 1817, the union of Lutheran and Reformed Churches was secured in Prussia, the movement extending soon to other German States, there has naturally been a disposition among Protestant theologians to emphasize the points of sacramental theory and practice on which both have agreed, though the controversy of both with Rowe has not ceased.

Schleiermacher, who was the son of a Reformed pastor, threw out the suggestion that the sacraments may be regarded as acts in the work of the risen Christ—an idea germane to that of Dorner, who treated the Church as the domain of the Holy Ghost.

Speculations of the most radical description have not been lacking in recent times, doubt being cast on the institution of the sacraments by the Author of Christianity, and the question specially raised whether He had any intention of making the Lord's Supper a permanent institution or only celebrated it once with His disciples in a genial hour, without any thought about the future. By a certain school a very close connexion has been assumed as having existed between the sacraments of Christianity and the initiatory rites of other religions by which it was surrounded in the primitive age and from which it drew its converts; and some regard the sacramental system as a vagrant boulder projected into Paulinism from the outside and inconsistent in its nature with the rest of the landscape. With such notions Reformed doctrine has nothing special to do.

It has, however, to do with novel ideas which some have been bringing hither and thither, since among the Reformed the tradition has always been specially strong that the preaching of the Word is the great means of grace. Some of the Presbyterian chaplains, when serving abroad, have obtained occasional glimpses of stately worship in the Roman Catholic Churches; they have seen how the celebration of the Eucharist supplies form and body to the Anglican service; they have witnessed the eagerness with which the members of their own denomination have welcomed a communion service; and some of them have ventured to invite all present who were desirous to partake, whether members of the Church at home or not. From such experiences they have derived the impression that in their Church at home enough is not made of the sacraments; and some of them have been proposing that the Lord's Supper should form a part—the most prominent part—of the principal diet of worship every Sunday, as well as that the Table should always be open to all who desire to come, without questions asked. Such suggestions deserve the attention always due to impressions received from first-hand experience; but the War will also bring to bear on their solution its older experience, which is very ample in regard to some of the points raised. Changes may be made and experiments tried; but the Reformed Church will not turn her back on her own past, by displacing her history from its process of purgation as she remembers the statement in the gospel, 'Jesus himself baptized not, but his disciples,' and the words of St. Paul, 'Christ sent me not to baptize, but to preach the gospel.'
